This Town conſiſted but of four Houſes, and yet contain'd very near four thouſand People; the truth on't is, every Houſe was as big as a little Pariſh, being four-ſquare, and every ſide two Bow-ſhot in length; they were built all of ſmall Trees, and cover'd down to the ground with Palm-leaves; there were thirty or forty Doors on every one of the ſides, by which all the ſeveral Families that inhabited them had their own peculiar ways of going in and out. Into this Wood of a Town was our *Engliſhman* brought, and preſented to the mighty Prince of the ſame, who was pleas'd to entertain him after ſo civil and hoſpitable a manner, that he had no ſmall cauſe to be ſurpriz'd at it: The very next day after his arrival the King ſent ſome of his Men abroad to fetch in all the varieties of Proviſion that the neighbouring Country afforded, which were Fiſh, (both Sea and Freſh-water) ſeveral ſorts of Fowl, Beaſts, Roots, and Fruits, and of all this he lent him enough, both for his own occaſions and alſo to pleaſure ſome of the reſt of the *Indians*, in whoſe friendſhip he got no ſmall Intereſt by this means. Thus he liv'd amongſt 'em void of all fear and apprehenſion of any danger, their kind and free way of treating him perfectly taking away all thoughts of that kind.

Having been ſome months in the Country, he got pretty good skill in their Language, and thereby was capable of informing himſelf better in their Manners and Cuſtoms than by Obſervation alone he could have done.

Their Manners and Cuſtoms.

The Religion of this People ſeem'd moſtly to conſiſt in ſome ſort of Devotion they paid to the Moon, and that eſpecially when ſhe was new; then they abounded in all ſorts of expreſſions of Joy and Triumph, they leap'd, they danc'd and clapt their Hands, and with all the Raptures imaginable welcom'd the new Light. Their King is allow'd to have as many Wives as he will, but the Subjects muſt be contented with one, except thoſe that are men of courage and Bravery in the Wars for to ſuch as theſe two Wives are indulg'd, one to go to the Wars with them, and the other to ſtay at home to govern the Houſe and Children: This is a good way enough to encourage the Men to be valiant, for as tis a comfortable thing to have a good Companion abroad, ſo 'tis an eaſe to a man's mind to have a truſty Overſeer to manage his Affairs in the mean time at home.

1596.

The only Arms they us'd when our Author firſt came amongſt 'em were Bows and Arrows, but he added two ſorts of Weapons more to their military Furniture, (which they never us'd before) and thoſe were Clubs and Targets; the latter he taught 'em how to make of the Bark of a certain Tree, which was ſtrong and ſtubborn enough to yield 'em a good defence in that capacity. He ſupplied the place of a General too amongſt 'em, lead them out to War, and brought them home victorious, and their Succeſs was in a great meaſure owing to the Diſcipline he had introduc'd amongſt 'em, and the care he had taken to furniſh 'em with ſuch Weapons both for offence and defence, as 'twas to be preſum'd their Enemies had not.

He had not been above half a year with 'em before he was put upon this ſort of Service, and the People they fought againſt were entirely routed, and driven out of their Town into the Woods: As for the Soldiers, they gloried in the Plunder of Tobacco and Cotton-beds which the vanquiſh'd left behind 'em; and the King feaſted himſelf upon the murder'd Carcaſſes, which were broil'd for his own ſpecial entertainment. In this practice indeed their ſavage and barbarous Nature ſufficiently appears; they devour human Fleſh with an infinite greedineſs and pleaſure, yea, there's hardly any that goes down with 'em ſo heartily and ſweetly as that of their Enemies, and therefore never any Priſoner falls into their hands (if he be worth eating or fit to be ſo) but he is ſacrific'd afterwards without fail; and there's nothing can ſecure a Man from this fate but ſome very foul Diſtemper, which ſhould make him a Poyſon to thoſe that were to eat him. In this caſe the Kings-Evil or the Pox might perhaps be a little protection to a Man, for the ſtrong Stomach of a Savage, it may be, would turn at ſuch a Diſh as that; but howſoever a diſeas'd or a raw-bon'd Enemy might come off, 'tis certain a plump well-fed one is look'd upon by them with the ſame Eye that a fat Ox is by a Butcher.

Eating human Fleſh.

Execution of their Captives.

Our Author himſelf ſaw this Experiment made ſeveral times while he was with them, and that not only upon ſome of their Priſoners of War, but ſome *Portugueſe* too that accidentally fell into their hands. Their way is to faſten the miſerable Sacrifice to a Stake, and then the whole Company dances ſome time about him, and in the intervals they drink a certain ſtrong Liquor of their own ſlovenly preparation; after this Ceremony, one of them with a huge maſſy Club beats out the Wretch's Brains, and then they cut him out into pieces and broil him, and are very merry at the eating of him.

Their Liquor.

That Liquor juſt now mention'd is made by their Women, from a certain Root, in this manner: They firſt boil it, and then chew it ſubſtantially in their Mouths for ſome time, after which they ſpit it out into a long Trough and pour Water upon it, and let it lie working there (like Ale) for two or three days, then they take it out and put it into broadmouth'd earthen Jarrs, and ſo let it ſtand for uſe. This Liquor has it ſeems a conſiderable ſtrength with it, and they have no inconſiderable love for it, for what between the one and the other, they are very often (both Men and Women) as drunk as Apes with it: But drunk and ſottiſh as they are, they are not to be tax'd with Covetouſneſs, they have no paſſion at all for Gold and Silver, nor do they feel any of thoſe pains and diſquietments that attend the Fever of avaricious Deſires in other Minds; to be rich amongſt them is to lie ſoft and eaſie, upon good Cotton Beds, and to have plenty of Tobacco and ſtrong Drink; in theſe Enjoyments they poſſeſs all the Pleaſure they have any notion or conception of, and believe themſelves ſo happy in 'em, that they ſeek for nothing farther; a very cheap and eaſie Felicity indeed, that requires nothing elſe to make it up but good Drink and Tobacco, both which things ſince their own Country yields 'em, they are in a hopeful way never to be miſerable.

Contempt of Riches.

Theſe People take a mighty deal of care to make their Valour in War known to others about 'em, and perhaps it coſts 'em almoſt as much to do ſo as it did to exert at firſt thoſe acts of Courage which they are ſo ſollicitous about publiſhing, for there's not a Man they kill in Battel but they make ſo many holes in their own Faces upon

that

Signs of Valour.

that ſcore; they begin firſt with the under Lip, then to the Cheeks, next to the Eyebrows, and laſtly to their Ears; all theſe are perforated in proportion to the number of Men they have kill'd, ſo that the moſt horrid and deform'd fellow amongſt them is eaſily known to be the moſt valiant.

Commoditys and products.

The great Commodities of this Country are *Braſile-wood*, *Tobacco*, red *Pepper*, and *Cotton-wool*. The Woods abound with *Apes*, *Monkys*, *Armadilloes*, *Hogs* without Tails, and as big as ours; and for *Birds*, the chief are *Parrats*, *Parakettoes*, *Doves* and *Oſtriches*.

He takes his leave of the *Indians*

Our Author having now ſtaid a conſiderable time amongſt theſe People, and being pretty well eſtabliſh'd in the King's Favour and good Opinion, ventur'd to addreſs him for his Liberty: And tho' it might have been reaſonably thought that a man ſo uſeful and acceptable as he would be very difficultly parted with, yet the King granted his requeſt, and order'd him a Convoy and Proviſion for his Journey. He travel'd for the ſpace of nine or ten weeks under the Conduct of theſe *Indians*, who brought him honeſtly and ſafely at laſt to a *Portugal* Town call'd *Bahiu Detodos los Sanctos*; but here he was like to fall into worſe dangers than any he had been in amongſt the *Indians*, ſo much more kind and compaſſionate were theſe *Chriſtians* than the *Savages*, for the Governour very quickly told him his Doom, which was, to be kept in Priſon there till he was ſent into *Portugal*, to ſpend the reſt of his life in the intolerable Slavery of the Galleys. This direful Sentence had infallibly been executed, had it not been for a certain *Portugal* Merchant of that Town, a particular lover of the *Engliſh* Nation, and a Perſon very ready at all times to aſſiſt any of them in diſtreſs.

Kindly entertain'd by a *Portugueſe*.

Carder being directed to go to this Man at his firſt coming to Town, found him as kind and good as he was reported to be; he took the forlorn *Engliſhman* into his protection, entertain'd him at his Houſe, and did all good Offices for him with the Governour; and when all came to all, that he was thrown into Priſon, by this Perſon's Bounty and careful Attendance he was preſerv'd from thoſe Miſeries which Priſoners (and thoſe Adverſaries too) are very frequently expos'd to. At laſt he was brought to a ſecond hearing before the Governour, the reſult of which was, That he ſhould be entruſted to the keeping of his *Portugal* Friend till the King of *Portugal*'s Pleaſure was known concerning him. It was above a year before any Anſwer came from *Lisbon* about that matter, but it was then order'd, That the Priſoner ſhould be ſure to be forth-coming till a Ship came over to tranſport him into *Portugal*.

Danger of being ſent Priſoner into *Portugal*.

In expectation of this direful Fate he paſs'd two years more, ſpending that time in the overſight of his Friend's Affairs, looking after his Negroes in the Sugar and Ginger Plantations, ſeeing them cut his *Braſile*-wood, gather the Pepper and the Cotton-wool: At laſt there came News, that the Ship which was to carry him to his ſo much fear'd Bondage would arrive in a little time; and now his Friend told him, that he could not poſſibly protect him if he ſtaid in the Country till the Ship was actually come, ſo therefore counſel'd him to endeavour his eſcape in the mean time.

His eſcape; and arrival in *England*.

This good Advice *Carder* put in ſpeedy practiſe, marching off in a Boat with four Negroes only, under the pretence of going a fiſhing; the place he got to was *Pernambucca*, where he alſo obtain'd a happy paſſage for *England*. After he came home, the fame of his Adventures brought him to *Whitehall*, and introduc'd him into the Queen's preſence, who was pleas'd to hear him tell all his Story, and at the concluſion to give him a Reward. He had ſpent between nine and ten years in theſe Peregrinations thro' the Weſtern World, having (abating the Kindneſs of one ſingle Perſon) met with as bad treatment amongſt the Chriſtian *Portugueſe*, as he did with good amongſt the much more Chriſtian *Savages*.

Chap. III.

The laſt and moſt diſaſtrous Voyage of that famous Navigator Mr. Tho. Candiſh, *extracted out of his own Letter directed to Sir* Triſtram Gorges *his Executor.*

1591.

Admiral *Candiſh's* Fleet.

THE Fleet which Admiral *Candiſh* ſet out this Expedition conſiſted of five ſail, the *Leiceſter* Gallion Admiral, the *Roebuck* Vice-Admiral, the *Deſire*, the *Dainty*, and the *Black Pinnace*. We muſt follow them out a great way to Sea before we meet with any thing in their Adventures worth rehearſing.

Great Calm.

They made it twenty days from the Coaſt of *Portugal* till they had ſight of the *Canaries*, and having gain'd that, they ſail'd away directly towards the Line: Under the *Equinoctial* they lay twenty ſeven days driving to and fro without a breath of Wind, in which time moſt of their Men fell ſick of the *Scurvy*, the violent heat of the Sun, together with the nocturnal Damps and Vapours, not a little contributing to the bringing this troubleſom Malady upon 'em.

After ſo long a Calm under the Line, a fair North-Weſt Wind began to blow upon 'em, and this ſerv'd 'em ſo well, that in twenty days ſail they had ſight of Land on the Coaſt of *Braſile*; they knew it muſt be here that the Land appear'd, tho' ignorant of what particular Part or Quarter of *Braſile* it was; but however, a certain Accident gave them information whereabout they were, for coming near the ſhore they took a Ship, the Pilot whereof told them, that they were then at *Cape Frio*, which is twelve leagues from the River of *Jenero*, and thirty from *Santos*, the place which they purpos'd to attempt the taking of. They took nothing in this Veſſel worth notice but a Frier, hid very cloſe in a Tub of Meal: This Divine, when he was pull'd out, to be ſure made a very pretty figure; in the night he might have paſs'd for a Ghoſt in a Winding-ſheet, but a little exerciſing of his Back with a good Oaken Cudgel would ſoon have driven away the Ghoſtlike form, and return'd that of the Frier again.

Cape Frio.

Ilha Grande.

Their new Pilot ſoon directed them to *Ilha Grande*, which is twelve leagues from *Santos*, and here they refreſh'd themſelves with Potatoes, and divers other good ſort of Roots, ſuch as the place afforded: They met with ſome few Hogs and Hens too, but as that ſort of Proviſion was very ſcarce, ſo they were as quarrelſom and ready to fall together by the ears about it, whenever they got any of it. The plain truth on't is, the Diſorders committed at this place were ſad Preſages of thoſe great Misfortunes that afterwards attended the Voyage; the Soldiers were like ſo many *Jews* and *Turks* to each other, all ſhifting for themſelves, diſtruſting their Fellows, and not caring what became of the Publick, ſo they could but have their own private ſatisfactions; he that got a good bit went away into ſome hole or corner of a Wood to make ſure on't by himſelf; neither was there any thing to be gotten from thoſe that had to ſpare, except it were by downright force, or fraud, or equal exchange; ſuch horrible ſharking was there amongſt 'em, that ſome poor fellows who could not ſcramble ſo well as the reſt were like to be ſtarv'd, and forc'd to wander in the Woods to get wild Roots to ſatisfie Nature withal.

1591.

The ill Temper of the Soldiers, and Differences amongſt 'em;

A certain company of theſe Vagabonds had one day better fortune than they expected, for as they were beating about for ſome Proviſion in the Woods, they met with a parcel of their Mates that were boxing each other very furiouſly; the buſineſs was, that they had got a wild Hog, which having kill'd and divided into Shares, they could not agree who ſhould have the largeſt, and ſo went to try it out that way: But in the mean time, while theſe fellows were at Loggerheads, the other Party coming in ſlily, ſtole away a quarter of the Hog, and went and made merry with it by themſelves in another part of the Wood: Theſe happy Thieves afterwards got good ſtore of Roots, and coming home the next day to the Lodgings of ſome of their Company, they found 'em dreſſing a parcel of young Whelps for Dinner; they had not ſo much Pork the day before, but a piece of a young

Puppey would go down well enough now, and therefore joyning their ſtock of Roots to the aforemention'd excellent Diſh, they were admitted upon that ſcore to dine with 'em.

At this ſort of a rate they liv'd at *Ilha Grande*, till the Admiral thought fit to give them ſome Diverſion, by making an attempt upon the Town of *Santos*.

Soldiers eager for *Santos*

The *Portugueſe* Pilot having inform'd them 'twas a very weak place, they concluded that their Long-boat and Shallop only, furniſh'd with a hundred Men, would be ſufficient for this purpoſe; and when the time came that the Boats were to be mann'd, they were all ſo eager of going, upon the ſcore of the Plunder they hoped to get, that now as hot a Diſpute aroſe about this point, as did before about dividing of the Hog; the concluſion of the buſineſs was, that they began to throw one another overboard as faſt as was poſſible, every man endeavour'd to rid the Boat of him that was next him, ſo that while all pretended to go, 'twas very likely that no body at all would be left to do ſo. The Admiral was forc'd to appeaſe this Tumult himſelf, and by freſh Orders to put the matter out of diſpute.

Town of *Santos* ſeiz'd.

The Party that went out upon this Service very happily executed the Deſign that was laid, they landed at the very time that the *Portugueſe* were at Church in the middle of high Maſs, and having thus ſurpriz'd 'em at their Devotion, they found no great matter of reſiſtance, they eaſily got the Swords of thoſe People that had any, and ſo ſtood there keeping guard upon 'em till the reſt of their Company appointed for this Expedition came up to them. They were but twenty three Men that did this Exploit, tho' there were above three hundred *Portugueſe* in the Church, beſides Women and Children. Thoſe that were left in the Town took the Alarm at the time that the Church was beſet, and diſpos'd of themſelves and their Money into places of more ſecurity; but as for them that were taken Priſoners, the Admiral diſcharg'd them all, except ſeven or eight of the principal.

The Plunder of the Town conſiſted in *Succats*, *Sugars*, *Caſſavie Meal*, and (which was better than all) pretty good quantities of *Gold* and *Silver*. One fellow that took up his Lodgings in a Frier's Cell, found a Cheſt of Silver under the good Man's Bed, it contain'd ſeventeen hundred Rials of Eight, a ſmall Hoard which this devout perſon had laid up ('tis to be ſuppos'd) for a time of neceſſity.

The *Indians* Friends to the *Engliſh*.

The *Indians* of the Country rejoyc'd mightily at the taking of this place, and deſir'd the Admiral to keep it to himſelf, and never let the *Portugueſe* come there more now they were once driven away; they proteſted they would be all of his ſide, and to juſtifie the integrity of their Pretenſions, they diſcover'd to him all the things they knew of, and amongſt the reſt three great Bags of Money which the *Portugueſe* had hid, and guided him to a place where he brought off three hundred head of Cattle, a Stock that ſerv'd 'em all the time they ſtaid at *Santos*. Moſt of the Company was for ſpending the Winter here, but the Admiral refus'd it for many good reaſons, that they made it full two months before they went away, and that expence of time was undoubtedly the overthrow of their Voyage. At their going off they burnt the outward part of the Town, deſtroy'd ſeveral of their Sugar-Mills between *Santos* and *San Vincent*, and ſet fire to all the Ships in the Harbour.

Go to the *Straits*.

From *Santos* they ſail'd towards the *Magellanick Straits*, and about the River of *Plate* had a Storm ſo horrible and amazing, that the Admiral with all his great Courage could not avoid being ſhock'd at it. The Fleet was miſerably toſt about and diſpers'd, but the Admiral having before appointed Port *Deſire* for the place of their general Rendezvouze in caſe of a ſeparation by any Accidents, the weatherbeaten Ships made in there of their own accord as faſt as they could.

Inhabitants ſhy of them.

Having refreſh'd at this Port, they ſail'd to the *Straits* Mouth, and finding the Winds there very contrary, were forc'd to lie beating before the Harbour of Port *Famine* at leaſt three days before they could double that Cape; for many times caſting Anchor without the Cape, in twenty fathom Water, on a ſudden the Current would carry away the Ships with Cables and Anchors afloat: At laſt with much ado they doubled the Cape, and got into Port *Famine*, where for ſeven or eight days they were ſhut up for want of Wind to go forwards: All the while they liv'd on Muſcles and the Fruits of the Country, there was no other more ſubſtantial Food to be gotten, the Savages themſelves (who ſometimes viſited 'em) were not able to ſupply 'em: Theſe naked People would return Feathers for whatſoever they gave 'em, and when they made ſigns to 'em for other Victuals, the others would anſwer again by ſigns, that they had none for themſelves, but juſt what they could get by their Darts. They were wonderfully ſhy and fearful, they would not come any nearer than the diſtance of a long Pole, by which they reach'd out and receiv'd what paſs'd between 'em,

Their Sufferings by cold

'Tis eaſie to be imagin'd that our *Engliſhmen* muſt needs be in very diſconſolate circumſtances at this place, ſtraitned in Proviſion, and pinch'd with ſuch ſevere Cold, that 'twas not an eaſie matter to live under the extremity of it: Many of 'em that were well in the Morning, before Night were frozen to death; and others of 'em endur'd ſuch hardſhips, that perhaps to die had been a much leſs unhappy thing. One Perſon particularly (of whoſe Adventures we ſhall hear more hereafter) pulling off his Stockings, pull'd off his Toes along with 'em, having his Feet (mortified with the Cold) as black as Soot at the ſame time; and another pretending to blow his Noſe, blew it quite off, and threw it into the Fire.

They try'd a great many places in the *Straits*, hoping to find better Shelter and more plenty of Proviſion, but they could meet with none where 'twas poſſible for Men to live at that time of the Year; yet notwithſtanding, in ſpight of all the Cold and bitter ruffling Winds, as long as they had Ground to anchor in and Tides to help 'em, they kept beating on in the *Straits*, and they pierc'd ſo far in, that they reckon'd they had made no leſs than fifty leagues within the *Straits* Mouth. The only tolerable place they came to was a ſort of a Harbour, where all the advantage they had, was perhaps not to die quite ſo faſt of the Cold, and to be ſomething leſs expos'd to the fury of thoſe extravagant Winds that were then blowing; but for all this, the Men died ſo faſt, that if they ſtaid there much longer, 'twas certain, they would have no Men at all left; and had the Men been invincible by the ſeverities of the Weather, yet the Sails and other Tackling of the Ships were not, for they decay'd and waſted apace, ſo that they were now almoſt paſt ſervice.

Sail towards *Braſile* again.

The Admiral therefore ſeeing that he muſt leave the *Straits*, (unleſs he intended to bury his whole Fleet there) and knowing that the ſooner the better too, ſet ſail from thence, and directed his Courſe towards *Braſile* again. 'Twas his inſolent mutinous Company that determin'd him to this Courſe, for he himſelf had projected a Voyage to *China*, and had all things been favourable, had made his paſſage thitherwards thro' the *Magellanick Straits*; but as that fail'd, and there was yet another way open, *viz.* by the *Cape of Good Hope*, ſo he had thoughts of purſuing his intended Voyage that way; but theſe factious People murmur'd, and made ſo many Remonſtrances againſt it, that the Admiral (fearing ſome bad effects if he ſhould exaſperate them by an over-obſtinate adherence to his own Deſigns) ſuffer'd himſelf to be perſwaded by them, and gave command to ſteer towards *Braſile*.

Ships loſt.

In this Courſe they loſe the *Deſire* and *Black Pinnace* by the way, which the Admiral charges upon the treachery of Capt. *Davis*; and it was not many days after that in a moſt prodigious Sterm they loſt the *Roebuck* too, ſo that now the Admiral had only his own Ship left; whatever Deſigns he had to execute upon the Coaſt of *Braſile*.

Come into St. *Vincent* Bay.

'Twas with extream labour and hazard that they reach'd the Coaſt of *Braſile*, and came to an Anchor in the Bay of St. *Vincent*. Here ſome of the Company deſir'd leave of the Admiral to go aſhore to ſome of the *Portugueſe* Farmhouſes to get Proviſions, and he yielded to it, giving them a caution not to make any long ſtay aſhore, nor to venture themſelves very far: And as long as they hearkned to this good Advice matters ſucceeded well enough, but when they began to neglect it, and ſuffer'd themſelves to be carried beyond the bounds which the prudent Care of the Admiral had ſet them, they plung'd themſelves into thoſe Miſchiefs which he ſo well foreſaw, and ſo zealouſly endeavour'd to prevent.

A certain *Indian* comes abroad, and tells them, that at a little diſtance there was a very rich *Farmhouſe*, which they would do very well to make a Viſit to, and therefore deſir'd that a ſmall Troop might be ſent thither. They had ſome reaſon to give a little credit (at leaſt) to this Story, ſince the *Indian* who told it had deſerted his own Countrymen, and been for ſome conſiderable time receiv'd into their Service: Accordingly the Admiral appointed Capt. *Barker* (a Perſon in whom he repos'd more confidence than in any one Commander beſides) to march out with twenty or thirty Men upon this Deſign, but with poſitive Orders at the ſame time to make but a very ſhort ſtay, whether he met with any thing or nothing.

Some ſent aſhore.

Contempt of the Admiral's Orders.

Theſe Men being once got aſhore, quickly forgot their Admiral's Orders; they met with good Victuals and Drink, and fell to ſtuffing their own Carcaſes, while in the mean time the Admiral and the Ship were to take care of themſelves. They liv'd ſo well, that 'tis plain

1591.

they had no thoughts of coming aboard again, for they ſent back the Boat that carried 'em, as if they had intended to take up their Dwelling there. The Admiral expected their return with a great deal of impatience; he was ſurpriz'd to ſee 'em ſo bold and venturous, and not leſs fearful of ſome direful event, conſidering the place where they were, and the ſmall ſtrength they had to defend themſelves withal. He ſent Meſſages to them, but receiv'd no Anſwers; he commanded 'em to come away, but they were out of his reach, and ow'd him no Obedience; beſides, they were then in a very merry elevated ſtate, and conſequently were all Admirals and Great Men in their own imagination. After this manner they paſs'd away two days and two nights, and not the leaſt News to be heard what was become of 'em; at laſt, upon the third day in the morning, the poor *Indian*, all bloody and wounded, got to the Ship, and put the Admiral out of his ſuſpence by the Story of theſe Gentlemens fate.

The *Portugueſe* it ſeems finding what Bait would take with them, had given them a very plentiful Entertainment, and ſeeing them ſo entirely abandon'd to the pleaſures of Eating and Drinking, thought they had a fair Opportunity now in their hands of taking a conſiderable Revenge: In ſhort, they got together a body of eighty *Portugueſe* and three hundred *Indians*, and falling upon them with that Force whilſt they were thus engag'd, ſacrific'd every Man there preſent, and 'twas with much difficulty that the *Indian* eſcap'd (like *Job*'s Meſſenger) to come and bring the News. 'Tis true, that this was no leſs than perhaps the Admiral expected, and 'tis certain 'twas no more than theſe Men deſerv'd for the Crimes they were guilty of, but yet 'tis eaſie to imagin that the Admiral muſt needs be deeply afflicted at it; for beſides that, he had loſt not only ſo many of his little Company, but ſo many of his beſt Men, (which made it a double Loſs) his Boat was gone into the bargain, and without that, 'tis well known, a Ship is in a very forlorn caſe at Sea; and there's no doubt but he muſt have ſuffer'd the very laſt Extremities, if by good fortune he had not got an old Boat from the *Portugueſe*, but lighting on that, he was able to ſerve himſelf a little (tho' but a little) by that means; beſides this, for a little further alleviation of his Miſeries, the *Roebuck*, that had been loſt in the great Storm, (coming this ſecond time to *Braſile*) came up to him again in this Bay, but in the moſt miſerable condition that ever Ship was beheld in, all her Maſts gone except the mizen, her Sails quite blown away, and every way extreamly ſhatter'd: A Ship ſo much weaken'd and out of order was but a poor addition to the Admiral's Strength; yet for all he was in no better circumſtances for an Attempt, he could not but think of ſome Revenge upon the *Portugueſe*.

Puniſhment of Contempt

Roebuck recover'd again.

He therefore mov'd down the River towards their Town, which he intended to beat down about their Ears; but when he was about half way, he found the River ſo narrow, by reaſon of a Shoald, that thoſe great Ships could not paſs, and all the Company declar'd it would be extreamly hazardous to endeavour it; nay, it was not without danger that they went ſo far, for they had very little more Water than what the Ships drew, and if they had once come aground, it had been impoſſible ever to diſengage 'em again, ſince (beſides the ſhallowneſs of the Water) 'tis all ozie thereabouts, and no Anchors will hold to hale a Ship off.

Neceſſity of ſmall Ships on the Coaſt of *Braſile*.

Now the Admiral found the want of his little light Ships, for nothing could be done here upon that ſcore; and 'twas not only here, but at moſt other places along the *Braſilian* Coaſt, that they would have been diſtreſs'd for ſmall Ships, for all their Harbours are barr'd, and there is no getting any large heavy Ships over 'em. All the Revenge that could be taken here was, to land ſome Men and ſpoil their Farmhouſes, which they did, and brought off ſome quantities of Proviſion.

But a *Portugueſe* Pilot propos'd to the Admiral a far nobler and more conſiderable Revenge than this, which was, the taking (or battering at leaſt) the Town of *Spirito Sancto*, and promis'd to carry the Ships over that Bar without any danger, affirming, that they ſhould find at leaſt five fathom Water there.

This Project, as 'twas a very good one upon many accounts, ſo 'twas eagerly embrac'd by the whole Company, and approv'd of by the Admiral himſelf, who very well knew that there was no place in all *Braſile* like that for the ſupply of thoſe Wants he was in: But when it came to be executed it would not do, the *Portugueſe* was either very ignorant of the place or deſign'd to run the Ships aground, for the deepeſt Water all over the Bar was but three fathom, and the Ships could not pretend to paſs there. Beſides this diſappointment, the Road was ſo ill, that they could hardly ride there, neither could they take in Water and other Neceſſaries, or do any ſort of buſineſs.

1591.

Ships to be attack'd.

And now, when it was far more likely than not, that they ſhould leave this place very ſpeedily, and that without doing any thing, they diſcover'd three Ships at anchor not far from the Town; they were all glad of this, making no doubt at all of bringing them clear out of the Harbour; whereupon the Admiral propos'd the making the Attempt that very night, before they were remov'd into a place of more ſecurity, and had all the beſt things taken out of 'em; but theſe baſe fellows, that were never good for any thing but drinking and revelling, and ſeem'd to be bewitch'd into a fatal diſlike of every thing their brave Admiral put 'em upon, grumbled, and were unwilling to ſtir then, and ſo the buſineſs was deferr'd till the next morning, but then 'twas too late, and their opportunity was gone, for the *Portugueſe* had brought the Ships in the night-time juſt cloſe to the Town, and fortified the Paſſage ſo, that they who attempted to bring off thoſe Ships were like to pay pretty dear for their Attempt; beſides, the River was very narrow which they were to go up, and over and above the Forts which the Enemy had rais'd, there was a natural Fortification of Rocks, from whence a ſmall number might beat out the Brains of an Army almoſt, by tumbling down great Stones upon 'em.

Good Adviſe neglected.

And now with all theſe diſadvantages the perverſe Soldiers were for going to attack the Ships, nothing elſe would ſatisfie 'em, and there was danger of a general Uproar amongſt 'em if the Admiral refus'd to comply; 'twas for this reaſon perhaps more than any thing elſe that he conſented to their going, but however together with his Conſent, he gave a ſtrict charge that they ſhould 'ſpy out a convenient landing-place, but not land, what opportunity ſoever offer'd it ſelf; and withal, that if the leaſt danger appear'd in coming at the Ships, they ſhould immediately return, and not pretend to ruſh thro' it, to the hazarding of both Men and Boats.

The Command in this Enterprize was given to Capt. *Morgan*, and their two crazy Boats were diſpatch'd crowded with Muſqueteers as full as ever they could hold. As ſoon as they were come within reach of the Guns from the Enemy's Sconces, they began to play pretty warmly upon 'em; and then our Men ſeeing all the Difficulties they had to encounter with, Captain *Morgan*, mindful of the Admiral's Orders, told 'em 'twas beſt to retire, and not venture any farther; but the foulmouth'd Soldiers preſently began to abuſe him, call'd him *Coward*, telling him they always thought he was ſuch a one, and now they ſaw it plainly; which was ſuch a provocation to the Captain (who was a Man of Metal and Courage enough) that in that Tranſport he forgot his Duty to the *Admiral*, and preſently commanded them to land; but alas, 'twas running upon certain and inevitable Fate: 'Tis true, they had by an exceſs of Courage ſome little advantages at firſt, and the Captain with ten more of the boldeſt ſcal'd the Walls of one of the Sconces, while another Party drove the Enemy out of the other, and poſſeſt themſelves of it; but the ſhowres of *Indian* Darts and Arrows that fell upon 'em, and the great Stones that were thrown from off the Trenches, were not to be avoided: In ſhort, the brave Captain loſt his Life, and above two thirds of the Company, and of thoſe that return'd there were not eight but what were bitterly wounded, ſome having two or three, others five or ſix Arrows apiece ſticking in their Bodies. The number of ſound Men now remaining was very ſmall, they had no hands now to ſpare for fighting, having but juſt enough to do the neceſſary Work of the Ships.

Inſolence of the Soldiers.

Capt. *Morgan* and his Company loſt.

The *Admiral*'s concern and ſorrow for theſe Loſſes was inexpreſſible, but however he ſet ſail from this unfortunate place for the Iſland of St. *Sebaſtian*; and 'twas in the way to this place that the Misfortune befell him which compleated the ruin of all his Deſigns, and perhaps the breaking of his Heart too.

His Ship the *Roebuck*, that had once before been loſt by a Storm, now wilfully loſt her ſelf, that is in plain terms, gave him the ſlip, and left him to ſhift for himſelf; but this was not all, for ſhe had got on board her the Surgeons with their Medicines, beſides the beſt part of the Proviſions, and then had left the Admiral loaded with all her ſick and wounded Men, ſo that as the ſick Men were under a neceſſity of dying for want of Phyſick, the ſound ones were no leſs expos'd for want of Proviſions, if Providence did not ſupply them. 'Twas Capt. *Devn* that commanded the *Roebuck* at this time, and to his honour it muſt be recorded, That *he was the Man that did this brave Action.*

The *Roebuck* leaves the Admiral.

1591.

Come to the Iſland of St. *Sebaſtian.*

They made a ſhift to get to Iſland St. *Sebaſtian* by that time their laſt Caſk of Freſh-water was in hand, and they had already begun to ſuffer very greatly upon the ſcore of the ſcarcity of that grand Neceſſary amongſt them. At this place they refreſh'd themſelves, ſurvey'd their Stores of Tackling and Proviſion, mended their Boat, and made her fit for further ſervice: As for Proviſions, they had enough for fourteen weeks at their ſcanty narrow way of living, but their Tackling was much leſs and worſe in proportion, for they had hardly any Ropes left, and but four Sails in all, the Sprit-ſail and Foretop-ſail (two of the moſt neceſſary) being wholly wanting, and the reſt more than half worn out. The Admiral here told 'em plainly his deſign of going a ſecond time for the *Magellanick Straits*, for they had the Summer now before 'em, and they would not fail of a ſtock of Victuals in going that way, at leaſt if *Seals* and *Penguins* would ſerve the turn.

The Soldiers refuſe to go to the *Straits*

Theſe and other Arguments which were urg'd for this Courſe they had ſo much Patience as to hear, but ſo much Impudence as to anſwer with only factious murmurings, and at laſt downright clamours againſt him that propos'd 'em; in ſhort, they ſwore all round, that they would never go to the *Straits* again, but ſail directly home, and that nothing ſhould divert 'em from their purpoſe. The Admiral was ſo highly incens'd at this daring Inſolence, that he reſolv'd to make one of the principal Mutineers an Example to the reſt, and that with his own Hand: This fellow refus'd to go to the *Magellanick Straits*, but the Admiral would now force him to make a much longer Voyage, and for that end whipt a Rope about his Neck, and intended to ſtrangle him: When the Company ſaw that he was in good earneſt, and the fellow was going to pot indeed, they all deſir'd the Maſter of the Ship to intercede with the Admiral for his Life, and promis'd they would be obedient for the future, and take what Courſe he himſelf ſhould think fit; ſo the Criminal was diſcharg'd, and the others ſeem'd to be in a much better humour and more governable for ſome time, after the Admiral had thus exerted his Authority, and ſhewn that he was not afraid of 'em; but all the while they were not really mended, they did but carry it fairly and ſmoothly to his Face, when at the ſame time they ſecretly curs'd him and his deſigns, and plotted his deſtruction.

The Admiral's trouble with his mutinous Crew at the Iſland.

'Twas in a terrible fear of their Villany that he liv'd all the time he was aſhore at this Iſland, about new building the Boat: The *Portugueſe* had continually a watchful eye upon him, and wanted but an opportunity to aſſault him; beſides, there was but a ſmall Creek that parted theſe Enemies from him, and he had reaſon enough to apprehend that ſome of his good People might hold a Correſpondence with 'em: For him to ſuſpect thus much of them, had not been at all any injury to the Rogues; for beſides, that their rebellious and treacherous Diſpoſition was a ſufficient ground for't, they were at that time actually caballing with the *Portugueſe*, and conſpiring the Murder of the Admiral and all the Company aſhore; and a certain *Iriſhman* (one of the number) brought the Deſign to as much perfection as the circumſtance would admit of, that is, he led the *Portugueſe* over in the Night-time, and knowing that the Men were moſtly unarm'd he aſſur'd the Enemy, that they might do even what they would with 'em, ſince they cou'd make no reſiſtance; and ſo all the ſick and wounded ones were murder'd upon the ſpot, and the reſt taken Priſoners.

1591.

Horrid Treachery.

After this Miſchief done, the *Portugueſe* went over to the other ſide again, but left ſeveral Parties of *Indians* planted up and down amongſt the Buſhes and Trees, who ſo diſtreſs'd our Men with their Arrows (and yet could not be hurt themſelves) that they were forc'd to quit the ſhore entirely, and go on board the Ship: This was a very great prejudice to them, becauſe they had not finiſh'd all the Repairs they came aſhore about, neither had they laid in that ſtock of Wood and freſh Water they wanted; but 'twas impoſſible to ſtay, and ſo they were oblig'd to ſubmit to the preſent urgent Neceſſity.

The Admiral now made only a ſhew of living, for his Heart was ſo far broken that he could hardly be ſaid to live indeed; all his Hopes were gone, and he deſir'd nothing more than to get into ſome deſolate place, and to lie down and die; yet ſtill he had ſome mind to be ſailing towards the *Straits*, but his outragious Sailors ſtubbornly refuſing it, he propos'd the going for St. *Helena*. This Deſign they ſeem'd to comply with, but yet in effect endeavour'd to fruſtrate it, for when he was aſleep they would ſail directly contrary to his Orders; and when they had gotten too far to the Northwards for St. *Helena*, 'twas impoſſible to perſwade 'em to tack about a little to the Southwards again, ſo horribly fearful were they of the *Straits*, and ſo jealous leſt the Admiral ſhould trick 'em thither.

The Admiral forc'd to ſail homewards.

What between this rude Obſtinacy of theirs and that of the Winds together, they did not come to St. *Helena*, but, as it ſhould ſeem, made the beſt of their way for *England*. This Courſe the Admiral hated worſe than Death, and as bad as his Men did the *Magellanick Straits*; for, having been unfortunate, he was aſham'd to ſee his Native Country without ſome Performances worthy both of it and himſelf: But 'twas in vain to reſiſt, and *a Man muſt go when the Devil drives*, or any ſuch Furies as thoſe were that tormented him.

He was more than 8 gr. to the Northwards of the Line when he wrote this Letter, and ſent together with it his laſt Will and Teſtament, but his account breaks off there, and we hear not whether he came aſhore or ended his weariſom Life at Sea.

And thus have we the laſt Adventure of that Brave and Great Man, Admiral *Candiſh*: His firſt Voyage was as full of Glory as this was of Misfortune; no Man ever compaſs'd the Globe in ſo little time; no Man ever did more happy things abroad, and return'd to his Country in greater Pomp and Triumph than he; and 'tis not unlikely that he might have ſhone this laſt time as bright as he did the firſt, had not the ill Humours of a company of baſe Fellows interpos'd and eclips'd him.

CHAP. IV.

The ſtrange Adventures of Anthony Knivet, *(who went out with Admiral* Candiſh *in his laſt Expedition) amongſt the* Portugueſe *and* Indians; *together with his Travels thro' thoſe parts, and the account of the People, their Cuſtoms, and the Products of their Countries.*

WHEN the Reader has conſider'd the whole courſe of this Man's Adventures, ſeen what Dangers he paſs'd, and what Difficulties he ſurmounted, it may be he'll be ready to wonder what could kill ſuch a man at laſt, and what Death he ſhould die: And indeed one may venture to ſay, that it is not likely he was born either to be hang'd or drown'd, brain'd or ſtabb'd, to be kill'd either with Heathen Arrows or Chriſtian Shot, to be roaſted in the torrid or frozen in the cold Zone, to be devour'd by Wild Beaſts nor (which is worſe) by Wild Men. We uſually ſay a Cat has nine Lifes, becauſe we ſee it ſo tough and hardy, and endure ſo many kicks and blows; and for the ſame reaſon we may allow this Man at leaſt ſo many, if not double the number. But let us follow him, and ſee how many Deaths he has confronted, that we may judge the better both of his good Fortune and Conſtitution.

Knivet loſes his Toes.

This was the Man that (firſt of all) loſt his Toes by the ſevere Cold in the *Magellanick Straits*, where he was alſo very near eaten up with Lice at the ſame time: Twice they imagin'd him to be quite dead, and accordingly took him up to fling him overboard, but juſt as they were going to do it the man ſpoke, and deſir'd them to forbear, becauſe he was not yet quite gone; and certainly he cry'd out in very good time, for he was as near going (in another ſence) as Four-pence half-penny is to a Groat.

Knock'd down

Not long after, the Admiral making a blow at one of his mutinous Seamen with a piece of a mighty Cable, by accident ſtruck *Knivet* inſtead of that Raſcal, and laid him for dead upon the Deck; and truly, having lain there for ſome time and ſhewn no ſigns of Life, they e'en took him up, deſigning to caſt him to the Fiſhes, but (as before) the poor man ſignified to them in a very happy minute that he had yet ſome life remaining, and ſo ſav'd himſelf for that time alſo.

Laid aſhore to die.

He comes to himſelf.

Companions dead.

At the Iſles of St. *Sebaſtian* he was brought aſhore (with ſome others) in the moſt miſerable caſe that one can eaſily ſuppoſe a man to be; his Body was all over black, his Feet (and what Toes he had left) extreamly raw; he was wholly unable to ſpeak, neither could he ſtir without help; he and all his Company were look'd upon to be paſt all Hope and Cure, and ſo were ſet down here to take their Fate, being left entirely to the care of Providence. As for *Knivet*'s part, being once laid, he expected to riſe up no more, but the others were in better caſe than he, being able to move about a little: However, having lain there upon the Sand, under the powerful Rays of the Sun, for five or ſix hours, he began to come to himſelf, the warm Sun carrying off that deadly Chill that poſſeſs'd him before, and raiſing his Blood and Spirits into ſome motion again. The firſt thing he did was to gaze and ſtare about, like one awak'd out of ſome deep Sleep, or a man come back again into the World from an Extaſie; and the firſt Objects that preſented themſelves to him were his Companions lying about him, ſome dead, others in their laſt Agonies, groaning and giving up the Ghoſt; this was a melancholy Scene to a man that had but juſt now recover'd his Senſes, and 'twas enough to have made him loſe 'em all again: To be ſure he was ſome time conſidering into what ſort of World he had got, how he and they came thither, and what brought 'em into that condition; but having after ſome time recover'd the memory of former things, and concluded (as we will ſuppoſe) that the Ship's Company had ſet them all aſhore to die, we'll believe that the poor man was in no ſmall diſtreſs. He found that his Companions had haſten'd their own End, ſome of them by eating a ſort of venomous Peaſe that grew by the Sea-ſide; this he relates, tho' how he came to the knowledge of it we can't tell. However, conſidering the Calamities they were deliver'd from by Death, he thank'd the merciful Providence of Heaven for ſhewing that Favour to thoſe poor Wretches, and at the ſame time bewail'd his own Miſfortune that he was left out of the number, and thereby reſerv'd for a Life of ſuch Miſeries as he had now reaſon to expect.

He look'd towards the Sea, and ſaw no ſign of any Ship or Boat that came to relieve or ſee what was become of him; and as for Food, there was nothing to be had, unleſs he would have eat ſome of the 'forementiond Peaſe: Now to do that, was to be poyſon'd; and to forbear, was to be ſtarv'd; and tho' he was not at all fond of Life, yet he could not determine by which of thoſe two ways he had beſt put a period to it.

Lives upon Crabs.

While he was in theſe thoughts he ſaw ſomething ſtir upon the Sea-ſhore, and making a ſhift to crawl thither upon all four, he found they were Crabs playing about in the Mudd; ſo having gotten ſome of thoſe, he carried 'em to a hollow Fig-tree hard by, where he found a great Fire ready made, and laying 'em upon the Coals, dreſs'd 'em in this manner and eat 'em.

After this Repaſt he lay down to ſleep again, and ſlept till the next day, and then at the time of the Ebb took his opportunity to get more Crabs, which was all his maintenance, and without which he muſt of neceſſity have been ſtarv'd. And at this rate he liv'd eight or nine days, without the ſight of any living Creature except the Crabs he fed upon; but the ſtench of the dead Bodies of his Companions beginning to grow very noiſom and offenſive, he was fain to remove his Quarters to another place, and this was at ſome convenient diſtance, by the ſide of a fair River.

A terrible Creature ſcares him.

Knivet loſes his Toes.

But he had not been here above half an hour before a terrible ſort of Creature came out of the River, and march'd directly towards him; its Back was all cover'd with Scales, it had great ugly Claws, and a long Tail. *Knivet* was too weak and lame to run away, (if that could have been a deliverance to him) and therefore inſtead of that, went forwards to meet it; the Animal upon this ſtood ſtill and look'd at him, and opening his Mouth thruſt out a long Tongue, which for the form he compares to a Harping-iron. As for his part, he ſaid his laſt Prayers, and expected the next minute to have been ſeiz'd and grip'd in thoſe horrid Claws, the very ſight of which made him tremble; but all of a ſudden the Creature turn'd about, and ran into the River again.

It may be this unexpected Deliverance did not ſurprize him a little, but yet however, ſince 'twas poſſible he might have more ſuch Viſitants if he ſtaid in that place, and ten to one if the next Monſter prov'd ſo merciful and good-natur'd as this, he went away from thence farther up into the Iſland.

His next place of ſettlement was determin'd by the ſight he had of a mighty Whale lying dead upon the ſhore, like a Ship with the Keel upwards; here he made himſelf a little ſort of a Hutt, and fed upon the Whale for the ſpace of a fortnight, and no doubt there was enough left for a fortnight more.

More Men ſet aſhore.

But, as good luck would have it, at this place he met with ſome Company; there were forty Men more ſet aſhore, ('tis to be ſuppos'd upon the ſame ſcore that he had been) and having joyn'd himſelf with them, all together they made a pretty good ſhift, and beſides, now he was in a much better ſtate of Health too, and by frequent going into the Water had ſo far heal'd his ſore Feet, that he was able to walk very well.

Portugueſe and Indians aſſault and murder 'em.

These poor men knew well enough that they ſhould never be taken into the Ship again, and therefore muſt provide for themſelves as well as they could, till ſome way was open for 'em to get clear: But it hapned that the *Portugueſe* and *Savages*, having ſome way or other had notice of their being there, landed upon the Iſland with a conſiderable number of Men, intending to deſtroy or take 'em all Priſoners. This News was brought 'em in the Night, by one of their own Men, who had eſcap'd the Enemies hands, and told 'em, that two others of their Companions were taken Priſoners, and would be conſtrain'd by the *Portugueſe* to direct them to their Quarters. Neither was there any way for 'em to avoid the approaching Danger, for they would have march'd along the Shore, but the Sea ran ſo high that they could not, and therefore were oblig'd to keep their Poſt and be upon the watch: But, in ſhort, all their Care avail'd 'em little, for the *Portugueſe* and *Indians* broke in upon 'em, and ſeiz'd 'em, and very quickly began to do execution upon theſe miſerable Captives; they knock'd about half of 'em on the head, and an *Indian* was going to ſerve *Knivet* the ſame ſauce, making two or three blows at him with his ſhort Bill, but he catching hold of a *Portugueſe* that was juſt by, and crying out, that *he would tell them ſome News if they would ſave his Life*, got a Reprieve for that time.

Knivet ſaves his Life.

Travels with a Savage to the Captain.

After he had told his Tale (which 'tis probable was even what came uppermoſt at that time in his fright) the *Portugueſe* deliver'd him into the hands of a *Savage*, with whom he was to go, but he fearing he ſhould be murder'd, beg'd of the *Portugueſe* to let him go along with him wherever he went; however, being aſſur'd that this *Indian* was his Slave, and that he might ſafely venture himſelf with him, he follow'd him along the Shore. They travel'd together almoſt all the night, and when they came to any Rocks that ran out into the Sea, the *Savage* would take him upon his Back, and ſwim round the Rocks till they were quite clear of 'em, and then land him again; at laſt they came by a great Cliff that ſtood by the Shore, and then his ſavage Guide whiſtled, to which another that was upon the top of the Cliff anſwer'd, and upon this there preſently came out five or ſix *Portugueſe*, of which one was the Captain of the Company that had thus aſſaulted them.

When *Knivet* was brought before him, he demanded of him, *What News?* but the Priſoner being ſomething hungry after his Nights Journey, deſir'd that he might firſt have ſome Victuals, and then he would tell all he knew. The *Portugueſe* laugh'd heartily at this Requeſt of his, but however they granted it, and gave him a pretty good Meal, after which he ſatisfied their Curioſity as well as he could as to the *News* they deſir'd.

More Engliſh kill'd.

The reſt of the Priſoners being alſo brought hither, receiv'd their Fate at this place; no leſs than twenty eight of them were ſacrific'd, while *Knivet* and one more alone eſcap'd.

Knivet carried to S. Sebaſtian.

After this he was carried away by the *Portugueſe* to the City of St. *Sebaſtian*, ſituated upon the River of *Janero*: At their entrance almoſt all the City came out to meet 'em, they made ſuch a noiſe with Pipes and Drums as they came along in their Canoes. The barbarous fellows (being come pretty near the Shore) took him up in their Arms and toſs'd him out into the Sea, crying,

1591.

There's our Prize, which had well nigh coſt him his Life, for the Tide ran ſo ſtrong that he was almoſt carried away with it, and had certainly been drown'd if one who had more compaſſion than the reſt had not commanded ſome of the Slaves that were by to go and fetch him out.

Knivet's firſt Maſter.

When he was brought before the Governour, he examin'd him, and then gave him for a Slave to that very *Portugueſe* who had firſt reſcued him when the *Savage* was about to cut him down with his ſhort Bill: This was as good fortune as he could expect in his preſent condition, for that Perſon us'd him with great humanity and kindneſs, made him always eat with him and lodge in his own Room, and then his buſineſs was only to keep his Maſter's Hogs, and go down to the Sea-ſide to get him Crabs.

Sent to the Sugar-mills.

Runs away, and lives in a Wood.

But theſe good days were too ſoon over, for the Governour calling him to a ſecond Examination, the effect of it was, that he was ſent away to work at a Sugar-Mill in the Country; here he had a miſerable life on't, he was laſh'd and beat like a *Galley-Slave*, not ſuffer'd to have a rag of Clothes to his Back, and nigh ſtarv'd into the bargain; all which put together, was ſo intolerable, that he reſolv'd to run away, and tho' he had no Refuge but a Wilderneſs to flee into, yet he thought he could not meet with more ſurly Company, nor endure more Straits, than where he was; ſo accordingly he march'd off, and finding a certain convenient Cave, he fix'd upon that for his Habitation: All the Day long he went out to fiſhing, and at Nights he went up and down to the *Indians* Houſes, to exchange his Fiſh for other Neceſſaries. And here he might have liv'd quietly enough, had not the Governour's care and diligence found him out, but 'twas his Chance to be diſcover'd, tho' being come back they uſed him better, and allotted him a leſs ſlaviſh Work than formerly he had for a time.

Worſe caſe than before.

But his ever varying Fortune, not long after, brought him into the Sugar Concerns again, and that under a more tyrannical inſulting fellow than he was with before; he was under the management of one that mortally hated an *Engliſhman*, and made little difference between ſuch a one and a Dog, except it were that the Dog were the leſs beat of the two.

He is given to the Governour's Son.

Knivet groan'd under this cruel treatment for the ſpace of four months, and then a much better circumſtance offer'd it ſelf to him; the Governour's Son pitying his diſtreſſed condition, deſir'd his Father to give him to him, which was granted, and ſo he was releas'd from the bondage of that ſort of life. 'Tis true, he was a Slave ſtill, but he was not us'd ſo much like one as before; he had a *Maſter*, but it was a *Man* that was his *Maſter*, and not a *Beaſt* or a *Devil*; which was no little Conſolation too.

Wyanaſſes.

Jarawapipo.

There was at ſome diſtance an *Indian* Town call'd *Wyanaſſes*, the People of which were at peace with the *Portugueſe*, and for Knives and Hatchets us'd to ſell their Wives and Children to 'em: His Maſter being order'd by the Governour his Father to reſide here for ſome time, *Knivet* came along with him hither, and from hence to *Jarawapipo*, from which place he was diſpatch as his Factor with ſeven or eight Slaves loaden with Knives and Hatchets to another *Savage Town*, the People of which were call'd *Pories*.

He goes to the Town of the *Pories*.

An odd way of receiving Strangers.

Having put into one of the largeſt Houſes, as ſoon as he was entred a Hammock was ſet up for him, and he requeſted to lie down upon it; this done, at leaſt twenty Women came into the Room, and ſome laying their Heads on his Shoulders, and others on his Knees, they all began to cry out together in a moſt ſad and doleful manner. *Knivet* could not tell what to make of this ſort of entertainment; the beginning puzzled him ſo, that he was in ſome doubt whether the latter end would be Comedy or Tragedy, yet as much ſurpriz'd as he was, he let the Women go on with their ill Muſick without giving them any diſturbance, and they alſo (when they had done) went away without giving him any account of what they meant by it. As ſoon as the Women were gone, in comes an old *Savage* with a great wooden Sword in his Hand, his Body painted all over red and black, three great holes in his Face, one in the under Lip, and the other two in the ſides of his Mouth, and in each hole a green Stone: This fellow came ſwaggering into the Room, and ſtriking his Breaſt in a moſt paſſionate manner, he look'd as if he had been ſtark mad, talk'd prodigious loud, and walk'd up and down without ſeeming to take notice of any body's being there. The poor man in the Hammock thought the buſineſs muſt be done now without fail, and indeed ſuch an odd Scene as this would have made any one conclude that the next that follow'd would be no other than that of Death it ſelf. However, (to ſhew how pleaſantly *Knivet* was even cheated into his Life, which in his own imagination was as good as loſt) the *Savage*, after he had finiſh'd all his poſtures and preachments, comes and ſtrokes him upon the Head and bids him welcome; after that, he call'd his Servants to bring out what Proviſions he had, and then inviting his Gueſt to come and partake with him, he made him know that he was glad to ſee him. And the News of a Stranger's being at this Houſe quickly ſpread abroad in the Town, and reach'd the other Towns too that were hard by, ſo that abundance of the *Cannibals* came to gaze and ſtare upon this new Face. *Knivet* was very kindly entertain'd and us'd in all reſpects by this old *Savage* his Hoſt; but that which made it the more conſiderable was, that he prov'd to be the King of the *Pories*, and this Houſe conſequently the Palace.

1591.

Every one of theſe Towns was a Kingdom independent, and that ſtood upon its own Baſis, ſome grave experienc'd old *Savage* or other was their King, and the reſt paid him Obedience as ſuch; perhaps *Knivet* lit of one of the beſt, and a Man whoſe Hoſpitality, Fidelity, and other Virtues would have rank'd him amongſt a better ſort of Men than *Cannibals*.

A Story of an inſolent Savage.

Knivet defends himſelf.

One day, as our Traveller was in the Houſe, there comes in a certain hectoring *Savage*, King of another Town hard by, that was a violent hater of the *Portugueſe*, and it may be at firſt took *Knivet* for ſuch a one; he brought a couple of Women along with him, and laying his Hands on their Necks, in that poſture came dancing up to *Knivet*: When he had danc'd thus about a quarter of an hour, he open'd his eloquent Lips, and began in this manner; *Doſt thou ſee theſe Women?* (ſays he) *By my Valour I got their Love, and their Deſire I am ſworn to fulfill, which is to kill thee, as I have done many more before.* The other replied, *That he was none of his Enemy, nor did not come into the Country to do him or any of his Countrymen miſchief, but ſervice, by bringing them thoſe things they wanted; but if he pretended to offer him any Violence, he and all his Country ſhould be ſure to pay for't.* The *Savage* did not mind his Anſwer, but went directly to lay hands upon his Goods that lay there, deſigning to divide them between his two Miſtreſſes, but *Knivet* then ſtarting out of his Hammock, and drawing his Sword, ran at him, and almoſt overturn'd him, which rude Aſſault ſo cool'd the *Barbarian*'s Courage, that he durſt not pretend to meddle any more, and the higheſt revenge he took at that time was, to rail, ſcold, and threaten to kill his Adverſary.

The *Pories* arm in his behalf.

The fearful noiſe he made whilſt he was thus pouring out his wordy indignation upon *Knivet*, alarm'd the old King of the *Pories*, who was not far off, and brought him into the Houſe to enquire what the matter was; and when the Caſe was told him, he ſharply reprov'd his Brother Prince for this Outrage done againſt his Friend, and that under his own roof too, and more than that, commanded him in a great fury to be gone out of his Town, and at his peril to come no more there without leave. So the other was fain to march away without his expected Spoil, but he went it ſeems with a deſign to revenge himſelf, for next day News came that he had arm'd his Town, and was coming with a good force to fetch away *Knivet*, whom he reſolv'd to ſacrifice according to the Cuſtom of the Country: But the other, as peremptorily reſolv'd to defend him as he was to deſtroy him, aſſembled all his People together, and having told them the occaſion, they all with a great ſhout declar'd their unanimous reſolution to ſtand by him and the Stranger to the laſt man; ſo they march'd out into the Field to meet the other *Savages* that were then advancing towards 'em, and found 'em much inferiour to themſelves in number, which was the reaſon that their Enemies (conſcious to themſelves how much they were overmatch'd) preſently chang'd their Pretenſions, and ſent word, *They did not come with a deſign to fight, but only to drive a Trade and be merry with them.* Upon this a Peace was preſently concluded, and they went away together to the Town of the *Pories*, into which the King freely admitted all the reſt, but would not ſuffer their Prince to come in, upon the ſcore of the Affront which he had lately offer'd him.

Knivet having ſeen ſo happy a concluſion of this buſineſs, reſolv'd to return to his Maſter again; but however, to gratifie his Hoſt for all Kindneſſes to him, he made him a Preſent of the moſt conſiderable of thoſe things he had brought, for which in return the other gave him ſeventy Slaves.

Comes from the *Pories*.

And now he took his leave, having a Guard of three hundred Bowmen, which the King of the *Pories* would

needs

1593.

needs ſend to convoy him along: His Maſter was at that time at *Ilha Grande*, where he was well receiv'd by him, and found him well pleas'd with his Negotiations among the *Savages*; and 'twas a ſign he was ſo, ſince by that time he had been at home two months he propos'd to him a ſecond Journey into the ſavage Countries upon the ſame account; but *Knivet*, whom Experience had taught the Inconveniencies of ſuch Journeys, and beſides finding little or no Profit in them as to himſelf, refus'd to undertake it, and was thereupon ſent away to the Governour again, who made it his buſineſs to be all day long upon the Water a fiſhing.

He is ſent to fiſh by the Governour.

In this Employ being one time upon a Rock watching for a *Dog-fiſh*, it chanced that he fell aſleep, his Line lying under him; a while after the Fiſh took the Bait, and by tugging the Line wak'd him, but he being in ſome confuſion, and running about the Rock to obſerve the Fiſh's motion, the Line tangled about his Legs, and the Fiſh ſtill pulling hard, dragg'd him off the Cliff into the Sea; here was the Fiſherman catch'd by the Fiſh, and that by the meer help of a Line, without Hook or Bait, a fine Trick, and a fair Warning to all of that Profeſſion. When the poor man was thus attracted into the Water, one may eaſily imagin he wiſh'd himſelf out again, eſpecially when he ſee the Fiſh ſwimming up to him, to catch him in a far worſe ſence than the former, that is, between his Teeth; but having always ſome good Luck (as well as bad) attending him, he got hold of the Line with his Hand, and giving it a jerk, ſo tormented the Fiſh with the Hook that ſtuck in his Mouth, that he turn'd about and ſwam away, but *Knivet* being faſtned to him by the Line, conſequently ſwam along with him. In this caſe there had been no help for him if he had not remembred he had a Knife hanging about his Neck in a String, but with that he cut the Line, and ſo diſengag'd himſelf from the danger; however, his Body was ſo beat and torn upon the Rock, that he was not able to ſtir for the ſpace of a fortnight.

As ſoon as he was recover'd again he was commanded out to his old trade of Fiſhing, by which means he had one day an opportunity of informing himſelf of ſome *Engliſh* Ships that were coming that way; and as he had (no doubt) a very longing deſire to get out of this miſerable Bondage, ſo he determin'd to try if he could not accompliſh it at this time: For that purpoſe being upon the watch, he 'ſpied the *Engliſh* Ships ſailing along at a good diſtance, but concluding that they would put in at St. *Sebaſtian* to refreſh, he ſet all the *Indians* aſhore that he had with him upon ſome plauſible pretence, and having the Wind fair, he hoiſted Sail all alone, and directed his courſe towards St. *Sebaſtian*. And he was now even within ſight of the Ships, when a contrary Wind blew ſuch a Storm that he was forc'd clear away, his Boat driven upon the Rocks of an adjacent Iſland, and daſh'd all to pieces, whilſt he himſelf was little better than ſo, by the rude blows he had againſt thoſe Rocks; but making a ſhift to get to the Shore, he lay here upon the Iſland three whole days without the leaſt nouriſhment, and here he muſt have lain perhaps till his Wounds and Hunger together had kill'd him, if the Canoes the Governour had ſent out to purſue him had not by chance landed at this place, and found him in that helpleſs condition.

Endeavours to make his eſcape.

His diſappointment.

His Entertainment when he was brought back was ſuch as was to be expected from ſuch an Attempt; he was led with his Hands bound behind him, all the Town rail'd at him and call'd him *Runaway*; the Governour, after a cholerick reception, commanded him to Priſon, and gave order how he ſhould be treated there; for a fortnight he was manag'd more like a Dog than a Man, he lay upon the bare Ground, and was fed with nothing but *Caſſavi-meal* and *Water*.

Condemn'd to be hang'd.

After this Exerciſe in Priſon, he was condemn'd to be hang'd as a *Renegado*, and was brought out of Priſon in order to his execution; but in his way to the Gallows going along by the *Jeſuites College*, all the Fathers came forth in a body, and carrying a Crucifix along with 'em, they preſented it to the Governour as a Symbol of Compaſſion, and at the ſame time falling on their Knees before him, beg'd the Life of the poor Malefactor: At their requeſt he was ſav'd, but remanded to Priſon, and after having been mortified there for three days, he was brought out into the Marketplace, and there whipt with Cords till his Skin was fetch'd off from Head to Foot, or (to uſe his own expreſſion) *till he had not a ſpot of Skin remaining upon all his Body*.

Sav'd by the Jeſuites.

Cruelly us'd in Priſon.

This Puniſhment over, he was carried to Priſon again, and treated there both as to Diet and Lodging as before, the effect of which was, that a Body ſo bruis'd and raw as his was, with lying on the bare Ground quickly corrupted, and the manifeſt ſigns of Putrefaction appear'd in Vermin and other horrible inſtances.

1593.

Sent to the Sugar-mill.

When he was ſo far recover'd as to be able to attend Work, he was ſent to the Sugar-mill, that ſoft, lazy, pleaſant Poſt, in which he had enjoy'd ſo much eaſe before, that to be rid on't he threw himſelf into the horrours of a Wilderneſs: To prevent his running away now, they faſtned an Iron Weight of thirty pound to his Leg, and put him under the government of a man who never met him but he baſtinado'd him, whether there was reaſon for it or no; a man that never ſtood to conſider Faults, nor enquire into the Merits of a Cauſe, but took a pleaſure in puniſhing, and diverted himſelf with Cruelty. Often he complain'd to the Governour of the barbarous Practices of the Factor, and ſhew'd him the marks of his cruel hand in Scars and Bruiſes, with which his whole Body almoſt was cover'd, but he had now no more Compaſſion for him, and ſeem'd to abandon him to the Tyranny of that Officer.

Stabbs the Factor, and runs away.

At laſt, when he had ſuffer'd nine months Oppreſſion of this nature, and ſaw no hope of releaſe, but by a bold and cloſe ſtroke of his own, he determin'd to make it, and rather choſe to kill the Factor than ſuffer himſelf to be kill'd by him; and that barbarous man himſelf ſhortly after gave him both the Opportunity and the Motive to put this violent Reſolution in practiſe, for as *Knivet* lay aſleep in the Sugar-houſe the Factor comes in, and with a Cudgel ſtrikes him a ſound blow over the Ribs, with that he ſtarted up, and ſeeing him ready to repeat his ſtroke, he catch'd up a Knife, and giving him two or three ſtabbs, got off, and made the beſt of his way into the Woods: Here he wander'd up and down, wiſhing ſome Lyon or Tyger to come and devour him, rather than fall into the hands of the *Portugueſe* again; and 'twas in the midſt of his moſt fearful thoughts of this matter that he heard a great noiſe of People in the Woods, which put him almoſt beſides himſelf, he believing them to be his Purſuers.

His eſcape from thoſe that purſued.

As the Noiſe encreas'd ſo did his Confuſion; ſometimes he ran and ſometimes he ſtood ſtill to hearken, but at laſt perceiving them to come nearer and nearer, and finding a neceſſity of ſome very ſecure Shelter to be gotten that very moment, he look'd about and 'ſpied a *Caravata* in a Tree, which is a ſort of buſhy ſtuff compos'd of thick long Leaves, and as big as an Eagle's Neſt, into which he got and lay very cloſe and ſtill; but he had not been there above a quarter of an hour before the Tree was compaſs'd about with *Indians* that were ſent to ſearch for him; they knew nothing of his being there, but ſeeing it appear like a place proper enough for hiding, they ſhot a good many Arrows up into the Tree, and when they had done that (no body crying out) they went away.

Poor *Knivet* was ſo terrified with this, that he kept in his Neſt two days and nights, in all which time he eat nothing, ſo that when he came down he was in a very weak and faint condition; but as well as he was able he directed his courſe to the Sea-ſide, and went along the Shore, in which march he found two or three *Savages* lying there aſleep, with their Fiſhing-tackle by 'em, and ſome little matters of Proviſion; this was ſo ſeaſonable an occurrence to a man ready to be ſtarv'd, that it had been a fault to have neglected relieving himſelf by it, but he did it very modeſtly, and never wak'd the *Savages* to tell 'em any thing either of the Virtue or Vice of what he had done.

A little farther he met with another *Savage* aſleep, whom (upon a ſtrict obſervation) he knew very well to be one of his fellow Slaves, and him he made bold to awaken, to enquire into the reaſon and manner of his coming thither; and truly, upon comparing notes together, their Caſes were juſt alike, for he had ſhed Blood too, and was a *Renegado* as well as *Knivet*, and durſt no more go hence than he, ſo that the likeneſs of their paſt circumſtances was an Inducement to 'em to ſeek their Fortunes for the future together. And this conjunction was ſo much the happier on *Knivet*'s ſide, in that this *Savage* was a great man in his Country, and beſides of wonderful honeſt Principles, inſomuch that the other declares he never met with truer friendſhip from any than from him.

Solamen miſeris ſocios habuiſſe dolorum.

Theſe two Wanderers (having adjuſted the matters of their Courſe) ſwam over from the Iſland to the Main, and came both very feeble and weary aſhore, for the Arm of the Sea was at leaſt two miles wide: Now they came out into a horrid Wilderneſs, where Lyons and Tygers and fearful Serpents were very common; their Food was wild Honey and Palmetoes, and a ſort of Snakes which the Cannibals call *Boaeyna*.

1593.

A terrible Journey.

When they had travel'd here thirty ſeven days, they came out into an open champion Country, and at laſt reach'd a place, the proſpect of which *Knivet* ſeem'd to know; upon conſideration he found it was *Pianita*, (the Town of the *Pories*) where he had been ſo well receiv'd before, and his old Hoſt was no leſs glad to ſee him now alſo. Here he told 'em the cauſe of his coming amongſt 'em, with all the Barbarities the *Portugueſe* had exercis'd upon him, and this, together with ſome Perſwaſions to renounce the Alliance and Friendſhip of the *Portugueſe*, wrought ſo far on them, that they reſolv'd with one conſent to break off from them, and defend both themſelves and him againſt 'em.

And this Reſolution 'tis poſſible they had maintain'd, had not ſome of their Neighbours (that were fond of the *Portugueſe*) practis'd with 'em, and inſinuated a better Opinion of that People into 'em, but they cried up the Bounty and other good Qualities of the *Portugueſe* at ſuch a rate, that the others believ'd what they ſaid to be true; and therefore, to gratifie ſuch a People as them, poor *Knivet* was deliver'd bound into their hands, and ſo preſented to his old Maſter the Governour's Son, who was come into thoſe parts to buy Slaves.

'Tis true, the malicious Neighbours had told Tales, and inform'd the *Portugueſe* that *Knivet* was at the *Town* of the *Pories*, and tis certain alſo that Meſſengers were ſent to *Pianita* to demand him, before the *Pories* knew any thing of that Information; ſo that it muſt be granted 'twas a ſort of a Surprize upon 'em, but yet that will never excuſe their Infidelity and Breach of Promiſe.

Knivet is brought to his Maſter.

Knivet being brought before his Maſter, was now under an abſolute neceſſity of ſubmitting to all Conditions impos'd upon him, in order to the ſaving of his Life; 'twas in his power to chuſe whether he would go home and be hang'd (for that muſt be the leaſt of his Fate) or take upon him to do the Work enjoyn'd him by his Maſter, and which he had ſome reaſon to believe would not be very eaſie; however, this being (at leaſt to preſent view) more eligible than paſſing immediately into the hands of an Executioner, he choſe that part, and ſtood to his Maſter's pleaſure.

Goes another Journey.

Accordingly he was diſpatch'd (with ſome few *Savages* in company) into a certain Country of *Cannibals*, to traffick for Slaves, and a diſmal Journey he had on't for 25 days together, over Woods and Mountains, and in continual Dangers by fierce and ravenous Animals; at laſt they came to a very fair and broad River, upon the Banks of which the Town (where they were to trade) was ſituated, and having got a Canoe, as they were ſwimming down the River they overtook another Canoe in which was two of the Natives: Theſe *Savages* were infinitely aſtoniſh'd to ſee *Knivet* in his *Portugueſe* Habit; they gaz'd at him with a ſtrange eagerneſs, and ſeem'd doubtful whether they ſhould eſteem him a Man or no: And truly *Knivet* for his part was in no leſs ſuſpence about them, for they were all over cover'd with Feathers, and look'd more like Birds than Men, and if they had had Tails, might well enough have paſs'd for a couple of great Fowl. In ſhort, 'twas impoſſible to ſee of what Complexion they were, except by ſome few places in their Legs; they had beſmear'd themſelves from Head to Foot with a ſort of viſcous Gum, and laying their Feathers on upon that, they ſtuck ſo cloſe that no body could be ſure (at firſt ſight) that they did not grow there.

Strange Habits of the Savages.

After each Party was ſatisfied with looking, (which was no little while firſt) one of *Knivet*'s *Savages* which was of that Country was commanded to tell 'em the deſign of their coming, and to deſire 'em to give notice of it at the Town, which they did very willingly, having been gratified with ſome little Trifles.

About two hours after came forth a body of at leaſt five hundred of theſe feather'd Animals, leaping and ſinging, and ſhewing themſelves extreamly glad of the coming of theſe Strangers to their Town; and when they had brought them thither, all the reſt came to receive them, and expreſs'd their Joy in the like manner. *Knivet* was entertain'd with a mighty deal of Ceremony, led from Houſe to Houſe, and had long Speeches made to him by all the principal Men; and when they came to the main buſineſs of dealing for Slaves, he ſucceeded ſo well in it, that he bought no leſs than ninety.

This Affair over, he return'd to his Maſter at *Ilha Grande* with the Slaves he had gotten, and under his protection, and his company, went home again to the Governour, who had now loſt all ſentiments of Diſpleaſure and Revenge, and was become mighty full of Care and Fear for him, leſt ſome unhappy Accident or other had betided him in his Rambles. And now he was advanc'd to a Poſt in the Sugar-mills ſomething like, and brought him in ſome profit, for in the ſpace of a Twelvemonth he had laid up two hundred Crowns.

Knivet in a better place.

1593.

From this good and credible place (by that time he was come to taſt the ſweetneſs of it) he was forc'd away by a War which broke out between ſome of the *Indians* which were Friends and Allies of the *Portugueſe* and others the moſt mortal Enemies of both.

He goes to War with the *Portugueſe*.

The *Portugueſe*, in conjunction with other *Indians*, rais'd an Army for the defence of their Friends, which march'd under the command of the Governour's Son, and *Knivet* was order'd to make one of the Company. To tell all the Difficulties and Terrours of this Journey would be a Work too tedious and irkſom; ſometimes they waded thro' Rivers, march'd thro' marſhy and muddy Grounds, croſs'd ſteep and ragged Mountains that lifted up their Heads into the middle Region of the Air; many times they were pinch'd ſeverely for want of Food, and upon this ſcore, together with their conſtant tedious Marches, the whole Army was much enfeebled, and abundance quite worn off their Legs: They had ſeveral cruel Diſtempers riſe amongſt 'em too, but principally amongſt the confederate *Indians*, who therefore cried out of Spirits and Hobgoblins that flutter'd about and tormented them at that rate; but the truth on't is, that they died chiefly (as 'tis common in thoſe hot Countries to do ſo) of exceſſive Sweating and Faintneſs, together with the Worms breeding in the Fundament and conſuming thoſe parts. The Remedy the *Indians* uſe for this is only to take Slices of *Limons* and *green Pepper*, and put it into their Fundaments, and with this they generally perform the Cure.

Difficult paſſage.

Diſtempers in *Braſile*.

Venomous Snakes.

But at one particular Stage in their Journey they were mightily troubled with a ſort of very poyſonous Snakes that were all about in a Bottom where the Army encamp'd; they kill'd about 600 of 'em before they could free their Lodging for that night, and yet they had no more miſchief done than only the loſs of an *Indian* who was bit by one of 'em; this poor man, as ſoon as ever the Wound was given, ſwell'd violently, and the Blood guſh'd out of his Eyes and from under his Nails, and in that condition he died.

Bad Fruit.

In another place they were much more endanger'd by a kind of Fruit, which was very pleaſant to the taſte and as pernicious other ways: Here the whole Army, both *Portugueſe* and *Indians*, were ſick, and *Knivet* ſays, for all that he knows had periſh'd, had it not been for a piece of Unicorn's Horn (as he calls it) which one of the Company had by him. Their beſt Food in this march was Pines, Palmetoes, and wild Honey, and ſometimes a little *Guiney*-Wheat and Potatoes, but theſe things were but ſeldom to be gotten neither, their way lying thro' more rough and unfruitful places; 'tis a ſign they were hard put to it for Victuals, when they eat up all their Leather Targets by the way, nay, the very Cowhide that cover'd the Hoſt and the ſacred Utenſils was devour'd too, and had thoſe Inſtruments been made of Leather, they would have been gone as well as the reſt: But 'tis a wonder that ſince the preſence of the Hoſt has produc'd ſo many miraculous Effects, it ſhould not do ſomething here, to keep theſe good *Catholicks* from coming to ſuch Extremities as oblig'd 'em to eat up the venerable Hide that cover'd it from the Injuries of the Weather: We are told, that the Beaſts themſelves have come out of the Woods, and the Fowls down from the Trees, to pay their Adorations to it: Ah, how happy and ſeaſonable would it have been for a company of wild Hogs or good fat Deer to have come and worſhip'd the Hoſt at this time, and have given the *Portugueſe* an opportunity to cut their Throats! But there were Infidels and our Heretical Countryman (the Spawn of *Luther*) in the Company, and who knows what an obſtruction their preſence might be?

Scarcity of Proviſion.

Now this Army (you'll ſay) was in a fine condition to encounter a furious Enemy, they had nothing to defend 'em from a ſhowre of Darts and Arrows, for their Targets (which ſhould have been upon their Shoulders) were in their Bellies; and certainly they had been in a hopeful caſe if their Enemies had not been all ran away; but when they by ſo many long and horrid Marches had at laſt reach'd their Town, they found no body there: Perhaps there was ſomething extraordinary in this, the wicked Spirits of that Town ſmelt what was coming, and in a ſtrange hurry were forc'd to fly the preſence; which hapned well enough for the *Portugueſe*, who elſe in all probability muſt have fled from theirs. The *Tamoya's* (for ſo were their Enemies call'd) had left ſome ſtore of Proviſions behind 'em, which they took poſſeſſion of, and beſides reap'd their Harveſt of *Mandioque* for 'em. They ſtaid here two months, the moſt part of which time was

1593.

imploy'd in nothing elſe but providing a ſtock of Victuals for their return. By this Town is a Bog, which after Rains abounds with Frogs that are a very good Meat and much eaten; there are a great many large Snakes too, which devour thoſe Frogs, and are themſelves devour'd by any that can catch and kill 'em, being a ſort of Food ſufficiently eſteem'd both by the *Indians* and *Portugueſe*, but it ſeems they are bold fierce Creatures, and will both aſſault and purſue a Man, for one of the Company that went out one night a Frog-catching was like to be catch'd by one of theſe Snakes, it was a very great one indeed, at which he came in not a little ſcar'd; upon this *Knivet* (who had more courage) went out with a good Club, and coming to the place where the Snake was, ſhe immediately quitted the Prey ſhe had in her Mouth, and raiſing up her Skin, like the Scales of a great Fiſh, and opening her Mouth very wide, ſhe put her ſelf into a poſture to leap at him, but he by one ſound and fortunate blow prevented that aſſault, for hitting the Snake upon the Head, he quite cruſh'd her Skull, and tho' ſhe flounc'd about and made a great noiſe in the Water for ſome time after, yet entirely diſpatch'd her by that means; this Snake he dragg'd home, and cut her out into quarters for the Captain and the principal Officers: But notwithſtanding, this Snake had very near coſt him his Life, for it being his turn to be Centinel that night, one of the Officers reflected upon him for his negligence, and aſſerted, that he had been call'd to the Watch while he was away; upon this, tho' 'twas falſe (and prov'd to be ſo) yet ſuch a Quarrel aroſe between 'em, that *Knivet* uſing his Sword, left his Adverſary for dead upon the ground.

Furious Snakes.

Knivet kills one of 'em.

Condemn'd to die.

And now he was bound and placed in the Stocks, whilſt Articles were drawn up in form againſt him; more than this, the Frier was ſent to prepare him for another World, and tho' the good Father was ſo charitable as to make two Viſits to him, exhorting him to Confeſſion, yet not a bit of Sin could be got out of *Knivet*, who had (as he ſaid) confeſs'd them all to Heaven before. In ſhort, he was led to the place of Execution, made his Speech to the Company, and expected the fatal turn, but the Officers (who had many of 'em a kindneſs for him) hapned to fall into a Debate among themſelves what Authority the Captain had to put him to death, eſpecially ſince no Murder was done, neither was he impower'd by any Commiſſion from the King; and truly upon conſideration they found he had ſo little, that they commanded the Execution to be ſtaid, and went away to the Captain to intercede for the Criminal's Life; and tho' he refus'd to grant it, yet they were reſolv'd to have it, and ſo accordingly by their own Authority (in ſpite of all the Captain's Proteſtations to the contrary) they return'd and diſcharg'd him.

His eſcape.

When the Army had ſtaid in this Country ſome three months longer, they began to march homewards again, and *Knivet* addreſs'd himſelf to the ſeeking new Adventures; to go home with them would be to go to a certain Death, (if at leaſt any could be certain to ſo ſlippery a fellow) and therefore he beg'd leave of the Captain to go ſeek his Fortune: This was more eaſily granted him than his Life before was, for as he was not fond of the Captain's company, the Captain was not much concern'd about his, but even gave him liberty to diſpoſe of himſelf how and where he would.

He undertakes a new Adventure.

Upon this permiſſion *Knivet*, with twelve more of the *Portugueſe* in his company, took leave, and began their Journey: They went down the River of *Jaiero* in a Canoe which they made of the Bark of a Tree, and coming to a certain Village, they landed there, intending for the future to go altogether by Land. Here were no Inhabitants at all, but it ſeems the *Indians* came hither ſometimes to fiſh, for there they found good ſtore of earthen Pots, and in 'em Lines with pieces of Gold tied to them, which were uſed for that purpoſe; likewiſe here they met with many ſorts of very fine and beautiful Stones, green, red, blue, white, others very glittering, and as clear as Cryſtal. They concluded by theſe tokens that they muſt be very near to *Potaſin*, and therefore travelling South-weſt from hence, they came into a ſort of a brown barren Soil full of Rocks and Hills, and yet many ſmall Rivers water'd it too; here they found lumps of Gold as big as Hazle-nuts by the ſides of theſe Rivers, and great quantities of fine Duſt of the ſame Metal.

After this they came out into a fair open Country, where they had a proſpect of a wonderful Mountain at leaſt ten days Journey from 'em; it ſhone with a dazling luſtre, and when the Sun came about, ſo that the Beams were reflected off from thence towards 'em, they declare it was very troubleſom travelling againſt the light of it: 'Tis pity they had not told us what it was that made this Mountain to reflect ſuch a light, for it's hardly to be ſuppos'd that Men ſhould be ſo ſtupid as to paſs by and not enquire into the cauſe of ſo remarkable a *Phænomenon*, tho' it's not improbable that the vaſt numbers of thoſe fair bright Stones before mention'd might be the reaſon of ſuch a ſhining.

About the foot of the Mountain they found abundance of the *Tamandro's* or *Ant-bears*; this Animal is as big as an ordinary Bear, and like it in the Body, but it has a Snout of almoſt a yard long, and a very great Tail all black and grey; they have the Name of *Ant-bears* from their ſo conſtant devouring thoſe Inſects, for they thruſt their Tongues into the Ant-hills, and then when the Ants are ſettled in great heaps upon them, they draw them into their Mouths, and ſo ſwallow them all down. Theſe *Tamandro's* are good Meat, and our Travellers ſerved themſelves of them very conſiderably for the Fleſh-part of their Proviſion.

They went along by this Mountain at leaſt twenty days before they could find any paſſage over it, but at laſt they did find one, tho' not over, yet under it, and that by a River that ran quite thro'; where this River went, or whither 'twould carry 'em, what Vortexes and Whirlpools, what Cataracts and vaſt falls of Water over Rocks and Precipices there might be, they knew not, but yet they reſolv'd to attempt a paſſage this way.

They go down the River under the Mountain.

Now who would not think that theſe Men were in ſome very great diſtreſs to find out Death and Danger, when they went to look for't in a River that ran under a mighty Mountain, and (for all that they knew) down into the great Abyſs? Or had they been ſure to avoid all ſuch Dangers, yet King *James*'s Reaſon againſt ſhooting *London-bridge* would have prevented ſome People perhaps from engaging in ſuch an Enterprize; for ſince the Mountain muſt fall one time or other, 'twas not impoſſible it ſhould tumble down upon their Heads: However, they put that to the venture, and making 'em a ſort of a Boat of Canes, between three and four yards wide, and ſix yards long, into it they went, carrying ſome ſtore of Proviſion with 'em, becauſe they could not tell how long 'twould be before they came out again; and indeed *Knivet* plainly declares, he does not know how long they were in that horrible paſſage, he ſays they went in of a Morning and came out again of a Morning, but that's all he knows of the matter: Now this muſt evidently be from one of theſe two cauſes, either they ſlept a great while, and ſo loſt time that way, or elſe they were all the while in ſuch dreadful darkneſs that they could never diſtinguiſh Day from Night: However, he ſays, when they had gone quite thro' and ſaw once more the chearful Light, and the face of the ſuperiour World, they were wonderful glad; which any one will eaſily believe, that thinks what 'tis to ſail under the bottoms of Mountains. And now ſeeing Houſes all about 'em, they determin'd to quit their Boat, and go and throw themſelves upon the mercy of thoſe *Savages* that dwelt there, and learn of 'em how to ſteer their Courſe for the future.

Taken by the Tameyes.

So they made up towards the Houſes, and as ſoon as ever the *Savages* eſpied 'em they came out full drive to meet 'em, whooping and hollowing all the way. Having taken 'em, they preſently bound their Hands, and tied Cords about their Middles, and ſo led 'em away to their Town. Being brought thither, two or three grave old Men came to examine 'em of what Country they were, and the *Portugueſe* all confeſs'd directly what they were, but *Knivet* ſaid he was a *Frenchman*; and it had been well for them if they had been *French men* too, for they were not aware into what Country they were rambled, nor into whoſe hands they were fallen; theſe *Savages* were the *Tameyes*, their moſt irreconcilable Enemies, and to whom nothing in the World was more pleaſant than to ſhed the Blood of their Nation.

Within two hours after this Examination and Confeſſion, Execution came on; one of the *Portugueſe* was led between ſix *Savages* out into a Yard, and then an old Man came to him and bid him look about him and take his laſt view of all things that pleas'd him, for he ſhould now ſee 'em no more; upon this a luſty young *Savage* with a great Club advances up to him, *Doſt thou ſee me?* (ſays he to the poor trembling *Portugueſe*) *I am he that has kill'd many of thy Nation, and will now kill thee*; and as ſoon as the word was out of his Mouth, with two ſound blows he diſpatch'd him: When he was dead they held him over the Flame, and ſtript off all his Skin, and then having taken out the *Viſcera*, (which they gave to their Women that ſtood by) they cut out the Body into Joynts, and ſent it about from Houſe to Houſe as far as 'twould go. Thus they ſerv'd all the twelve *Portugueſe* one after another; they made ſo many Feaſts of them, and were merry to the higheſt degree, doing nothing but drink,

Manner of their Executions.

dance,

1593. dance, and hollow Night and Day as long as theſe Dainties laſted.

Knivet ſav'd.

When *Knivet* had ſeen all the *Portugueſe* thus devour'd, he expected that they would be very quickly for taſting a piece of a *Frenchman* too, but truly when they had done all their Sports they came to him, and told him he ſhould not need to fear the like treatment that the *Portugueſe* had, for as for all his Countrymen they had ever been their Friends, but the *Portugueſe* had always been their Enemies and made Slaves of 'em, and 'twas for that reaſon that they had dealt in this rigorous manner with them.

Thus our *Engliſhman* (tho' under the notion of a *Frenchman*) liv'd not only free from all fear and danger, but alſo in good credit and eſteem amongſt 'em; and he was ſerviceable to 'em upon many accounts, he taught them how to encamp, to put themſelves into order of Battel, to fight regularly, and ſeveral other things relating to Military Diſcipline; they never would go out to Battel without him, and in the time that he was with them they gain'd ſeveral Advantages over other Nations of *Savages* that came to diſturb 'em. 'Tis the Cuſtom of theſe barbarous People to go roving about, whole Nations of 'em together, from one Quarter to another, and that as often as they have a mind either to change their Habitations or make War with any other People whom they are jealous of, or ſuſpect will be their Enemies.

Tamoyes injure the Allies of the *Portugueſe*

And *Knivet* now found ſomething of an Inclination in theſe *Tamoyes* to leave the Country where they dwelt at that time, and remove into thoſe parts of the Continent where they could have Trade with the *French*, and where they had alſo formerly liv'd; he did not ſtifle this motion, but endeavour'd to promote it as much as he could, for his Fortunes ſeem'd to be inſeparably link'd to theirs, and therefore if he went along with them into thoſe parts, there was ſome hope of his ſeeing *Chriſtian* Faces again, and getting an Opportunity to make his eſcape, but if they ſtaid here thoſe hopes were for ever loſt, ſince they would never care to part with him. In ſhort, after he had given them an account of the place he fix'd upon for their ſettlement, and the probabilities of a good Commerce with the *French* there, they unanimouſly reſolv'd to relinquiſh the Country they were now poſſeſs'd of, and go and plant themſelves there; ſo they march'd away in a body to the number of thirty thouſand, thro' Woods and Deſarts, over Mountains, Hills, and Rivers, ſometimes Northward and ſometimes Southward, ſhaping their Courſe as Neceſſity and Policy together directed them, and had they not gone to War with another Nation of *Savages* by the way, they might probably have finiſh'd their intended Journey with ſafety and quiet enough, but engaging themſelves againſt a certain People who were the Allies of the *Portugueſe*, they brought a compleat Ruin upon themſelves; for thoſe People being conſiderably worſted by 'em in one Battel, went and crav'd Succour of their Friends the *Portugueſe*, who quickly rais'd an Army, and ſent it out under the Command of the Governour's Son, he with whom *Knivet* went before upon the like Expedition, and who had ſo many times been his Maſter; and theſe much better Soldiers, with their Martial Furniture, and eſpecially their terrible great Guns, ſo daunted the Army of the *Tamoyes*, that they were like ſo many Men without Life or Soul, and not at all pretending to diſpute the point with 'em, ſubmitted themſelves to their Mercy.

Portugueſe kill and captivate 'em.

The Captain was aſtoniſh'd to find his old Servant *Knivet* alive amongſt theſe People, but having examin'd him what was become of the twelve *Portugueſe* that travel'd with him before, and finding the *Tamoyes* had ſacrifice'd 'em, he preſently gave Orders to his Soldiers to maſſacre all the old Men and Women, and bind the reſt for Slaves. Thus was the whole Nation in a manner cut off, 10000 kill'd upon the ſpot, and the remaining 20000 led into a Captivity worſe than Death.

A valiant Savage King.

'Tis true indeed, that there was yet remaining a ſmall Town of this People, as they accidentally diſcover'd afterwards; for going out upon a new Expedition, againſt another ſort of *Savages*, that were come to take up their Dwellings in ſome of thoſe places where the *Tamoyes* had been before, they found a Town of theſe *Tamoyes*, who had liv'd by themſelves in a Mountain ever ſince the firſt Conqueſt the *Portugueſe* had made of 'em. Their Captain (*Knivet* ſays) was at leaſt 120 years old, a Man of wonderful Strength and Stoutneſs for his years, and of a very daring Courage; he with his People joyn'd with the *Portugueſe*, in their Deſign againſt theſe new Enemies, and being come in ſight of their Army, he runs into the thickeſt ranks of the *Portugueſe*, and bid them that had never ſeen him obſerve him now, and follow him into the Battel, (if they durſt) where they ſhould ſee his Valour: When he had ſaid this he took his Bow and Arrows and charg'd into the very middle of the Enemy, of whom he kill'd three preſently, and was himſelf ſhot with one and twenty Arrows, which remain'd ſticking in his Body. Before he died, he deſir'd to be inſtructed in the *Chriſtian Religion*, and to have Baptiſm adminiſtred to him, both which being done, he expir'd, calling upon God for Mercy in a very devout and fervent manner. 1593.

The *Portugueſe* had no great trouble to put an end to this War, for the Enemy never ſtood to joyn Battel with 'em, but ran all away, and they not thinking it worth their while to purſue 'em, return'd home.

Knivet 'ſcapes to *Angola*.

After this *Knivet* liv'd ſomething better with the Governour than before, but yet he was grown ſo horrible weary of this Country, where he had met with ſo many Diſaſters, and ſuffer'd ſo many Miſeries, that he reſolv'd once more to attempt the making an eſcape from it; and his Plot ſucceeded, he got on board a Ship, and came to *Angola* in *Africk*, from whence he went up the River of *Guanſa* to the City of *Maſangano*, intending to ſerve there as a Soldier for ſome time, and then travel thro' *Ethiopia* into *Turkey*, and ſo home.

Is taken and ſent back to *Braſile*.

But it ſeems there was another Journey cut out for him at this time, and inſtead of making a Viſit to *Preſter John* or the *Grand Seignior*, he muſt once more go and ſee the old Governour in *Braſile*. In plain terms, he was ſeiz'd here by a Purſuivant, carried away Priſoner to *Angola*, and from thence to St. *Sebaſtian* to his old Maſter again. The Governour receiv'd him after another manner now than he did the firſt time of his running away, he puniſh'd him only with Jokes and Jeſts, bid him welcome from *England*, and ask'd him how all his Friends did there; he order'd the Fetters to be taken off from his Legs, gave him good Clothes, and us'd him kindly.

Some time after this (by a favourable turn) *Knivet* had the comfort of breathing the Air of a Chriſtian Country again, for his Maſter was recall'd from his Government in *Braſile* home to *Liſbon*, of which (we may be ſure) he was not a little glad.

Goes to *Fernambuco*.

They ſet ſail from St. *Sebaſtian* for the City of *Fernambuco* in *Braſile*, where they were to ſtay ſome time, and in this Courſe they ſo wonderfully eſcap'd a Shipwreck, that hardly any Deliverance of that kind could be more ſtrange and unexpected: They got aſhore upon this Coaſt, where they had been expos'd to ſo much danger, and made the reſt of their Journey to **Fernambuco** by Land.

Goes to the Wars at *Rio Grande*.

While they lay at this place, *Knivet* went to the Wars at *Rio Grande*, for that place was beſieg'd by a very potent *Indian* King, with an Army of above 40000 Men. The *Portugueſe* ſet upon 'em unawares, and having ſurpriz'd 'em in the midſt of their Mirth and Feaſts, made ſuch a ſlaughter, that they were glad to propoſe Terms of Peace; the Conditions were, *That all their Priſoners ſhould be releas'd, and they ſhould be permitted to live in their own Country as Freemen, only acknowledging a ſubjection to the King of* Spain, *and upon this ſcore they would all of 'em, both King and People, be baptiz'd.*

The *Portugueſe* gladly accepted of theſe Conditions, and ſo Peace was made, and one of the largeſt Provinces of all the North of *Braſile* was added to that Crown. The Soldiers got very rich Plunder at this Conqueſt, they found Diamonds, Rubies, and Saphires in ſome of the Villages that ſtood by the Sea, and *Knivet* for his own part tells us, that he was above five hundred Crowns the better for this Expedition.

Sails to *Liſbon*.

When this was over, he return'd to *Fernambuco* to his Maſter, and from thence in a ſhort time ſail'd with him into *Portugal*. He liv'd in the Governour's Houſe at *Liſbon* in pretty good ſort for the ſpace of nine months; but then falling ſick, he was ſo far neglected by his Maſter (who certainly ow'd him more care and attendance) that he had ſuffer'd the laſt Extremities if a certain charitable *Engliſh* Nun had not given him a ſeaſonable Relief; and 'twas by this good Woman's means that (as his Sickneſs grew more and more violent) he was remov'd into the Royal Hoſpital, where, he tells us, the *Portugueſe* Doctors bled him twenty one times, and at laſt compleatly recover'd him; and then when the Phyſicians had done with him, his kind Friend the Nun brought him out again with Money in his Pocket.

Becomes an Interpreter to Merchants.

Now *Knivet* thinking all manner of Obligations to his Maſter for the future were utterly cancel'd by this his cruel neglect of him, did not go back to his Houſe, but ſet up for getting his own living; and the courſe that he took for it was, to be an Interpreter to Merchants; in this way he got as much buſineſs as ever he could turn his hand to, and maintain'd himſelf very well: Abundance of theſe Merchants (finding his fitneſs for buſineſs) would have imploy'd him in their Concerns in *Braſile* and other parts of the *Weſt-Indies*, but he who had liv'd in that

1593.

Country but too long already, and had now a mind to have one look more at *England*, refus'd their Offers, and waited for a favourable opportunity to take that view he ſo much deſir'd; but the Date of his baniſhment from home was not yet out, his Fortune muſt yet have another unhappy turn, and Slavery that left him in *Braſile* meet him once more in *Portugal*. To be brief, his old Maſter, that found he would not come at him, incens'd the Viceroy againſt him, and had him laid in a Dungeon, where he was kept with ſo ſhort an Allowance that his manner of living was next door to ſtarving: In this Diſtreſs he continued for ſome time, but how long we are not certain, as neither alſo how he was deliver'd from thence, but we know by many intimations that he did undoubtedly ſee *England* again, and rejoyce with his Friends, after all the various Scenes of his diſaſtrous Fortune.

Knivet caſt into Priſon.

Having run over the Hiſtory of this Man's Adventures, we are now to ſee the Obſervations he has made upon the ſeveral Countries he travel'd thro', the varieties of People and Nations, with as much of their Cuſtoms and Rites as were known to him, and (after all) thoſe Remarks which do more immediately relate to Navigation and Geography.

The Natives of *Braſile*.

As for the People of this mighty Country (*Braſile*) the firſt Nation he deſcribes are the *Petivares*, who dwell in the Northern parts of *Braſile*, between *Baya* and *Rio Grande*; they are not of ſo wild and barbarous a diſpoſition as many of the *Braſilian* Nations are, their greateſt rudeneſs lies in their preſerving thoſe two notorious Characters of wild and rude Men, which is going quite naked and devouring Human Fleſh; otherwiſe they are a People of decent and civil Manners enough: If you come to 'em as a Merchant, they'll traffick fairly with you; if as a Warriour and an Enemy, they'll fight with as much Generoſity and Courage. They are generally portly, of a good Stature, and of no bad Complexion; their Bodies are wrought all over with fine Works, and their Lips perforated with a Roebuck's Horn, to make room for a green Stone which is to be placed there; both theſe Ornaments (the latter at leaſt) ſeem to be peculiar to the Men, neither do they aſſume them till they are of age; but this green Stone in their Lip is ſuch a mark of Gentility amongſt 'em, that he that appears without it is reckon'd to be of the very Dregs of their Nation, and to have no fine Blood running in his Veins.

Polygamy.

They allow every Man to take as many Wives as he can get, but the Women can have but one Husband at a time, yet a Wife of one Man may be paſs'd off to another, if her preſent Husband gives his conſent to it in a publick Meeting. Theſe poor Women are in one reſpect meer Porters to their Husbands, for when they go to the Wars the others lug along all the Proviſion in Baskets at their Backs.

Cuſtoms of Childbed.

But they manage the matter ſtill more odly in another reſpect, for when they are deliver'd of a Child, and ought to have all the ceremony and attendance proper to a lying-in Woman, the Husband preſently lies down in the Hammock, (as if he had been brought to Bed himſelf) and all his Wives and Neighbours come about and ſerve him. This is a pleaſant fancy indeed, that the Woman muſt take all the pains to bring the Child into the World, and then the Man lie down and gruntle upon it! there's few Women in the World would like this, to loſe all the Privileges and Triumphs of that condition, and inſtead of being careſs'd and waited upon by the Men, preſently to become Nurſes or Goſſips to 'em themſelves; but the Cuſtom obtains among the *Petivares*, and their Women it ſeems don't diſpute it.

Superſtition.

The Men are ſo very ſuperſtitious, that all the while their Wives are with Child they will not kill any female Animal, Beaſt, Bird, or Fiſh, for they believe that if they ſhould, their own Child would certainly die.

When they go out a hunting at any time, and bring home ſome agreeable Prey along with 'em, they do, by making a Preſent of it to one of their Wives, ſhew which of the number they intend to lie with that night; ſhe that receives the Favour is not a little glad and proud on't, ſhe ſmiles upon the Gift as the happy *Sultana* does, who receives the *Grand Seignior*'s Handkerchief upon the like occaſion; away ſhe goes to the Water and waſhes, then ſhe comes home, and goes up into her Hammock, and commands all the reſt of the Wives to ſerve her; in ſhort, ſhe is ſole Empreſs of the Houſe (as well as of the Bed) for that day, and all the reſt are very punctual in their obedience to the Orders ſhe gives.

The *Petivares* are great Enemies to the *Portugueſe*, and certainly eat all the Priſoners they take; they that take 'em don't kill 'em, but give 'em to their Brothers or Friends to do it for 'em; and here 'tis a Fancy that theſe People have, to aſſume as many Names to themſelves as they kill Men.

Towns and Houſes.

As for their way of living, they have good large Towns of their own, and thoſe Towns good large Houſes, for they are 220 yards long; they are cover'd over with Palmeto Boughs, and have no manner of Partitions in 'em: They divide all their Grounds, and juſtly enough obſerve every man his proper limits.

Feeding.

They are not ambitious of high feeding, living moſtly upon *Herbs*, *Guiney-wheat*, and *Mandioque*; both Men, Women and Children waſh themſelves every morning, this is a thing they never omit, but whether there be any thing of Religion in it, or whether it be pure Decency and Cleanlineſs or no, is not certain.

The moſt remarkable Animals of this Province are the *Serpents* and the *Monkeys*; the Serpents are by the Natives call'd *Jebya*, they have four Legs and a long Tail like a Crocadile, and are preying ravenous Creatures like them; they lie very ſtill and cloſe upon the ground, and hide their Tails, that they may not be diſcover'd by them when they watch for Prey, and then when any Animal (that they dare ſeize on) comes within reach, they raiſe themſelves, and darting out a couple of ſharp Fins from the fore quarters, kill whatſoever they ſtrike.

Serpent *Jebya*.

Monkeys.

The Monkeys (which the *Petivares* call *Wariva*) are as big as an ordinary Spaniel, but very black, with a Face almoſt human, and a very long broad Beard; you ſhall ſee twenty or more of 'em together in a Tree, and one of the number ſhall walk up and down with his Paw upon his Beard, chattering and making a violent noiſe, whilſt all the reſt ſit mighty ſtill and quiet, liſtening to the Diſcourſe of that preaching Monkey.

The Tapoyes.

On the Coaſt betwixt *Fernambuco* and *Baya* dwell the *Tapoyes*, which Name ſignifies *Wild Men*, and therefore all the reſt of the Cannibals abhor that People and their Name, the *Wayanaſſes* only excepted, who are like the *Tapoyes* in their Manners, and conſequently don't ſo much deſpite the Name: And they very well deſerve to be call'd ſo upon this account, that they have no ſettled Habitations, but run up and down the Woods like the wild Animals; neither do they maintain any friendſhip or correſpondence with other People, but are at war with all, and their next Neighbours are ſure to be their Enemies, let 'em come where they will. They make holes in their Lips, as other Savages do, but they don't work their Bodies all over like the *Petivares*, tho' inſtead of that they beſmear 'em with a Gum, and then ſtick the Feathers of Parrats and other Birds upon 'em. They are a cowardly treacherous ſort of People, never coming out into the open Field to fight, but hiding themſelves in Holes, and behind Trees and Buſhes, till they have a fair opportunity to attack their Enemies with ſome conſiderable advantage; they don't value themſelves by their fighting, but by their running, ſo that he's the beſt Man amongſt 'em who (when he has done a miſchief) can ſcour faſteſt away. They eat Human Fleſh as well as their Neighbours, but they ſpeak a Language very different from all the other *Braſilians*. The Women here go out to War with their Bows and Arrows as well as the Men, and therefore if they can but run as faſt, are to be ſure as good Soldiers as they.

Topinaubazes.

From the River of St. *Francis* to *Baya de Todos Santos* dwell the *Topinaubazes*, which are like the *Petivares* in all points, as to Dreſs, Language, and Manners, this only excepted, that they let their Beards grow long, which neither the *Petivares* nor any other Cannibals do, but pull it quite away, and that not only from their Faces, but their Eyebrows and Privy parts alſo.

Waymores.

From *Baya* to the *Elews* dwell a barbarous and deſperate ſort of People call'd *Waymores*; they are very big luſty fellows, exceeding ſtrong and valiant, (or rather furious) not ever conſidering Danger or the hazard of their Lives, but will attempt any thing that lies in their way, tho' with ever ſo great an odds of Men. They have no Towns nor Houſes, the Woods and other Refuges of wild Beaſts are their natural Homes: They don't care where they come, (into what Province, or amongſt what ſort of Enemies) for they are ſo very ſwift of foot, that hardly any body can hurt 'em: No Lyon can devour its Prey more greedily than they do the Fleſh of Mankind, neither is any Swine more filthy and dirty than (for the moſt part) their Bodies are.

The Tomemynes.

The *Tomemynes* dwell about *Spirito Santo*, and have every way as much Spirit and Courage, but withal are much more like Men and true Soldiers than the *Waymores* are. They have many Towns, and thoſe ſtrongly wall'd and guarded too; their Houſes are cover'd over with Bark of Trees, and made with Canes like Hurdles, that they may have the conveniency of ſhooting out thro' 'em.

Knivet

The Portugueſe war with 'em.

Knivet went to the Wars along with the *Portugueſe* againſt theſe People, but he declares, that tho' they had a conſiderable Army, they thought every man to die there, the *Savages* aſſaulted 'em with ſuch a well-govern'd fury and ſo great a reſolution: While they were beſieg'd they would come and ſtand upon the City Walls, (painted all red and black, and beſides trimm'd with Feathers) holding in their hands Wheels ſet round with combuſtible matter, theſe they would ſet of a light fire, and waving 'em about their heads, cry out to the *Portugueſe*, *Louae cyave p m'm anc*, that is, *Even like this ſhall you be conſum'd.* One of them broke into the *Portugueſe* Army one day, and coming to the General, took him up in his Arms and in ſpite of all their endeavours ran away with him to the River, where he threw him in, and had certainly drown'd him, if a timely relief had not come: But at laſt they were vanquiſh'd, and great numbers of 'em kill'd and taken Priſoners, tho' they made the *Portugueſe* ſo much work firſt, that they would eaſily grant it was not a thing of trifling difficulty to conquer the *Tomomynos.*

The Waytaquazes.

The *Waytaquazes* inhabit about the North and South ſide of Cape *Frio*, in low marſhy grounds; they are bigger Men than the *Waymores* are, and wear long black Hair like them; their Women fight as well as the Men, and are accoutred with Bows and Arrows; they don't lie in Hammocks as other Cannibals do, but like Hogs, upon the Ground, round about their Fires. Theſe are a People too that are at War with all Nations, and eat *Spaniards*, *French*, *Portugueſe*, *Blackmores*, *Braſilians*, indifferently, according as they can catch 'em. When you take any of theſe fellows Priſoners, and bind 'em ever ſo faſt, (unleſs it be with Chains of Braſs or Iron) yet you muſt have a watchful eye upon 'em if you intend to keep 'em; for *Knivet* ſays, that thirteen of 'em were left thus in a Houſe by themſelves bound Hand and Foot, and yet when they came to look for 'em, they were all gone. This had not hapned if they had put out their Fire before they had gone away, but leaving that burning, the Priſoners made ſhift to roul themſelves to it, and ſo burnt aſunder the Cords that held 'em.

Eaters of all People.

Odd way of taking Sharks and Alligators.

Hardly any beſides theſe People themſelves do perhaps dare to make ſo bold with *Sharks* as they commonly will; they'll go into the Water to 'em, manage 'em till they have got 'em by the Tail, and then drag 'em along to the ſhore in that manner.

Knivet tells us of very great *Alligators* in this Country, he ſaw abundance that were ſeven yards long, and taking it all together, (the horrible Scales, the ugly Paws, and much more ugly Head of it) he believes it one of the moſt frightful Creatures that can be look'd upon. The *Portugueſe* are mightily for taking theſe Creatures, but they dare not venture to take 'em ſo as the others do the *Sharks*, that is, go into the Water and catch 'em by their Tails; they fiſh for 'em with a great Iron Chain and a Hook as big, which they bait with a Cock or a Hen or ſome ſuch Animal. The Teſticles of the *Alligator* (he ſays) are as good as any Musk in the World, and 'tis upon this account that the *Portugueſe* do fiſh for 'em.

The Wayanaſſes.

In the *Waytaquazes* Country the Mountains are ſo full of *Crablice*, that they are a bitter plague to all that live there; they ſtick in the Skin, and when they have once faſtned themſelves, there's no pulling 'em off again; therefore *Knivet* ſays, that when all other means fail'd, they were fain to make a Fire of Straw, and ſindge themſelves all over like ſo many Hogs, and by that means they were rid of 'em. This Country abounds with wild Hogs and a kind of wild Fowl as big as Turkeys call'd *Muta's.*

Topinaques, their ſtrange Cuſtoms.

The *Wayanaſſes* dwell eighteen leagues to the Southward of the River *Janero*, at *Ilha Grande*; theſe are People of lower Stature, as well as Courage, than any others we have deſcrib'd, but they have much more Humanity, and are not addicted to ſuch barbarous Practices as the moſt of their Neighbours are; they don't paint nor carve their Bodies, but the Women colour their Faces and Bodies too with a ſort of red, like Oker, which grows in a round God like a Bean, by this means their Faces (which are otherwiſe ſufficiently well-featur'd, and adorn'd with a good natural Complexion too) are rendred far from enticing, and in ſhort very ugly. Both Men and Women have their Hair growing long by their ſides, and ſhaven on the crown, like *Franciſcan* Friers; they are mighty admirers and takers of Tobacco, and think it not only the beſt thing their Country produces, but one of the greateſt Neceſſaries of Life; for, beſides its uſe in ſmoaking and chewing, they practiſe all their Chirurgery with it, and apply that alone in caſe of any external hurt whatſoever.

'Tis of them that the *Portugueſe* buy moſt of their Slaves, and if at any time they want, they come to *Ilha Grande*, where they are ſure to find ſome of the *Wayanaſſes* a fiſhing, who quickly go to their Towns and make proviſion for a Market.

Topinaques.

The *Topinaques* have their Quarters at St *Vincent*: The Women here do all paint themſelves with divers colours, and on their Heads they wear a thin Bark of ſome Tree, like a Ribbon. When they kill any Man they are all of 'em (univerſally) painted with a ſort of Fruit they call *Janipavo*, their Heads are ſtuck with Feathers, their under-Lips ſet with Stones, and having each of 'em a Rattle in their Hands, they dance for three days together: The Men will drink of a very filthy Liquor they prepare themſelves as long as they can ſtand, and if they are ever ſo much overloaded and diſorder'd by their Exceſſes, they take a Pipe of Tobacco, and pretend to be as eaſie and freſh again preſently as if they had drank nothing.

Pories.

The *Pories* dwell from theſe at leaſt a hundred miles, within the main Land; they are in ſtature and make moſt like the *Wayanaſſes*, which is ſhort, thick, big-bellied and broad-footed; their Complexion is agreeable enough, but their Temper and Qualities are of all the *Savages* the moſt commendable, for they will not go to war with any Nation that will but ſuffer 'em to live in peace; they chuſe rather to wear Clothes than to go naked, if they can but get 'em; and then they take no pleaſure in eating human Fleſh, neither do they make that their Food, but when they muſt do it to keep 'em from ſtarving; in ſuch a caſe, if they have a dead Man by 'em, they'll eat him.

There are abundance of Lyons, Leopards and Cats of Mountain in this Country; and for Vegetables, Pines, Cocao's, and Balſamick Trees, and theſe laſt in ſuch plenty, that for a Knife or a Comb you may have five or ſix gallons of Balſam.

The Molopaques.

After you have paſs'd the furious River of *Paraeyna*, you come into the Country of the *Molopaques*; theſe differ from all the *Savages* (that our Author had ſeen) in this point, that they have Beards like the Men of other Countries, whereas amongſt all the Nations of *Braſile* you ſhall hardly find any one People that ſhew you any thing conſiderable of this token of Manhood. He commends highly their good manners and civil deportment, their order and diſtinction of Houſes and Families, each man here dwelling with his own apart from others, and not huddling two or three ſcore together in one great Stall, or under ſome ſhelter in the Woods, as many other *Savages* do. And they obſerve their ſeaſons for eating and drinking as regularly as they do the diſtinctions of Families; they eat Morning, Noon and Night, and not (like Beaſts of Prey) at every impulſe of a ravenous Appetite, or when a bit falls into their clutches.

Their orderly living.

The King.

The Kingly Power has annex'd to it the liberty of exceeding all the Subjects in the number of their Wives; and this ſeems to be the main mark of diſtinction between Soveraign and Subject in that Country, for the King has neither any Garb or Ornament, any Reſpect or Honour, or any thing elſe (as far as he could obſerve) to diſtinguiſh him from another man, but only his greater number of Women and his Title *Morouiſhava*, which they always gave him.

The Women.

The Women *Knivet* compares to the *Engliſh*, both for their Complexion, Behaviour and good Humour; they are however, he acknowledges, ſomething too reſerv'd and backward in their Converſation, being ſo very grave that you ſhall never ſee 'em laugh at any thing that paſſes, but yet ſo quick and apprehenſive withal that you can ſay nothing but what they take. In ſhort he believes, with the Civil and Religious Improvements and Poliſhments of the *European* World, they would be one of the fineſt People upon Earth.

Long Hair.

The Women have their Hair of divers colours, white, yellow, brown, black, and they generally wear it ſo long that they tie it about their middle (with the Bark of a Tree) for a covering; thoſe that have not this defence wear a ſort of a Furr inſtead of it.

Plenty of Gold.

Their Country is very rich in Gold, tho' they don't eſteem nor uſe it for any other purpoſe than to faſten about their Fiſhing-lines: This may ſerve for an Emblem good enough, and we know what multitudes of ſuch ſilly Fiſhes there are in the World, that are drawn upon the Hook with a golden Bait. They don't trouble themſelves to work in the Mines for Gold, as the *Spaniards* do, but content themſelves with ſuch pieces as they find when the Rain has waſh'd away the Earth. Where the Golden Mines are, there are no Trees, but Mountains of dry black Earth; and that particular Mountain where the *Molepaques* find moſt of their Gold, is call'd by them *Etepararange.*

The

Motayes.

The *Motaya's* poſſeſs a fair champion Country between the *Molopaques* and the *Tamoyes*; they are a People of little Stature, a good brown Complexion, and they wear their Hair (both Men and Women) much as we do in *England*, but they abhor any thing of Hair ſhould grow upon their Chins or Eyebrows, and therefore they always pull it away with a Shell.

Their Entertainments of Strangers.

When Strangers come to their Houſes they welcome them with bitter weepings and lamentations, and after that they entertain 'em with the beſt they have: *Knivet* ſays, that when he and the *Portugueſe* came amongſt 'em, they came forth ſinging and dancing to meet 'em upon the way, and brought *Guiney* Wheat and Roots to preſent 'em with; but certainly never was ſuch a Feaſt heard of as they made 'em when they came to their Houſes, it conſiſted of Frogs, Snakes, Serpents, Dogs, Monkeys and Mans-fleſh, a Treat that might have ſerv'd well enough had Lyons and Crocadiles or ſome ſuch rude voracious Animals been their Gueſts; but this was their beſt, and it ſeems ſome on't went down well enough, tho' the Mans-fleſh would not, for which the *Motayes* laugh'd at them, pitied their ignorance, and told 'em, they had not Palates nice enough to diſtinguiſh fine Meat when 'twas ſet before 'em.

Lopos.

Farther in the Country live the *Lopos*, call'd by the *Portugueſe*, *Birero's*; they are much ſuch ſort of People as the former, but their Women more rude and ſhameleſs, maintaining nothing at all of the *decorum* of their Sex: They live altogether in the Mountains of Pine-trees, and upon that Fruit mainly: Their Houſes are only Boughs, tied together with rinds of Trees, and therefore are chang'd as often as they pleaſe, or when more Fruit and better Shelter of Boughs invites 'em to it.

Rich in Gold.

The Country is as rich in Gold and fine Stones as moſt in all *Braſile*, but it lies ſo far in the main Land, and is ſo populous, that as yet the *Portugueſe* have got no footing there.

The Tract of Land that runs along from theſe Provinces laſt deſcrib'd, towards the Country of the *Tamoyes*, is wonderfully rich in Gold and rare Stones; here was that ſtrange Mountain before mention'd, that caſt ſuch a luſtre at a vaſt diſtance; here 'twas alſo that *Knivet* and his Company met with Gold and Precious Stones ſo very frequently as they were travelling along, that 'twas a wonder how it came about that each of 'em ſhould not bring off ſuch a Cargo of Riches as would make 'em live jollily for ever after; but he does affirm, that they oftentimes threw away the Stones they had, to take up others they met with which they thought finer and more valuable. 'Twas at leaſt two months they travel'd in this golden Country, having their Eyes every day ſtruck with thoſe Beauties and Charms which the whole World is ſo mad for, and ſo vehemently covets to poſſeſs.

Tamoyes.

And the Country of the *Tamoyes* it ſelf is not leſs enticing upon this account: Theſe *Indians* do no more value Gold and Precious Stones than we do Bricks and Tiles, and the reaſon is, becauſe they ſee 'em almoſt as commonly. They are perhaps the moſt handſom taking People in all *Braſile*, both Men and Women, and that whether we conſider the goodneſs of their Complexion, the cleanneſs of their Make, or the juſtneſs of their Stature and Proportion.

Knivet (as has been related) liv'd a conſiderable time amongſt theſe People, but he has not been ſo particular as might have been expected in diſcovering their Cuſtoms and Manners to us.

Toceman.

The Country of *Toceman* was one of thoſe that the *Tamoyes* paſs'd with *Knivet* when they travel'd towards the Sea. The Inhabitants of it are call'd *Pigmies*, becauſe they are of ſo very ſmall a ſize, but they don't ride upon Cranes, nor are they ſuch poor *Animalcula* as the vulgar Fables make 'em to be: They dwell altogether in Caves and other ſubterraneous retreats, and their main ſuſtenance is Roots, Wheat and *Caſſavi*-meal, of which the former is ſuch as we have in *England*.

This Province the *Spaniards* believe to be the common Boundary of *Braſile* and *Peru*, becauſe here are the common Products of both thoſe Countries, the *Breſilian* Roots and the *Peruvian* Corn and Grain. They keep this in their hands, (tho' it yields 'em nothing but wild Horſes) for theſe little *Tocemans* are deſperate Enemies to the *Peruvians*, and help to keep them in awe under the *Spaniſh* Government.

Caryjobs.

Between this and the Country of the *Caryjobs* ſtands the famous Mountain of Metals, ſo call'd becauſe of the Mines of Iron, Copper, Gold and Quickſilver that it contains; 'tis vaſtly high, and all bare, without any thing of a Tree.

The chief Town of the *Caryjobs* ſtands by the Sea, in a fine pleaſant riſing Ground; there's a good Bay hard by, where an hundred Ships may lie at Anchor without any danger, and here alſo one may be ſure to be always furniſh'd with good ſtore of Fiſh. In this Country a man may buy a dozen Skins of very good Furr for a Knife or a Fiſh-hook, and for any little parcel of Trifles you ſhall have an *Indian* go and fetch two or three Baskets of Metals, ſome pieces of which ſhall, it may be, be of the moſt valuable kinds; nay, ſome for the value of two or three Knives, and a Comb, and ſome ſuch things, have had brought 'em to the worth of four or five thouſand crowns in Gold and Stones. The *Caryjobs* are Men of good Courage, they ſpeak the ſame Language with the *Tamoyes*, and are in moſt reſpects like 'em. The *Tamoyes* warring with theſe People, drew the ſtrength of the *Portugueſe* upon themſelves, as was before related, ſo that here 'twas that our Traveller finiſh'd his Peregrinations about this part of *America*, going home from this place with the *Portugueſe*.

Gyants at Port *Deſire*.

As to the other parts of *America* whither his variable Fortune brought him, he tells us, that at Port *Deſire* (which is the next Haven to the *Straits* of *Magellan*) there are People which may very well deſerve the Name of *Gyants*: He ſaw ſome of the prints of their Feet upon the Shore, and affirms, that they were above four times the length of an ordinary Man's Foot; and ſome of the Fleet further told him, that when they lay at Port *Deſire* ſome of theſe monſtrous People threw ſuch huge Stones out of Slings from off the Shore upon them, that they were forc'd to weigh Anchor and lie farther out at Sea: But more than all this, he actually ſaw one of them that was taken and brought to *Braſile*, a meer Youth, but above thirteen ſpan long; he was fair, well proportion'd to his height, and wore his Hair long, hanging down upon his Shoulders. There are ſeveral ſmall Rivers about this Port, which afford great ſtore of Pearl and Coral.

Dwarfiſh People at Port *Famine*.

At Port *Famine* dwell a ſort of *Savages* very different from the former, they are not above five or ſix ſpans high, but withal very thick and well ſett; their Mouths are ſo wide that they reach almoſt from Ear to Ear, and theſe wide Mouths they fill with raw bloody Fleſh, which they devour with an exceſſive greedineſs: They beſmear their Faces and Breaſts with Blood, and then lay on light downy Feathers, which the Blood makes ſtick to their Skins (like ſo much Glue.) As for the Humour and Manners of this People, there was nothing at all to be known of either, for they were ſo exceſſively ſhy and fearful of being catch'd, that there was no Converſe with them to be obtain'd.

Knivet ſpeaks of a certain Beaſt in this Country which is bigger than a Horſe, with vaſt great Ears and a Tail like a Cow; they are very good Meat, tho' he knows no other Name of them than that which the *Indians* of *Braſile* give 'em, which is *Tapelywaſon*: He ſaw ſome of the ſame alſo in *Ethiopia*, in the Kingdom of *Manicongo*, and there the *Portugueſe* call 'em *Gomba*.

But we muſt now take a ſhort view of his Obſervations of that part of the World.

Angola.

'Twas to *Angola* that he fled from *Braſile*, and of this Country he tells us, that 'tis very ſmooth and champion, has a dry black Soil, and yields very little Corn, but good ſtore of Plantans, it yields neither no ſort of Stone, and very little Wood, ſo that the *Angolans* Houſes are ordinarily very pitiful things, cover'd with Earth, and no bigger than a reaſonable Chamber, but yet divided into ſeveral Partitions, in one of which a Man has hardly room to turn or ſtand upright. Their Beds are made of Bulruſhes ſow'd together with the Rind of a Tree. The Money moſt current amongſt them is nothing but the Shells of Fiſhes, which they pick up upon the Shore, and which the *Portugueſe* alſo bring in great plenty from *Braſile* to *Angola*.

The People and their Cuſtoms.

Theſe People do much eſteem red, blue, and yellow Clothes, and for a piece of a ſpan ſquare they'll freely give a Slave; the uſe they put it to is, to hang it before, and under that the Skin of a great Weazel, and this is all their Apparel. Their Complexion is the blackeſt of all *Africa*, and as black as Jett it ſelf: The Men cut long Streaks in their Faces, that reach from the tops of their Ears to their Chins, and the Women wear abundance of Shells upon their Arms and the ſmall of their Legs.

Monogamy.

The Cuſtom of the Country allows to each Man but one Wife at a time, and if any Perſon lies with his Neighbour's Wife, he loſes his Ears for his Offence. All their Children are circumcis'd, and have their ſeveral Proper Names given 'em at that time.

The *Angolans* do very religiouſly fear and reverence their King, they ſerve him with all the care and reſpect in the World, and think it the higheſt Crime to diſobey any Command he gives. They fight no Duels but what they fight by his ſpecial leave and permiſſion, and in his preſence; they come before him, and falling flat on their Faces to pay him their firſt Adorations, they then riſe up and kneel, and in that poſture crave his permiſſion to fight; the King then ſtrikes 'em over the Shoulders with a Horſe-tail, and by this token ſignifies his Pleaſure in granting them their Deſire. After the Battel is over, the Surviver (if there be any) comes and proſtrates himſelf after the ſame manner before the King, and having made a long Harangue, he riſes and takes the Horſe-tail from the King's Shoulder, and waves it over his Head, and then lays it upon his Shoulder again, and now he goes away with abundance of Honour, all the Nobles and Courtiers attending upon him. When this Prince goes abroad, he has two or three hundred Archers to attend him, ten or twelve Muſicians go before him playing upon Pipes made of Canes, next to theſe follow five or ſix Pages, and the rear is brought up by the Nobility.

The *Portugueſe* have a City in this Kingdom, call'd *Spirito Santo*, a place of conſiderable Trade for Slaves and Elephants Teeth, beſides Proviſions, which the Blacks bring thither conſtantly.

Congo. But *Congo* (which our Traveller viſited alſo) is certainly a much more mighty Kingdom than *Angola*: This The State of the King. King goes abroad with a vaſt deal of Pomp and Splendour, on either ſide of his Elephant there goes ſix Slaves, all of 'em Noble, ſome of 'em of Royal Blood, yea, Kings themſelves: Thus 'twas at the time of *Knivet*'s being there, there were two captive Kings, who waited by the ſide of this Monarch's Elephant, and ſeveral of the reſt were Brothers and near Kinſmen of Kings; they carry a Canopy of State over his Head, and at every the leaſt word of command he gives, they fall flat upon the ground before him: Before him march at leaſt five hundred Archers; next to them, and juſt immediately before himſelf, goes a Herauld, who proclaims all his great Actions, and extols his Virtues, that have made him famous in that part of the World; then follow his Secretaries and other Domeſticks; and in this manner he always goes abroad. When he goes to his Camp all the whole Army worſhips him, and they kiſs the Ground together; and after a Battel, if he viſits his Camp, he ever dubbs at leaſt twenty Knights, and gives 'em Livings according to their merit.

The King upon the Throne when our Countryman was there was a *Chriſtian*, the *Portugueſe* had made him ſo, and conſequently were very great about him: *Knivet* was brought before this great Prince, and finding him gentle and favourable to Strangers, he did (at his command) entertain him with very free Diſcourſes of his own Queen and Country, and when the *Portugueſe* would have interrupted him at his talking ſeveral things they did not like, the King gave 'em a paſſionate Reprimand, telling 'em, he ought to be let alone telling the truth, and it being his own Country that he ſpoke of, he was a better Judge of what was or was not ſo than they.

Two things in *Knivet*'s Diſcourſe did very greatly aſtoniſh this King, one was, That Queen *Elizabeth* had ſo long govern'd her Country without any interruption by Rebellion and Tumult; and the other, That ſhe had all that while liv'd a Maid, and ſo vigorouſly defended her ſelf from a Husband: By this Wonder the King ſeem'd to ſuppoſe that ſuch things were hardly to have been expected in his Country; and it may be ſo, for a Climate under the Line might much more naturally tend to produce the contrary effects, than one in the middle of the Temperate Zone.

That part of the Kingdom of *Congo* that borders upon the Kingdom of *Angica*, eſpecially that about the City *Maſangano, an unhealthy place.* of *Maſangano*, is very unhealthy: This City lies juſt under the Line, in a bottom, ſurrounded with four Hills, and as there is not one River, ſo there's abundance of Bogs. The *Portugueſe* obſerve a mighty regularity here in their Diet and Clothing and Phyſicking of themſelves, and yet (after all) die like any Rats; while *Knivet*, who ſlav'd hard all day long, and eat or drank any thing he could get, and that at any time too of the 24 hours, enjoy'd his perfect Health, and never made the leaſt Complaint all the while he was in this moſt intolerable Climate.

Gold. The Gold that this Country affords ſo plentifully reconciles the *Portugueſe* to it, and makes all the ſcorching Heats and cruel Diſtempers of it tolerable to 'em.

Angica. The Kingdom of *Angica* lies under the Line; the Natives are tall and very well proportion'd, valiant and reſolute to the laſt degree; the *Portugueſe* their Neighbours at *Maſangano* do diſtreſs them with Wars, but 'tis their Principle always to die when they can't conquer thoſe Enemies, for they never yield to 'em. They are a Mahometans. ſort of *Mahometans*, as their Rites and Cuſtoms (well known in that Religion) do plainly diſcover. They have not much better Dwellings (whatever their Proviſions be) than their Neighbours the *Angolans* have; but yet we hear of no more, as to the latter, than good Wheat and a Grain like Fetches, of which they make their Bread: And for Fowl, they have Hens, Partridges, and Turkies good ſtore.

Thus have we run thro' his Remarks upon the Countries he travel'd thro'; theſe that follow will more directly ſerve the Mariner.

Rio Grande. *Rio Grande* (call'd by us the *Great River*) is above two leagues broad in the mouth: On the Coaſt are many great Bays, where the *Indians* frequently find conſiderable quantities of Ambergriſe; alſo in the Country adjoyning are great ſtore of Sugar-canes, Pepper, Ginger, and Wax.

'Tis to be noted, that on the Coaſt of *Braſile* there are three Rivers that bear the Name of *Paraeyna*; the firſt lies next to *Rio Grande*, the ſecond runs thro' the Country almoſt as far as *Lymo*, and comes out between Cape *Frio* and *Spirito Santo*; the third lies betwixt the River of *Plate* and St. *Vincent*: The former has a fair great Bay, which Ships of the largeſt dimenſions may enter and come to an Anchor near the Shore.

Guyana. *Guyana* is a ſmall River that lies by the firſt *Paraeyna*; in the Mouth of it ſtands a Rock that is continually cover'd with Sea-fowl, and hereabouts you have two fathom Water; a quarter of a mile inwards, upon the South-weſt ſide, you may have freſh Water, and good ſtore of Cattle: Upon this River alſo you'll find a great many Sugar-mills, and fiſhing-Carvels that are continually carrying Sugar to *Fernambuco*; likewiſe here's *Braſile*-wood, Pepper, Ginger, Cocao's, *Indian* Nuts in great plenty.

Etamariqua. *Etamariqua* is a Point of Land like a Cape, it runs half a mile into the Sea, and upon it the *Portugueſe* have built a Town; you may anchor very near the Shore, both on the South-weſt and North-eaſt ſide of the Town, in ſeven fathom Water. All the Country till you come to Cape St. *Auguſtine* is low Land, and there's no danger in ſailing from thence to *Fernambuco*, except the Clifts which lie along the Coaſt of the River St. *Francis*, and are always to be eaſily ſeen: When there is a Spring-Tide the Seas overflow the Land behind, and if there be any Wind blowing from the Eaſt, it beats the Sea into the hollows of the Clifts, and makes a terrible noiſe, upon which account the *Indians* call this *The Land of the Bell*. Here are pretty good quantities of Sugars, and very great ones of Cocao-nuts.

On the North ſide of *Fernambuco* you ſhall ſee white Downs, and when you are paſt all theſe on the South, you are then by a place call'd *Capiguramirini*, where there are Fiſhermen always to be found; from hence to *Fernambuco* is not more than two leagues. At this time, if Caution. you are under 8 gr. you ſhall ſee a flat Land, even and bare, which is call'd *Capitua*, and then you muſt take care that you don't run Southward, for fear of a Point of Land which is four leagues from the Cape, and ſtretches into the Sea as far as Cape *Auguſtin*; 'tis call'd by the *Portugueſe*, *Punto de Olynda*.

Punto de Olynda. When you have doubled this Point, you are to avoid putting in with the Town of *Olynda*, and that becauſe of the Sands call'd by the *Portugueſe*, *Baybos de St. Antonic*, which lie at leaſt three or four mile into the Sea: Being near the Shore, you will ſee all the Ships that lie at Anchor over the Clifts call'd by the *Portugueſe*, *Arecias*. This place where the Ships lie is a league from *Fernambuco*, and 'tis the noted Harbour into which all the Shipping from *Fernambuco* comes, and from hence to the Cape you ſhall ſee the Clifts lying one by another, and as even and regular as a Wall made by Art.

Fernambuco. The Town of *Fernambuco* is ſeated upon a Hill, and ſtrongly intrench'd round about; towards the Sea ſtand ſeveral Forts, which ſcour all the Shore from the *Arecias* to the Point of *Olynda*. From the *Arecias* runs along a River thro' the Land, about a Gunſhot from the Sea-ſhore, and goes quite behind the Town from the South to the Weſt and Eaſt, and ſo makes it a *Peninſula*, communicating with the Land on the North ſide only.

Cape Auguſtine. The Cape of St. *Auguſtin* is a ſhoot of Land that advances into the Sea two or three miles; 'tis eaſily known by the three Hills that appear, as alſo the *Portugueſe* Church, and particularly in that half a league to the Southward you ſee the Iſland St. *Alexyo*.

Iſland Alexyo. The Iſland of *Alexyo* is long and narrow, ſtretching North-eaſt and South-weſt, and lying within a league of the Shore; you may anchor between it and the Shore in all weathers, for there are ſeveral fair Bays, where you may lie in ten or twelve fathom Water; alſo upon the Iſland it ſelf you may take in Wood or freſh Water.

Porto Docalno

Porto Docalno lies Southward of *Alexyó*, it is a low flat Land; you need not fear going in by the Rocks, for hard by them you ſhall have fourteen fathom Water. This Harbour may eaſily be known from the Southern Point of the Iſland *Alexyo*, for when 'tis low water you ſhall ſee a fair Bay, and all the Shore (being a black ground) bare almoſt to the Cape. Here you have great ſtore of Sugar-canes and Cattle.

River of Stones.

About eight leagues to the Southward from *Porto Docalno* is the *River of Stones*; you ſhall ſee from Sea a great Bay run within the Land, and before the mouth of it many great Rocks: Now, to come into the Bay, you muſt keep cloſe to the Shore on the South-weſt ſide, and after you be in the Bay go full Weſt, and this Courſe will bring you to a River that runs at leaſt twenty leagues up into the Land. Here you may (if you be of any tolerable ſtrength) plunder the *Portugueſe* of their Sugars and Cattle, and meet beſides with *Braſile*-wood, Pepper, Cotton, and ſeveral other ſorts of Merchandize.

Camaryiuva.

Camaryiuva lies a league to the Southward of the *River of Stones*, and, to know it, you will upon kenning diſcover three great red Hills call'd by the *Portugueſe*, *Bareos Varnellios*. The place is not inhabited, and the mouth of the River is narrow and ſhallow, having not above five foot Water, but you may anchor in the Bay hard by the River, and ſend your Boat very ſafely for freſh Water; you may fiſh alſo here very ſucceſsfully, for there's great plenty of all ſorts of freſh Fiſh.

St. Antonio River,

The River of St. *Antonio* lies ſeven leagues from *Camaryiuva*; 'tis a very great River, and is ſome fifty leagues within the Land, having ſeven fathom Water at coming in, but is ſo narrow that no Ship ought to venture entring; but the Boats may without danger, and 'tis as good a place as can be to ſupply you, if you want Fiſh of any ſort, eſpecially that great Fiſh call'd by the *Indians Varana*, which is as big as an Ox. After you are within the River, you have high Sand on both ſides, and a treacherous People that live thereabouts to deal with; if they ſee you unprovided or negligent in your Watch, they'll fall upon you, but if they find you able and always ready to defend your ſelves, then they'll come and trade very peaceably with you.

Harbour of Frenchmen,

That Bay which is call'd *The Frenchmens Harbour* (and by the *Indians*, *Aiarema Piaſave*) lies two leagues Southward from the River of St. *Antonio*; it may be known by a high Hill which ſtands over it, and is full of *Braſile* Trees. To enter this Harbour you muſt mark the Clifts, and when you are got to the Northward of all of 'em but one, you may ſafely come within a Stones-caſt of the Shore. To get freſh Water, you muſt land and go upon the South ſide of the Hill, where you'll ſee a fine Stream iſſuing out of the Hill into a great Ciſtern cut out of a Rock.

River of Crocadiles

The neighbouring River is by the *Indians* call'd *Jaquareaſicke*, or the *River of Crocadiles*, becauſe there are abundance of thoſe Creatures in it: 'Tis narrow, and is remarkable for the white Rock that ſtands in the mouth of it. To enter it, you muſt keep on the North ſide of the Rock, where you have nine and ten foot water: After you are in it you come to a great Bay, and on the North-eaſt ſide there's a ſmall River, where you may be ſupplied with freſh Water. Here a Man muſt take ſpecial care how he goes into the Water, for the Crocadiles lie cloſe by the Bank-ſide, and preſently ſeize any thing that comes into their Element. Here's nothing to be had in this place, unleſs you'll fiſh for Crocadiles, and take their Cods or Bladders for the Musk they afford, as the *Portugueſe* very commonly do.

Alaqua Riv.

The River *Alaqua* lies three leagues to the Southward from that of *Crocadiles*, and four to the Northward from the River of St. *Michael*; on either ſide of it you'll ſee a great Hill, by the *Portugueſe* call'd *Os Caivas*. There is but ſeven or eight foot water at the coming in, tho' very clear of all Rocks; but after you are enter'd, you'll find a great many banks of Sand, where ſtore of Fiſh is to be had for the pains of catching. At the coming in alſo, on both ſides, a Man may take in freſh Water.

Michael Riv,

The River of St. *Michael* is known by the Clifts that ſtand before it, like the *Arecias* Clifts of *Fernambuco*; you muſt enter at the end of the Cliff hard by the Shore on the South-weſt, taking good heed to a ſmall Clift that ſtands between the mouth of the River and the Shore; this ſmall Clift you are to leave betwixt you and the Shore, and then between it and the Rocks you may enter, and have three fathom water: But you muſt obſerve in entring not to ſail to the North-eaſt, (tho' you ſee the Bay large) and that becauſe of ſeveral great banks of Sand; therefore you muſt keep Weſt ſtill, within a Stones-caſt of the Shore, and ſo you ſhall be ſure to keep in the Chanel. Thus you muſt ſail till you diſcover a Houſe, which you will ſee doubling a Point full South from you, then 'tis beſt to caſt Anchor, becauſe unleſs a man knows the Chanel very well, he is in danger by going farther. You will ſee a River that runs up into the Land, near which dwell ſeveral *Portugueſe*, and here you may meet with Cattle enough, *Caſſavi*, *Braſile*-wood, Oyſters, (in which you'll find good Pearl) Balſam, Tobacco, and Neſico-trees, the Wood of which is very valuable, and good for Bruiſes and old Hurts.

The River of Toads.

The *River of Toads* is eight leagues from the place laſt mention'd, in the *Braſilian* Tongue 'tis call'd *Corooen*, which ſignifies as much. Here is a very good Harbour, if a man knows how to get in well; now the entrance is between the two great Rocks that ſtand right before the Bay, which by the *Portugueſe* are call'd *Os Bayos de Don Rodrigo*. When you are entred, you may anchor hard by the Rocks, and ſound the Chanel, which lies North-eaſt from you. The beſt way to get freſh Water is, to go a quarter of a mile by the Sea-ſide, and then you ſee a fair River, where you may have both Water and Fiſh too.

Cape Frio.

Cape *Frio* is a Point of Land that runs into the Sea at leaſt twelve miles, and lies under 22 gr. You may anchor on the Eaſt ſide of the Cape, in a Harbour call'd *Abayia Formoze*, which will afford you good ſtore of *Braſile*-wood, and ſometimes Ambergriſe. On the North ſide of the Bay you'll ſee a great River call'd *Uparaſen*, where you may fiſh to very good purpoſe, and in the mouth of this River there's a great deal of Coral.

R. Saquarema

Saquarema is a River that runs four leagues to the Southward from the Cape; it is narrow at coming in, and you'll have twelve foot Water till you be three or four leagues up the River: All along on both ſides you have *Braſile*-wood and freſh Water plenty. Upon the South ſide of the River you'll ſee the Hill call'd by the *Indians Boypeua*, (that is, *the rotten Whale*, for the top of it looks like a Whale) and there, if you want ſuch wild Food, you may have Potatoes, Plantans, Oranges, Limons, and the Roots call'd by the *Indians Caravaſen*, as many as you deſire.

Great Rock Etiura.

A league to the Southward of the River *Saquarema* ſtands the great hollow Rock *Etioca*. Before the mouth of this Rock, towards the Sea, ſtands another flat Rock that ſhoots out a little upon it, where may be ſeen very plainly and diſtinctly the prints of bare feet in ſeveral places up and down in that moſt ſolid Stone. Here's very good fiſhing, and alſo plenty of thoſe pretty green Stones which the *Indians* uſe to wear in their Lips. You may anchor within Muſquet-ſhot of the Shore, but if the Wind be in the Eaſt, 'tis very dangerous.

Pirateniga.

Pirateniga is a Bay five leagues to the Southward of the Rock *Etioca*; right before it ſtands a ſmall Iſland inhabited by the *Portugueſe*. This Bay runs between a Mountain a mile and more within the Land: You may lie with your Ships at the Iſland, and ſend your Boats aſhore for Cattle, *Caſſavi*, Oranges and Limons, and many other Commodities beſides; if a man has a mind to ſome Fiſh, he may ſatisfie himſelf abundantly at that Sport, either by Net, or Hook and Line. *Knivet* affirms, that at this Bay he ſaw one of thoſe Marine Creatures which the Vulgar gives the name of *Mermaids* to.

River Janero.

The River of *Janero* or *January* lies three leagues from *Pirateniga*; it is indeed a great Arm of the Sea, which runs at leaſt fourteen miles into the Land; in the mouth are four Iſlands ſituated, but the beſt mark for the City of St. *Sebaſtian* is a Fort that ſtands on the North ſide of the coming in of the Harbour, upon a Rock. On the South ſide ſtands a Hill that reaches into the Sea, call'd by the *Portugueſe*, *Camo*, (that is, the top of a Ship) and on the North ſide of the *Camo*, at the foot of it, hard by the Sea-ſide, ſtands the high Rock which they call the *Sugarloaf*; this is juſt as you ſail into the Harbour: But then in the midſt of the entrance, (in the very mouth of the River) lies a Rock very plain to be ſeen, ſo that to go in you muſt keep between the Rock and the Fort that ſtands on the North of you. When you are entred the mouth of the River, and are paſt the Fort, you ſhall ſee the Iſland of *Brigalion* right before you: Now you muſt be ſure to paſs on the North of this Iſland, and as ſoon as you have done ſo, you have the proſpect of the whole City, both on the Hill and the Sea-ſide, before you; then you muſt take heed not to go right to the City, becauſe of the Sands that lie all along before it as far as the Iſland of St. *Bent*: This Iſland is a quarter of a mile from *Brigalion*, and to the Eaſtward of it ſtands a great Rock, between which and the Iſland of St. *Bent* you venture to ſail: As ſoon as you have entred, you may anchor hard by the Iſland, and then you'll ſee a Church ſtanding upon a Hill, which is call'd St. *Bent*, at which time you need not fear to go right before the Town.

Cautions in ſailing to St. Sebaſtian

River *Wara-tiva.*

The River *Warativa* lies three leagues from that of *Janero*, and 'tis to be known by two Iſlands that lie exactly before the mouth of it, where alſo you'll diſcover an high Hill. On either ſide, both on the South-weſt and North-eaſt, is low Land, and there is no entring for any Ship here, tho' you may anchor between the Iſland, and ſend your Boats aſhore. Here are Fruits and Fiſh in the ſame plenty as in ſeveral other places before deſcrib'd.

Ilha Grande.

From the River of *Warativa* for the ſpace of four leagues is all low ſandy ground, and here you'll ſee an high Hill call'd by the *Indians Marambayapuam*, (or the *End of Way*) right over againſt this Point you ſee *Ilha Grande*, at the coming in of which Harbour you may be ſecure, for hard by the Shore you have twenty fathom Water. When you are in the mouth of this Harbour you ſee right before you a great white Rock, which will lie full Weſt from you: You muſt leave *Ilha Grande* Southward from you, and then another great Iſland called *Epeoya* comes in view; at a Point of this Iſland which lies full Weſt towards the main Land, you'll ſee two ſmall Iſlands, and when you are right againſt 'em, a fair Bay, where you may anchor at pleaſure. To come into this Bay, you muſt paſs between the two Iſlands juſt now mention'd. This Harbour merited a more particular Direction to be given for the finding of it out, becauſe it has this Advantage, that a Man may ſail out of it with almoſt any Wind whatſoever.

Long Iſland.

Long Iſland is eaſily found out, for 'tis hard by the main Land, and is to be ſeen diſtinctly from the Iſland *Epeoya*; and to the Southwards from it (about half a league) you'll ſee two ſmall Iſlands which go by the name of *Amembuquavo*, over againſt which is a delicate River, where you may be furniſh'd with great ſtore of Fiſh, and upon the banks find *Mandicca*, and ſeveral other good Roots.

St. Sebaſtian

The Iſland of St. *Sebaſtian* lies about three leagues from *Ilha Grande*; 'tis a long and fair Iſland, and you may ſafely anchor between it and the Shore. About half a league from the Iſland of St. *Sebaſtian* ſtands a ſmall Iſle right into the Sea, call'd by the *Indians Uraritan*, and by the *Portugueſe*, *Alquatraſſes*; here you may always meet with Seals, and ſeveral ſorts of Sea-fowl, as many as you will.

River of *Paraeyva.*

That River *Paraeyva* (that runs between the Town of St. *Vincent* and River of *Plate*) has a very good Harbour for Ships, and hereabouts you meet with abundance of the Cannibals call'd *Carijos*, whom you may trade with for Pepper, Ginger, very rich Furrs, Cotton-wool and Wax, which they bring in great plenty.

River of *Plate.*

The mouth of the River of *Plate* is wide, and within it are ſeveral Banks of Sand; you muſt be ſure to keep very near the North Shore, till you ſhall ſee an high Mountain white at top, then ſailing Southward at leaſt four leagues, you'll ſee another ſmall Hill on the North ſide, which you muſt ſail right with; this brings you into a fair Bay, where you muſt ſtill keep along the Shore, and after paſſing the Weſtern Point of this Bay, you'll have the River *Maroer*, and then you need not fear any Shalows till you come before the Town of *Bonos Ayres*.

Country between *Tocoman* and St. *Jago.*

From the Province of *Tocoman* to St. *Jago* is eighty leagues, and all the way to be travel'd with a Compaſs, and care to be taken in ſteering to a Point as nicely as if you were at Sea; the reaſon of which is, the prodigious Mountains of Sand that are found there, and which ſhift and change places as the Wind does, ſo that to day you have 'em on this ſide, and to morrow on the contrary ſide of you.

In this Journey alſo you'll paſs ſeveral Rivers, which will appear to be not above a foot deep, but without good Guides will be found deep enough in Quick-ſands to ſwallow both Horſes and Waggons together.

From St. *Jago*, till you come to *Potoſi*, you travel thro' Mountains and Valleys and great Towns of *Indians*, who all are at Peace with the *Spaniards*; and you ſhall meet with hundreds of theſe *Indians* upon the Road, who ſhall offer to carry you from Town to Town in Nets faſtned to Canes, and ſupported by two or more Men; this is the eaſieſt travelling in the World, and the price of it is no more than a Fiſh-hook, or a few Glaſs Beads.

You'll alſo paſs by ſeveral Gold Mines, and may traffick with the *Indians* for that and Precious Stones, but this ſort of Trade is not brisk hereabouts, as 'tis at *Potoſi* it ſelf, becauſe there the Mines are open and wrought on, but between St. *Jago* and *Potoſi* they are not.

At *Potoſi* you have no want of any thing, (tho' the Country of it ſelf be barren) for the Traffick they have with *Lima*, and all the Towns of the South Sea, brings a ſufficient Supply; they carry Oils and Wines in great earthen Jarrs upon the Backs of Sheep, which they commonly call Sheep of five Quarters, becauſe their Tails are as big and heavy as one Quarter of the Sheep.

The Ore.

The rich Ore (when they firſt take it out of the Mines) looks like black Lead, then they grind it in certain Engines, and waſh it thro' fine Sieves in pav'd Ciſterns made for that purpoſe. They make the *Indians* work in the Mines ſtark naked, that they may not hide any thing about 'em; and thus are they kept to the Drudgery, while their Maſters the *Spaniards* wallow in all manner of Eaſe and Pleaſures, and grow exceſſive rich into the bargain.

And here we end the Account of Knivet's *Remarks.*

CHAP. V.

Some Obſervations of the Iſland of Trinidado, *the rich Country of* Guiana, *and the great River* Oronoco, *with other Rivers; made by* Francis Sparrey, *who was left in the Country by Sir* Walter Rawleigh *A. D.* 1595, *and after that being taken Priſoner by the* Spaniards, *and living a Slave in* Spain, *return'd into* England *again A. D.* 1602.

Guiana.

THE Country of *Guiana* bears directly Eaſt from *Peru*, and lies almoſt under the *Equinoctial*.

Riv. *Oronoco.*

The River of *Oronoco* (otherwiſe call'd *Barequan*) has nine Mouths upon the North ſide of the main Land, but upon the South ſide our Obſerver could diſcover no more than ſeven; ſo that yet, what between Iſlands and broken Lands, it has ſome ſixteen Mouths in all. The entrance to this River thro' the River *Capuri* has nine foot water at the mouth in a full Sea, and at the ebb but five foot; the Water flows but a ſmall time, but riſes apace, and the ebb goes but ſlowly, continuing ſix hours in all.

River *Amana*

In the bottom of the Gulph of *Guanipa* there is a River call'd *Amana*, which leads into *Oronoco* alſo; if a Man enters this River of *Amana* from *Curiapan*, he can't poſſibly return the ſame way he came, by reaſon of the Eaſterly Winds and ſtrong Currents, but he muſt of neceſſity go into a River within the Land, which is call'd *Macurio*.

If you ſail ſome twenty leagues in the River *Amana*, you may diſcover the great and high Mountain *Oecopa*, from whence may eaſily be diſcover'd the Plains of *Samia*, thro' which you have a ſafe paſſage over Land within ten or twelve leagues of *Cumana*, or to the *Caracas*. Upon theſe Plains are four ſeveral Nations, all which are reputed great Soldiers, and they are ſomething black; their Names are, the *Samia's*, the *Aſſawaics*, the *Wikeries*, and the *Arrora's*.

Paſſage to *Oronoco.*

To go from the Iſland of *Trinidado* to the great River *Oronoco*, the River *Amana* bears South, but parting from this Rvier by a Branch which bears to the Weſt, one may this way enter *Oronoco*.

The

Riv. *Europa.*

The River *Europa* lies to the Eaſt of *Oroncco* as you come from *Trinidade*. 'Tis very eaſie to go from the River *Oronoco* to the Town of St. *Domingo*, which bears N. N. W. directly, but you muſt of neceſſity paſs the River *Amapaia*, leaving the Iſland of the *Amazons* to the S. and hold your Courſe as near as may be N. W. and N. N. W. By this means you avoid all the danger of the Cannon and Force of the Town, and land ſome ſix days Journey from St. *Domingo*.

Riv. *Wiaumli.*

The River *Wiaumli* is to the N. of *Oronoco*; to go into this River, you may go in the Land till you come to the little River *Maccab*, then directing your Courſe South, you will within two days enter the River *Wiaumli*: This River gives its Name to the adjacent Country too.

River *Drano.*

Drano is a fair River, and lies exactly South-eaſt from *Oronoco*, but it's dangerous to go far in it, not upon the account of any Dangers the River preſents to a Boat that ſails in it, but the bad Air and malignant Dews (that fall thereabouts and kill abundance even of the *Indians* themſelves) are Impediments in the way of a free converſation upon that River. Beſides this, there is another, and that is the horrible corruption of the River by the foul and loathſom Waters that are continually drein'd into it from the Fenns of *Anelas*; theſe are ſo bad, that 'tis deadly to drink of 'em, and many a one has died for't.

River *Arui.*

The River *Arui* runs continually North, and ſo to the River *Caſſipa*, and from thence into *Oronoco*: Near to *Arui* are ſeveral other Rivers, but hardly any thing conſiderable.

The firſt River that falls into *Oronoco* from the North is call'd *Cari*; beyond that, on the ſame ſide, is the River *Limo*, to the Weſt of that is *Pao*, and beyond that the Rivers *Caturi*, *Voari* and *Capuri*, which laſt 'tis dangerous to enter.

In the River *Oronoco* are various Iſlands, particularly in the midſt of it a pretty big one, and ſomewhat mountainous, call'd *Ocanita*; there's another alſo which goes by the Name of *Aio*, where the Wind is always Eaſterly in the Morning before the Sun is high.

Riv. *Ubra.*

The River *Ubra* bearing to the Weſt of *Carthagena*, bears to the Southward of the Iſland of the *Amazons*: This River *Ubra* (if you ſtand to the South-weſt) leads to that part of the Province of *Arimaijo* which is call'd *Ereegoodawe*; 'tis a barren mountainous Country, they have neither *Guiney-Wheat* nor *Caſſavi*, but *Veniſon*, *Hogs* and *Conies* they have in great abundance.

The Author's attempt to paſs by the River *Oronoco* to *Peru*.

'Twas reported to our Author by the *Indians*, that there was (on the North of *Peru*) a way to enter the River *Oronoco*, which Intimation encourag'd him to attempt the diſcovery of a Paſſage from that River to *Peru*. In this Attempt (he tells us) he was driven by a Storm into a River which his *Indian* Pilots call'd *Salma*, in which after he had been for three days, he enter'd the great River of *Papemena*, which is at leaſt ſix leagues broad: From hence he came to the ſweet and pleaſant Iſland of *Athul*, a Spot ſo delightful and in ſo benign and temperate a Climate, that he profeſſes he could willingly have ſpent the remainder of his days there: There's abundance of fine freſh Rivers, and thoſe well ſtock'd with Fiſh; there are Fowls and other Animals for Food. In the Woods (which are very numerous) you have delicate Fruits all the Year round, Cotton, Balſam, *Braſile*, *Lignum vitæ*, and Cypreſs-trees. The Soil promiſes Metals, nay, ſome ſorts of Ore he did find in divers places; the Rivers too afford fine Stones, but for want of Skill he dares not warrant the goodneſs and valuableneſs of 'em.

A Deſcription of the Iſland of *Athul.*

This lovely Iſland is but ſmall, and it has no Inhabitants, which (he ſays) is upon the account of the neighbourhood of the *Caribes*, a rude ſort of Savages, within whoſe reach People are afraid of living.

From hence he return'd to the River of *Oronoco* again, becauſe he found his labour loſt, and 'twas impoſſible to go to *Peru* that way; but he did not go back exactly the ſame way that he came, for paſſing the River *Papemena*, he left that of *Salma*, and came a much more direct way into the River of *Oronoco*, even by the River *Limo*, as his *Indian* Pilots imagin'd; but by what went before 'tis plain, that there was no great credit to be given to their Surmiſes.

The Author fruſtrated of his Deſign.

He gives us farther this account of a Voyage he made from the River *Oronoco* Weſtwardly, in which Courſe a Man is like to meet with moſt Gold, tho' there be moſt Danger too, (eſpecially in going far into the Country) by reaſon of the *Epuremi*, an *Indian* People that live continually in Arms, and are never eaſie but when they are fighting and killing their Neighbours.

From *Oronoco* he came into the River of *Ciſnero*, and ſo coaſted to *Amapaia*, (remarkable for that bad ſort of Water before mention'd) from thence to the River *Pao*, and at the term of ſix weeks came into the rich Country of *Curaa*. This is in the Province of *Guiana* or *Manoa*, and 'tis character enough of it to ſay, that it abounds in the moſt deſirable of all Metals: In ſome places you have Mines of white Stone, and the Gold running in Veins between the Stones; in others you find it in ſolid Grains in the Sands of the Brooks and Rivulets: But a Man can hardly be rich here without venturing his Life for't, that is, he can't go to the Rivers to pick the Gold grains without danger of being ſnapt by the Crocadiles. There are alſo Pearl in this Country, ſome of which our Traveller ſaw, but they are neither large, orient nor round; the *Spaniards* ſaid they were not Pearls, but Topazes, and perhaps neither he nor they ſaid true.

Province of *Curaa.*

Camalaba is a place to the Southward of *Oronoco* River, famous for a Fair of Women-Slaves which is kept there. *Sparrey* going to Market here, had ſuch a Bargain on't, that one may venture to ſay poſitively he could not be cheated of his Money; for eight of theſe female Slaves (and the oldeſt of 'em under eighteen) he gave a red-hafted Knife that coſt him exactly two Mites, ſo that a Woman here is four times as cheap as a Farthing Pye is in *England*, tho' perhaps ſhe is a much-worſe bit; at this rate a Pedler, out of the Stores of the portable Shop at his Back, might buy Women enough to plant a Country almoſt as big as the *Great Mogul*'s.

Camalaba Fair.

Tar or *Taroo* is an Iſland to the S. S. W. of *Oronoco*: This Iſland has no ſtated Inhabitants, but ſerves only for a kind of a baiting-place to the *Caribees*; thoſe Barbarians go abroad and ſteal People, and then they come hither and eat 'em. The Author came to this place with a conſiderable ſtrength, deſigning to ſacrifice ſome of thoſe Cannibals if he had found 'em here, but they were gone, tho' their Houſes ſuffer'd for 'em, and were burnt to the ground. Going about the Iſland cloſe by the Water ſide, he found Stones of ſeveral colours, tho' he makes no mention what they were, either in his own or other mens Opinions.

Taroo Iſland.

To the Weſtward of this Iſland is a River call'd *Habuc*, in moſt places about which you have 8, 10, 14, 17 & 30 fathom Water; the entrance at the mouth is barr'd, but yet at a full Sea you ſhall have 14 & 15 foot Water, and in the Chanel where the Canoes enter (and which is but narrow) there is better than ſix fathom. This *Habuc* is certainly the beſt and ſureſt Harbour for our Ships in all theſe parts, and 'tis not quite eight days Journey from *Oronoco*.

Habuc Harbour.

There is a certain River call'd *Capuriſol*, thro' which (he tells us) is a moſt ſure, ſafe, and perfect way to *Peru*, tho' the Voyage will take up eight or ten weeks to finiſh it, and it muſt be perform'd with Ship-boats or Canoes too, becauſe theſe Rivers have always very little Water. This River lies in 8 gr. 2 min. N. L. and in it you ſhall always have a light breeze of a Weſtwardly Wind, Noon-time only excepted, when there is hardly any at all: The Country in which it is has the Name of *Emeria*, and that Province is the Eaſt part of *Dorado*.

Capuriſol River, by which one may go to *Peru*.

CHAP. VI.

An Account of a Voyage to Guiana by Captain Charles Leigh, perform'd at the charges of Sir Olave Leigh his Brother, and his own: Taken out of the Captain's Journal and Letters, and the Journals of ſeveral others that went the ſame Voyage.

A.D. 1604. March.

Capt. Leigh goes for Guiana.

THE Captain ſet out in a handſom Bark of ſome fifty Tun, call'd *The Olive-Plant*, having no more company with him than forty ſix Men and Boys. The deſign of this Voyage was, to make a more compleat diſcovery of the Country of *Guiana*, and to fix an *Engliſh* Plantation there; to which the Captain (with his Brother) was the more encourag'd, in that he had viſited this part of the World once before.

Comes to the Riv. of Wiapoco.

Receiv'd kindly by the Natives.

By the 22d of the enſuing *May* they came into the River of *Wiapoco*, in the Latitude of 3 gr. ½ to the North of the Line; and the Town of *Wiapoco*, which lies on the Coaſt of *Guiana*, was that where they intended to take up their abode. The Natives were ready to give them a good Entertainment as ſoon as they came; they were extreamly willing the Captain and his Company ſhould reſide amongſt 'em, and yielded to their taking ſolemn poſſeſſion of the Country in the name of His Majeſty of *England*.

A Contract betwixt 'em.

The Mount Howard.

About this River of *Wiapoco* (otherwiſe, and by a more moderate Name, call'd *Caroleigh*) dwelt three Nations of *Indians*, the *Yaioa's*, *Arwarka's*, and *Sapayoa's*, which being driven away from their ancient Dwellings by that peſtilent and troubleſom People the *Caribes*, had ſettled themſelves here. Now the Agreement the Captain made with the *Indians* was this, That allowing him a good quantity of Ground for Gardens, and ſome Houſes for the preſent, he ſhould aſſiſt 'em againſt their inveterate Enemies the *Caribes*. This Contract was confirm'd by very good Aſſurances on both parts, and to make it the more ſure on the ſide of the *Indians*, the Captain demanded, and they freely gave, four or five Hoſtages, as Pledges of their fidelity and good meaning, two of which were Perſons of great account amongſt 'em. Their firſt Plantation was upon part of the Mountain that lies on the Weſt ſide of the entrance of the River, and to which they gave the Name of Mount *Howard*, in memory of our famous Admiral of that Name.

Mutinous Company.

In this Country might our Captain have liv'd a very fortunate life, and one very uſeful too to his own Country at home, had he not had the ſame plague with many Great Men abroad, (and which has broke the neck of many a brave and well-laid Deſign) a mutinous diſcontented Company: They had not their fine Meats and Sauces here as in *England*, nor their ſoft Down-beds, but muſt lie in Hammocks, ſwinging in the Air like ſo many Spiders in their Cobwebs; beſides, they were not to walk about and take their pleaſure only, but there were Woods to be cut down, and other neceſſary works in order to a Plantation to be done, none of all which did agree with the Conſtitution of theſe People; they were therefore very troubleſom and tumultuous, and made ſeveral bold Remonſtrances againſt the Captain's Deſigns of ſettling in the Country, demanding to be led home again. However, with kind words and many perſwaſions, he brought them to conſent to try the Country for a Year, and patiently endure all Extremities; notwithſtanding which ſome of 'em were worſe than their words and left him, even thoſe of whoſe Service and Company he had moſt need.

Worms in the Feet.

Indian Cure for the ſame.

'Twas another Unhappineſs too that the Men were very unhealthy here, ſome had *Agues*, others *Fluxes*, others again *Vertigo's*, but the moſt vexatious (tho' not the moſt dangerous) of all was a ſort of *Worms*, which made their way into their Feet, and under their Nails, and fix'd themſelves ſo ſecurely there, that they were not to be gotten out but by tearing open the Fleſh with a Needle, and then not without great pain and difficulty neither. One of the Company had his Feet ſo overrun with 'em, for want of Shoes and Stockings, that he was forc'd to ſubmit to the *Indian* method of cure, which was this, they pour'd melted black Wax upon the bottoms of his Feet till they were all cover'd, this they let lie on till 'twas throughly cold and hardned, and then with a ſudden twitch pull'd it all off at once, and they ſay all the *Worms* came off or out along with it; which any body would eaſily grant to be poſſible, ſince no doubt but the Skin and Fleſh came along with it, and 'tis probable the *Worms* might keep them company.

Ship returns.

'Tis to be noted that the Captain, the next year after his arrival, diſpatch'd the Ship home again to *England*, for freſh ſupplies of ſuch things as he wanted; it went under command of Captain *Huntlie*, and carried in it the five *Indian* Hoſtages. Now the return of this Ship was very greedily expected, for the Company was diſtemper'd many ways, and beſides, they could not at all times have from the *Indians* thoſe quantities of Proviſions they had occaſion for; and in this uneaſie condition did the Ship find 'em when it did come; however, being now all together, and the honeſt Party ſomething ſtronger than before, they acknowledg'd the Captain's Authority in general, and promis'd to aſſiſt him to the uttermoſt. After this they made an Expedition againſt the *Caribes*, the confederate *Indians* going along with 'em; but thoſe Villains, as cunning as they are miſchievous, having taken the Alarm, got away into the Woods, and avoided 'em.

Fruitleſs Expedition againſt the Caribes.

Captain dies.

Some ſtay behind.

The Fatigues of this Journey, together with the filthy Liquors they were oblig'd moſt commonly to drink, and the foul Weather they were expos'd to abroad, heightned the Fluxes amongſt 'em, and kill'd ſeveral; and worſe than all, the Captain himſelf, juſt upon the point of his going on board for *England*, to fetch a compleat lading of ſuch things as were needful for his Company, was carried off by the ſame Diſtemper; and thus by this unhappy ſtroke the whole buſineſs was quaſh'd, and all the Company began to think of ſhifting for themſelves, ſome went away in their own Ship for *England*, others got on board a *Dutchman*, and others a *Frenchman*, as many as there was room for; but, in ſhort, there were ten poor wretches that could get no paſſage, and ſo muſt ſtay upon the ſpot: Here then they liv'd, waiting for the ſame favourable opportunity that their fellows had before them, and recovering by degrees a good ſtate of Health, they imploy'd their time in planting Flax and Tobacco, and other Country Labours. They liv'd in perfect amity and friendſhip with the *Indians*, and made another Expedition with 'em againſt the *Caribes*, wherein they ſucceeded better than before, doing conſiderable damage to the Enemy. The care of their Proviſion for Life lay altogether upon the *Indians* who had undertaken it, and they did it at ſo cheap a rate, that two months Victuals would coſt our *Engliſh* no more than ſuch a trifle as an Ax or a Hatchet, or a few Knives.

They go in a Dutch Ship for Holland.

At laſt the happy opportunity came for theſe Men to return into their own Country too, and that by another *Dutch* Merchantman, which came into the River of *Wiapoco*; but the way by which they had notice of this they themſelves look upon to be very ſtrange, for ſome months before the *Indians* told 'em that there were three Ships lying in the River of the *Amazons*, one of which at ſuch a time ſhould certainly come into the River of *Wiacopo*, where they then were. Our Men ſay, that the *Indians* often converſe with *Peyar*, (ſome inviſible Being which they call by that Name) and that this Information came from him; but let it come from what it will, 'twas certainly a true one, for the Ship came exactly at the limited time.

The *Indians* were very loth to part with 'em, and being willing to have yet ſome memory of them and their Country remaining amongſt 'em, they brought abundance of their Children to 'em, to receive ſome of our *Engliſh* Names: Likewiſe there was great enquiry made after Sir *Walter Rawleigh*, (who was well known in this Country) and one conſiderable *Indian* came as far out of the Main as *Orenogue*, to ask what was become of him, and to ſend him a challenge of his Promiſe of returning again. And certainly that excellent Perſon had procur'd himſelf ſuch an eſteem in theſe parts of the World, and was ſo valued even by the *Indians*, who were not ſuch competent Judges of his worth as we our ſelves were, that if his

Fate had been to be decided by them, they would ſooner have made him the head taller by a Crown, than ſhorter in that ſence that we did.

Our *Engliſhmen* having embark'd themſelves in the *Dutch* Ship, ſail'd with them to *Amſterdam*, and from thence came ſafe to *England*.

To this may be added the following Account of another Ship ſent by Sir Olave Leigh *to his Brother at* Wiapoco, *but which put in by the way at Iſle St.* Lucia, *and never finiſh'd her Voyage to* Wiapoco.

IF the former Voyage had an unfortunate iſſue, and beſides had ſomething ſad and melancholy in it, tho' more than the Scenes of common and uſual Deaths, this now before us was certainly much more ſad in its Conſequences, ſince the Scenes here were moſt of 'em bloody ones, and the Deaths barbarous Executions.

A.D. 1605

This Ship (the *Olive Bloſſom*) ſet out for *Wiapoco* the ſame Year, in *April*, that the other Ship did in *July* from *Wiapoco* for *England*; the Commanders were Captain *Catlin* and Captain *St. John*. What between contrary Winds and Currents, and eſpecially the unſkilfulneſs of the Maſter, they quite loſt all hopes of recovering their intended Port in any due time, and therefore they put in firſt at *Barbados*, and afterwards the Iſland of St. *Lucia*, deſigning from thence to return to *England* again; but examining their Stores of Proviſion, and finding not near enough to ſerve ſo great a Company as they were ſo long a Voyage, Captain *St. John*, with ſeveral of the Paſſengers, to the number of 67 Men, reſolv'd rather to ſtay and take their Lot upon the aforeſaid Iſland, than run the hazard of being ſtarv'd at Sea. Here therefore they were ſet aſhore, with their Swords, Muſquets, Powder, one ſmall Piece, and a Barrel of Biſcuit for Food, which was all the others would allow 'em; but notwithſtanding they quickly found a way to get a conſtant ſupply, which was by trading with the *Indians*, who were willing to maintain that Correſpondence with 'em; they would bring 'em all ſorts of Roots and Fruits that their Country afforded, together with ſome Fowl too, as Hens, Gulls, Pelicans, Woodcocks and Snipes, and then with a little trouble they could every night take delicate Tortoiſe upon the Sands.

67 Perſons ſet aſhore.

For ſome five or ſix weeks they liv'd in the little Hurs or Houſes they had built, and never made any Excurſions into the Country, nor any Journey towards the diſcovery of it: But the Captain ſeeing one day certain Plates of Metal upon the Arms of ſome of the *Indians*, and being inform'd that they were Gold, enquir'd of 'em from whence they had it, who told him pointing to a very high Mountain in the North-weſt part of the Iſland: Upon this the Captain himſelf with ſeveral of the chief, (to the number of a Boat-full) went in queſt of this golden Mountain, the reſt being appointed to keep good guard at home in the mean time; but the Journey not being very long, they promis'd to return in a weeks time again.

When this part of the Company was gone, the others that ſtaid behind expected the *Indians* to come and bring 'em Victuals as they us'd to do, but they did not come near 'em, and for three days together they ſaw nothing of 'em. The *Indians*, it ſeems, had obſerv'd when the Captain went, and had follow'd him to ſo good purpoſe, that they cut him off, with his whole Company, in that Journey; and this was the reaſon why the treacherous *Barbarians* did not come with Proviſions according to their Cuſtom, for they were then at the ſlaughter of the *Engliſh* at the Mountain.

Capt *St. John* and his Men kill'd.

And now they intended to make a like riddance of their Companions, for in the next place they began to gather about 'em in great numbers, but yet carried it fairly and ſmoothly, to take away all grounds of ſuſpicion from 'em; but our Men, who well ſaw how many came to 'em both by Sea and Land, and therefore began to miſtruſt ſome ill Deſign, kept a ſtrict watch, and fortified their little Camp as well as they could: The *Indians* came up and down to 'em, and drank and ſmoak'd with 'em as before, and amongſt others there came a certain deſperate Savage, whoſe Name was *Augramert*, who was a Captain of the Iſland of St. *Vincent*, and whom they had invited hither to ſerve 'em in this Enterprize.

Indians prepare to deſtroy the reſt.

After Dinner one day *Augramert* (who had been well entertain'd) would needs have our Men to his Quarters, alluring them with the Promiſe of furniſhing whatſoever Proviſions they had occaſion for; for 'tis to be noted that the *Indians* had laid up large Stores for the uſe of theſe new-comers, tho' they had none to ſpare for the *Engliſh*. There was eighteen of the Company that went along with him and his Father, and very pleaſant they were till they came within ſight of the Houſes, but then all of a ſudden, whilſt Mr. *St. John* (who was the Captain's Brother) was jeſting and playing with *Augramert*, that Savage catch'd hold of his Sword with one hand and his Poignard with t'other, and at the ſame time the old man his Father knocks him down with a great wooden Sword: Then the *Caribes* that lay in ambuſh began to ſhew themſelves, and the Arrows flew out of the Woods like Hail; our Men were but eighteen againſt four or five hundred, and ſurpriz'd too, ſo that hardly having time to light the Matches of their Guns, there were not above ſix diſcharges made: However, after their firſt diſorder, they rallied and made a ſtand in a certain Paſs, where they might poſſibly have defended themſelves to ſome good purpoſe, even againſt that multitude, had not a new Company aſſaulted 'em behind, but receiving a ſhowre of Arrows in their Backs, they had no other way but with their Swords in their hands to break thro' them, and endeavour to run for't; but 'twas impoſſible to eſcape, for they had laid ſo many Ambuſhes, and ſo effectually ſtopt up every Paſs, that all theſe brave Men (one only excepted) died upon the ſpot, ſeveral of 'em being pierc'd with more than a hundred Arrows, and the Savages taking care all along not to come within reach of them till they ſaw 'em drop, and then with their huge *Braſile* Swords came and knock'd 'em o'th' head.

Savages ſurprize and aſſault the *Engliſh*.

He that made his eſcape from this direful ſlaughter had a hard matter to do it, he was forc'd to hide himſelf in a Wood, and then ſwim a Lake, and ſo get home, which he did time enough too, to give his Fellows the Alarm.

And 'twas in a very little time after, that a body of the Savages came and preſented themſelves upon the Sands to their view, intending to aſſault 'em, but they quickly march'd off again when the others let fly with their Piece of Cannon upon 'em.

But in the ſpace of two or three days they return'd with thirteen or fourteen hundred Men, and beſet them round both by Sea and Land, ſhooting their Arrows continually in amongſt 'em, and wounding ſeveral: This ſort of Combat held for ſeven or eight days, but then the Savages bethought themſelves of a more dangerous piece of Policy, they ſhot Fire along with their Arrows, which burnt both the Houſes of the poor Defendants and all their Cheſts too, which they encompaſs'd themſelves withal as a Barricado againſt the Enemy; however they maintain'd their ground, and quickly erected themſelves a new ſort of a Fort made of the ruins of the old one, and cover'd with Earth and Sand; this effectually ſav'd 'em from all danger by Fire, and (as they had order'd the matter) kept off the ſtorms of Arrows too: Their Enemies ſeeing they could not accompliſh their deſign, went all away and left 'em.

Savages attack them in their Houſes.

They defend themſelves.

But now they were ſtill expos'd to very dangerous Enemies, tho the others were gone out of ſight, there was Hunger and want of all Neceſſaries for Life coming upon 'em with violence, and which way to guard againſt theſe they could not tell; but Providence was pleas'd to incline the minds of ſome of theſe ſavage Creatures to be kind and pitiful to them in their extremity, for they came and of themſelves offer'd to traffick with 'em for Proviſions, and thus conſtantly ſupplied 'em for the ſpace of a week: At laſt our Men told 'em, *Their deſire was not to ſtay in their Country, to be any farther troubleſom to 'em, but to be gone, in order to which if they would furniſh 'em with a Boat, they would give them in requital Hatchets, Knives and Beads, as many as would content 'em.* To this the *Indians* agreed, and brought 'em a Boat, upon which they preſently went to work to fit her up for ſervice, and went off as ſoon as poſſible, becauſe theſe friendly Savages told 'em, there were farther Preparations making againſt 'em.

Some of the Savages ſupply 'em with Proviſions.

They put to Sea in a very bad condition, having no Chart, nor Compaſs, nor Skill to manage and direct a Boat; neither could they hold out long as to the matter of Proviſion, for four or five gallons of Water, with a few Plantans, Potatoes, about twenty Biſcuit, and a little Rice, was all their Store.

They were ten days at Sea, and one of thoſe days had a very great Storm, which tho' it brought 'em often into danger of drowning, yet did 'em this kindneſs, to bring 'em Rain to quench their thirſt: Some Sea-fowl alſo (tir'd with flying) came and reſted themſelves upon the ſide of the Boat, and theſe help'd to eke out their ſcanty Proviſions.

They being nineteen of 'em in one little Boat, crowded and preſs'd it ſo, that the Brim was near enough the Water to let every little Wave roul over it, ſo that four of 'em were continually imploy'd by turns to lade out the Water.

'Twas upon the tenth day that they firſt 'ſpied Land, but what or where 'twas they knew not, having only gone as the Wind and Sea carried 'em, except that ſometimes they directed their Courſe a little by the Sun in the day, and the Stars by night; however, they could not reach Land the ſame day they 'ſpied it, but labouring with a Calm till night, they came upon the Shore before they were aware, and ſo ſplit their Boat upon a Rock; here ſome ſcrambled up the Rocks, and others the Roots of Trees that ſtood upon the Shore where they were caſt; 'twas a certain Iſland, but without Inhabitants, and indeed any thing that was fit to preſerve Life.

After they were all got on ſhore, and began to look about 'em, they found into what a miſerable place they were caſt, and they eaſily concluded that if there was no way found to get looſe from hence (in a very little time too) they muſt every man of 'em ſubmit to his Fate; in ſhort, they muſt be ſtarv'd, all of 'em together, unleſs ſome (that could and would attempt ſuch a Diſcovery) ſet themſelves to find out relief. Upon this conſideration they agreed, that a certain number of 'em ſhould take the Boat and go over to the main Land, while the reſt ſtaid there praying for their good ſucceſs, and a deliverance from the Deaths that threatned them. The Men that went had certainly their ſhare of Danger, as well as them that ſtaid behind, who had nothing in the Earth to ſatisfie Nature withal but Salt-water and Tobacco; theſe Travellers (I ſay) were ſometimes in danger of ſtarving as well as they, but then they were more expos'd upon other accounts, as particularly in croſſing ſeveral Rivers, where ſometimes the *Sharks* and other times the *Alligators* would purſue 'em for a good way together.

Scarcity of Proviſion.

When they had wander'd ſome time, and were hardly able to go any further, they came to a Cave, where they ſaw a Veſſel of Wheat-flower, which without any further ceremony they made into a ſort of Cakes, and gave Thanks to God for't, without troubling themſelves about the Owners. Shortly after this, they were ſo happy as to light upon ſome company which were *Spaniards*, *Indians* and *Negroes*, and theſe were as kind and compaſſionate to our Men as their diſtreſſed caſe requir'd; they feaſted 'em with the beſt of their Proviſion, and becauſe they ſaw 'em ſo very feeble, let 'em ride, and went themſelves on foot: Thus they brought 'em to an *Indian* Town, where they had the ſame ſort of treatment ſtill, and here 'twas that they began to open the miſerable caſe their poor Companions were in at the deſolate Iſland; and as ſoon as ever they had recover'd ſtrength enough to undertake the Journey and ſhew the way, the *Spaniards* and *Indians* went along with 'em, and carried Proviſions for thoſe poor Men: Providence had diſpos'd of ſome of 'em in the mean time, ſo that the number was leſs by five, and indeed the remainder was ſo near going the ſame way too, that 'twas a queſtion whether Nature were not too far tir'd and ſpent to be recover'd again; for they were not able to eat, ſo that 'twas with a great deal of Art and Care that thoſe feeble and ſick ones were to be manag'd, and no little pains to be taken to ſet 'em upon their Legs again; however, they carried 'em over to the main Land, and from thence to that ſame *Indian*-Town where their Companions had been ſo kindly entertain'd before, and ſo to another Town inhabited by *Spaniards*.

The *Engliſh* treated kindly at *Coro*.

Both the *Spaniards* and *Indians* ſhew'd all the Generoſity and Good-nature imaginable in the treatment of theſe Men, and they ſeem'd ſo glad of the opportunity of relieving ſo much Miſery, that 'twas even a matter of Contention amongſt 'em who ſhould be moſt forward to do it; all the Dons of the Town took each his Man to entertain at his Houſe, to provide for both at Bed and Board, and to furniſh with all the Materials of a comfortable and pleaſant Livelihood; and then for a Country Entertainment, at any time when they pleas'd they went out into the Villages, where the *Indians* would give 'em a true and hearty welcome with the beſt Fruits and Meats they could provide, and ſeeing alſo that they were pleas'd with Apes, Monkeys, and Parrots, they would catch ſtore of thoſe Creatures, and have em ready in their Houſes againſt the *Engliſh* came; thus well were they diſpos'd of after their miſerable circumſtances, and ſo conſiderable a breathing time had they to prepare 'em for freſh Troubles.

After they had been here ſome time, they began to think of their own Country, and ſome of 'em made a motion to the *Spaniards* for a permiſſion to go; and indeed it was but ſome of them that had a mind to be gone, for as to the others, they liv'd ſo much at eaſe that they did not care to think of interrupting that ſort of life by a new courſe of Adventures; beſides, they perſwaded the *Spaniards* not to let their Fellows go, and ſuggeſted ſeveral little Jealouſies to 'em, which was far from the Kindneſs to be expected from Countrymen, and Men too whom common Dangers and Sufferings ought to have endear'd to each other; however, at laſt three of 'em got both leave and opportunity to go, breaking thro' all the tempting Offers of the *Spaniards* to keep 'em in the Country.

Go to *Carthagena*.

The Town they went from was call'd *Coro*, and the place they were bound for was *Carthagena*, where the many Recommendations they had to the chief of the City would in all probability have procur'd a very good reception, had not the Governour died juſt as they came thither; but that happening, (unluckily for them) they were immediately clapt up in Priſon, and in no ſmall danger of being condemn'd to the Gallies, had not the mediation and kindneſs of one conſiderable man prevented that; and by his means alſo they were conſtantly ſupply'd with good Proviſions all the while they lay there, for the barbarous *Teniente* (he that ſupplied the Governour's place) would not allow 'em any thing: This ſame good-natur'd *Spaniard* alſo, with another as rich and charitably diſpos'd as himſelf, were the Bail for theſe poor Men, entring into a Bond of a thouſand Ducats for their forth-coming; however, that was more a piece of Formality than any thing elſe, for the *Teniente* himſelf, at their delivery out of Priſon, did give them their Liberty. And now they were only to ſpend their time in making much of themſelves, till the Galeons were ready to ſail for *Spain*, with whom they were to go. One of the generous *Spaniards* carried 'em down to his Country-houſe, and treated 'em in a manner more like Noblemen than poor common Sailors; then the Dons and the Great Men that came to his Houſe as Viſitants would (out of their winnings at Cards) give each man of 'em ſix or ſeven Pieces of Eight at a time. And at this rate did he and the reſt entertain 'em, till the Galeons went, at which time he procur'd 'em each their paſſage.

Impriſon'd there.

Set at liberty.

As for the reaſon of this extraordinary Courteſie this *Spaniard* ſhew'd our *Engliſh*, it was the Favour ſhewn by Sir *Francis Drake* to his Father; for when *Carthagena* was taken and plunder'd by the *Engliſh*, Sir *Francis* ſav'd that Perſon's Life and all his Goods; and his Son did this to diſcharge himſelf in ſome meaſure of the Obligation that laid him under.

CHAP.

Chap. VII.

An Account of a Voyage to Guiana, *perform'd by* Robert Harcourt *Eſq*; *of* Stanton-Harcourt *in the County of* Oxon: *Written to Prince* Charles.

Bay of *Wiapoco.*

OMitting the ſeveral Particulars of the Voyage, (in which there occurr no Remarks capable of giving any Entertainment) we'll conſider the Author as at the end of it, and already come to an Anchor in the Bay of *Wiapoco*. It was not long before ſeveral Canoes of *Indians* came to ſee who and what they were, and finding 'em to be *Engliſh*, came on board 'em without any farther Ceremony.

The *Indians* here were no leſs pleas'd with our Mens Knives, Beads and Toys, than our Men were with the Plantans and Potatoes, the Hens and the Fiſh, which the others brought with 'em; there was a mutual ſatisfaction of Appetites amongſt 'em, of the one ſide for Eating, and of the other for Play; the Belly here, and the Fancy and Humour there, were equally entertain'd.

Town of *Caripo.*

The *Indians* come aboard the *Engliſh.*

The Town from which theſe People came was call'd *Caripo*, ſeated upon the Eaſt ſide of the Hill in the mouth of *Wiapoco* River; and 'twas not a little advantage to our Men in coming hither, that the Lord or petty King of this very place was on board their own Ship at this time; he had been it ſeems ſome years in *England*, and now (with another of his Countrymen) came over with Mr. *Harcourt*, tho' his true Quality was not known till the *Indians* now diſcover'd it. There was very great Joy amongſt them for the return of their Prince, and the more effectually to expreſs that, as alſo their Gratitude to the *Engliſh* for this Benefit, all the chief *Indians* of the Town came on board Mr. *Harcourt*'s Ship, and brought plenty of their Country Proviſion with 'em. As for their parts, they deſir'd no better Entertainment than *Aqua Vitæ*, and that they had till their *Indian* Humour and Gaiety was rais'd to a pretty high pitch; but after theſe ſort of Merriments were over, Mr. *Harcourt*, in a Speech, gave 'em to underſtand the deſign of his coming; he put them in mind of what had been done by Capt. *Leigh* before, who by their free conſent took poſſeſſion of the Country in the name of the King of *England*; That His Majeſty intended no ſort of unjuſt Uſurpation over 'em, nor to treat 'em in any way like Slaves and Vaſſals, but only to be their friendly Protector, and deliver 'em from the Inſolencies and Oppreſſions of the *Caribes*: He told them alſo of the Kindneſſes that had been done them by Sir *Walter Rawleigh*, who freed 'em from the *Spaniſh* Servitude, burnt the Town of *Trinidado*, and deliver'd five of their *Indian* Kings, that lay there bound Neck to Neck with Collars of Iron, and would have been ſacrific'd; particularly alſo, That their Countrymen the *Oronoqueponi* (who border upon the River *Oronoco*) did then actually ſurrender their Country to Sir *Walter Rawleigh*, in the name and for the uſe of Queen *Elizabeth*; and from all this, That the ſame Reſolution was likewiſe expected from them.

Mr. *Harcourts* Speech to 'em

Indians Objection.

They conſult.

The *Indians* were ſenſible of the truth of all theſe things, but yet they ſeem'd to be much diſſatisfied that Sir *Walter Rawleigh* himſelf did not come again amongſt 'em, according to his Promiſe; and when Mr. *Harcourt* had excus'd that, they objected, That they had not room enough to receive ſo great a Company as now was come, for their Town was but ſmall, and beſides, their Gardens but little neither, ſo that the Products of 'em would never be ſufficient to maintain both themſelves and our Men too. But this Objection they did not urge very ſtiffly, for they were told, that the *Engliſh* did not intend to be chargeable to 'em and live upon their coſt, but to traffick with 'em for Proviſions, upon the Principles of a juſt and equal exchange, and would alſo be no leſs diligent than themſelves in dreſſing and improving their Garden-grounds, that they might have enough of thoſe Neceſſaries of Life. Upon this the *Indians* crav'd the liberty to withdraw and go to conſult amongſt themſelves, which they did, and ſate above two hours debating and drinking *Aqua vitæ*, and at laſt gave this as their final and unanimous Reſolution: That the *Engliſh* ſhould be very welcome to ſettle amongſt them, and that they would furniſh them with Houſes and all other Neceſſaries as far as they were able; but only, ſince the ſame things had been ſeveral times promis'd them before, and no *Engliſh* had yet planted in their Country, they fear'd leſt this ſhould prove to be more Words and Ceremony too than any thing of Performance; however, they would be contented to try once more.

They yield to the Propoſals made.

And now our Captain, with all his whole Troop, went aſhore to the *Indian* Town, where the beſt reception that could be expected from ſuch People as they was given 'em, and they were diſpos'd of up and down in convenient Lodgings.

Caripo Town.

This Town of *Caripo* is very advantageouſly ſeated; for, ſtanding upon a great rocky Mountain, it is not acceſſible but only by certain narrow foot-paths, (which are eaſily defended too) and that by reaſon of very ſteep Clifts and rough woody ways, ſo that our Men were lodg'd here as in a Fort, and wonderful conveniently in reſpect of the Harbour, for that was but at the bottom of the ſame Hill, on the top of which they liv'd, ſo that their Ships rid at Anchor juſt underneath 'em.

Hope fruſtrated by the Guide.

The great Rains, that fell almoſt without intermiſſion, made 'em lie ſtill here in this Neſt for at leaſt a month, and there was no going out to travel the Country. But that wet ſeaſon being over, the Captain addreſs'd himſelf to the ſearch of thoſe Golden Mountains that had been ſo much talk'd of, and which his Company had been ſo often promis'd from the very beginning of the Voyage: But as many times great Hopes and Promiſes do, ſo did thoſe that they were fed up with, prove vain and empty at laſt, and their moſt forward Guide, who had before made no doubt of ſhewing them the richeſt Treaſures of Gold, now when it came to the tryal, upon the ſpot where he had pretended theſe to lie, could diſcover nothing at all.

This Diſappointment ſo ſtirr'd the inconſtant Humour of the common Soldiers, and thoſe that came out meerly for the ſake of the charming Gold, that they were like to have put all into downright confuſion; but the prudent Commander us'd his utmoſt endeavours to cool that heat, and ſilence the noiſe made upon this ſcore, and that ſo ſucceſsfully, that what by ſoft words and politick contrivances to ſet 'em at work and keep their hands full of buſineſs, he prevented the matter from running up to the extremity of an open Mutiny.

Gold Tokens.

Beſides, ſome of the *Indians* diſcover'd to him, that the Country of *Guiana* was not ſo barren of Gold as the ignorance and miſtake of their Guide might have made it imagin'd, for they ſhew'd him one day certain Images of Metal, which upon examination were one third part at leaſt Gold; and they told him too, that thoſe things were made in the high Country of *Guiana*, where great ſtore of 'em was to be had. But then the very white Sparr, of which alſo all the high Country is full, was another confirmation of this; for as every ſort of Mine has a peculiar Sparr, ſo that of Gold and Silver has one, which by its extraordinary whiteneſs and pureneſs is very diſtinguiſhable from all others.

M. Gemeribe.

But tho' the Captain was out of all hope of advancing to any of thoſe Mines now, yet he ſet himſelf to perfect what Diſcoveries he could of the Country in order thereto, and therefore did in perſon travel up the River of *Wiapoco*, to make Obſervations there, and alſo diſpatch his Brother (with ſome others) to diſcover the River of *Arrawary* and the Country bordering upon it, which adjoyns to the River of the *Amazons*: He went alſo and took poſſeſſion of the Mountain *Gemeribe*, which is the uttermoſt Point of Land to the Northward in the *Wiapoco*; this he did with the Ceremony of Twig and Turf, in the preſence both of his own People and the *Indians* too. After poſſeſſion taken, the Mountain was deliver'd over to an *Indian* to hold and poſſeſs the ſame, himſelf and his Heirs, of His Majeſty *James* King of *England* paying the yearly Duty of a tenth part of all Tobacco

Cotton-wool, Annoto, and other Commodities growing within the Limits of the ſame.

Dangerous Voyage.

But the Attempt of the Captain's Brother and Capt. *Harvey*, in diſcovering the River *Arrawary*, was attended with great Difficulties and Hazards, for their length run by Sea to this River was near an hundred leagues; and in the way they had many fearful plunges, by reaſon of a high-going Sea that breaks upon the Flats and Shoals, eſpecially at the next great Cape to the North of *Arrawary*, which they nam'd *Point Peril*, upon the ſcore of the Danger they paſs'd there. Then up the River their Diſcovery proceeded fifty leagues more, and yet all this while they had none but flat-bottom'd Canoes, not near ſo broad, tho' ſomething longer than the common *Thames* Wherries.

Diſcoveries up the River of *Arrawary*

Shy People.

The *Indians* they met with up this River plainly diſcover'd they had never ſeen *European* Faces before; they would not a long time be enticed to any ſort of Trade or Converſation with them, no, not with the other *Indians* they brought along with 'em, becauſe they were as much as the others perfect Strangers to 'em, but always ſtood upon their guard, and by their actions declar'd that they look'd upon 'em as Enemies; but at laſt the fine Toys wrought upon 'em, and an earneſt deſire to poſſeſs ſome of thoſe things, the looks of which pleas'd them ſo well, that it induc'd 'em to come to ſome terms for Proviſions.

What progreſs they made in diſcovering this River ſhall be afterwards related, but they had certainly gone farther if they could have been ſupplied with Bread and Drink, for as for Fleſh and Fiſh, they could procure enough, but the other Neceſſaries failing, 'twas impoſſible to perſwade their *Indian* Guides to proceed with the Voyage, and ſo they ſail'd homewards again: And here their greateſt danger attended 'em, for coming to the *Carripoory* Iſlands, they would needs paſs between them and the main Land; now the *Indians*, who well knew the extream danger of ſuch an attempt, had ſaid all that could be ſaid to diſſwade them from it, and yet nothing would do, but they muſt go that way. And here 'twas that they met with ſuch a Breach of the Water, that if the *Indians* had not been extraordinary induſtrious indeed, they had been all ſwallow'd up: The Seamen call theſe violent Breaches of the Water by the name of *Boors*, for 'tis like the furious claſhing or ruſhing together of two enrag'd Creatures; after the firſt ſhock they part and retire back, to meet with more violence, till one has entirely run down his Adverſary; ſuch a ſort of a Combat is here between two contrary Tides, they ſtrive and preſs upon each other with a horrible noiſe and foaming of their Waters; and our Men, as if they had a mind to ſee which was the ſtrongeſt of the two, muſt needs come where they thus broke upon one another, but 'twas their good luck to eſcape and come home ſafe again to *Wiapoco*.

Return for England.

Not long after this Mr. *Harcourt* was oblig'd to return for *England*, having left his Brother to command in chief in his abſence, to whom was joyn'd as Aſſiſtant (or rather as his Lieutenant) that ſame Captain *Harvey* before mention'd.

Riv. Courwo.

Divers other Rivers found by Mr. Harcourt.

Having parted from *Wiapoco*, he came firſt of all to *Caiene*, where finding ſome defect in his Ships, he left them at that place to repair what was amiſs, and in the mean time, with his Ship-boat alone, went to ſee what diſcovery he could make. He follow'd the Coaſt to the Weſtward, and paſſing by the River of *Mecco-oria*, he lodg'd that night in the mouth of the River *Courwo*, which has an entrance narrow enough, tho' deep, but within affords a good Harbour. The next day he continued his Weſtwardly Courſe alſo, and paſſing the Rivers *Manmanury*, *Sinnamara*, *Oaraſſonini*, *Coonaunonia*, *Uracco*, and *Amanna*, he came to the River *Marrawini*; the Bar lies two or three leagues off at Sea, and 'tis all Shoal upon it, being but two fathom Water, but within it the Chanel is three, four, five and ſix fathom deep: At a matter of five leagues within the River are the Iſlands *Curewapory*, which are wholly uninhabited, becauſe at the riſing of the Waters they are overflow'd; and there are abundance of other Iſlands of this nature up and down in this River.

Falls of Water.

He omits ſeveral *Indian* Towns and Villages, together with the Entertainment he had at them, and only tells us, that having gone about twenty leagues from the Sea, he found the River in a manner barr'd up with Rocks, over which the Water fell with prodigious violence, notwithſtanding all which Falls he had the Courage to proceed; but ſtill the farther he went, the more dangerous he found them to be and the more in number too; but then when he had paſs'd the firſt Mountain towards the high Country of *Guiana*, (which is call'd *Sapparow*) and had diſcover'd ſeveral other high Mountains before him, being then at leaſt ſix days Journey up the River, he met with ſo bad and ſhoaly a Water, and ſuch vaſt Overfalls, that here he was forc'd to put an end to his Journey.

Difference between the River Marawini and that of Wiapoco.

Tapuramune.

Strange Indians.

Being return'd back to his Company and Ships, he had the following account of the Country from a Kinſman of his, who had been at the trouble of travelling to make ſome diſcovery. He went at leaſt eleven days Journey up the River *Marrawini*, which by the way is much different from that of *Wiapoco*, ſince the latter is not paſſable but when the Waters are fallen to the loweſt, and the former not but when they are riſen to the higheſt. Here he came to a Town of the *Caribes* call'd *Tapuramune*, which is above a hundred leagues from the Sea, and three days Journey from *Moreſhego*, another Town of the ſame People alſo: The *Indians* of this place inform'd him of ſeveral great and mighty Nations that he would come to, if he travel'd ſome ſix or ſeven days beyond *Moreſhego*, particularly of ſome that were in ſtrength and ſtature beyond other Men, and had conſequently Arms (Bows and Arrows) vaſtly bigger than what were us'd or could be manag'd by any other People: Farther, That ſeveral very great and conſiderable Rivers do fall into the River *Marawini*, (ſome of which he ſaw himſelf as well as heard of) and that 'tis twenty days Journey from *Tapuramune* to the head of *Marawini*; moreover, that a days Journey from thence to the Landward, a man comes into a plain level Country, very fit for Cattle, upon the account of the mighty Graſs it affords. In ſhort, this Perſon in his Journey met with above eighty Overfalls of Water, and ſeveral of 'em very dangerous, which tho' as he came they made him difficulty enough, yet in returning they did not a little quicken his paſſage; a Man generally in this caſe ſwims three days Journey in one.

Pitch of Cape Brea.

Hot Bath of Mevis.

Mr. *Harcourt* now ſail'd homewards with all the Expedition imaginable, and had a Voyage to his deſir'd Port ſafe and proſperous enough, in his accounts of which we have only one or two Remarks to take notice of; the one is, of the excellent Pitch at Cape *Brea*, which is known pretty well in the World upon that ſcore, 'tis here in ſuch plenty, that all places on this ſide the Globe may be ſtor'd with it, and 'tis ſo good and ſo proper for all Ships that go into the very hot Countries, that nothing can be imagin'd more; any Man will eaſily conclude this, when he is told that this Pitch will not melt nor run with the Sun's heat, as all other Pitch does: The other Note is, of the famous hot Bath at the Iſland of *Mevis*, and which Mr. *Harcourt* commends as an admirable Remedy for ſeveral Diſeaſes; he himſelf experimented the Vertues of it, he brought a very bad and dangerous Cough along with him out of *Guiana*, of which he was very ſpeedily cur'd by bathing and drinking the Water; farther, one of his Servants had his Hand ſo burnt with Gunpowder that he was like to loſe the uſe of ſome of his Fingers, the Sinews were ſhrunk and the Hand contracted after a very odd manner, but by bathing two or three times all was much alter'd for the better, his Hand was perfectly heal'd, and tho' not reduc'd ſo entirely as was deſir'd, yet 'twas in a fair way ſo to be. Several others of his Company were alſo cured of ugly Swellings in their Legs, and that within the compaſs of a Day.

After this account of the Voyage, we muſt take that alſo of the Country to which 'twas made, its Qualities and Inhabitants.

River of the Amazons.

It is bounded on the North with the Sea and the great River *Orenoco*, on the Eaſt and South parts with the celebrated River of the *Amazons*. This River of the *Amazons* is perhaps the greateſt River now known in the World, and ſeveral valuable Writers have eſteem'd and call'd it ſo; it has its riſe from the Mountains of *Peru*, and (winding and turning it ſelf as it does) runs the ſpace of fifteen or ſixteen hundred leagues; it diſcharges its burden into the Ocean with ſuch a violent force, that a great way out at Sea you may drink freſh Water, and Mr. *Harcourt* declares, that being thirty leagues from Land, they drank as good and well-taſted Water as could come out of a Spring, and this from the River of the *Amazons*.

'Twould be an endleſs work to deſcribe all the leſſer Rivers and Branches that communicate with this mighty Stream, 'tis enough to ſay that there is a prodigious number of 'em, and perhaps as many ſeveral Nations of *Indians* that dwell about 'em; there is a ſeveral Kingdom almoſt at every River, and ſometimes to go from one Bank to another, is to come into a new Country: But we are now more immediately concern'd with *Guiana*. One of the ſweeteſt and moſt pleaſant Provinces of this ſpacious Country is that which they call *Coſſheberry*, that

lies

The Country of *Guiana.*

Topazes here found.

lies to the Northward of the River *Arrapoco* (the moſt Weſtwardly Branch of the River of the *Amazons* that falls into the Sea.) The *Engliſh* that travel'd here found a delightful mixture of open Downs, fruitful Meadows, and thick Woods; there were abundance of ſtately Mounts that afforded pleaſing Proſpects, and very low Valleys beneath 'em, all ſhaded with Trees and moiſtned with freſh Streams running thro' them: According to their deſcription, no ſpot of Ground in the Univerſe could be more capable of charming a man than this, eſpecially the Air of it, being as healthy too as the appearance is inviting. It affords a ſort of Stones which at firſt were taken for Diamonds, but prov'd not to be ſo, tho' very good and lovely; but this they ſay of 'em further, that they are a ſort of a ſign of Diamonds, and 'tis obſerv'd that at *Tenaſſeren* in the *Eaſt-Indies*, where there is the greateſt plenty of Diamonds, theſe Stones are plentifully found too; our Men gave 'em the Name of *Topazes*, but what they were ſeems to be uncertain.

Beſides this *Cooſheberry*, there are alſo the Provinces of *Arracoory* and *Morownia*, which are very pleaſant and fertile ones. In general, this Country affords as many Minerals and Metals as any part either of the *Eaſt* or *Weſt-Indies*, and there's demonſtration enough that, as for ſome of the Metals, they are none of the baſeſt.

Phyſical Drugs.

For Phyſical Druggs, there's *Spikenard*, *Senna*, *Caſſia Fiſtula*, *Bole Armoniac*, *Terra Lemnia*, yellow *Amber*, and ſeveral noble *Gums*; but there's one Gum call'd *Colliman* which they thought merited a particular deſcription, 'tis black and brittle, and looks almoſt like common Pitch, if you put a little of it upon burning Coals, it will quickly fill the Room with a moſt ſweet and pleaſing odour, and the ſame Fumes receiv'd up into the Head, will effectually cure the *Vertigo*, *Megrims*, and all Diſtempers of their kind; it is commended alſo for its great uſe in the dead *Palſie*, and Womens pains in their Backs, the effect of their Labour; in this latter caſe they order it to be ſpread upon a piece of Leather, and applied to the part: Laſtly, 'tis good for all Wounds and Sores, for any Ache or Pain, and is very proper to be uſ'd where any part requires a particular ſtrengthning and refreſhment. Beſides this, there is another Gum which they call *Baratta*, which is every whit as ſoveraign a Medicine and as rare a Perfume.

Vegetables.

Strong purging Apple.

As for the Vegetables of this Country, there are ſome very odd ones; there's an Apple, which goes by the name of the *Sleeping Apple*, but may as juſtly be call'd the *Purging Apple*, ſince it produces both thoſe effects, and with violence too; this a certain *Engliſhman* found to his no little trouble and diſorder, he only bit a piece to try how the Apple taſted, ſpitting it out again preſently becauſe 'twas ſo violently hot, however that very ſmall matter which went down produc'd the effects of an extraordinary ſleepineſs and purging, and the latter diſorder did not ſtop till it had made the man ſit down at the leaſt ſixty times.

There is farther a certain Berry in theſe parts (admirable againſt the *Dyſentery*) which the *Indians* call *Kellette*.

Medicinal Plants.

The Juice of the Plant *Uppea* cures Wounds made by impoyſon'd Weapons, and that of the Leaf *Icari* is as good a Remedy againſt the Headach.

Woods for Dyers.

See Knivet's Voyage.

But the Mechanicks as well as Phyſicians may find in this Country Materials for the practiſe of their ſeveral Profeſſions; the Joyners here may find the delicate Wood *Pira Timinere*, which will ſerve for all the Curioſities of their Trade; it is red and ſpeckled, and worth thirty or forty pounds *per* Tun. The Dyers have all the main Ingredients for Colours that can well be wiſh'd for; the Berry *Annote*, rightly prepar'd, gives a perfect Orange-tawny in Silk, and there's another that dyes a blue; there's a Gum which in Cloth dyes a ſure and perfect yellow in grain; Leafs which (well prepar'd) dye a deep red; a Wood which gives a purple, and another a yellow; but that which is more worth obſervation is, that there is a certain ſort of Wood which tinges a hot Liquor with a noble purple, and a cold one with as good a crimſon. The Wood that intoxicates the Fiſh is alſo here in great plenty, of which ſome account was given before, but 'tis a ſort of a Providence that it grows ſo plentifully here, becauſe the People are hardly ingenious enough to ſhift for themſelves by other methods of Fiſhing, as other *Indians* do.

Tobacco.

Tobacco is one of the moſt topping Commodities of this Country, and 'tis the opinion of our Authors that this very thing alone might be manag'd ſo, as to bring in the *Engliſh* Nation as much Profit as ever the *Spaniards* had by the richeſt Silver Mine they are Maſters of in the *Indies*; the Soil is certainly very kind to and fit for it, no place can be more natural to it, except the Pipe in which 'tis to be ſmoak'd.

Sugar-canes.

The Sugar-canes are another Product of as great a character as the Tobacco, they grow here to a vaſt bigneſs in a very little time, and therefore (conſidering alſo the mighty plenty of 'em) a man may fairly conclude that no little advantage might accrue by erecting ſome good *Ingenio's* here.

Cotton and fine Hemp.

Cotton-wool and fine Hemp or Flax are very common Commodities alſo, of the former they make Fuſtians, Bombaſt, and the *Indian* Hammocks or Swinging-beds, and of the latter a Cloth extraordinary fine, and fit for the beſt uſes.

And ſince we are ſpeaking of Vegetables, it is not amiſs to bring the *Senſitive Plant* (as 'tis vulgarly call'd) into the number; they are not uncommon in ſome parts of the Country, they appear almoſt like Roſebuſhes, and are about half a yard high; our People made ſeveral Experiments upon 'em, both by touching and cutting the Leafs, and they had taken care to put ſome of 'em up in Pots to bring over, which they had effected, but that the Monkeys (who will always be imitating what they ſee Mankind do) went to make ſome Experiments upon 'em too, and quite ſpoil'd the Plants.

Caſſavi, Mais, and Guinea-Wheat.

As for matter of Proviſions, the Inhabitants depend mainly upon what the Earth brings forth ready to their hands; their Food is moſtly like themſelves, wild and in its pure naturals, at leaſt if they take any pains, they ſpoil a Diſh by the dreſſing on't: The *Caſſavi* Root is their principal ſtaff and ſupport for Bread, they rub the Root upon a Stone, and preſs out all the Juice of it, and afterwards bake and ſo grate it into flower; the raw Juice is ſaid to be Poyſon, but boil'd with *Guinea*-Pepper makes an excellent wholſom Sawce. They have alſo a vaſt deal of *Mais* or *Guinea-Wheat*, which is a Grain that yields a wonderful Encreaſe, even a thouſand or fifteen hundred for one, and many times more; it makes very good Bread and Cakes, and may be uſ'd to any purpoſes that our Wheat may.

Their Drinks.

And they are beholden to the *Caſſavi* and the *Guinea-Wheat* alſo for their Liquors, of which they have ſeveral ſorts, ſmall and ſtrong, thick and thin, clear and muddy, ſome that muſt be drank preſently, and others that will keep ten or twelve days, but yet (they ſay) all of them pretty tolerably taſted. Wine they have none at all, for there is not a Vine in the Country, but the Soil being ſo rich as it is, and the Clime ſo warm, 'tis more than probable that (were they planted here) they would proſper exceedingly.

Honey.

But they have as good Honey as any in the World, and as much of it too, tho' it be all wild, and taken out of hollow Trees and holes in the Earth.

Fruits.

Their common Fruits are Pines, Plantans, Medlers, Plums, and Nuts of various kinds, the three firſt of which are greatly commended, but the two laſt to be eaten with caution, inaſmuch as the Plums are very apt to give the Flux, and the Nuts to bind too much, unleſs eaten moderately.

Beaſts wild and tame.

And as for thoſe that cannot content themſelves with theſe common Products of the Field, there's Fleſh enough for 'em of all ſorts, Deer, wild Swine, Hares and Conies, but very different from ours in *England*, Maipuries (which taſte like Beef, and will take Salt) and Baremoes or Ant-Bears, that taſte as much like Mutton; beſides theſe, Lyons, Tygers, Leopards, Ounces, Marmoze's, Porcupines and Armadillo's.

Fowls.

For Fowls there are wild Ducks, Wigeons, Teal, wild Geeſe, Pheſants, Partridges, Doves, Stockdoves, Woodcocks, Snipes, Blackbirds, Curlews, Goodwits; Birds of Pleaſure, as all ſorts of Parrots, Parrakeroes, and ſmall Birds of delicate colours; Birds of Prey, as Hawks, Vultures, and others of the ravenous kind.

Fiſh.

The varieties of Fiſh are ſtill as great, if not greater, for here you have plenty of Sea-Breams, Mullets, Soals, Scates, Thornbacks, Swordfiſh, Sturgeon, Seal, and Salmon; of Shell-fiſh, Shrimps, Crabs, Lobſters, and Oyſters, which laſt may be taken off from the Branches of the Trees by the Sea-ſide; but the moſt remarkable freſh-water Fiſh is that which is call'd *Caſſerwa*, it is bigger than a Smelt, and much more delicious Food; this Fiſh has a flat Back indented, and the Ribbs round, very different from moſt other Fiſhes; but 'tis odd enough which is farther reported of it, that it has two pair of Eyes, ſo that as it ſwims along it keeps the lower ſights always within the Water, and the upper ones above or out of it: A very circumſpect Fiſh indeed, that looks into both Elements at once, and wants only a pair of Eyes more in the Tail to make it impoſſible to be catch'd. There is another Fiſh too that deſerves a particular mention, call'd by the *Indians*, *Coiumero*; by the *Spaniards*, *Manati*; and our *Engliſh* the *Sea-Cow*: It is properly a Sea-fiſh, but it always comes into the freſh Water in Winter and wet weather, and ſometimes 'twill come up into the Shallows in the drown'd Lands, and feed upon Graſs and Weeds. The Meat of it taſts like Beef, takes Salt very well, and will ſerve to victual Ships, as many of our *Engliſh* have experienc'd: It affords an Oyl excellent good for many purpoſes, and the Fat of it ſerves to fry Fiſh or Fleſh as well as Butter or any other Fat; but then as the inſide of it is furniture for the Belly, ſo is the outſide alſo for the Back, for the Skin is as good as Buff, and being dry'd in the Sun, and preſerv'd from wet, 'twill make Targets and other pieces of defenſive Armour, in which a Man may expoſe himſelf to a ſhowre of *Indian* Arrows.

The *Sea-Cow* and its Uſe.

Before we come to ſpeak of the Inhabitants of this Country, their Manners and Cuſtoms, we muſt take a little view of the diſpoſition of the Land and Air it ſelf: By the Sea-ſide 'tis all very low, and the ſcorching heat would render it wholly uninhabitable here, were it not for the freſh Eaſterly Breezes that cool and temper the Air, blowing generally moſt forcibly in the heat of the day; and in many places the low Lands are actually very little inhabited for all this Remedy, and that becauſe of the overflowing of the Waters, a Diſtemper which the cool Breezes can never cure. In the mountainous parts the Air is fine and pleaſing, the Soil in many places very fertile, and in others barren, tho' that barrenneſs is alſo fruitful of rich Metals and Minerals very often. The champaign Country is very temperate and healthful, and abounds in Meadows, Paſtures, and delicate freſh Rivers; 'tis inferiour to none for all ſorts of Sports and Pleaſures, and in many places too will give a Man the particular Sport of digging Gold and other valuable Foſſiles out of the Ground.

Quality of the Land and Air.

The Weather and Seaſons upon this Coaſt do differ conſiderably with reſpect to the ſeveral parts of it, for in the Eaſtern parts, towards the River of the *Amazons*, the dry weather begins in *Auguſt*, and the violent Rains and bluſtering Winds come on in *February*; but in the Weſtern parts, towards the River *Oronoco*, the dry weather begins in *October*, and the Rains and Winds in *April*; but as for degrees of Heat and Cold, 'tis much at one both in the Eaſtern and Weſtern parts, tho' ſometimes (from ſome particular cauſes) thoſe Seaſons may commence or end ſooner or later both in the one and the other of 'em; and this the Experience of them that have liv'd there confirms.

The Weather and Seaſons.

The principal Nations of this Country are, the *Parawagoto's*, *Arrucoories*, the *Charibes*, the *Arwaca's*, the *Yaio's* and the *Suppaio's*; the *Engliſh* were moſtly converſant with the three laſt, as being the Inhabitants of thoſe parts which they moſt frequented, tho' they had ſome correſpondence with ſome of the friendly *Charibes* too. Of all theſe the *Arwaca's* have the beſt Character for ſober civil deportment; the *Yaio's* are a ſort of a proud flouting People, and the *Suppaio's* crafty and cloſe in their dealings, and both the one and the other require good looking to.

The Nations of *Guiana*.

What their Religion is, could never be diſcover'd, there is ſo little ſign of any external Form amongſt 'em; they ſeem to ſhew a certain obſervance of the Sun and the Moon, but they don't expreſs it by any formal act of Worſhip, or by any Sacrifices made to them, yet there appears to be rooted in their Minds a certain Notion of another ſtate, wherein Men exiſt after this Life, as alſo of Rewards and Puniſhments therein: Thus whenever a Prince dies, they always kill ſome one or other of his Slaves; and they give this reaſon for it, That he ſhould attend his Maſter in the other World where he is gone. Again, when thoſe *Indians* die amongſt thoſe which have the Reputation of being good, they point up to Heaven, as when thoſe that have been miſchievous and troubleſom are gone they point down to the Earth, intimating thereby the different circumſtances of the Good and the Bad in their different Habitations and Houſings after this Life. It has been further obſerv'd of 'em, that they have expreſs'd to the *Engliſh* a mighty deſire of having Men brought amongſt 'em that ſhould teach 'em to pray, and particularly Capt. *Leigh* was mightily ſollicited by 'em to this purpoſe. Now 'twould be odd to ſuppoſe ſuch a Deſire in Men, without ſuppoſing alſo at the ſame time that they were aware of the Exiſtence of ſome very powerful and good Being, at whoſe hands they were to ask Protection and Supply of their Wants. And indeed, if what our Countrymen do very poſitively affirm be true, that their Prieſts or Soothſayers have ſometimes actual Conference with wicked Spirits, and that theſe poor wretches themſelves are ſometimes diſtreſs'd by 'em, and feel the effects of their Malice, 'tis no wonder (if they have any Notion of a Being that is both kind and great too) that they ſhould deſire to learn the way of invoking Him.

Their Religion.

Some hints of their Belief of a future ſtate.

But, to let this paſs, they have no other Diviſion nor Computation of Time than by Moons and Days; and as for numbering, they reckon from One to Ten, and then ſay, *Ten and One*, *Ten and Two*, inſtead of Eleven and Twelve, and ſo on. In common Converſation they reckon by their Fingers and Toes, by which way they expreſs their Numbers and keep their Reckoning exactly and readily enough. When they promiſe or appoint any thing to be done by a time limited, each Party takes a bundle of Sticks containing as many as there are Days or Moons in the ſpace of time they agree upon, then every Day or every Moon each Man draws one Stick out of his bundle, and when they are all gone they know the appointed time is come.

Their account of Time.

Their greateſt Solemnity is at the death of any of their Princes, Captains or Friends of great note and quality, but the plain truth on't is, 'tis no more than a drunken bout, for the *Guianians* are exceſſively given to this Vice, and 'tis the ſureſt mark of a brave Man amongſt 'em, when he will ſtand as firm as a Poſt over a Jarr of Drink, and empty two or three down into his Belly: Upon ſuch an occaſion they meet together, and bring ſeveral Jarrs of their ſtrong Liquor along with 'em, for (as was hinted before) this is the very Spirit of the Solemnity, and without Drink they cannot remember the Departed: Here then they drink, dance and ſing; and to make the Harmony more compleat and raviſhing, the Women that are a-kin to the Party deceas'd ſet up their Pipes and cry all the while. Theſe mighty doings laſt juſt as long as the Drink does, and no longer, for when that's out the Ceremony is over, the Muſick ceaſes, and the whole Company is quaſh'd, ſo now they begin to diſperſe themſelves again. Oh! did but ſome of the great Rivers of the Country run with ſtrong *Parranow* or ſome other ſuch Liquor, how ſoon would theſe People change their Element, become amphibious Animals at leaſt, and duck themſelves half the day in the belov'd Fluid?

Solemnity at the death of a Captain or Friend.

And indeed, ſince they eſteem a Man ſo much for his Drinking-abilities, one would think this qualification ſhould determine 'em in their choice of a General for the War; but they are not ſuch deſperate Sotts neither, tho' they are bad enough of all conſcience; they know that a General muſt know how to handle other ſorts of Inſtruments than a Pot or a Jugg, and be able to look other Enemies in the face than a Jarr of ſtrong *Parranow* or *Caſſavi* Beer; in ſhort, they require Patience, Courage and Hardineſs in him they elect to this Charge, and therefore when they have fix'd upon a Man, they thus proceed to try whether he has thoſe Virtues or no; they ſet him in the midſt of 'em, and after they have harangu'd him a while upon the Qualities of a good General, they take their Rods and begin to whip him ſoundly; the noble Candidate ſtands unconcern'd under this ſevere trial, he never ſtarts nor flinches, tho' every ſtroke draws Blood from him, and the dy'd Rods declare his Fleſh to be carbonado'd: Thus when his Virtues have been written over and over in ſcarlet, and the Examiners conclude 'em to be viſible and manifeſt enough, they put an end to the examination, and with one conſent ſalute him General: A very pretty method indeed! a man that is ambitious of this Honour need only get the reputation of having a caſehardned Backſide, and he is in as fair a way to Preferment as can be.

Method of chuſing a new General.

Theſe People are of a tall neat make, well limb'd and proportion'd; they go all naked, both Men and Women, without any ſort of covering, and the Women ſubmit to it with as little concern and regret as the Men: But if it be ſaid that Paint is a covering, then indeed they muſt be allow'd to be cover'd, for they do beſmear their Bodies with that, eſpecially when they go to Feaſts, and would make the fineſt figure.

Their Houſes are built much after the manner of our Barns in *England*, but much longer, for ſome of 'em by meaſure were a hundred and fifty paces long and twenty broad, ſo that a hundred Perſons at leaſt dwell in one of 'em; they are very artificially contriv'd, and the thatching is ſo nice and exact that no wet whatſoever can poſſibly moleſt them that are within.

Their Houſholdſtuff conſiſts of earthen Pots or Jarrs, which hold their Liquor, and are made ſo neat, that they look as if they were gilt; then Baskets of divers ſorts, very artificially made; and their Hammocks, ſome of which are made of Cotton-wool, and others of the Bark of Trees.

The Men and the Women never keep company together all day long, they eat, drink and converſe apart, the former at one end and the latter at the other end of the Houſe by themſelves: Alſo when a Woman is to be deliver'd, ſhe goes into a Room all alone by her ſelf, and going thro' her Labour without ſo much as a Cry or a Groan, when the Child is born ſhe calls to her Husband to come and take it, who immediately goes and receives the Infant, puts it in a Pot of Water to waſh it, and then paints it over with ſeveral colours.

The Commodities theſe *Indians* moſtly deſir'd of the *Engliſh*, by way of exchange for the Products of their Country before mention'd, were all ſorts of Edge-tools, Nails, Fiſh-hooks, Harpon-irons, Looking-glaſſes, Beads, Needles, Pins, Hats, Linnen and Woollen Cloths, Shirts, Bands, Salt, Powder and Shot, Swords and Muſquets; but theſe latter ſort of Tools our Men were cautious (and that juſtly) of making them very familiar with. They laid a great deal of ſtreſs upon the aſſiſtance and friendſhip of the *Engliſh*, and 'twas as great a baulk to any of 'em all to find the *Engliſh* engag'd againſt 'em.

There was one of theſe *Guianian* Princes nam'd *Leonard Ragapo*, whoſe Country was that very pleaſant Province of *Cooſheberry* before deſcrib'd; this Perſon (who was a true Friend to the *Engliſh*) had invited them into his Country, and upon that invitation, and by the Captain's order, ſome of 'em went and reſided with him for a time. While they were there the *Caribes* broke into his Dominions, committing horrible Outrages, and not content with doing that miſchief at a diſtance, advanc'd their Army towards the place where *Leonard* himſelf was; the brave *Indian* arm'd ſome of his Troops with their uſual Weapons, Bows and Arrows, ſharp-pointed Staves, and wooden Swords and Targets, and then deſiring four of our *Engliſh* Muſquetiers to bear him company, he march'd to meet the Enemy; he was himſelf the entire orderer of the March, and diſpoſer of the Battel, the *Engliſh* permitting all this as well in a compliment to him, as to ſee their way and method in martial affairs, and the poſture he ſet 'em in was thus; firſt the four Muſquetiers two abreaſt, then two *Indians* arm'd with Swords and Targets, next two Archers, and then two carrying ſharp-pointed Staves, and thus the whole Army, which was not near a hundred, went on: The *Caribes* came on in the ſame good order, but coming within view, and ſpying the four *Engliſh* in the front, they made a ſudden ſtand; *Leonard* preſently gueſſing the reaſon of it, commanded his own Men to ſtand too, and then (taking only his Sword and Target) advanc'd towards the *Caribes* till he came within hearing, and call'd out for their Captains to come and meet him; here he ſmartly reprov'd 'em for the Injuries they had done him and his People, demanded ſatisfaction, and withal warn'd them of ever coming into his Territories more in that hoſtile manner; but he told 'em, if they would not ſatisfie for the Wrongs they had done, and promiſe never to diſturb the Peace of his Country more, he ſtood ready there with his Friends the *Engliſh* to give 'em Battel, in order to the taking a juſt Revenge; and laſtly he bid them take notice, that if they were reſolv'd to fight, and any of the *Engliſh* died in the Conflict, he would fetch all the Power of that Nation from *Wiapoco*, and cut 'em all to pieces, and burn their Houſes. This, ſpoke with a good grace and courage, and enforc'd with the preſence of the *Engliſh*, had the deſir'd effect, the *Caribes* (tho' vaſtly more in number) were cool'd and quieted, they ſubmitted to the Conditions of Peace impos'd upon 'em, and ſo march'd back to their Habitations.

From hence 'tis plain, that what by the Factions of theſe *Indians* among themſelves, and the Neceſſities ſome of the weaker Parties lie under of protection and defence, a foreign Power (managing the matter well) would find no great difficulty to plant it ſelf amongſt 'em.

CHAP. VIII.

A brief Account of the Country and People about the River of the Amazons; *by* William Davis *Barber-Chyrurgeon of* London, *who liv'd there ſome time.*

THIS Country (the Relater tells us) is extreamly full both of Woods and Rivers, as alſo of Lakes and Pools, ſo that the Inhabitants are far enough from any danger of wanting thoſe two great conveniences of life Wood and Water; the Woods abound with all ſorts of wild Beaſts, and there's plenty of good wild Fowl in 'em too; but *Parrots*, he ſays, are more common there than *Pigeons* in *England*, and he commends 'em for as good Meat: The Waters, both the running and ſtanding ones, afford as much Fiſh; but there are ſo many *Crocadiles*, *Alligators*, and *Water-ſerpents*, that thoſe who frequent 'em for that Sport muſt always be upon their guard.

The Country is very ſubject to violent Rains, Thunder and Lightning, and thoſe Storms, as they are very frequent, ſo they commonly hold ſixteen or eighteen hours of the twenty four. But the worſt Perſecution to Strangers that come hither is that of the *Muskitoes* or *Flies*; theſe importunate Animals will be continually hovering about a Man and ſucking his Blood, let him do almoſt what he can to defend himſelf; and 'tis to be ſuppos'd the Author ſuffer'd pretty conſiderably under this perſecution, becauſe he ſeems to ſpeak ſomething feelingly of the matter.

There are abundance of petty Kings about this great River and the various branches of it; they have their ſeveral Rivers to themſelves, which confine their Territories and Power, and upon which they very often fight one with another; 'tis upon the Water that they decide moſt of their Quarrels, and he that's overcome is not thrown out of his Canoe to feed the Fiſhes, but ſerves for a principal Diſh at the Table of the Conqueror, the victorious King eats up him his Arms have ſubdued, and buries him in his own Royal Belly; notwithſtanding which one is bound to believe, that the honour of ſuch a Sepulchre is no temptation to any man to be overcome. The Enſigns of Majeſty here are a Crown of Parrots Feathers, a Chain of Lyons Teeth or Claws hung about the Neck or the Middle, and a wooden Sword in the Hand; he that appears thus adorn'd is thereby known to be a King.

The People go (both Men and Women) as naked as they came into the World, they wear their Hair long, but the Men have it pluck'd off on the crown, which is all that can be call'd Faſhion relating to them: As for the Women, they have none at all, but their Hair and Breaſts are both ſo long, that 'tis a queſtion which of the two are longeſt. The Men wear little Canes thruſt thro' the foreskin of the *Pudenda*, as alſo thro' their Ears and lower Lips; at the bridge of the Noſe they faſten ſmall glaſs Beads or Buttons, which hanging down directly before their Mouths, bob to and fro as they ſpeak, and in this pretty motion they take not a little pride and pleaſure: But as fooliſh as they are in this reſpect, they are crafty and ingenious enough in others; they are horrid treacherous too, light of Finger as well as light of Foot; they are very dexterous at ſhooting, and kill not only Beaſts and Fowl, but even the Fiſhes too in the Water with their Arrows; as ſoon as they have ſtruck a Fiſh they preſently throw down their Bows and leap into the Water to catch him; this Weapon is made of *Braſile*-wood, 'tis about two yards long, and the Arrow ſeven foot, the String is made of the Rind of a Tree, and lies cloſe to the Bow without any bend. When they have got any Prey they meet together in companies, and eat every man what he has got himſelf; this they do without Bread or Salt or any ſort of Drink but Water, the Author ſays Water and Tobacco, but 'tis to be ſuppos'd he does not mean Water with Tobacco ſteep'd in it, for if he does, their Liquor is ſtrong enough of all conſcience in one ſence, whatever it be in another. The Country yields neither Gold nor Silver, as far as the Author could diſcover, but vaſt quantities of Fruits and Roots, ſuch as have been deſcrib'd in the other parts of *America*.

The People are ſo wiſe as to deſpiſe Money, or at leaſt ſo happy as to be ignorant of it, and they'll exchange a parcel of Proviſions for a glaſs Bead or a Jews-harp that they won't take ten or twenty Shillings for, and if all other People had been of their mind, that part of the World had been leſs viſited than 'tis.

CHAP. IX.

A compleat Account of the great Country of Braſile, *with the Manners and Cuſtoms of the Inhabitants; from a* Portugueſe *and a* Frenchman, *who liv'd there a great while.*

Ten Nations in *Braſile* who uſe the ſame Tongue.

WE ſhall not pretend to reckon up the vaſt numbers of Nations with which this mighty tract of Land is peopled, to tell their ſeveral Names and Tribes, nor to deſcribe the particular places of their abode; ſomething has been done this way before, in the account of Mr. *Knivet*'s Adventures in this Country, upon which ſcore we ſhall forbear entring any farther into that ſubject now; 'tis ſufficient to ſay, that amongſt all the diverſities of Languages which theſe ſeveral ſorts of People uſe, there is one which (becauſe it ſpreads more than any ſingle Language beſides) may be call'd the principal Tongue of *Braſile*, and 'tis ſpoken by ten ſeveral Nations of *Indians*: This is that which the *Portugueſe* do underſtand and ſpeak in all their converſes with theſe People, and their Children born here ſpeak it much more perfectly than themſelves; it is an eaſie, eloquent, and pleaſant Language enough, and very copious, but the great fault of it, and that which renders it difficult to Learners is, its having ſuch a multitude of Compariſons in it.

Friends to the *Portugueſe*

The People that ſpeak this Tongue are (and were) the ancient Friends of the *Portugueſe*, and 'twas by their Arms and Aſſiſtance partly that the Country was conquer'd; they joyn'd with the *Portugueſe* in their Endeavours to extirpate the reſt of their barbarous Neighbors, and their Endeavours have ſucceeded ſo well, that they are now almoſt all gone from the Coaſt, and are retir'd to ſurer Refuges in the inner part of the Country.

Tapoyes.

Theſe People, as diſtinct from the ten Nations before mention'd, are all comprehended under the general Name of *Tapoyes*, and there is no leſs than ſeventy ſix ſeveral Nations of 'em, each of which uſes a peculiar Tongue; they are inveterate Enemies to the *Portugueſe*, and to all the reſt of the *Braſilians*, tho' 'tis ſaid that there is one ſort of 'em that dwell near the River of St. *Francis*, that maintain a friendly correſpondence with 'em, many of which are alſo made Chriſtians after their manner, that is not inſtructed in the Principles of the Chriſtian Faith, but ſprinkled with the Water of Baptiſm.

The temper of the Country.

The Climate of *Braſile* is temperate and healthful, and (amongſt the Natives at leaſt) the Thread of Life is ſpun out to as great a length here as any where: The Gountry is full of old People, and 'tis a common thing to ſee ninety and a hundred Years in a hopeful way of going on to a greater number. This will make it eaſily believ'd that the Air they breath is pure and clear, as indeed it is, and the Heavens always ſhew a bright face over their Heads; you ſeldom ſee black Clouds flying about here, or noiſom Fogs and Miſts riſing, every ſcent of which ſometimes gives a man a Diſtemper, if the ſight of 'em does not make him melancholy. In the Winter, 'tis true, there are great Rains, and the Skies help to overflow the Country as well as the Rivers, but all this wet does not make it unhealthful, nor breed ſuch Diſtempers as ſhorten the Lives of the Inhabitants.

Seaſons.

There are very ſhort Twilights in this Country, 'tis no ſooner Day but the Sun's up, as alſo 'tis Night as ſoon as ever he is down. The Summer begins in *September*, and ends in *February*; the Winter in *March*, and ends in *Auguſt*, and the Days and Nights are almoſt equal all the Year round.

From *Fernambuco* as far as the Government of *Spirito Santo* 'tis all full of Hills, and you hardly meet with any Stone, eſpecially 'tis ſo towards the Sea-coaſt; but from thence to St. *Vincent* 'tis very rough and rocky, and abounds with Stone Quarries.

Vegetable Products.

In deſcribing the Products of this Country, we will begin with the Vegetables; and here the *Mandioca* comes firſt to be conſider'd. This is a Root ſomething like a Carrot, but bigger and longer; they grow to the height of fifteen ſpan, and at every ſpans diſtance there are certain Joynts; out of the ſides ſhoot ſeveral little Stalks or Branches, which have a white Pith within, and if broken off and ſet in the ground, will themſelves in ſix or eight months have gotten Roots big enough for Food, for 'tis to be noted that this Root is the main thing they make their Bread of; they ſteep it in Water, and then making it up in Balls with their hands, they dry it upon Hurdles over the Smoak, then they ſcrape and ſift it, and ſo get a Flour which is whiter than that of Wheat; this Flour mix'd in a certain proportion with the raw *Mandioca*, makes 'em a Biſcuit, which they call *Biſcuit of the War*, becauſe it ſerves the *Portugueſe* and *Indians* when they go to Sea-ſervice. There is alſo another ſort of Biſcuit, which is made of the Water or Juice of the green Root, congeal'd and dried by the Sun or the Fire; this is of all the whiteſt and pureſt, and is ſo delicate, that 'tis made only for the beſt ſort of People.

Mandioca Root.

The Uſe of it

This *Mandioca* Root ſerves 'em for the making ſeveral ſorts of Broth alſo, and thoſe ſo very healthful and reſtorative, that they give 'em to ſick People, as the moſt proper and effectual means to recover 'em. But beſides all theſe Uſes, they make Cakes, Pies, Fritters, and Cimnels of it; yea, there's hardly any uſeful or pleaſant ſort of Food belonging to a Houſe, and which can be made of Grain, but they fetch it out of this Root.

As for the Medicinal Vertues of it, 'tis commended as an excellent Remedy againſt the bitings of venomous Creatures, when 'tis prepar'd by drying in the Smoak; notwithſtanding to eat this Root raw is of dangerous conſequence, for it contains a cold crude Liquor, which produces fatal effects in the Body of Man, yet other Animals have the privilege of eating it raw without any hurt, and not only ſo, but with a great deal of benefit, for it fattens and nouriſhes them to a great degree; but ſhould they drink the expreſs'd Juice, it would infallibly kill 'em, and they would live no longer than till that got down into their Stomachs. There is one particular ſort of it which the *Indians* call *Aypim*, that they except from this property of poyſoning when eaten raw, and which boil'd or roaſted is very well taſted, and makes good Flour for Cakes and Bread; but the Wines which the *Indians* make of it are ſuch a Medicine for the Liver, that to their frequent drinking of this Liquor is attributed their freedom from all Diſeaſes incident to that part.

Herb *Nana*.

The Herb *Nana* is very common in this Country, it is like the *Semperviva* or Herb *Aloes*, and has Leaves like that, but not ſo thick, and is all round about full of ſharp Prickles: in the middle of it grows a Fruit like a Pine-apple, full of Flowers of divers colours, and very pleaſing to the ſight, and at the bottom come out four or five Sprigs, which are fit for planting. The Fruit is one of the beſt in the World, has a grateful ſmell and a very pleaſant taſte, and is very full of Juice; if one would compare the taſte of it to that of any other known Fruit, one would ſay it reſembles that of a Melon, but 'tis vaſtly better. The Juice is very good for them that are troubled with the Stone, but found to be as hurtful wherever there is a Fever; and for a vulgar uſe of it, it perfectly takes away all ſpots out of Clothes. This Fruit is ſo very plentiful, that the *Indians* fatten their Hogs with it, and except ſome ſmall quantities that are preſerv'd for a ſort of Sweetmeat, they have no other way for common ſpending of 'em, but only to carry them to Sea, where the Sea-ſick People eat 'em, and find benefit by 'em; and then to infuſe 'em in Wine, and drink a draught of it in the morning, they look upon to be very wholſome.

Its Uſe.

Fig-tree *Pacoba*.

The Fig-tree *Pacoba*, which grows here very commonly, is that which the Natives call *Adam*'s Fig-tree; it is very big, and grows to twenty quarters long, the Stalk is ſoft and ſpongy, the Leaves extreamly long, ſmooth and ſoft like the *Bragamza* Velvet, ſo pleaſantly cool and refreſhing, that People ſick of Fevers have theſe applied to 'em to abate their violent heats and make 'em eaſie The Fruit grows in cluſters like Figs, upon certain *Pedunculi*, which come out of the main Stalk every foot diſtance, and each cluſter contains about two hundred of the Figs, ſometimes more and ſometimes leſs. The Fruit gather'd and laid to ripen becomes very yellow, and acquires a pleaſant taſte; but beſides its gratefulneſs to the Palate, 'tis medicinal to the Body, as thoſe that lie down of Fevers or that ſpit Blood do experience to their benefit. This is an ordinary Fruit alſo in their Gardens, and they have of 'em all the Year round.

Of the *Palm-trees* of this Country (of which they make four or five kinds) there is one ſort particularly which they call *Iri*, that bears a cluſter of Fruit like Damaſcens, but the whole is ſo large and heavy, that a man can hardly lift it with one hand; the Kernel is of the bigneſs of a Cherry, and may be eaten, tho' of the Fruit it ſelf we have no account either one way or the other. Upon the tops of theſe Trees there grow certain white Tendrels or young Branches, which they cut off and eat, and thoſe that have been troubled with the Piles affirm, they afford relief in that caſe.

Iri, a ſort of Palm.

The Tree call'd *Aijri* by the *Braſilians* is ſomething like the *Palm*, but the Stock is arm'd on every ſide with ſharp Thorns and Prickles, which will do the ſame execution upon a man's Fingers that touches 'em that ſo many Needles would do: It bears a Fruit not very large, but which contains a Kernel as white as Snow, and not to be eaten. This Tree ſeems to be a kind of Ebony, for the Wood is very black, ſo hard that the *Braſilians* make Arrows and Clubs of it, and ſo heavy that, being thrown into the Water, it preſently ſinks to the bottom.

Tree *Aijri*.

There are Trees alſo whoſe Woods are of divers other colours, and ſome of 'em as variouſly entertaining the Smell with their different ſcents, as they do the Sight with their colours; one particularly perfumes the Air like a Roſebuſh, and another that throws out a ſcent like a Bed of Garlick; this latter Tree is ſo ſtrong, that no man can endure the place where 'tis either hewn or burnt; 'tis every way a Poyſon to the whole Body, as well as to the Noſe, and if a man eats the Kernel of the Fruit, he is in as much danger of dying by that as by the horrid ſtink without eating. The Natives paſs by all theſe bad qualities, and love the Fruit notwithſtanding, becauſe it furniſhes them with materials for making their Rattles. The Leaves of this Tree reſemble the Leaves of our Apple-trees, and the Fruit appears (in ſhape) ſomething like a rough Cheſnut.

Choyne-tree.

The *Choyne-tree* is of an indifferent height, with Leaves of the ſame green and form too as thoſe of a Bay-tree, and a Fruit as big as a Child's Head, not round but oval; the bard Shells of theſe ſerve 'em for Rattles, and being alſo divided in half, they are uſed for Cups and other ſmaller Houſhold Veſſels.

Sabaucaie.

To this uſe alſo do they put the large Fruit of the Tree *Sabaucaie*, but Nature has directed 'em to this by making the Fruit in the form of a Cup. In the bottom of it there are a parcel of ſmall Kernels that look like Almonds, and have the ſame pleaſing taſte too.

Acaiow.

The Fruit by the *Barbarians* call'd *Acaiow* comes from a Tree of the height of our Service-tree, 'tis of the ſhape and bigneſs of a Hens-egg, and when ripe, of a golden colour like a Quince; it affords a Juice of a tart quick taſte, and that is reckon'd a very proper and good cooler for the Body, when diſorder'd with any preternatural heats.

Paco-aire.

Paco-aire is a Shrub of ten or twelve foot high, with a Stock many times as thick as a man's Thigh, and yet for all that ſo tender that it may be cut aſunder with a Sword at one ſtroke. The Fruit it ſelf has the name of *Paco*, and 'tis as long as a man's Hand, and not unlike a Cucumber either in colour or ſhape when it comes to be ripe; but then theſe grow for the moſt part twenty and twenty five thick together upon every Bough, ſo that the *Braſilians*, when they gather and carry 'em to their Cottages, do often find themſelves loaded with a few of thoſe Boughs. When the Fruit is ripe, the Knop being pull'd off after the manner of a freſh-gather'd Fig, it ſeems clotty and full of little cluſters, upon which account them that eat it do imagine almoſt they are eating a Fig, and indeed the taſte is not only as good, but much better than that of the moſt delicate Figs that come from *Meſſilie*. The Leaves of the *Paco-aire* are in form like thoſe of *Water-ſorrel*, but big enough to cover the *Water* it ſelf as well as the *Sorrel* that grows in it; the length of 'em is generally ſix foot, and the breadth two, but they are very ſlender and thin, and having only one ſtrong middle rib to ſupport and hold 'em together, the Winds do ſo tear 'em with blowing 'em about, and leave 'em hanging in ſo many rags, that to thoſe that look on 'em at a diſtance, the ſhrubs appear to be all ſtuck with Feathers.

Ananas.

This Country affords ſtore of thoſe Trees likewiſe that bear the *Ananas*, that noble and uſeful Fruit; whether theſe of the *American* growth are better or worſe than thoſe in other parts of the World is not readily told, but 'tis certain that here they are very excellent. The Plant is in form like the *Flower de Luce*, with crooked bending Leaves, which are divided round about ſomething like the Aloe, and of the form of thoſe of the greater Thiſtle; the Fruit is as big as an ordinary Melon, and of the ſhape of a Pine-apple, growing after the manner of our Artichoke; when they are ripe they are of a golden colour, and yield the ſmell of the Fruit of the *Idean* Bramble, ſo that they diſcover themſelves by their fine ſcent to thoſe that walk in the Woods and other places where they grow; in taſte they excell to that degree, that none of our preſerv'd Fruits do go beyond 'em, and the Liquor drawn from 'em by expreſſion is nothing inferiour to the *Malmſey* Wine.

Murcuia.

The Plant *Murcuia* runs up the Walls and Trees like Ivy, it is very pretty to look upon when 'tis in Flower, and yields a round Fruit, which is not always of the ſame colour, but ſome yellow, and others black, and divers other colours beſides 'em: The little Kernel and Juice within are of a pleaſant taſte enough, tho' ſomewhat tart; but taken all together, 'tis a Fruit of a very good account in the Country, and of no little uſe. The Leaves of the Plant beaten with Verdegriſe, is a Specifick for inveterate Ulcers and the Pox.

To theſe may be added the *Mulberries*, the *Dewberries* both red and black, *Common* and *Kidney-Beans* of many ſorts, *Potatoes*, *Pumpions*, ſo large, that when they have hollow'd 'em they uſe 'em for Veſſels to carry Water in; *Millet* of many ſorts, the Root *Cara*, which is like a Turnep, and the *Taiaoba's*, that reſemble Cabbages, and purge a man that eats 'em.

Jetigeucu.

But the Root call'd by them *Jetigeucu* (which is the *Mecoacan* of the *Antilles*) is remarkable for this Vertue alſo; it is a long Root like a Radiſh, of a conſiderable bigneſs, and purges ſufficiently; beaten alſo in Wine or Water, 'tis a Medicine for the *Ague*, and preſerv'd or made into a ſort of Marmalade, is taken to very good purpoſe upon ſeveral other accounts.

Ipecaya, a Remedy for the Bloody-Flux.

The Plant *Ipecaya* is a Specifick for the *Dyſentery*; the Stalk is a quarter of a yard long, and the Root rather more; it has only four or five Leaves, but thoſe (as indeed the whole Plant) of a very rank and filthy ſmell: They beat the Root well, and then infuſe it in Water, letting it ſtand all night, the next morning they ſtrain it off and drink the Infuſion, which purges ſo effectually, that the malignant Humour is entirely carried away and extirpated by it.

Cayapaia, a Counter-poyſon.

Cayapaia is an Herb which for its ſingular vertue in ſecuring the Body from all the miſchievous effects of Poyſons, particularly that of Serpents, has got the name of *Snakeherb*; and 'tis reckon'd as good a Remedy as the *Unicorne* and *Bada*, the *Bezoar-ſtone* or *Cocao* of *Maldiva*. There is no part of it of any ſignificancy for this purpoſe but the Root only, which is thin and ſlender, and in the middle has a Knot like a Button; this they beat and infuſe in Water, and ſo drink the Liquor: And 'tis the ſame courſe alſo that is taken if a man be wounded with an envenom'd Dart or Arrow, or if he has a *Fever*; they have no other method of preparing it but give their Patient a Doſe of this Water, which they repeat as the caſe requires.

The Herb *Tyrequi* or *Tarerequi* is (as ſome would call it) a Solar Plant, from the particular regard it bears to that Luminary; it lies as it were dead and wither'd, quite ſhut up and contracted all night long, and in the morning, as ſoon as the Sun is up, it begins to recover and ſhew all the marks of Life, in the opening and expanding of it ſelf, and ſpreading its Flowers; thus it continues till Sun-ſet, and then it dies away again, till the comfortable Beams of the next morning Sun come and give it a new reſurrection. The Root of this Plant is very jagged, the Branches ſlender, the Leaves like them of *Baſil*, the Flowers red, and come forth all at the very top: It's good to deſtroy *Worms* both in Men and other Animals, and the *Indians* (when they are ſick) perfume themſelves with it, to preſerve 'em from dying; but how vain ſoever that Fancy be, 'tis pretty certain that it may preſerve a man from dying of the *Bloody-flux*, if he uſes it in good time, for 'tis eſteem'd a very great Remedy for that Diſtemper, but then 'tis not the Fumes that cure neither, but the infuſion or ſome other preparation of the Plant, according as thoſe *Braſilian* Doctors pleaſe to manage it.

The ſame is partly the vertue of the Herb *Embeguacu*, it helps the *Flux*, and is upon many accounts more proper for Women than Men; the Roots of it are ſo long that it does almoſt exceed belief; the Rind is very ſtrong, and ſerves for the making ſubſtantial Cords and Cables for Ships, which are of ſuch a nature, that by being in the Water they grow green.

Caccobaringa is a ſmall Herb, which bears a Flower as big as a Haſle-nut, with a very few Leaves, green above and white underneath; the Roots and Leaves ſtamp'd are an excellent Remedy againſt all ſorts of Wounds, but they uſe the Leaf alſo it ſelf without any ſtamping or preſſing, for only laying it to the Wound, it ſticks faſt till it has done the buſineſs.

The Herb *Cobaura* ſerves for the cure of old Sores that are advanc'd paſt the reach of all other Remedies; they lay it both bruis'd and burnt to the part affected, and it quickly maſters the Ulcer, dries up the Humour, and brings a new Skin.

The *Holy Herb* (as they call it) does this ſervice in the caſe of Wounds, and a great number of internal Maladies too; they uſe it for Aſthma's, Coughs, Catarrhs, diſorders of the Head and Stomach; but the *Portugueſe* and *Indians* do make ſome other (and thoſe very unholy and unclean) uſes of this holy Plant, for they'll ſit and ſuck the ſmoak on't for a whole day together, till they are as drunk as ſo many Apes; they make certain Pipes or Tubes of Palm-leaves, and fill 'em with this Herb dried, and then ſetting fire to it at one end, and holding the other in their mouths, they keep drawing till they have drawn themſelves into a ſtate of abſolute Drunkenneſs; and they are not contented neither to do this all the day long, but the *Portugueſe* will do it in Bed, and the *Indians* as they lie in their Hammocks for a whole night together, and are the next morning as mellow as if they had been drinking Wine or ſtrong Beer all that time.

Guaraquimiya is reckon'd to be the Mirtle of *Portugal*, and beſides other excellent Properties, has this, ſo effectually to expel *Worms* out of the Body, that thoſe that eat it do ordinarily void 'em preſently.

Camaracatimbae is a Plant that reſembles the *Sylva's* of *Portugal*, the Water wherein 'tis boil'd is an admirable Remedy for *Scabs*, *Pox*, and *Green Wounds*; the Flower of it is very fair and lovely to look upon, and finely ſcented, and being ſo, they uſe it to adorn both their Houſes and Altars.

Aipo is the very *Smallege* of *Portugal*, and has the ſame Vertues; it is found only about the Sea-coaſt, eſpecially in the River of *Janero*, for which reaſon perhaps 'tis that it is ſo much ſharper and more pungent than that of *Portugal*.

The *Meadmallow* of this Country has the ſame effects with that otherwhere; the Flowers are a curious red, very large, and look almoſt like *Portugal* Roſes.

Caraguata is a ſort of Thiſtle that bears a yellow Fruit as long as one's Finger, which eaten raw will bliſter the Lips, but boil'd or roaſted, produces no ill effects, only they are forbidden to Women with Child, becauſe they are ſaid infallibly to cauſe Miſcarriage.

There are alſo others of theſe *Caraguata's* that have vaſt long Leaves like Flags, and bear a Fruit like the *Nana* before mention'd, but not at all well-taſted; the beſt part of the Plant is the Leaf, of which a very fine ſort of a Thread may be made, fit for many good purpoſes, but in order to the getting of this Thread, they prepare the Leaf by ſteeping it in Water.

Good Thread from a Leaf.

Timbo.

Timbo is a Plant that comes up from the Earth like a String, and riſes up to the tops of the higheſt Mulberry-trees, to which ſometimes alſo it grows cloſe like Ivy; they are exceeding ſtrong and tough, and therefore ſerve for all manner of bindings, even thoſe that are as big as a Man's Leg may be wound and twiſted about without breaking. The Bark or Rind is an infallible Poyſon to the Fiſh, and being caſt into the Water, leaves hardly any of 'em alive: This ſeems to be ſomething of the ſame nature with a kind of Wood (before deſcrib'd) which had the like miſchievous effects upon the Fiſhes.

See Knivet's Voyage.

Cotton.

The *Bombaſine Cotton-ſhrubs* are found in great numbers in this Country; they grow to an indifferent height, and have Flowers like the little yellow Balls of Cucumbers. The Fruit, when ripe, divides it ſelf into four parts, each of which yields the Cotton in flocks of the bigneſs of a little Ball; in the midſt of theſe flocks are found certain black Grains very compact and cloſe preſs'd together, in form and bigneſs not much different from a Bean. The *Braſile* Women are very skilful in gathering and ſpinning this *Bombaſine Cotton*, and the great uſe they make of it is about their Beds, as we ſhall ſee farther by and by.

Maſtich.

Maſtich grows here alſo amongſt the Briers and Buſhes, which, together with all the reſt of the odoriferous Plants and Flowers, perfumes the Woods after a moſt pleaſant manner. In theſe Woods you find Reeds of the bigneſs of a Man's Leg, and whilſt they are ſtanding upon the ground, ſo very tender, that with one blow of a Sword one may cut off the largeſt of 'em, yet let 'em be but dried and you'll find 'em hard and ſtiff enough; the *Braſilians* head their Arrows with 'em, and they are ſo very piercing, that whatever wild Beaſt is ſtruck with 'em is ſure never to ramble the Woods any more.

Beſides the Reeds, they have as many varieties of Canes, ſome of which are extreamly big, and others very long, conſiſting of a great number of Joynts, and theſe the *Indians* uſe for Weapons alſo.

To conclude, the Plants found here that co-incide with thoſe of our own Country, are *Ferns*, *Parſly*, *Purſlain*, *Baſil-Royal*, *Sowthiſtle*, *Beets*, *Endive*, *Peony-royal*, *Mint*, *wild Sage*, tho' ſuch of theſe as ſmell ſtrong enough in our Climate, have but very little (if any at all) in that.

This following Account of ſome other Braſilian *Vegetables, tho' it was not lit of time enough to be put into the foregoing one, yet deſerves to be preſented to the Reader, which we ſhall therefore do.*

Other Plants

OF the *Acaiow*-trees the Author (whoſe Name we know not) obſerves, that the Timber or Wood it ſelf is found to be fit for no uſe whatſoever, but it affords a ſort of a Gum good for painting, and that in great plenty; with the Bark of it they dye their Yarn and the Veſſels they uſe about their Houſes: If the ſame be ſtamp'd and boil'd with Copper till the third part of the Water be conſum'd, 'tis a ſovereign Remedy for old Sores, and makes 'em heal quickly.

Mangaba.

The *Mangaba*-trees have green Leaves all the Year round, and bear Fruit twice a Year; their Flower is altogether like the Jeſſamin, and ſmells as well; the Fruit is as big as an Apricock, yellow, but ſpotted with black, and within has ſeveral Kernels, which are eaten as well as the Fruit it ſelf; they are wholſom, well taſted, and lie ſo light upon the Stomach, that thoſe who have eaten ever ſo many can hardly find they have eat any at all: The Tree and Fruit both being green, are full of a clammy milky Juice, and bitter to the taſte; the Fruit is always gather'd green, and laid to ripen in their Houſes.

Murucuge.

The Fruit *Murucuge* is like the wild Pear of *Portugal*, it has a very long ſtalk, and is always (like the former) taken green off the Tree; the trunk of it affords a milky Liquor, but of ſuch a conſiſtence when 'tis well ſettled and congeal'd, that if the Inhabitants had the Art of writing Letters, this might ſerve 'em inſtead of Sealing-wax.

Araca.

The *Araca* is a ſort of a ſmall Pear, (or at leaſt nearer that than any other Fruit) the colour of which is yellow, red, or green, for there are of all theſe kinds in *Braſile*, and thoſe very common and plentiful too; it is a Fruit that holds very near all the year round, and is pleaſant enough in the eating, eſpecially to them that love but a ſmall reliſh of the ſowre.

Ombu.

The *Ombu* is a great Tree, not very high, but well ſpread; the Fruit is like a white Plumb, and therefore the *Portugueſe* do give it that Name; it has this odd property, that it makes thoſe People loſe their Teeth that eat it; but the Root is much more favourable, it has no influence to make a man loſe any good thing belonging to him, but will contribute to the ridding him of whatever is evil and troubleſom, for they give them with advantage to People in *Fevers*, and they ſerve inſtead of Water to thoſe that travel the Deſarts, becauſe being naturally very cool and refreſhing, they help to abate the violence of a man's thirſt in that caſe.

Jacapucaya.

The Tree call'd *Jacapucaya* is one of the greateſt and faireſt of the Country; it bears a Fruit like a Pot, and big enough to anſwer the uſe of a Pot too, and is at leaſt two fingers thick; but the beſt of all is, that upon this Pot there is a Cover which (pull'd off) diſcovers the Nuts that lie within, but if you ſtay till the Fruit is ripe, the Cover will open of its own accord and let the Nuts fall out. The Nuts do very much reſemble the *Indian Myrobalans*, but if a man eats many of 'em green they bring all his Hair off: The Husks are uſed for Drinking-veſſels, and the Timber of the Tree (which is very hard, and never rots) is much uſed about the Sugar-mills

Araticu.

The *Araticu* is a Tree of the bigneſs of an Orange-tree, and the Leaf is like that of a Citron or a Limon; the Fruit is of the ſize of a Pine-apple, being better ſcented than taſted, and more wholſom than either: Amongſt the ſeveral ſorts of 'em there is one call'd *Araticu Panania*, the Fruit of which is ſo cold, that much of it eaten has almoſt the effects of a Poyſon. The Roots of theſe Trees for lenity are as ſo many Corks, and therefore the People out of them do make Buoys for their Nets.

Pequea,

Of the *Pequea-trees* there be two ſorts, one bears a Fruit as big as a good Orange, and the Rind of it is as thick as that of the Orange is, but within it you find a Liquid which you may call a Honey, if at leaſt the ſweet taſte and the fine Amber colour will allow it that name; there is as much of it as comes to the quantity of an Egg, and there are ſeveral Kernels mix'd with it. The other *Pequea* is only for Timber, but 'tis ſome of the heavieſt and moſt durable of this Country.

Jabaticaba.

The Tree *Jabaticaba* diſtinguiſhes it ſelf by this in a pretty remarkable manner from moſt other Trees, that it is wholly beſet with Fruit from the very Root to the top Bough or Sprig; all along the Body of the Tree you find the Fruit, as well as in the uppermoſt Branches, and ſo going downwards you do the ſame till you come to the very Earth it ſelf. The Fruit is of the bigneſs of a good Limon, and has a ſowre taſte, like ſome Grapes; the *Indians* make a kind of a Wine of it, but what or how good we are not able to ſay.

As for the *Pines*, *Palms*, and *Cocao's*, they are too common to inſiſt upon their deſcription.

Cabueriba.

The *Cabueriba* is a very large Tree, and affords Timber for ſtrength and ſervice inferiour to none; but that which renders this Tree moſt valuable is the ſovereign Balm it affords, a Balm compar'd to that of *Gilead*, that perfectly heals all green wounds, and takes away the ſcarr. The way of getting it is, to make an inciſion in the Bark, and ſo the Balm diſtills from the Tree into a Veſſel ſet to receive it: 'Tis a ſign that the Balm it ſelf is a rare Perfume, when the Bark of the Tree is ſo good a one, and the Natives make Bracelets and Necklaces of it upon that account; but the Woods where they grow ſmelling all over, will make a man ſenſible of this at ſome diſtance.

Cupayba.

Cupayba is a ſort of Fig-tree, commonly very high, ſtrait and big, if it be cut it yields a vaſt deal of Oyl that ſerves both for Lamps and the cure of Wounds, even to the taking away the Scarr it ſelf: The Wood is good for nothing, the entire Vertue of the Tree being wrapt up in this oily matter; and therefore, tho' our Author tells us that the Beaſts, who are taught by Nature the Vertues of this Tree, will come and rub themſelves againſt it, as if 'twere to borrow ſomething from it in order to the cure of their Diſtempers; we cannot be of his mind in this matter, but believe that the ſence of the Beaſt's rubbing is the very ſame with that of a Man's ſcratching where it itches, and that they do it againſt this Tree, and not another, is becauſe this happens to be next 'em, or to lie readieſt in their way.

Ambaigtinga

Ambaigtinga is another kind of Fig-tree, which affords Oyl for Lights alſo as the former; but they draw a peculiar Oyl from the Leaves, by laying them in the Sun for ſome days, then ſtamping and boiling them, and taking off the Oyl which ſwims at top. This Oyl is a very good Remedy for them that are troubled with continual Vomitings, and can't retain what they eat, as alſo for the Cholick and Obſtructions in the Bowels; the uſe of it lies altogether in external application, namely, anointing the region of the Stomach pretty plentifully with it.

Igbacamuci.

Igbacamuci is a Tree that bears a Fruit in faſhion like a Pot or Pan, and is as good as a Quince; within there are certain ſmall Seeds, that are a noble Remedy for the Bloody-flux.

Igcigca the Maſtich.

The Tree that yields the *Maſtich* is call'd *Igcigca*, when 'tis cut there diſtills a white Liquor, that afterwards congeals, and is the *Maſtich* it ſelf.

But there is another Tree of this kind call'd *Igtaigcica*, which ſignifies in the *Braſilian* Language *Maſtich* as hard as Stone; and it anſwers its name, for 'tis ſo hard and ſhining withal, that it looks more like Glaſs than Gum, and the People do really uſe it to glaze their earthen Veſſels, valuing it mightily upon that account.

Curupicaiba

Curupicaiba is like the *Portugal* Peach-trees in the Leaf, and the Liquor that comes from the Leaves of it is excellent for the Pox, and for all Wounds, both green and old ones; the Bark upon inciſion yields a matter ſo clammy and viſcous, that they uſe it inſtead of a Birdlime, and catch the ſmaller ſort of Birds with it very eaſily.

Caaroba.

The *Caaroba* Tree is medicinal all over, and not a part belonging to it but is ſome way or other a Remedy; the Leaves chew'd and laid to a Pocky Sore, dry and heal it; the Wood has the ſame effect that the *China* Wood and that of the *Antilles* have in the ſame Diſtemper; and of the Flowers they make a Conſerve of no contemptible uſe in that caſe alſo.

The Wood *Caarobmocorandiba* has the ſame vertues with the former, and beſides it cures the Looſeneſs; it's grey, and has a hard Pith like the *China* Wood.

Jaburandiba

All the Country of *Braſile* abounds with the Trees call'd by them *Jaburandiba*, and in that with a Remedy for all Diſeaſes of the Liver, as powerful as any that's known; 'tis the Leaf that is to be eaten for this purpoſe raw, and as it comes from the Tree; and the Author ſeems to ſpeak with more than ordinary aſſurance in this caſe, as having been ('tis probable) an Eyewitneſs to a conſiderable number of Cures.

Betel.

The *Betel-tree* affords a Remedy as proper and ſure for the Toothach, which is the Root (a little bit of it put in the hollow of the Tooth, but then it bites and teazes the Tongue like Ginger, and conſequently draws plenty of Rheum, which may do good in other caſes.

Caſſia Fiſtula.

The *Caſſia Fiſtula* Tree is reported to grow in *Braſile*, and the *Spaniards* declare 'tis as good as that which comes from the Eaſtern World; but our Author does not pretend to have found any here.

Anda.

The *Anda*-trees are very fair and great, their Wood ſerves for all uſes that Wood can be put to; the Fruit gives an Oyl for Wounds, but the *Indians* value it as much for the uſe they make of it in their Unctions.

Maxeruguigba

The *Maxeruguigba*-tree bears a Fruit as big as an Orange, in which are a parcel of Kernels, from whence they draw another ſort of Oyl to anoint themſelves with; the Bark kills the Fiſhes, and all other Creatures that drink the Water where 'tis caſt have the ſame fate alſo.

Aiuraturiba.

The Fruit of the *Aiuraturiba*-tree affords a red Oyl, and that of the *Aiabutipita* a black one, both which the *Braſilians* very frequently anoint themſelves with: 'Tis to be noted too that Fruit which yields the red Oyl is red it ſelf, as that which yields the black is black, and this latter is very much eſteem'd amongſt 'em, as a Medicine of no ſmall vertue.

Janipaba.

The *Janipaba*-tree is a very large one, bearing a Fruit like an Orange, and in taſte like a Quince; the Leaf reſembles that of a Walnut, and changes every month; the Timber is very fit for ſervice, and the Fruit a Remedy for all ſorts of Fluxes; of this alſo they make an Ink or a Paint to colour themſelves with, which when firſt made is white, and ſo it continues for ſome hours after 'tis laid on upon their Bodies, but then it changes into the contrary colour, and they remain as black as ſo many Negroes; not that the *Braſilians* do make themſelves all over of this complexion, they only give ſome fine ſtrokes about the Face, Arms and Legs, draw a pair of Stockings perhaps, or a ſluſh'd Doublet, or ſome other piece of dreſs, to make themſelves a little fine, but then all this finery wears off in eight or nine days time, and longer than that they can't keep it upon their Backs do what they will; they muſt renew the decaying colour when that time is expir'd, and lay on freſh, or elſe they loſe their *European* Habits, and become poor naked *Braſilians* again as they were before: Repeating this often, makes the Skin very tough and hard; and 'tis to be obſerv'd, that in order to have a Paint that ſhall anſwer the deſign, the Fruit muſt be gather'd green, for being ripe it will not do.

Jaquitinguacu, good for waſhing.

The Tree call'd *Jaquitimguacu* bears a Fruit like the *Spaniſh* Strawberry, the Seed or Kernel of which is very hard and black, and ſhines with a gloſs like Jett; the Husk of it is bitterer than Aloes, and ſerves for waſhing as well as the beſt Soap in *Portugal*.

To theſe may be added the fine *Braſile*-wood, of which the red Ink is made, and other Woods of ſeveral colours, fit not only for the making other colour'd Inks, but all ſorts of carv'd and turn'd Works. Then the Smelling Woods, the Incorruptible Woods, that never rot being either laid in the Earth or in Water, the Woods of *Angolin* and *Aquilla*, Cedars and Nutmeg-trees, which tho' not quite ſo fine as thoſe of *Eaſt-India*, yet come very near 'em; of all theſe our Author tells us no more than that they are Natives of this Country alſo as well as the former. He ends his Diſcourſe of Vegetables with an account of a Tree which will be thought not a little ſtrange; it is a very great and ſpreading one, growing about in the Fields and otherwhere in the main of the Country; the Boughs of it are perforated up and down in ſeveral places, and the holes are many times the length of an Arm, and full of a clear well-taſted Water; they are always found full, and ſtand at the ſame ſtay Winter and Summer; a whole troop of weary Travellers may come and refreſh themſelves under one of theſe Trees, repoſe in the cool ſhadow, and quench their thirſt with the Water of this Fountain; and the want of Water being moſt commonly one of the greateſt Inconveniencies to thoſe that travel the inland parts of the Country, it ſeems as if Providence had provided this Remedy for't, in diſpoſing up and down here and there ſuch funds of of Water as theſe are, which ſhould not be liable to the uncertainties that the common ones are.

Bees of *Braſile.*

Having done with the *Vegetables*, we come to the *Animals:* The *Bees* of *Braſile* differ conſiderably from ours, and are more like that leſſer ſort of black Flies we are troubled with in the Summer than our Bees by much; they make their Combs in the holes of rotten Trees, from whence the *Braſilians* gather it with a great deal of Art and Care; the Honey being ſeparated, the Wax remains as black as Pitch, and this they preſerve very nicely, but not to make Torches or Candles with, (for as for Lights they uſe only a ſort of Wood which yields a very clear and bright flame) but to ſtop cloſe up the great Canes in which they keep their Feathers, that they may not be gnaw'd by the Butterflies.

Butterflies.

Theſe Creatures (which the *Europeans* call *Butterflies*, and the *Braſilians Aravers*) are as big as Graſhoppers, they come about the Firehearths in great multitudes, as our Crickets do, and are ſure to conſume and devour any thing (unleſs it be Stone, or Bone, or Metal) that lies in their way; but there is nothing which is not Meat that 'ſcapes 'em worſe than Leather and things made of it, and therefore if they lite of any Leather-breeches, Jackets, Shoes, &c. they eat off all the upper grain entirely, and leave a thin ſlight buſineſs behind, which a man may call the remainders of Leather if he pleaſes, but without he knew it to be ſo, he would be hard put to it to prove it. If a *Fowl* or any thing of that kind be in their way, they'll make a clear Anatomy on't, and ſhew a man the wonderful ſtructure of the Bones, without giving him the trouble to pick off the Fleſh. In a word, theſe Animals are not a little vexatious to them, and if their Houſes have not the plague of Rats and Mice like ours, yet they have Butterflies, which by the advantage of their Wings can come where the former ſort of Vermin can't pretend.

Spiders and Scorpions.

Our Authors tell us likewiſe (but without deſcriptions) of various ſorts of *Spiders* here; of *Scorpions*, which are almoſt as common about their Houſes as the *Lizards* are, and they are in every hole, and the walls themſelves are cover'd with 'em: But the ſting of the Scorpion is not ſo fatal it ſeems in this Country as 'tis in many others, for they ſeldom die of it, nor is it attended with any horrible ſymptoms preſently, only in the ſpace of twenty four hours it will produce very violent pains; the Remedy the *Braſilians* uſe is a bruiſ'd Scorpion applied to the part. In the account of the Snakes and Serpents we ſhall be more particular.

Divers ſorts of Snakes.

How they ſeize their Prey.

The *Giboya* is one of the largeſt Snakes of the Country, and ſome of 'em are found of twenty foot long; the miſchief they do is not by their Poyſon (for they have none) but their Teeth, as other ravenous Creatures do; they lie upon the watch along the Highways, and when they ſee their Prey within reach, they at once throw themſelves upon it, and wind themſelves round the body of it with I know not how many folds, by which means the poor entangled Animal is cruſh'd, and all his Bones broke. This Snake has it ſeems a good large ſwallow, for they report of him, that no leſs than a whole Stag goes down his Throat at once.

The *Guiraupiaguara* is a very black long Snake, and has a yellow Breaſt; they glide along upon the tops of the Trees faſter than any man can run upon the Ground, and here they catch Birds and eat their Eggs, for which reaſon the *Braſilians* gave 'em that name, which in their Language ſignifies *Eaters of Birds-eggs.*

There is another ſort alſo that do as well mount the Trees for Birds and Eggs, as deſtroy the Chickens and rob the Henrooſts below; theſe are very long and big too, but all over green and beautiful enough to behold, and the name they give 'em is *Caminana.*

A Snake with a long Snout.

Boytiapua ſignifies having a long Snout, and the Snake of this name is remarkable for that; it is very long and ſlender, and feeds only upon Frogs. The Natives conjure with this Snake, for when a Woman has no Children they take and laſh her over the Hips with it, and then ſay ſhe ſhall be ſure to have ſome; a very probable cauſe of ſuch an effect, but ſure the help of her Husband is not excluded at the ſame time.

An odd way to have Children.

The *Gaitiepia* (a large Snake) has all the ſcent of a Fox, ſo ſtrong and rank that he is diſcover'd by it whereever he is; ſo has the *Boyuna* too, which is black, and very long and ſlender. Some People fancy the ſmell of a Fox is good for the Palſie, and if ſo, theſe Snakes might perhaps be kept to as good purpoſe.

The *Bom-Snake* is call'd ſo from the noiſe he makes as he goes along; it is of a very large ſize, but does no manner of hurt.

The *Boicupecauga* (which ſignifies a Snake having Prickles upon its Back) is very formidable, as well for his dimenſions as his poyſonous nature; and whereas ſome of thoſe Creatures may be met with ſafely enough, both Men and all other Animals endeavour as much as they can to keep out of this Snake's way.

Jararaca is a general name for four ſorts of very venomous Snakes; the firſt is about ten ſpans long, having two fearful fangs or tusks that lie as it were cover'd up in their Gums, but when they bite they ſtretch 'em out to a great length, and ſtrike 'em with a mad fury into the Object that provokes 'em. Some ſay the Venom is in the Gum, others, that it is encloſ'd in the cavity of the Tooth, but however this is certain, that there is an Inciſure along the ſide of the Tooth for an outlet to it: this venomous liquor is very yellow, and ſo ſtrong that it diſpatches a man in a few hours time. Another ſort have the ſame colour and form with the Vipers of *Spain*, and are every whit as dangerous. The third and worſt of all has a red Chain along the Back and Breaſt, and all the reſt of the Body grey. The laſt kind are but ſmall in compariſon with the others, are of an earthy colour, have ſome things about the head like a Viper, and make ſuch a noiſe as that does.

The *Curucucu* is about fifteen or ſixteen ſpans long, a fierce and poyſonous Creature, that lies cloſe among the Trees, and leaps at Men or any other Animals without diſtinction.

Bell Snake.

The *Boyciningna*, otherwiſe call'd the *Snake of the Bell*, is twelve or thirteen ſpan in length, it is reckon'd very poyſonous, and moveth with a mighty ſwiftneſs toward its Prey, inſomuch that upon this account they have given it the name alſo of *The Flying Snake*; but notwithſtanding this advantage, it does not hunt ſo ſucceſsfully as other Creatures of that kind do, for Nature has form'd a Bell in its Tail, which makes ſuch a noiſe as it moves along, that 'tis a warning to all Creatures that hear it to keep out of the way. There is another of theſe *Bell-Snakes* that is ſmaller than this, but black and very venomous.

Strange Poyſon.

The Snake *Ibiracua* is remarkable for this effect of its Poyſon, that it makes the Party bit preſently void Blood at all the paſſages of the Body, at Mouth, Noſe, Eyes and Ears, and thus it continues ſtreaming forth till by ſome proper method the Flux is ſtopt, which if not done in time too, ſignifie nothing, and the whole maſs will at laſt be exhauſted.

But of all the reſt known the Snake *Ibiboboca* is ſaid to be the moſt fatally poyſonous; this lives in chinks and crannies of the Earth, and by the providence of Nature is ſo form'd, as to be very dull and ſlow in its motion; it is all over (both Head and Body) ſpotted with red, white and black, which diverſity hath procur'd it the name of the *Snake of many colours* amongſt the *Braſilians*.

Musk Snake.

As for that which is call'd the *Musk Snake*, we have no more ſaid of it, than only that it deſerves that Name, as carrying a very powerful (but pleaſing and fragrant) ſmell of Musk along with it wherever it goes, ſo that the blind man, by the direction of his Noſe, may poſſibly keep out of the way of theſe as well as the other above-mention'd. The *Braſilians* are endanger'd by theſe venomous Creatures not only abroad in the Woods, but even in their own Houſes, and according to the account given by our Authors, there's hardly a day but ſome miſchief or other is done; they find 'em about their Seats and in their very Beds, and are peſter'd with 'em in ſo many places, that 'tis (at leaſt it muſt be thought ſo by them that are not us'd to ſuch companions a very vexatious life they muſt needs lead, to be forc'd to be ſo continually upon their guard.

Divers ſorts of Deer, &c.

We will now go on with the reſt of the terreſtrial Animals, and then come to thoſe that dwell in the Water. The *Deer* (call'd in the *Braſilian* Tongue *Cuacu*) is a Creature that the Natives themſelves do as highly eſteem as any, and that partly becauſe their Sinews furniſh them with Bowſtrings, and their Horns with heads for their Arrows: There are ſeveral ſorts of 'em found in the Country, ſome that feed altogether in the Woods, and others that frequent the plain Fields, and are to be ſeen there in whole herds; ſome that are very large, great-headed, and have ten or twelve Snags; others of a ſmall ſize, and that have one only. The Skins of them ſerve for ſeveral occaſions, and the Fleſh is alſo of no little account amongſt 'em.

The *Tapiirel:* (which ſome call the *Elkes*) are made like a Mule, the Tail is about a Fingers length, and the Snout (which they ſhrink up and extend at pleaſure) a ſpan, but they have no Horns at all; they'll take the water and ſwim a great way, and not only ſo, but dive too, tho' when they do this they quickly get to the firm bottom, and going along there, come up again in another place.

Wild Boars. The wild Boars are of divers ſorts; the common ones (which are alſo the ordinary food of the *Indians*) have exactly the ſcent of a Fox, by which they are betray'd to the Dogs that hunt 'em.

Others call'd *Tayacutirica* (which ſignifies a Boar that grinds his Teeth) are much bigger than the ordinary ones, and much more rare; they are arm'd with Tusks, which render 'em very formidable to the other Animals, and they are ſure to aſſault any they meet.

But yet theſe are much leſs fierce and terrible than a third ſort, which they call *Tayacupita* (the ſence of which is a Boar that ſtands ſtill and waits); theſe will fly upon the greateſt Dogs, or any Hunters, tho' ever ſo well arm'd, that come near 'em, and what they maſter they rend in pieces and eat, whether it be Man or Beaſt. If they purſue a Man, and he takes the ſhelter of a Tree to avoid their fury, they'll beſiege him there, and ſtay till he comes down, ſo that at this rate he muſt of neceſſity either ſtay there and be famiſh'd, or become a banquet to the hungry Boar at laſt; and therefore the *Indians* that are acquainted with this trick take care to go with their Bows and Arrows, and ſo play upon the Beſiegers out of the Tree till they have diſpatch'd 'em.

The *Tapirouſſon* is a Beaſt that much reſembles a Cow as to its ſhape and ſize, tho' in other reſpects it differs very much from it; it has long ſhaggy Hair of a reddiſh colour, no Horns, a very ſhort Neck and Tail, long hanging Ears, a ſlender thin Leg, and a whole Hoof; 'tis a Creature of no fierceneſs at all, and notwithſtanding Nature has given it a ſett of very ſharp Teeth, is not at all apt to imploy 'em in any actions of violence upon Men or other Animals; the Natives hunt 'em abundantly, catching 'em ſometimes in Traps and Gins, and piercing 'em at others with their Arrows, but 'tis not ſo much for the ſake of the Fleſh (tho' that be good enough, and taſts not much unlike our Beef) as for the Hide, of which they make their Targets, and is, when well dried in the Sun, of an obſtinacy that no Weapon in the World can make yield.

Ounces. The *Braſilian* Woods are well ſtock'd with *Ounces* likewiſe, ſome black, others grey, others ſpotted; there's hardly any Beaſt to be found in 'em more cruelly furious than this; the Boars will purſue a Man to a Tree, and ſtay for him there, but the Ounces will mount the Tree, and go up after him, eſpecially if they are any thing big; there is nothing they meet can be ſecure from their rage if they happen to be a little fluſh'd, they'll aſſault whole troops of other Animals at once, break into the herds of Swine, deſtroy the Henhouſes, and leave waſte and deſolation wherever they come in thoſe fits; the killing of one of 'em is reckon'd a very glorious action among the *Indians*, he that does it gets a Name by it that makes him not every one's fellow, and they uſe the ſame Ceremonies of Triumph in this caſe that they do when they have conquer'd a human Enemy, the only difference is, that they eat the latter, but make no ſuch uſe of the former; they afford nothing that's good (as far as is known) but a Skin, which the *Portugueſe* Women uſe for Rugs and Coverlets, eſpecially the fine ſpotted ones.

Ant Bear, mention'd by *Knivet*, but not deſcrib'd. The *Tamandua* (or *Ant-Bear*) is of the bigneſs of a large Dog, but bigger than 'tis long; the Tail is twice or thrice the length of the Body, and ſo well ſet with Hair, that 'tis a Skreen to him from the Injuries of all weathers, and a Cover, in which he can wrap up himſelf ſo ſecurely as not to be ſeen; the Head is ſmall, the Snout thin, and the Mouth very little, but the Tongue (with which he licks up the Ants after he has open'd the Hills with his Paws) is full three quarters long: All the Dogs are ſaid to be exceedingly afraid of theſe Creatures, and the *Ounces* too have at leaſt an averſion to 'em, if not a fear of 'em.

Acuti. The *Acuti's* are like the Conies of *Spain*, chiefly in reſpect of their Teeth; they are of a dunn colour, inclining ſomewhat to a yellow and are bred up tame about the Houſes; they take into their fore-feet whatſoever they eat, and ſo carry it to their mouths; they always eat very faſt, and what they leave at one time they preſently go and hide till the next that they are hungry.

Paca. The *Paca* does in ſome meaſure reſemble a Pig, the Fleſh is pleaſant and well taſted, but not very eaſie of digeſtion; there are great numbers of 'em, and yet they never bring forth more than one at a time; ſome of 'em are pure white, which are great Rarities, and found chiefly about the River of St. *Francis*.

The *Aguti* is of the ſize of a young Pig, and has a cloven Foot and a ſhort Tail like that, but the colour on't is red, and the Noſe and Ears like that of a Hare; theſe are very delightful Meat.

Pague. The *Pag* or *Pague* is of ſomething a larger ſize than the former, and eats like Veal; the Head is very deform'd, but the Skin ſo beautiful and fine, all ſpotted with black and white, that 'twould be of no little account to thoſe that are skill'd in Furrs or would make Merchandize of 'em.

Carigue. The *Carigue* is like the Fox of *Spain*, (tho' ſomewhat leſs) but ſmells much worſe; it has a Bag that reaches from the fore-feet to the hinder, with ſix or ſeven Teats in it, and in this Repoſitory their young ones are lodg'd till they are big enough to provide their own food. It generally brings half a dozen or more at a litter, which is too many by five for ſuch ravenous Vermin as they are, for they deſtroy all manner of Poultry, and climb up the Trees and Houſes too in the night-time, ſearching for Prey; in ſhort, there's hardly a Bird that can 'ſcape 'em.

Tatu. The *Tatu* or *Armadillo* is of the bigneſs of a Pig, of a whitiſh colour, and has a very long Snout; the Body of it is wonderfully defended with hard Plates or Scales which no Arrow can pierce, neither is the Creature vulnerable, except he be hit juſt in the Flanks; they will dig ſo very faſt, that ſeveral Men with their Mattocks have not been able to do ſo much as one of theſe with his Snout alone, ſo that they preſently convey themſelves into a ſure refuge under-ground, where they are not to be undermin'd nor indeed taken by any other trick, but only that of throwing Water into their holes, which if it be done, they are eaſily maſter'd: Their Fleſh is as white and tender as that of any Hen or young Pig, and the Skin is uſeful for the making of Purſes; the *Braſilians* are mightily pleas'd with 'em, and breed 'em up for domeſtick Companions.

Sarigoy. The *Sarigoy* is a Beaſt which the *Braſilians* will not touch to eat of, becauſe of the loathſom ſmell it has with it, but the *Europeans* have found 'em notwithſtanding that to be very good Meat, if they are but flea'd and all the fat that lies about the Kidneys carefully taken away, for Experience has told 'em 'tis this alone is the cauſe of that vile ſmell, and when this is gone the *Armadillo* it ſelf is not more agreeable Food.

Wood Rats. The Woods abound likewiſe with a ſort of great *Rats* (as our Author calls 'em) which are as big as a Squirrel, and their Fleſh not much inferiour to that of the moſt delicate Conies.

Canduacu. The *Canduacu* ſeems to be no other than the *African* (tho' here 'tis the *American*) *Porcupine*, amongſt which there is this difference, that ſome of 'em have their Briſtles or Quills black and white, others have 'em yellow and black at the points, and all theſe throw or dart out their Quills as that Beaſt is vulgarly known to do; but then there is one ſort of 'em very ſmall, which tho' they are furniſh'd with thoſe natural Darts as well as the reſt, yet never ſhoot any about as they do; but they all agree in this property, that they are a very good ſort of Meat.

Hirara. The *Hirara* is a Beaſt very like the *Civet-Cat*, and are of ſeveral colours, as white, black and grey; there's nothing will ſerve this Creature for Food but Honey, ſo that the *Braſilians* loſe many a ſweet ſuck by their means; they do nothing elſe but hunt about the Woods for it, and when they have found a ſtock, they go and fetch all their young ones to that place, then the old one goes in and brings it out to the others till their Bellies are full, and ſatisfies her ſelf with their leavings.

Cuati. The *Cuati* by its grey colour reſembles the *Portugal Badger*, the Claws and Snout are very long, and by the help of the former it climbs the Trees like a Monkey; they are ſo ravenous that there's no Animal they light of (that is not more than a match for 'em) that 'ſcapes being devour'd by 'em, but Snakes, Birds and their Eggs is moſtly what they live upon. Some keep them tame in their Houſes, as being docible Creatures and apt for ſeveral purpoſes both of ſervice and diverſion, but they are withal ſo malicious, and given to tear and devour all that lies in their way, that they are not much liked for domeſtick Companions. Of theſe there is two or three kinds more, which are as big as Dogs, and have tusks like wild Boars, and do very near as much miſchief as they.

Wild Cats.

As for theſe Beaſts which our Authors call *Braſilian Wild-Cats*, 'tis probable they are no other than *Tygers*, which their delicate Furrs, their extraordinary ſwiftneſs and fierceneſs, does ſeem very ſufficiently to juſtifie; yet they find none of 'em bigger than an ordinary Dog, but for colour they have both black, white and ſaffron.

Jagoarucu.

The *Jagoarucu* is call'd the *Dog* of *Braſile*, more for its Dog-like yelping than any other reſemblance; they are of a grey mingled with white, their Tail very hairy; they live upon Fruits as well as Animal Prey, and will bite what they ſeize on after a very terrible manner.

Tapati.

The *Tapati* are like the Conies of *Portugal*, and they alſo make a kind of a noiſe like the barking of a Dog, but this is chiefly in the night-time, and the *Indians* never hear it but they are ſurpriz'd, looking upon it as an evil Omen; they are very rare, for not only the Beaſts of Prey, but the ravenous Birds too do aſſault and devour 'em.

Jaguacini.

The *Jaguacini* are as big as a *Portugal* Fox, and of that colour; they feed chiefly upon Sea-crabbs and among the Sugar-canes, of which they deſtroy abundance; they are a mighty ſleepy ſort of Creature, and are very often taken napping and kill'd.

Biarataca.

The *Biarataca* is like a Ferret, but conſiderably bigger, and has a remarkable Croſs of white and grey along the Back; this Creature makes wretched havock of the poor Birds and their Eggs, but its moſt beloved food is Amber, which it very often walks the Sea-ſhore to find; it has neither ſharp Teeth nor long Claws, nor any formidable Weapon, and yet is able ſo well to defend it ſelf and offend its purſuer, that no Beaſt of Prey can do better: In ſhort, 'tis by a ſtink that it makes, and one ſo very foul and horrid, that it has made both Dogs and Men that have taken it ſick to the very death; they don't tell us which way it comes, whether upwards (which is leſs probable) or downwards, as alſo whether it be from any Excrement voided, or is only a meer Fizzle; but which ſoever it be, 'tis ſaid of 'em, that they are ſo cunning as to make a hole in the ground and do their ſtinking occaſions there, when they would not be diſcover'd, as on the other hand, when they are ſurpriz'd, to ſcatter that fine Perfume abroad, and ſo by poyſoning the Huntſmen and Dogs to put an end to the chaſe.

Priguica.

The *Priguica* is like a ſhagg'd Dog, very ugly to look upon his Legs very long, and arm'd with fearful Claws, yet with theſe long Legs they go with their Belly juſt touching the ground, and move ſo very ſlowly along, that 'tis an eaſie matter to take 'em, but all the blows a Man can give 'em ſhall never make 'em mend their pace. Their only or principal Food at leaſt are the Leaves of certain Fig-trees, which if they are depriv'd of, they die.

Sagovin.

The *Sagovin* is by ſome reckon'd a kind of Monkey, 'tis of the bigneſs of a Squirrel, and has red Hair, but in the make of the Body, the Noſe, the Neck and Breaſt, ſhews a lively Image of the ſtately beauty of the Lyon; but the reſemblance is ſtill nearer in reſpect of the Spirit of this Animal, but 'tis very haughty and full of Stomach, apt to reſent an affront, and would pine to death with meer diſcontent and vexation, ſhould any thing be offer'd contrary to its humour; 'tis for this reaſon partly that they don't attempt to bring 'em into this part of the World, they would never endure their Priſon, nor digeſt the injury of the Confinement, but would die out of ſpite by the way, and make their Jaylors loſe their triumph; but then they are but poor little feeble Animals, and don't appear to be fit for fatigue and travel, eſpecially by Sea, ſo that (tho' they would be mightily eſteem'd in this part of the World if we ſaw 'em) yet upon this account alſo they don't attempt their tranſportation.

Hay.

The *Hay* is of the bigneſs of a Dog, of an aſh-colour, with a very long Tail, its Feet and Claws are horrible, like thoſe of a Bear, and its Belly hangs down like a Sow ready to farrow. While this Creature is in the Woods it is extreamly fierce, but being taken and us'd to the preſence and company of Men, it becometh tame and gentle.

Coati.

The *Coati* is of the ſize of a Hare, with ſhort ſpotted Hair, a ſmall Head, and little ſharp Ears; it has a Snout more than a foot long, perfectly round, and of equal bigneſs, except juſt at the extremity, where it diminiſhes all of a ſudden, the cavity of it is very ſmall, and will ſcarce receive ones little Finger; it is a very ſtubborn, obſtinate, little Beaſt, and when 'tis taken will gather up its four Legs and lie down all of a heap, and till 'tis pleas'd of it ſelf to riſe, will neither be ſooth'd nor beaten into it; and not only ſo, but it won't eat neither, unleſs you provide a Banquet of Ants for it, which Creatures it often feaſts upon in the Woods.

Janouare.

The Braſil. are afraid of 'em.

The *Janouare* is a Beaſt of Prey very like the *Lynx*, in reſpect of his ſpotted Skin; his Chin is furniſh'd with a Beard of long ſhaggy Hair, his Legs as long almoſt as thoſe of a Greyhound, and he runs no leſs ſwift than that Creature does; the *Braſilians* are horribly afraid of theſe Beaſts, and not without reaſon, for they are many times ſnapt by 'em and torn in pieces; on the other hand when they catch any of the *Janouares* in their Traps, they revenge themſelves upon 'em with all the malice imaginable, they put 'em to the moſt lingring deaths they can contrive, pierce 'em now and then with an Arrow, that they may feel themſelves die, and by their torments make thoſe they have offended ſome ſatisfaction for their Crimes; and 'twas upon this account that theſe People the firſt time they ſaw our *European* Hounds ran away every man for his Life, as faſt as their Legs could carry 'em, they fancied they were *Janouares*, and concluded our Men to be out of their Senſes to let 'em leap and fawn upon 'em ſo as they did. We read alſo what ſervice Dogs have done the *Spaniards* in their Wars with the *Indians* upon ſeveral occaſions, how the poor *Barbarians* were terrified, their Troops diſorder'd and broken by the letting looſe of the Dogs amongſt 'em, and the *Spaniards* Victories over 'em facilitated by this only aſſiſtance; nay, there don't want inſtances wherein we find a main ſtreſs of the Battel to have lain upon the Dogs, while their Maſters ſtood by, look'd on, and only cry'd *halloo*. Now 'tis very poſſible what we have been ſpeaking of might be ſome cauſe (at leaſt) of this ſo mighty a fear and conſternation, and that granting a parcel of Dogs to be capable of diſturbing a naked Enemy, as the *Indians* were, yet their reſemblance to the moſt hated and fear'd *Janouares* made the impreſſion of Horrour much deeper than otherwiſe 'twould have been.

Apes and Monkeys.

The Apes and Monkeys are very numerous in this Country; of the former there is a peculiar ſort call'd *Aquiqui*, which are as big as a good Dog, black and very ugly every way, the Face is white, and the Beard reaches from Ear to Ear, and is as preciſe as if 'twere cut with a pair of Sciſſars. Notwithſtanding their colour, they have ſometimes a young one that happens to be rediſh, and the government of the Apes always belongs to theſe, for (we muſt know) their Kingdom is elective, tho' the Honour goes along with this Carrot-colour'd Family.

There are Apes and Monkeys both of ſeveral other colours beſides, and ſome of 'em are reputed to be ſo fierce and ſtomachful, that if they are wounded with an Arrow, they'll turn again and fling it at him that ſhot it, and then for their cure they look out for a certain Leaf, which they chew and cramb into the Wound. 'Tis ſaid alſo that when their Cubbs are ſo very little that they can't go, they leap with 'em from Tree to Tree, hanging about their Necks, and thoſe little Animals will hold and cling as faſt to their Dams as a Burr to a Man's Coat; but if their young are ſo big that they can go, but not ſtrong enough to leap, then if they have occaſion to move from one Tree to another that is within their length, one of the old ones lies acroſs and makes a ſort of Bridge, holding faſt by one Tree with his fore-Paws and the other with his hinder, and ſo all the little ones paſs over his Back.

Crocadiles and Lizards.

To the Land-Animals we may alſo joyn the *Lizards* and the *Crocadiles*; 'tis true, the *Crocadile* frequents the Water as well as the dry Land, but thoſe that do ſo (or which is all one, the *Alligators*) ſhall afterwards be mention'd with the other Animals of that Region: We have here to do with the *Crocadiles* that keep the Land, and of theſe, our Authors aſſure us, there is no ſmall plenty in *Braſile*; there are many of 'em of the bigneſs of a man's Thigh and proportionable length, but ſo far from doing any harm, that the little Children play freely with 'em, and they run about the Houſes as commonly (but in far greater numbers) as Dogs and Cats do about ours.

And that we may be ſure that theſe are not really *Lizards* which they call *Crocadiles*, (miſtaking one for the other) 'tis to be obſerv'd that they tell us of the *Lizards* beſides, how large they are, what colour, and how good meat: Their Skin is ruſſet, and adorn'd with multitudes of ſpots; they are very harmleſs inoffenſive Creatures, and never known to do any thing to forfeit that character they commonly have, of being friendly to Mankind; their Fleſh is as white, tender and ſweet as that of the beſt Capon, ſo that thoſe who have loath'd it upon the conceit of the Creature, have upon taſting it been fond of it above all other meats. 'Tis true that theſe now deſcrib'd are the *Lizards* that frequent the Marſhes and Rivers, but then we are aſſur'd there are others that are purely Inhabitants of the Woods, and of which alſo 'tis as true, that they have nothing of that cruel and ravenous humour in 'em that *Crocadiles* are always deſcrib'd by: Was it ever known that Animal refus'd a good morſel when he could eaſily come by it? that he ſtood to ſtare and gaze upon his Prey, and then tamely run away from it? But one of our Authors (*Levins* the *Frenchman*) does confirm this of theſe *Lizards* upon his own knowledge and experience, and to that purpoſe tells this Story.

A ſtory of a *Lizard*.

He and two more of his Countrymen were travelling ſome part of *Braſile*, and paſſing thro' a certain Valley, they heard a fearful noiſe, made by ſome Beaſt or other coming towards 'em, and quickly after, upon a little Hill about thirty paces from 'em, they 'ſpied what it was, but 'twas with no little fear and ſurprize that they ſaw a *Lizard* bigger than a Man in the Body, and near ſix foot long, cover'd with white rough Scales like Oyſter-ſhells; the Monſter ſtood and look'd on 'em, as they could well ſee by his glaring Eyes, and they being in no condition to make any aſſault upon him, kept their ſtation, expecting when he would come and fall aboard 'em; but the *Lizard*, it ſeems, had no ſuch deſign, for as he ſtood upon that riſing ground for a little freſh Air, (which they ſaw him draw in with open mouth, the weather being extreamly hot) ſo when he had taken his fill both of that and looking at them too, he turn'd ſuddenly about and ran away. 'Twas a full quarter of an hour that this Interview laſted, and Monſieur tells us he was not a little glad when 'twas finiſh'd, and he ſaw the *Lizard*'s Tail: However, it confirm'd him in the opinion that this Creature has a love to Mankind, ſince in his caſe there was a fair opportunity, if it had lov'd only to devour 'em.

There are alſo other Animals beſides the *Lizards* which would make an ordinary Stomach heave at the thoughts of eating, and yet are very acceptable meat with the *Braſilians*; ſuch are a great large ſort of *Toads*, which they roaſt and eat without ſo much as bowelling, and *Land-Serpents* colour'd with black and red, as big as a Man's Arm, and four or five foot long; theſe they catch abroad in the Woods, and bring 'em home and throw 'em down amongſt their Wives and Children, who take 'em up and handle 'em without any manner of hurt; ſo that 'tis certain theſe Creatures, both *Toads* and *Serpents*, have not that poyſonous quality in 'em that ſome others have in the very ſame Country; tho', allowing all that, a man would faſt as long as Nature could hold out, and it ſhould be ones laſt ſhift to make a meal of 'em.

Divers ſorts of Parrots, and other ſmall Birds.

Let us come now to the wing'd kind, and leaving the groſs Earth, look over the Inhabitants of a finer Element.

Parrots are ſome of the moſt vulgar Birds of the Country, they flie together in whole flocks, and are kill'd by thouſands, for all which they ſwarm ſo, that there's never any miſs of 'em: There are various ſorts of 'em, and there's only one known but what will talk with a very little teaching; their colours are very beautiful and ſhining, and ſo admirably mix'd in ſeveral of 'em, that one of thoſe Birds alone is an entertaining ſight.

Some have a Breaſt as red as ſcarlet, and all along the Body are yellow or green or blue, but not without a little ſprinkling of all theſe colours too: Theſe never lay more than two Eggs at a time, and breed in the trunks of old Trees and about the Rocks. Others with all the former colours have black and grey beſides, and they'll breed and bring up their young in the Houſes, for which reaſon they are much more eſteem'd. There is another that is black ſprinkled with a little green throughout the Body, the Feet yellow, and the Eyes and Beak red. Another that is all green, the Cap and Collar yellow, the Pinnions red, the Tail red, yellow and green, and over the Beak a tuſt of blue Feathers that adorn it to a wonderful degree.

But the Parrot call'd the *Tuin* is ſomething more curious, if not for the colours, yet for the ſize; 'tis no bigger than a Sparrow, but ſo chearful, that 'tis always tatling or ſinging after its manner, and will skip up and down upon a man's Breaſt and Shoulders that breeds it up, and eat the Victuals out of his Mouth, or pick his Teeth with its Bill if he'll give it leave; theſe are eſteem'd as very great Rarities.

But there is another, which they call *Guiratiuba*, that they make more account of than the former, but the only reaſon ſeems to be becauſe 'tis ſcarce and far-fetch'd: This Bird is hardly ſeen out of a great man's Houſe, and they value 'em as ſome men do their Hawks, and as others do the Birds that delight 'em with the moſt charming Notes, and yet this is a Creature that never ſings nor talks, but is always ſad and ſullen, and of a humour not capable of giving any diverſion; ſo that there's no doubt to be made but 'tis the uncommonneſs of it that enhances the price, and makes 'em ſo much eſteem it. This ſilent melancholly Bird is a Jewel in the midſt of all the thouſands of talking Parrots in *Braſile*, for the ſame reaſon that one of thoſe talking Parrots would be ſo if all the reſt were tongue-ty'd and dull like this.

The *Yapu* is a Parrot of the bigneſs of a *Pye*, its Body of a fine black, the Beak and Tail yellow, and on its Head it has a Coronet conſiſting of three tufts; they are bred up in Houſes, and live upon Spiders, Beetles, Crickets, and ſuchlike Inſects, in catching of which they are ſo ſharp and diligent, that they keep a Houſe very clear of 'em; they are ſo much for pecking, that if a man holds 'em in his Hand they'll be apt to run to his Eyes and peck there, for which reaſon they don't make 'em ſo familiar as they do other Parrots. 'Tis a common obſervation of theſe Birds in general, that they are extreamly ſenſible and apt to learn, and we are told a Story of one whoſe docility is no ſmall ſupport to the Reputation of all Parrots in this reſpect, at the command of his Miſtreſs he would either dance, whiſtle, talk, or counterfeit the noiſe the *Braſilians* make when they go to battel, and at the leaſt word from her leave off in the middle of the Dance or Song, or whatever elſe he was doing; neither was it poſſible to make him move either Tongue or ſo much as his Foot, till the Miſtreſs ſignified ſhe gave leave: Our *Frenchman* made the Experiment, and endeavour'd by Careſſes to ſeduce the Bird into a little motion, but all in vain, *Poll* ſtood as immovable as a Poſt, and as ſilent too, and paid an exact obedience to the Law his Miſtreſs had impos'd upon him, in ſpite of all artifices and endeavours to the contrary. The Woman valued this Parrot at ſo high a rate, that ſhe abus'd him when he offer'd to buy it; and when he demanded the price of it, ſhe told him, a piece of a braſs Cannon.

The *Guamimlique* is commended for one of the neateſt and clever'ſt little Birds that is; in its flight it makes a noiſe like an *Humble-Bee*, and flies much after that waving uncertain manner, and then never eats its Food ſitting ſtill, but always flying; the colour of the Body is grey, but the Cap upon its Head is ſuch, that 'tis hard to ſay what colour 'tis of, for whatever ſide or way you look upon it, you ſee almoſt all ſorts of colours, and 'tis the ſame if one looks upon the Breaſt; it has a very long Bill, and a Tongue that ſtretch'd out is full twice the length of the Bill. Whether this Bird ſleeps much or no is uncertain, however the *Indians* ſay that it ſpends ſix months entirely in a profound Sleep.

The *Guiranheugeta* is of the bigneſs of our *Goldfinch*, the Back and Wings blue, the Breaſt and Belly yellow, and a Diadem of the ſame-colour'd Feathers upon his Head; 'tis an admirable Bird for the Cage, indeed in this alone a man has the pleaſure of many, for it has the Notes of a great many other ſorts of Birds, and makes ſuch a variety of changes and turns in its whiſtling, that it is a Conſort by it ſelf; neither is it for giving its Maſter a little touch of Muſick and away, but continues the Song to ſuch a length, as effectually ſhews the goodneſs both of the Birds Lungs and Humour at the ſame time.

The *Tangara* is about the ſize of a Sparrow, 'tis all black except the Head, which is of a fine Orange-tawny. If there were any way to be let into the Myſteries of the actions of theſe Creatures, or a Rule to know the meaning of 'em, a body would imploy that piece of Skill.

The Fowl that frequent the Salt-water are next to be conſider'd.

Sea-Fowl.

The *Gairatinga* is as big as the Crane of *Portugal*, the Body extreamly white, and its Legs and Bill very long, but the former reddiſh, and the latter yellow; on the Neck a man finds the greateſt beauty that belongs to it, which is a Plume of very fine Feathers, not to be compar'd to any but thoſe of the *African* Eſtridges.

The *Caripira* is otherwiſe call'd *The forked Tail*, becauſe its Tail is divided in the midſt; the fat of this Fowl is good for the Looſeneſs, and the Feathers ſerve the *Indians* for their Arrows: 'Tis ſaid of 'em, that they are certain forerunners of the Ships arrival, and it very ſeldom fails that ſome few days after they are ſeen the Ships come into their Ports.

The *Guaca* is taken to be the Sea-*Mew* of *Portugal*, which, becauſe 'tis common enough, we ſhan't ſtand to deſcribe; they live upon Cockles, which to open and come at, they take 'em up in their Bills, and let 'em fall upon the Rocks till they have broke the Shell in pieces.

The *Guiratouteen* is a Fowl, the moſt remarkable property of which is, the Lethargy or deep Sleep that it is moſt commonly found to lie in; the *Indians* light on 'em lying thus on the ſhore to all appearance dead, and tho'

Sea-Fowl. handled, diſcover no ſigns of life; but then to bring 'em to themſelves again they give 'em a cant, throwing 'em a good way, and ſo by means of the fall the Bird is thorowly wak'd, and makes uſe of its Wings to avoid being toſs'd in that manner any more.

The *Calcamar* is as big as a Pigeon, and the report of the Country is, that they lay their Eggs in the Sea, and there hatch and breed their young; they don't fly at all, but by the help of their Wings and Feet together ſwim along upon the Water very ſwiftly: The Mariners generally expect a great Calm when they ſee theſe about, and this they do ſometimes in ſuch vaſt numbers, that they are even troubleſom to 'em.

The *Agaya* is of the ſize of a *Pie-annet*, its colour is white beſpotted with red, and the Bill is long and faſhion'd like a Spoon; 'tis a mighty catcher of Fiſh, to do which it uſes this ſlight, to ſtrike it with its Foot upon the Water, and then ſtretch out its Neck to wait for the Fiſh till a fair opportunity offers to ſeize 'em.

The *Caracura* is a little grey Bird, whoſe Eyes are made very beautiful by a red circle that appears in each of 'em; thoſe that hear the noiſe it makes are deceiv'd, imagining it the Voice of ſome very large Bird; but 'tis odd that this Bird can't ſing with its fore-mouth, but muſt do it alſo with that behind at the ſame time, that the Song ſhould come both ways at once, and that with ſo filthy a ſmell too, that 'tis no little puniſhment for a man to be by. 'Tis true, as to the concern the Ear has in the matter, the Harmony may be both ways much alike, and the Fart as melodious as the Song, but ſince another Senſe is alſo to give its Verdict and declare it ſelf offended, we muſt pronounce an odds between 'em, and ſay the ſuperiour Organ makes the ſweeteſt Muſick. This Entertainment uſually begins two hours before Day, and laſts all the Evening till the end of the twilight, and the People obſerve that for the moſt part 'tis a token of fair weather.

The *Guara* is as big as a *Pie-annet*, it has a long Bill which at the end is like a Creſcent, and its Legs are about a ſpan; there's hardly any Bird ſo ſtrange as this, for the various colours it appears in; 'tis the true *Proteus* among the Fowl, and he that knows it at one time cannot poſſibly do it at another, without he goes by ſome ſurer marks than that of the colour. When firſt it comes out of the Shell 'tis black, and quickly after turns grey, by that time it comes to have the command of the Wing it becomes whiter than the pureſt Dove, and this innocent colour it next exchanges for that of Blood, 'tis redder (if poſſible) than ſcarlet it ſelf, and ſo continues all the reſt of its life. Theſe may be bred in Houſes, but their food muſt be Fiſh or Fleſh, and always put in Water; the *Braſilians* highly value their Feathers, and make all thoſe gawdy fantaſtical Ornaments (for which they are ſo noted) as much of theſe as of any other their Country yields.

Our Authors tell us of ſeveral other ſorts of Water-Fowl, but not deſcribing any of 'em, we will hear their account of the Fiſh and other Animals that live in the Water, ſome altogether, and others amphibious.

Divers ſorts of Fiſh. We will begin with the *Ox-fiſh*, ſo call'd from its likeneſs to that Creature, particularly with reſpect to its Head, which with the hairy Skin, the Ears, the large Tongue and Cheeks, reſembles an Ox ſtrangely; the Eyes are but ſmall in proportion to the Body, but they are defended with Eyelids, by which the Creature ſhuts and opens 'em at pleaſure, wherein there is a remarkable difference between it and other Fiſh; but there is alſo as much in the point of breathing, for this cannot dwell long under water, as others can, but muſt every now and then come up for a mouthful of Air, and breathe a little: The Body is of a great bigneſs, and all cover'd with yellow Hair; it has two Arms each a cubit long, and two Hands with five Fingers a-piece, and on each a Nail like that on a Man's; under theſe Arms the Females have two Dugs, with which ſhe ſuckles her young, but theſe are never more than one at a time: The Inwards of it appear exactly like thoſe of an Ox, and on all the outſide it has nothing of a Finn, ſo that the moſt of the Fiſh is ſeen in the Tail, which is notwithſtanding all round and cloſe: In the Head, a little above the Eyes, are found a couple of Stones of a conſiderable magnitude, white and heavy, and reputed to be the beſt Remedy for the *Stone* in the World, being beaten to powder and drank in a draught of Wine or Water, it forces away the Stone if it be voidable, and of this they give us an inſtance of their own knowledge. The Bones of this Fiſh are all hard and maſſy, and not only as ſolid, but as white as Ivory; the Meat is to be compar'd with the beſt of Beef, which it much reſembles, and is as ſubſtantial a food either for a Houſe or Ship; and indeed it is ſo much more like Fleſh than Fiſh, that it rais'd a diſpute amongſt the *Portugueſe*, whether 'twas a proper Diſh for Fiſh-days or no; and both Parties had enough that was plauſible to urge on their ſides, for if one could ſay 'twas an Inhabitant of the Water, and came out of the ſame Element that all Fiſh live in, the other might reply, So did *Mermen* and *Mermaids* too, and yet a holy Father would hardly allow a Diſh of that ſame on a *Wedneſday* or *Friday*; beſides, there's the ſtrength and ſubſtance of Fleſh in it, and 'tis too rank and high to anſwer the ends and purpoſes of a Fiſh-day. In ſhort, how they ended the matter is uncertain, but the caſe being weighty, and the Peace of Mens Conſciences concern'd in it, it ought to have been well diſcuſs'd by Divines, and brought to a compleat determination.

The *Beijupira* is like the *Sturgeon*, and not much leſs valued, for its good taſte and wholſom nature; they are taken in the open Sea only with a Hook and a Line, being ſix or ſeven ſpans long, their Bodies very round, black on the Back, and white on the Belly.

The Fiſh call'd the *Ox-eye* is like the *Tunnie*, as well for its ſize as form, the inward as the outward parts; it is vaſtly fat, and they take out of it Courſes as thick as a four-ſhilling-piece of the *Portugal* Money; this ſerves for all the purpoſes that good Butter or rather Hogs-lard does. The Eye of it is ſo very like that of a terreſtrial Ox, that upon that ſcore it goes by this name.

The *Camurupi* is as much eſteem'd for eating as any of the former, it's twelve or thirteen ſpan long, and has a Finn upon the Back (which it always carries rais'd up) that is at leaſt two or three; the grain of it lies all in flakes interlarded with fat and greaſe, but notwithſtanding it has abundance of bones, and muſt be eaten with much care and caution. They generally kill 'em with Harpon-irons, for 'tis a thick Fiſh and heavy, being burden ſufficient for two men to lift; there are multitudes of 'em to be found in thoſe Seas, and they are a profitable Prey enough, conſidering the quantities of Oyl that are drawn from 'em.

The *Piraembu*, otherwiſe call'd *The ſnorting Fiſh*, is known and diſcover'd by the ſnorting noiſe it makes, which is heard very diſtinctly if it be any thing near: It is pretty conſiderably big, and eight or nine ſpan long, of a good taſte, and much eſteem'd; in the Mouth it has two Stones of the breadth of a Hand, whoſe uſe and office is to grind the Wilks and other ſuch hard things whereon they feed: Theſe Stones the *Indians* prize at a great rate, and wear 'em about their Necks as Jewels.

Whales are ſo common upon this Coaſt, that they are to be ſeen ſometimes forty or fifty together, and many Barks have been overwhelm'd by 'em; any loud roaring noiſe ſcares 'em ſtrangely, particularly the beating of a Drum does it effectually, and makes 'em very fierce and mad.

The *Swordfiſh* alſo (the everlaſting Enemy of the *Whale*) is no ſtranger in thoſe Seas; their Weapon is eight or ten ſpan long, ſet on both ſides with a row of very formidable Teeth, which are longer or ſhorter according to the dimenſions of the Fiſh; the *Whale* very frequently feels the exceeding ſharpneſs of this Weapon, in the terrible battels fought between this Fiſh and it; but the *Shark* comes in for a ſhare in the honour of the Victory too, for the *Swordfiſh* ſeldom engages alone, but while that gives the Wounds the hungry *Shark* comes and ſucks the Blood, by which means their Adverſary is ſo enfeebled, that at laſt he is forc'd to yield the day. The *Swordfiſh* Enemies to the *Whale*.

Of the *Sharks* there are ſix or ſeven kinds obſerv'd about the Coaſt of *Braſile*, but all fierce and voracious to the laſt degree; they will not only purſue a Man upon the Water, but leap aſhore after him too, and by that means they are ſometimes prevented from returning back again. All that they can ſeize or light on is their Prey, Ravenous nature of the *Sharks*. and be it what it will, down it goes, provided it be not a Harpon-iron, or an Anchor, or any thing of that untractable nature; their Bellies are ſometimes furniſh'd like a Saleſman's Shop, for there you ſhall find Skins, Cloth, Doublets and Breeches; in ſhort, any piece of Tackling from a Ship, or any Rags that drops from the Back of a Sailor, is meat for a *Shark*. Thoſe cruel Teeth of theirs, that rend their Prey in ſo fearful a manner, do as much miſchief after they are dead as when they are alive, for the *Indians* uſe 'em in their moſt deadly Arrows, and he that has once ſeen what theſe Teeth are, may eaſily imagine what a wound ſuch a Weapon (coming with a great force too) would make upon the tender fleſh of a human body; 'tis almoſt too cruel for Mankind, and ought only to be imploy'd againſt the *Sharks* themſelves, and 'twould be proper enough to deſtroy ſuch deſtroyers with their own Teeth.

Divers ſorts of Fiſh.

The *Flying Fiſh* and the *Cattle* abound alſo in theſe Seas, but theſe have both been deſcrib'd in other places.

The *Toadfiſh* or (as 'tis call'd in their Language) the *Amayacu*, is about a ſpan long, and oddly painted, but the Eyes are fine and fair to look on; when 'tis taken out of the Water it will ſnort and ſwell ſtrangely, for which reaſon it had the name of the *Toadfiſh* given: If it be flea'd (they ſay) it may be eaten, but otherwiſe it infallibly and ſuddenly kills thoſe who pretend to feed on it, as ſome have found to their coſt; and no great wonder it ſhould kill Men, when 'tis a Poyſon for Rats, as it ſeems 'tis, and there's none of thoſe Vermin that eat of it but die for their curioſity.

There are two other kinds of theſe *Toadfiſhes*, one that is all over cover'd with Prickles like a Hedghog, and ſnorts and ſwells out of the Water like the former, and may alſo (like it) be eaten if the Skin be pull'd off, and (they ſay) with advantage too in caſe of the *Bloody-flux*, tho' methinks it ſhould be a man's laſt Remedy, if there be any room for choice. The other is of a triangular form, and the Poyſon (which in the two former was but Skin deep) in this is ſunk down into the Bones and *Viſcera*, which clear taken out, the Fiſh notwithſtanding is ſaid to be eatable; and eatable only it ſhould be, without ever being actually eaten, unleſs it come in for a laſt refuge in Food, as the other ſhould do in Phyſick.

The *Amorealy* is like the *Toadfiſh*, that is, full of ſharp Spikes or Prickles, for this is arm'd in the ſame manner: It lies cover'd up under the Sand upon the ſhore, ſo that ſometimes it wounds the Hands and ſometimes the Feet of them that are ſearching there after other things, and in this caſe a man's only remedy is by Fire, this alone draws out the Venom.

The *Puraque* is in form like the *Scale*, but in nature and quality reſembles the *Torpedo*; for if a man touches it, tho' but with a Stick, his Hand ſhakes like that of a Paralytick, and is benumb'd to that degree, that all ſence and uſe of it is for a time taken away: Notwithſtanding all this, the Fiſh is eaten without any manner of prejudice.

The *Camararu* is ten or fifteen ſpan long, very fat, and roaſted taſtes like Pig; the Body is cover'd with Spikes, which are yet a leſs dangerous Weapon than the Teeth, for the Arm or Leg that's bitten by 'em ſeldom recovers, but rots away. The Natives ſay they engender with the *Sea-Snakes*, for they find em in the Sands waiting for 'em, and many times actually knit and twiſted with 'em.

The *Amaya Curub* is a round Fiſh, and of the bigneſs of the *Bugallo* of *Spain*; it is very venomous, and its Body is as full of a ſort of Warts as it can hold, for which reaſon it has the Name of *Carub*, that word ſignifying a *Wart*.

Beſides this and others mention'd before, there are ſeveral other ſorts of venomous Fiſhes, and ſuch as have ſo vehement a Poyſon too, that few eſcape who eat or touch 'em.

Mermen and *Mermaids*.

But what ſhall we ſay to our Authors accounts of the *Ypupiepra* or *Merman*, a Story which for a long time has appear'd as ridiculous to ſome People as that of the *Sphinx* or *Centaur* it ſelf; neither would they any more believe the Seamen telling of an Animal that is both Fiſh and Man, than the Poet's deſcribing another which is a compound of Man and Horſe; not that they mention them neither as ſuch a mixture of the parts of Man and Fiſh, but rather as all over and entirely human in their ſhape; but yet, tho' the deſcription be not particular as to the matter of fact, they make no manner of doubt. They come up to the Barrs of the freſh Rivers, and are to be ſeen there very frequently; and in *Jagoaripe*, ſeven or eight leagues from the Bays, a great many of 'em have been diſcover'd: In *Porto Seguro* they have been both ſeen and felt too, ſeveral *Indians* having been kill'd by 'em; and 'twas but in the Year 1682. that an *Indian*, upon the Water in a Canoe, was purſued by one of 'em, and with very much difficulty made his eſcape; but this fellow coming home miſerably frightned, it ſeems, told the Adventure to his Maſter, who would needs go to ſee the Monſter, but he had better have taken his Man's word for't as it fell out, for ſitting careleſly in his Canoe with one of his Arms out, the Creature (who had 'ſpied him) ſuddenly ſeiz'd him by that Hand and carried him under Water: What they catch they are ſaid to embrace ſo ſtrictly in their Arms, that they do with graſping cruſh it all to pieces.

The *Apula* is a Shell-fiſh that looks more like the joynt of a Cane than any thing elſe; 'tis good to eat, and if reduc'd to powder and drank faſting, has the name of very great good in Diſtempers of the Spleen.

The Fiſh call'd *Sea-fomes* by the *Portugueſe*, *Aguas mortas* or *Dead-waters*, are as broad as a Hat, and by the multitude of folds they have (by which alſo they catch other Fiſh) do reſemble the *Barbary* Purſes: Theſe are not to be eaten at all; their ſtinging cauſes very great pains and (which is a peculiar property) unavoidable weepings, and therefore we are told of an *Indian* who had receiv'd many a bitter wound with Arrows, and never ſhed Tear for any of 'em, but being ſtung by this Creature, wept plentifully; ſo that it ſeems not to be the effect of any violence of pain, but of ſome particular property of the Venom, which forces it ſelf that way, and well deſerves to be further enquir'd into.

Crabbs.

There are ſeveral ſorts of *Crabbs* found in this Country, and moſt, if not all, are made Food by the People; one kind that caſts its Shell, always when it does ſo retires into its hole, and there tarries the ſpace of two or three months, and then comes out again: Another is ſo large, that a Man's Leg will go into the Mouth of it; theſe Creatures are ſo affected with Thunder, that it always fetches 'em out of their holes, but they make at the ſame time ſuch a rattling noiſe themſelves, that they may be heard a great way, and they have ſometimes been miſtaken for troops of arm'd Enemies upon a march. That kind that keeps in the trunks of the Trees which grow by the Sea-ſide live moſtly upon Cockles, and uſes a notable artifice for getting the Fiſh out of the Shell; when they ſee a Cockle gaping, (as they do very often) they preſently by the help of their Claws ſlip ſome little Stone or other into the aperture, ſo that the Cockle cannot poſſibly cloſe his Shell again, by which means they have an opportunity to pick out the Fiſh, which they do with a great deal of dexterity.

The *Periwinkles* and *Muſcles* are very fine and good, and plentiful too hereabouts; they both afford a ſort of ſmall Seed-pearl, but of the *Muſcle-ſhells* particularly the *Indians* ſerve themſelves for Knives and Spoons.

But the *Oyſters*, as they are extreamly large, ſo they yield many of 'em Pearl that are very big and rich: The *Indians* in former times us'd to come and fetch vaſt quantities of *Oyſters* to ſerve 'em all the Year round, and the Shells they piled up in mighty heaps up and down in ſeveral parts of the Country, which by degrees came to be cover'd with Earth and Trees; the *Portugueſe* by digging have diſcover'd ſeveral of theſe vaſt Hills of buried Shells, and do continually find more and more of 'em, and the uſe they put 'em to is, to make a ſort of Lime of 'em for building. How great theſe collections of Oyſter-ſhells are, may be gueſs'd by this, that of one heap alone was built part of a College, the Governour's Palace, and ſeveral other Buildings, all which notwithſtanding had not exhauſted it, but part was yet remaining when our Authors were in *Braſile*. This Lime is very white, and very fit for all the purpoſes 'tis made for; this only is to be ſaid of it, that the Rain turns it blackiſh.

Wilks.

The great *Wilks* are valued at a high rate by the *Braſilians*, for the ſake of the many Nicknacks they make of 'em, nay, to purchaſe one they'll part with a Priſoner or a Slave very frequently. Thoſe of the largeſt ſort are two ſpan in breadth and one in length, and not to be exceeded in whiteneſs by Ivory it ſelf. As for the leſſer ſort of *Wilks*, *Scallops*, and another ſort of Shell-fiſh call'd by the *Braſilians Piraguaig*, (which are eaten, and their Shells us'd for Ornaments) theſe are too common with 'em to be ſo much regarded.

Large *Shrimps* and *Prawns* are no uncommon things in *Braſile* neither; and in a word, about the holes and cracks of the Rocks are abundance of Animals to be met with; they afford refuges to the *Sea-ruffs*, *Crabbs*, *Oyſters*, *Water-rats*, *Parrets*, and many others, which may at any time be found there by thoſe that will venture to ſearch ſuch places.

Other Animals that uſe the Water

To the Fiſh alſo we may ſubjoyn theſe following, which tho' not of that kind, yet do either in whole or in part belong to the Water; ſome of theſe are of the *Serpentine* kind, and as formidable as any others whatſoever.

There's the *Snake* call'd by the *Braſilians Cucurijube*, which is reckon'd one of the very largeſt that is known in the Country; there are ſome of 25 and 30 foot long, and a yard in compaſs, which are dimenſions large enough to make the Report credible of their ſwallowing the larger ſort of Animals, ſuch as great *Hogs*, *Stags*, and the like: It has a Chain all along the Back from the Head to the Tail, and the Teeth wherewith the monſtrous Beaſt grinds her Prey are like a Dog's, both for ſize and form, but the method it takes to ſeize and ſecure it is, to wind and fold it ſelf about it, and let it be Man or Beaſt that is once made a Priſoner in that manner, there's no poſſibility of redemption again. When they have gorg'd and glutted themſelves pretty well they are mightily diſpos'd to ſleep, which coſts 'em many times their Lives, for the *Indians* come and chop a piece or two of their

Tails off when they find 'em napping, and this (they ſay) is to be done without incurring any danger, for the Animal lies in a Sleep ſo deep, and ſo like a Death, that ſhe does not rouze even at theſe abuſes. Thus one day they found one aſleep, and cut two pieces of the Tail off, and the next day they came and found her dead, and ſaw ſhe had two wild Boars in her Belly; ſhe was twelve yards and a half long, and proportionably big.

The *Manima* is another *Water-Snake*, and rather bigger than the former, and has a fine painted Skin; the *Braſilians* hold it for a mighty lucky thing to ſee this Creature, they bleſs themſelves upon it, and take it for an Omen of long Life; but other People perhaps would be of a contrary opinion, and take it for very ill luck, and an infallible Prognoſtick of a ſudden Death, to meet ſuch a filthy Monſter as this is. Theſe two laſt-mention'd are freſh-water *Snakes*, but the *Terepomonga* is a *Snake* that lives in the Sea.

The word *Terepomong* in the *Braſilian* Tongue ſignifies a thing that cleaves faſt, and this Creature is of that ſtrange nature, that whatſoever touches it ſticks to it ſo faſt, that 'tis not to be parted from it again; this *Phænomenon* is as ſtrange as any in Nature, and 'twould be worth while to enquire the cauſe of it, and to know by what ſort of a glutin it is that the *Terepomonga* binds other Animals ſo cloſe to it ſelf, or what elſe can be the cauſe of this adheſion. It ſeems however that by this means ſhe gets her Livelihood, 'tis a neceſſary advantage that ſhe cannot part with nor ſubſiſt without; for whether 'twill do in the Sea or no is uncertain, but 'tis ſure that the *Snake* comes aſhore for recruits, contracts her ſelf up into a little compaſs till ſhe has got ſomething faſtned to her, and then ſhe marches away with it to the Sea, and returns again to her own natural bigneſs, which is equal to that of a large Cable.

Jacare Lizards.

The *Jacare Lizards* are as big as Dogs, their Snout is like that Creature's alſo, and their Teeth long and large; their Skin is like Plates of Armour, and will defie any Arrow in the World to pierce it, yet they do no manner of harm, and the *Indians*, who take 'em often in their ſnares, do very ſeldom (if ever) deſtroy 'em. Their haunts are diſcover'd not only by the great Cries they make, but alſo the musky ſmell they carry with 'em, and which, of all the parts of the Animal, is particularly predominant in the Teſticles. They lay Eggs as big as Gooſe-Eggs, and ſo hard, that ſtriking one againſt the other, they ring like Iron. They frequent both the Land and the Water too.

The *Jaguamcu* is a Creature bigger than any Ox, and its Teeth more than a ſpan; theſe are very miſchievous, and prey both by Land and Water; they are not very common, but ſome of 'em are found in the River of St. *Francis* and in *Paraguacu*.

Sea-Wolfs.

The *Atacape* ſeems to be a Sea-Wolf; 'tis vehemently ravenous, and comes frequently up out of the Water to watch for Men, and then 'tis ſo ſwift a runner, that 'tis a hard matter to eſcape it.

Water-Hogs.

The *Water-Hog* (call'd *Capiioara*) is as big as that which lives altogether on the Land, but has no Tail like that; it will ſtay a long time under Water, but yet tho' it be ſo familiar in that Element, it lodges on the dry Land, and always brings up its young there: In the roof of the Mouth it has a very great Stone, which ſerves inſtead of Teeth; its food is Graſs and the Fruits that are to be met with along the Rivers.

The *Tortoiſes* may be mention'd too, theſe ſwarm to an incredible degree, as well they may, conſidering they lay two or three hundred Eggs at a time; they lay 'em all in the Sand, and when the young ones are hatch'd they lead 'em away to the Sea, where they are brought up. The Eggs are as big as Hens-eggs, very round, and have this property, that whether boil'd or roaſted, the White is ever ſoft. Some of the *Tortoiſes* are ſo big, that their Shells make compleat Targets for the Wars, and there was one taken upon the Coaſt of *Braſile* of ſuch a ſize that twenty men could not lift it from the ground.

In the freſh Rivers they tell us likewiſe of *Otters* and other Water-beaſts that have rich and delicate Furrs, ſome of which do no harm, and others very fierce and given to devour.

Frogs that the *Indians* fear their noiſe.

Amongſt the ſeveral ſorts of *Frogs* that lie croaking about in the Pools and Puddles of this Country, that kind which the *Indians* call *Guaririci* is not to be forgotten: What notions they have of it we can't tell, but this is certain, that they are ſo fearful of hearing it croak, that they die with that fear almoſt; and if it be their lot at any time to hear that fatal Muſick, 'tis impoſſible to perſwade 'em to think of living, but the fancy that they muſt die thereupon is ſo deeply rivetted in 'em, that they do indeed languiſh and die in good earneſt: This ſeems to be the pure effect of odd Notions and Imaginations, and is not a deſpicable Inſtance of the danger of yielding to thoſe Impreſſions at firſt. Some fantaſtical old Hagg or crackbrain'd Fellow or other amongſt the Anceſtors of theſe *Indians*, diſliking the noiſe this Animal made, gave it an ill Name, and ſpoke of it whatever a wild and crazy Imagination dictated, and their Poſterity, who think themſelves bound to believe all they ſay, took it and kept it like an Oracle, and now it has paſs'd from Generation to Generation, and is ſunk ſo deep into their heads that they can't throw it out again, but muſt preſerve it in ſpite of all Senſe and Reaſon. A poor little *Frog* can't croak in a Puddle, but half a dozen Lubbers that hear it muſt come home ſick and die upon't.

That account which has now been given of *Plants* and *Animals* relates to ſuch chiefly as are the peculiarities of this Country, at leaſt are ſtrangers to us in *Europe*; but beſides theſe, our Authors tell us, thoſe of our part of the World do live and thrive there in abundance too.

Braſile appears like another *Portugal*, for here you have the Horſes, the Herds of Cattle, the Poultry, the Grain, the Fruits, the Flowers, the Plants which that Country yields. The Reader will eaſily underſtand this of ſome, and not all theſe ſeveral things; neither do we intend any more by that reſemblance of *Braſile* and *Portugal*, than that the *Portugueſe*, who are Maſters of the Country, have tranſported a great many of the Products of their own Soil hither, and made 'em now as it were Natives of this.

Having now ſurvey'd the ſtate of Nature in this great Country, it remains that we dip a little into the civil and moral Hiſtory of the ſame.

The Religion of the Natives.

Their notion of a Deity.

Of the general Flood.

The Religion of the *Braſilians* is (like themſelves) ſomething wild and unpoliſh'd, digeſted into no Precepts, attended with no Ceremonies, and (in a word) hardly capable of any deſcription. That Power which they call *Tupan* is explain'd by them to be the Author of the Thunder and Lightning, (or rather the Thunder and Lightning it ſelf) but 'tis plain that they have no very good opinion of him, for being violently ſcared when any Tempeſt riſes upon 'em, they ſay, that's no good God that puts 'em into ſuch a fright. Yet others of 'em have attributed ſome Goodneſs and Bounty to *Tupan* too, for they ſay 'twas he that firſt gave 'em their Mattocks and Tools for Country Labours, and 'twas he that gave their Food and the encreaſe of their Lands: But when our Travellers diſcours'd to them the ſubject of the Creation and Government of the World by one Almighty Being, they look'd upon one another, like men that heard a new and ſtrange Story: Their way is when they are mightily ſurpriz'd to expreſs themſelves by this word *Teh*, which is their note of admiration, and ſolemn with them upon ſuch occaſions; thus they did now, they anſwer'd the Diſcourſe with *Teh*, *Teh*, and diſcover'd a conſiderable degree of aſtoniſhment. But the notion of the univerſal Deluge paſſes currently amongſt 'em, and they often have it in their Songs, (as well as their Diſcourſe) that the whole Earth was oppreſs'd with a Flood of Waters, and all Mankind were drown'd, except ſome of their Anceſtors, who ſav'd themſelves by climbing up into monſtrous high Trees: This both our Authors agree in to be a generally-receiv'd Tradition amongſt 'em, and they profeſs to have expreſly heard it from 'em.

Of a future ſtate.

Neither are they utterly void of notions of Good and Evil, and the conſequences of each as to ſome kind of future ſtate; 'tis true, that future ſtate is blindly deſcrib'd by 'em, and their Suppoſitions about Rewards and Puniſhments as full of barbarous Whimſie as that of their Anceſtors deliverance from the Deluge.

Virtue with them is, to defend their Country, to murder their Enemies and eat 'em when they have done: And their after-Felicities are, to be gather'd to the far-diſtant Region where their Progenitors are, to live in pleaſant Gardens, and ſport amongſt the Trees and Flowers with them. On the other hand, their Wicked Men (that is, Cowards and feeble-ſpirited inglorious Fellows) ſhall be all fetch'd away by *Aignan*, and treated in a very ſevere and cruel manner by him: But yet this, with all the whimſie and conceit of it, is ſo ſurely and firmly their Belief, that they are inſpir'd by it to do thoſe things which (according to their meaſures) are actions of Virtue and Piety. Neither are they ſo obſtinately fix'd in their own way, and ſo fond of their Opinions, as not to bear the Propoſal of any other, or to take it ill if they are diſputed with or ſometimes contradicted, they would endure all theſe Liberties with much eaſineſs and good humour, nay, would be pleas'd to hear the accounts the *Europeans* gave of their God and Religion. And truly herein the Endeavours of *Lerius* the *Frenchman* were very good and commendable; he was not backward to make uſe of any opportunity to inſtruct theſe poor barbarous People in thoſe matters which the other *Chriſtians* (who upon pretence of their Converſion conquer'd their Country) never took the pains to give 'em any information about. But to this purpoſe he tells this Story; That being one time at a certain *Braſilian* Village, there was a mighty crowd of the People about him, whom the novelty of ſuch a ſight as himſelf and his Countrymen had drawn together; the People, glad of their arrival, made 'em a great Feaſt, at which they themſelves alone ſat down, the grave men of the *Braſilians* ſtanding by and attending them all the while, for 'tis their Cuſtom never to ſit down to eat with thoſe whom they highly honour and reſpect. They obſerv'd that *Lerius* and his Companions pull'd off their Hats and ſpoke ſome words before they began to eat, and in like manner when they had done, which appearing a very odd thing to 'em, one of the elderly Men came and enquir'd the meaning of it, *What meaneth this Cuſtom* (ſays he) *which you now uſed, when taking off your Caps you all kept ſilence except one? To whom was that Speech which he made directed? Was it to any of you here preſent, or to ſome that are abſent?* Upon which *Lerius* took occaſion to diſcourſe of ſeveral points of Religion to them, and they heard him very patiently out, nay, diſcover'd ſo much reliſh and liking of the matter he had talk'd of, that many of 'em promis'd to obſerve the new Law which he had taught 'em, and did ſeveral times joyn with him and his Company in their Exerciſes of Devotion.

Reaſons of the difficulty of their converſion to Chriſtianity.

But as they are wonderfully fond of imitating the Examples of their Forefathers, and think it the higheſt glory to be like them, ſo it follows that they muſt very tenaciouſly maintain the Cuſtoms their Anceſtors did, and keep (as ſacred) whatever comes by Tradition from 'em. Beſides, they are apprehenſive of a mighty ſhame and ſcandal in abandoning an old Cuſtom and conforming to ſtrange Modes even in any thing, they think it argues a fooliſh fickleneſs and inconſtancy of mind, (tho' they change for the better) which will render them the ſcorn and deriſion of their Neighbours; and this one thing alone weigh'd very heavy with 'em, as appear'd by their own confeſſion to *Lerius*; they told him they ſhould lie under the ſcoffs and reproaches of all the bordering People, if they ſhould now become tame and gentle to their Enemies, and be afraid to eat their Fleſh as they had formerly done. This is ſuch a piece of Virtue and Bravery amongſt 'em, to treat their Adverſaries in the moſt ſevere and inhumane manner, that till their notions of Virtue and Vice are alter'd, 'tis not to be expected they ſhould ever leave it. Yet it muſt be own'd that they ſeem'd to think the *Europeans* who had no ſuch Cuſtoms better men than themſelves that had, and were it not for the 'forementiond reſtraints, could e'en be content to part with 'em. *Mair*, (would they ſay to *Lerius*, for by that name they call all *Frenchmen*) *you are very happy, who know ſo many Secrets as you do, which are all kept hid from us poor miſerable men.*

Notion they have of the Devil.

But to proceed; 'tis very clear and certain that they have a notion of ſome evil and hurtful Being, which has both will, power, and opportunity ſometimes to do 'em miſchief; the Name they give him moſt commonly (for they have ſeveral) is *Aignan*, and 'tis in no little fear and dread of him that the poor wretches live; *Lerius* affirms, that he has been often talking with them when they have fallen into an agony without any apparent reaſon, acted like mad-men, and cried out raving, that *Aignan* beat 'em. As for themſelves, they pretend to ſee very odd ſights not uncommonly, but what we now ſpeak of is what the Author was an Eyewitneſs to ſeveral times: And ſuppoſing the truth and ſincerity of his relation, (and what ſhould move any man to invent ſuch Lies of the Devil?) 'tis odd that any Prepoſſeſſions, any degree of a powerful Imagination, *Flatus*, *Hypo*, or any thing of that kind, ſhould ſhake every Limb and Bone of a Man's Body, make him ſweat with very anguiſh, and appear with a diſtorted countenance, like one ſuffering the utmoſt extremities of a rack. It is true indeed, there are amongſt 'em a parcel of Raſcals that go for Witches, and are likely enough to impreſs the People with the worſt of notions, and make 'em believe all thoſe things which will moſt contribute to the reputation of their Impoſtures; theſe go by the name of *Caraibes*, and their chief buſineſs is to go about from Village to Village, inſinuating a belief of a mighty Power they are poſſeſs'd of, and the ſtrange things they can perform; they perſwade 'em that they are able to inſpire 'em with Courage and Fortitude, and that the very Fruits of the Field are in their power, ſo that they can either make 'em flouriſh, or hinder their kindly growth if they pleaſe; and which is worſe than all this, the *Braſilians* are ſo bewitch'd as to believe 'em, and have ſo great an opinion of their Skill, that they don't take it well to have it call'd in queſtion, and 'tis almoſt the ſame thing there as to deny the Infallibility of the Pope in *Europe* amongſt them that believe it: But of the blind Credulity of the one and the roguiſh Tricks and Impoſtures of the other, this is alſo a further inſtance remarkable enough; the *Caraibes* will take three or four of thoſe Rattles they call *Maraca*, which are as big as Oſtriches Eggs, and dreſſing them up with Feathers, they thruſt the Staff unto which they are faſtned into the ground, then they command the very beſt Meat and Drink that the Houſe where they are affords to be ſet before theſe Hobbyhorſes, telling the People, that the *Maracca's* will devour it all, and they as readily believe it as that they themſelves do ever eat or drink; and thus they make them furniſh a conſtant ſupply of Proviſions for I know not how many days together, all which they take their opportunity to come and ſteal away themſelves, and ſo play the ſame trick that their honeſt Brethren the Prieſts of *Bell and the Dragon* did.

The Deluſions of the Caraibes.

Tricks of the Caraibes.

'Tis a common thing in travelling up and down the Country to ſee a parcel of theſe fine Meſſes ſtanding before a Broomſtaff, (for 'tis no better, abating the Feathers) but *Lerius* and his Companions were ſo wiſe when they met with 'em as to baffle the Conjuration, and eat 'em themſelves; this made the *Caraibes* their mortal and irreconcilable Enemies, and the *Braſilians* believ'd ſome very great misfortunes would happen to 'em for ſuch a piece of Impiety.

Solemnities of the Braſilians.

There is alſo a certain ſort of a religious Solemnity in uſe amongſt 'em, in which the *Caraibes* bear no little part. The *Tonoupinambaltii* (for 'twas amongſt thoſe that *Lerius* convers'd moſt) have a Cuſtom of coming together in a general Aſſembly once every third or fourth Year; 'twas our Author's hap in his Travels to come to that place when this great Aſſembly was met, and ſeeing ſome of the *Caraibes* amongſt 'em, and gueſſing from thence that ſome very odd things would be done, he reſolv'd to ſtay and ſee the end of it; the multitude was divided into three parts, the Men by themſelves, the Women alſo apart, and the Children ſo too, and each troop ſhut up in a diſtinct Manſion; *Lerius* and his company being Strangers, were ſhut up with the Women, and the laſt Orders the *Caraibes* left with them was, that they ſhould not any of 'em dare to ſtir out of that place, but diligently attend to the ſinging of the Men. After ſome time they began to hear a low muttering noiſe from the Apartment of the Men, at which the Women roſe up, buſtled together, and ſtood all of a heap liſtning to thoſe doleful ſounds; but when the Men rais'd their Voices, ſo that the words were diſtinctly heard, particularly the Interjection *Hè, Hè*, which they often repeated, the Women immediately broke out too, and anſwer'd in the very ſame terms; but then they proceeded to ſuch extravagancies, that the *Frenchman* was well nigh ſcar'd; together with their howlings, they ran out into ſuch wild poſtures and motions, ſhaking their Paps, foaming at the Mouth, falling down in Agonies, and lying like ſo many perfectly dead, that (to uſe his own expreſſion) one would have thought the Devil had taken corporal poſſeſſion of 'em. The Horrour was likewiſe encreas'd by the diſmal cries and ſcreamings of the Children, who when the Women were rais'd to this pitch, began to open their Pipes too; and this, *Lerius* confeſſes, made him loſe very near all his Courage, and he began then to think what might be the end of this matter, but he was freed of thoſe melancholy thoughts a little while after by the removal of the cauſe of 'em, for the diſmal ſounds languiſh'd away by little and little, and by doing ſo gave the Ear the pleaſing reſpite of a profound ſilence; the Men had finiſh'd that round of Song, and the Women and Children (like ſympathetick Chords, that beat only upon beating of the others) gave over too and held their Tongues.

The Author goes amongſt 'em.

After a ſhort interval the Men began again, but with ſo ſweet and truly harmonious a Note, that our Author was now as much raviſh'd as he was terrified before, and had a mighty deſire to remove to that Manſion where they were, that he might ſee as well as hear 'em; his Interpreter diſſwaded him upon the ſcore of the danger, and told him 'twas an Enterprize himſelf durſt never attempt, who had been converſant amongſt 'em ſeveral years; the *Braſilian* Women alſo alledg'd the ſame thing, but he being inflexibly bent to ſee the Ceremony, broke thro' all perſwaſions to the contrary, and accordingly went.

At his entrance (contrary to all expectation) the *Braſilians* diſcover'd no manner of concern, but kept their

The manner of their dancing.

order and went on with their Dances as if no Stranger had been preſent; the manner of their Dance was thus: The whole multitude was divided into three parts, and each of thoſe threw themſelves into a circle, all ſtanding very cloſe by one another, but not joyning Hands, every man's right Hand was laid upon his Buttock, and the left hanging down ſtreight by his Side, and in this poſture they danc'd along in the round ſhaking their right Legs; in the middle of every ring ſtood three or four *Caraibes* dreſs'd up after their antick manner, and holding in each hand one of the *Maraca's* before mention'd; theſe Impoſtors ſtood here to do the great Office for which they are ſo highly reverenc'd by theſe ſilly People; they mov'd up and down, danc'd backwards and forwards, and ſhook their Rattles, with ſeveral other amuſing nonſenſical actions, but theſe were but the introductory Ceremonies, for in the next place they took long Canes, into which they ſtuff'd an Herb they call *Petum*, which they put Size to, then turning themſelves hither and thither, they puff'd out the Smoak upon the multitude that ſtood round 'em, uſing theſe words, *Receive the Spirit of Fortitude, whereby you may overcome all your Enemies*: The Dances and the Muſick held on the mean while, and as for the latter, the Author (who was himſelf not ignorant of Muſick) in plain terms profeſſes, that 'twas matter of the higheſt wonder to him, how People utterly unskilful, as they are, ſhould ever lay their Notes ſo harmoniouſly together, and form Tunes ſo very pleaſing as they did; it had, he ſays, then ſuch an influence upon him, touch'd his Paſſions ſo agreeably, and excited ſo many delightful Senſations within him, that he was all Tranſport and Extaſie, and gone quite beyond himſelf, neither could he ever think upon it afterwards, but a ſecret Joy would ſteal upon him at the remembrance; in a word, he could not forget it, and that pleaſing din was always ſtriking his Ears.

The Songs they ſung at this Solemnity were partly Lamentations for their dead Anceſtors, repetitions of their Acts, hopes of their own meeting with 'em again beyond the Mountains, and diſmal threatnings of their Enemies; alſo here 'twas that our Author (amongſt the medley of Subjects their Songs went upon) heard them commemorate the general Deluge, and the drowning of the whole World except ſome of their Nation.

The buſineſs being over, the *Braſilians* made a moſt ſumptuous Feaſt (after their manner) for the entertainment of the *Caraibes*, to which they invited *Lerius* and his Company alſo; neither did they at all reſent that liberty he took in coming into their Aſſembly without their leave, tho' perhaps the firſt thing of that kind that ever was done by any *European*.

Lamentations for the Dead.

Praiſes they give the dead

Their manner of Burial.

The Ceremony of their Lamentations for the Dead and performing the Funeral Rites is no leſs odd than the former, a man that is not us'd to it, and comes amongſt 'em at ſuch a time, muſt either reſolve to lie awake all night, or elſe go ſeek a Lodging at another Village; the Women ſcream and howl at ſuch a rate, that the Muſick of a whole Wilderneſs of Wolves is not more intolerable: This is the trade as ſoon as ever a Party is dead, the Breath is no ſooner out of the Body, but Grief comes out of their Mouths with ſo helliſh a noiſe and fury, that 'tis a wonder they don't blow it all clean away, eſpecially conſidering that they hold it ſo long too, for if a Perſon dies in the Evening they'll make this melody all night long without intermiſſion; neither are they only the Members of a ſingle Family, or of two or three perhaps that are allied, that make up theſe Conſorts, but if it be a Perſon of ſome conſideration amongſt 'em that is dead, the whole Town meets to run mad together upon this occaſion: They ſay all the fine things of the Deceaſed they can think of, reckon up all his noble Qualities, as his Valour, his Hunting, his Fiſhing, his Bounty in giving Captives to his Friends to be devour'd; and this they do ſpeaking to each other in parts, mixing their Cries and Lamentations between: This our Author heard when the Dialogue proceeded thus; *That moſt valiant man is dead* (ſays one Party) *which gave us ſo many Captives to be devour'd*; to which the others anſwer'd, *Oh that notable Hunter, moſt excellent Fiſher! Oh, valiant killer of the* Portugals *and* Margaiates! And thus they went on exaggerating the Praiſes of the Dead, but then the burden of the Song (or rather of the howling) was thus, *He is dead, he is dead whom we lament*; to which the others replied, *Alas, he is dead, and we ſhall ſee him no more till we dance with him behind the Mountains, as our* Caraibes *teach us*. When they have finiſh'd theſe Ceremonies they waſh the Corps and paint it over very neatly, and then wrapping it in Cotton, they ſet it into a Veſſel which ſtands in a deep hole in the Earth; but 'tis to be obſerv'd that their way is not to lay dead Bodies horizontally, as the Cuſtom obtains in *Europe*, but either bolt upright or at leaſt ſitting in that 'foremention'd Veſſel: The Maſters of Families are generally buried in the middle of their own Houſes, and along with 'em all thoſe things they us'd to value and admire, and the reaſon they give for it is, that they may not by lying in the way revive the remembrance of the Deceaſed, and cauſe new ſorrow as often as they are ſeen; but if any man has a thing by him when he dies that was given him by another, it returns again to him that gave it, and he may lawfully ſeize it wherever he finds it, for they ſay that a man by dying loſes all right to every thing that comes to him this way.

Into the Manſion of the Dead they alſo put great ſtore of Proviſion; this is to ſtop *Aignan*'s mouth, who comes rummaging about the Graves, and if he finds no good Victuals there, eats up the Corps in revenge: And this they continue to do conſtantly till they think the Body is conſum'd, and the Worms have ſecur'd it from *Aignan*'s Depredations for ever.

It will be eaſily conceiv'd that this Notion was put into their Heads by the *Caraibes*, who come and ſteal away the Proviſions, and then make 'em believe the Devil does it; but one would ſooner believe he was in their Bellies than any where elſe, to lick ſo many Platters clean every night as they do, and that for ſo long together. Notwithſtanding the *Braſilians* believe as they tell 'em, and will do ſo in defiance even of ocular demonſtration to the contrary, *Lerius*, by watching their waters narrowly, and ſhewing them the Proviſions ſet in over night remaining untouch'd in the morning, made them plainly ſee there was no Devil in the matter, but the hungry Guts of the Prieſts, and yet they could hardly believe their own Eyes; and as 'twas with a great deal of difficulty that ſome few were convinc'd, ſo the reſt were not to be wrought upon, but perſiſted ſtill in their old Opinion, that *Aignan* came and eat up all the Victuals. What is the power of Errour and Prejudice, when inſinuated into the minds of Men, and artfully cheriſh'd there? It will upon occaſion render all their Senſes uſeleſs to 'em, and make 'em as blind with a pair of Eyes in their Heads as the Moles are that have none at all; here were People that were in doubt whether a *Dæmon* had not quite devour'd the Proviſions, tho' they ſaw it plainly lying in the Diſhes before their faces; and no doubt but the *Caraibes* could make them believe a Pig to be a Dog, or a Gooſe to be a Parrot, if they ſet themſelves to try their power over 'em.

How they end their Mournings.

After a Corps is buried, all the Kindred continue their Lamentations night and day for the ſpace of a Moon, not howling with open throat, ſo as they do at firſt when the loſs is juſt come upon 'em, but in the more moderate way of weeping and ſighing, and doing a ſort of Pennance, abſtaining from all Food the whole day, and taking a little refreſhment at night only; but when the date of the mourning time is out, they immediately apply themſelves to the work of redeeming their loſt time, and having been ſo long divorc'd from all Pleaſures and Entertainments, they plunge into 'em with no little eagerneſs, both Men and Women fall to drinking, and (that they may never be troubled with their Sorrows more) they drown them.

Manner of curing Diſeaſes.

But now theſe People, that are ſuch paſſionate bewailers of the Dead, are very ill tenders of the Sick, and one would fancy, by the trouble and pains they put themſelves to upon Deaths and Funerals, they ſhould not be very fond of 'em. They have indeed a ſort of Men amongſt 'em which they call *Pages*, and are their Phyſicians, but much fitter to be Pages in the *Engliſh* ſence of that word than in the *Braſilian*; they pretend to cure Diſtempers by Suction, that is, when the ſick perſon has diſcover'd the affected part, they apply their mouths and draw, making believe they draw and ſuck away the cauſe of the Diſtemper. Now ſuppoſe a man had a *Fiſtula in Ano*, theſe Doctors would have a fine cleanly work on't, and 'twould be odds if (while they made the Patient well) they did not make themſelves ſick: The practiſe of Phyſick in other Countries requires a man to have a good Head, but here it requires a ſtrong Stomach, and he that can eat a —— without ſpewing for the matter, may ſet up for a well-qualified Doctor.

Hard treatment of the Sick.

It's a ſtrange Humour of theſe People, that when any body is ſick they never give them any Victuals without they urge it themſelves, ſo that if a man ſhould loſe the uſe of his Tongue in a Diſtemper, he muſt ſtarve of conſequence without remedy: But it is much ſtranger ſtill, that thoſe who are about the ſick Party do nothing but dance, drink and ſing all the while he is languiſhing upon his Bed; this is a very hard caſe, and a man had much better be diſpatch'd out of the way when he begins to be ill, than be tormented with a continual noiſe in his Ears when he is in ſuch a caſe: 'Tis true, they are willing to be rid of the trouble of Attendance, and have the ſick Man at the end of his pain to as ſoon as may be, and no doubt but this is an effectual Method to accompliſh both; but then they ſhould not make ſuch a terrible ſplutter afterwards, for 'tis odd to go firſt of all to kill a Man by ill management, and then fall a howling because he is dead. But they have (as was ſaid before) a Conſolation that comes afterwards, and know how to waſh away all the Remainders of their Sorrow.

Their Marriages.

In the Point of Marriage, the *Braſilians* ſtick at no degree of Relation but that of own Mothers, Siſters and Daughters; as to all the reſt, they are free, the Uncle marries his Niece, and the Nephew his Aunt: But tho' theſe Bloods may be lawfully mingled, yet thoſe of two intimate Friends are held ſo near, that 'tis a Crime amongſt them to pretend a Marriage there. No Man may marry the Daughter or Siſter of his *Atourasſap* (as they term it) that is, his moſt familiar Friend, who lives together with him in ſuch a manner, that all their Goods are common. Their way of proceeding in the getting of Wives, is, firſt to make ſure of the Woman's Affection, and then go to her Parents, or (if ſhe has none) the next Kindred, and ask their conſent, which if they give, well and good, if not, they are contented of both ſides, and forget one another. A young Man did not uſe to be ſuffer'd to marry amongſt them, till he had given ſome Proof of his Courage in the Wars by taking or killing an Enemy, and he was obliged alſo to hold certain Feaſts for two or three Year before: So the young Women having diſcovered the Tokens of Ripeneſs, kept their Feaſts likewiſe, and then their Parents began to think of Huſbands for them. But there is a mighty deal of mirth and feaſting when a young Bride is brought home to her Bridegroom; all the Parents and Kindred of both ſides come together, and lay the Foundation of their new Relation in good eating and drinking. After the Feaſt is over, the concluding Ceremony is the delivery of a Net clean waſh'd, to the young Couple; this ratifies the Marriage, and they go preſently away to conſummate it. But leaving them in the Hammock, the Bride's Father in the mean time in the other Apartment, acts a very comical part: He takes a Stake or ſomething of the like nature, and falls to cutting and chopping of it, and what is this for, but to chop off the Tails of the young Grand-children that are now to be expected. They are mightily afraid any of their Race ſhould appear like Monkeys; but they believe they would, and come with Tails into the World, if they did not take this Method to prevent it; and therefore the Bride's Father very ſolemnly chops a Stick, which how natural a Tendency it has to hinder the growing of Tails, any body that conſiders the Matter a little deeply, will eaſily ſee.

A ſtrange Cuſtom.

Some Cuſtoms of the *Braſilians* were hinted by Mr. Knivet, but theſe Authors were in other parts of the Country.

Priviledges of the married ones.

When the *Braſilians* have married their Children, they then allow them the liberties of drinking and carouſing freely, which before they denied them; they think it proper for Youth to be bred up in all manner of moderation and abſtinence, and not have that Spur added to their natural heat and vigour, which Wine and ſtrong Liquors will certainly add: And they are introduced to this Liberty with ſomething of ceremony, the old People make a Speech to them about the ſober and moderate uſe of Wine, tell them they muſt drink ſo as not to make their Tongues run to faſt, and encline them to ſpeak bad things; and then they give them the Initiating Cup, and hold their Heads at the ſame time leaſt they ſhould be ſick and vomit; for 'tis to be noted, that if their young Men are over-power'd with the firſt Wine, they take it as an Omen of their being Cowards, but if they carry it off bravely, they conclude they'll be fit for the Wars, and fight with courage.

A prognoſtick of a good Souldier.

Cuſtoms at the birth of Children.

When a Child is born, the Father thus far performs the Office of a Midwife, as firſt of all others to receive the Child into his Arms, to waſh and paint it, cut the Navel ſtring, and preſs down the Noſe; which latter they do, becauſe they imagine the greateſt Beauty of their Children to lie in the flatneſs of their Noſes: Then without wrapping it in any ſort of Swaddling-clouts, he lays it down in a Hammock, and if it be a Boy, he brings a little wooden Sword, a Bow and Arrows, which he puts down by it, and a Bunch of Herbs, which repreſents the Enemies the young Heroe ſhall kill when he comes of age. After this, he kiſſes it, and leaves it with this ſhort hortatory Speech, *My Son* (ſays he) *when thou art come to Man's eſtate, be valiant, and take revenge of thy Enemies.* As for their management of Children, they generally let them ſuck a Year and a half, and their Mothers carry them about in Nets at their Backs, thro' heat and cold, and all weathers, wherever they go. They are extravagantly fond of, and indulgent to them, avoid all things that may make them cry, and therefore (even when they are capable of it) they never give them any correction, that they may not have ſo diſpleaſing a ſound in their Ears. But one thing deſerves particular notice, which is, that the *Braſilian* Children do in great meaſure confute our Notions here in *Europe*, about the firſt management of them, for 'tis generally ſaid, that Children would grow crooked, bandy legg'd, and every way out of ſhape, if they were not bound and ſwath'd up very cloſe and tite; whereas the *Braſilians* never uſe a Rag about theirs, they are laid down naked upon a Cotten Bed as ſoon as they are born, and carried ſo afterwards at their Mothers Backs, and yet none are better ſhap'd than they, and grow more ſtrait and upright; 'tis not common to ſee a deform'd or a diſtorted Limb amongſt them, or if there be, 'tis known to be the Effect of ſome other Cauſe.

Braſilians never ſwaddle their Infants.

Poligamy allow'd.

Poligamy is a Cuſtom generally receiv'd and allow'd in this Country; there's nothing to bound or ſtint any Man as to the number of his Wives, but his own Humour and Circumſtances; neither do they with a multiplicity of Females under their Roofs, lead lives leſs quiet and pleaſant than thoſe that have but one. The Women don't ſcold and quarrel about the biggeſt ſhare in the Man's Affections, nor plot and contrive to circumvent one another in their Amours. The Huſband may make one his Darling if he pleaſes, and the reſt will look patiently on, and won't give him or the happy Favourite any trouble by their Jealouſy. If either of the Wives ſhould defile his Bed by any adulterous practice, he has a Power in his Hands to revenge himſelf; and that he may do, either by killing her that has ſo abuſed him, or if not that, yet by putting her away with all the ignominy in the world: Death or Divorce are the Puniſhments of the Crime. But unmarried Women may take all the freedom imaginable, and no body reproach them for't. They are under no Law but that of Inclination, and know no reſtraint but that of want of Opportunity, and if that be taken away, 'tis eaſy to imagine what follows; yet to do them juſtice, the Authors ſay, they wiſh the *Europeans* did not give occaſion to ſay, that they are more beyond all ſhame and modeſty in thoſe matters than the *Braſilians.*

Adultery puniſh'd.

Free uſe of unmarried Women.

Habit.

As to what concerns the Dreſs and Habit of theſe People, 'tis quickly deſcrib'd; they go naked, except only the Ornaments of Paint and Feathers. In ſome Parts where the *Portugueze* have to do, they have conform'd themſelves a little to the *European* Cuſtom, and wear ſome ſort of Apparel; but 'tis more for pure faſhion's ſake, than regard to modeſty and decency; or, becauſe the *Portugueze* oblige them to it, and they dare not diſobey them. 'Tis plain, that they look upon Cloaths as an incumbrance, and do what they do only out of form, by their way of uſing on't; for amongſt thoſe that are provided with all neceſſary Apparel, you ſhall ſee one come abroad with a Cap only on his Head, and another with a Waſcoat or ſhort Jacket that reaches to the Navel, and every where elſe as naked as he was born; this is dreſing to good purpoſe, and ſuch a ſhort Jerkin as that, well anſwers the great deſign of Cloaths. They have various ways of cutting their Hair, of polling and ſhaving in uſe amongſt them; and indeed this is one of the main Characters by which the ſeveral Nations are diſtinguiſh'd from one another, The VVomen always cut their Hair when they become Mourners for the Dead, and alſo when their Huſbands go long and dangerous Journeys, in both which Caſes by this Cuſtom, they expreſs their ſorrow and concern.

Houſes.

Their Houſes are made of Timber, and cover'd with Palm Leaves, have two or three Doors each, and conſiſt of a great number of Rooms: Each of theſe is taken up by a diſtinct Houſhold, and has its own proper Fire-place, Hammocks and other Furniture belonging to it; they are not parted from one another by any VVall, ſo that when a Man is once entred the Door, all that the Houſe affords or contains, is open to him. Some of them are ſo large, that they hold 200 People and more, and generally all are govern'd by one principal Perſon, who is, as it were, the Maſter of the whole united Family.

Furniture.

Their Houſhold Stuff conſiſts of Earthen Jars, Baſkets, Baſons, Platters and Cups; the Cups are made of Gourds and other Fruits hollow'd for this purpoſe, and all their Baſkets and Panniers, ſome of Ruſhes, others of Graſs, but ſo very ingeniouſly wove together, that their Art deſerves highly to be commended. But the greateſt Curioſity belonging to their Houſes, are their Hanging-Beds, which they work in Looms made after their Country faſhion; ſome of them are made like Nets, others like ſolid Cloth; they are five or ſix Foot long and an Ell broad, having at either end certain Cotton Loops, thro' which the Cords paſs that faſten them to the Beams of their Houſes.

Waſhing.

VVhen theſe Hammocks are become dirty with long uſe, or by reaſon of the Smoak of their Fires which burn all Night cloſe by them in the VVinter time, they cleanſe them after this manner: The VVomen go into the VVoods and gather a Fruit not much unlike a plain Gourd in ſhape, but much bigger, ſo that one of them can ſcarce be held with one hand: This they cut into pieces, and having thrown it into a great Earthen Veſſel, and pour'd on a little water, they ſtir it vehemently about with a Stick, till a ſort of Froth ariſes; this is their Soap, and all beſides, and they need nothing elſe, for it makes their Beds comparable to the cleaneſt and whiteſt things in nature.

Works and Labours.

The Men ſpend their time in Employments ſuitable to their Sex; in Hunting, Fiſhing, Fowling, Fighting, and making Arms for that purpoſe. The VVomen ſpin and weave Cotton, dreſs Victuals and do Garden work, and are, in a word, marvellouſly induſtrious and handy. The chief Man in each Family preaches to all the Houſe in the Morning as they lie in their Hammocks, he tells them when 'tis time to riſe and go to their ſeveral Labours, and what they ſhould beſtow their time in for that day. This Cuſtom they ſay they learn'd from a certain Bird (which they call the Lord of Birds) 'tis like a Hawk, and ſings every Morning with the firſt advances of the day; they argue, that as that Bird ſets up his Note ſo as to be heard of all the reſt about him, even ſo ſhould the Maſter of a Family make all that he is concern'd with, hear his Inſtructions.

Cuſtom taken from a Bird.

Diet.

As for their Diet, it is e'en what they can get; what Nature and Providence affords, or Art and Induſtry can procure them; what the VVoods or the VVater, or the Air will yield them; what they can kill with an Arrow, or catch in a Trap, pluck from a Tree, or dig out of the Ground; 'tis the Fleſh of any Creature, rational or irrational, Fruits, Grain, Herbs, or Roots; their Stomacks are not nice and ſqueamiſh, nor do they need the courtſhip of fine Sauces: They won't ſtick even at the moſt loathſome Animals, and many Snakes and Toads have been Inſtances of the ſtrength and goodneſs of their Digeſtion. And as they are indifferent to what they eat, ſo they are as little thoughtful about the Concern of providing it; they don't ſpend time in collecting and laying up great hoards of Proviſion, but content themſelves to get in reaſonable Supplies as their VVants return upon them. The VVoods are at hand, and their Bows and Arrows, and Fiſhing Tackling, are always ready, and if they light of any ſport, they eat and are merry, if they fail, they are patient, and bear the Inconveniencies of Hunger and Thirſt with an eaſy mind, till they can remove them.

Times of eating.

They obſerve no ſtated times for eating; the Formalities of Breakfaſt, Dinner, and Supper are not known amongſt them: If they have a Stock of Proviſions by them, they make but one Meal on't, but that runs thro' the whole 24 Hours; for they eat all Night as well as all day long, and like ſome People that we ſay their Money burns in their Pockets, and they can't be quiet till 'tis all gone, ſo the *Braſilians* are as reſtleſs till their Cup-boards are empty, and the Houſe be clear'd about them.

Drinking Feaſts.

Ordinarily they don't drink at their Meals, but make a diſtinct and particular buſineſs of that afterwards; they love it ſo well, that they won't do it, but when they have leiſure to attend and ſet to it; and indeed they ply it ſo cloſe, that they generally lie level with the Horizon by that time they have done. But their extravagancy this way appears much more at their ſet Feaſt, which they often make. Upon theſe Occaſions there are ſome of them that go ſinging about from Houſe to Houſe, calling and inviting all they can find to come to be merry. This Mirth laſts two or three days, or perhaps more, and it's made up of Muſick, Drinking, and Dancing; there is ſome eating work alſo, but that's at the beginning, and (as the leſs principal part of the Entertainment) ſerves only for an Introduction to the reſt. And they are ſo indefatigable in theſe Sports, that they allow themſelves no time for reſt; they never ſleep a wink all the while, but ſpend the whole time in dancing and drniking. Sometimes too the ſtrong Liquors work ſo powerfully, that they go to lugging one another by the Ears, to breaking of Pates, and fingering one anothers VVives promiſcuouſly; they fall all of a heap, and do all the ruſtical things that a wild Mobb let looſe upon one another can be ſuppoſed to do. Abſtracting from theſe accidental Diſorders, they are a People of ſober civil carriage enough; they agree wonderfully well together, and very ſeldom brawl or fight; but if any quarrel happen, and one be wounded by another, if he that did the miſchief can be taken, he is wounded exactly in the ſame part of the Body by the Kinſmen or Friends of the Sufferer. In a word, they are mighty punctual in their Retributions in caſe of Corporal Damage; the *Lex talionis* obtains amongſt them in its utmoſt vigour, and 'tis not only Life for Life, but Eye for Eye and Tooth for Tooth, without any limitation or excuſe.

Good qualities of the *Braſilians.*

Their exact Juſtice.

Kindneſs to their Wives.

None are more kind and gentle to their VVives than the *Braſilians* for the moſt part are; if they are otherwiſe, 'tis when VVine has got the maſtery of them, and then they excuſe it to the good VVomen afterwards, telling them that the fault was in the VVine; which commonly makes up the matter betwixt them. And, whether it be out of love or jealouſy, or a mixture of both, they ſeldom go out, but their VVives go with them; when they go from home the Man walks before, and the VVoman comes after, which is, that if there ſhould be a Danger of any ſort, the Man may meet with it firſt, and give his VVife an opportunity to make her retreat; but when they come homeward, they ſhift places, the VVoman is firſt, and the Man comes behind for her guard; ſo that either way the VVoman is ſtill neareſt home.

Care for their Children.

They teach their Children very early to dance after their Country manner, and not only that, but to ſing too; theſe are the firſt things they learn as ſoon as they are capable, and 'tis indeed the chief part of their Inſtitution. But 'tis obſervable, that they document ſo, that even while they are very young, one ſhall ſeldom ſee thoſe little Squabbles and Fallings out amongſt them, that Children are very incident to in other places; they don't fight and call one another names, nor give any ſort of bad language to one another, but follow their Play with a great deal of peace and quietneſs. The *Braſilians* are much more thankful if any one does theſe young ones a kindneſs; if he teaches them any thing, or makes them a Preſent, than if 'twas done to themſelves; and there's no ſurer way to make an entire Purchaſe of their Friendſhip, than to expreſs a fondneſs for, and a good will to their Children. And for this Reaſon 'twas that they had ſo great an eſteem for the *Portugueſe* Fathers; thoſe Prieſts were very intent upon the Education of their Children, taught them to read and write and caſt account, and to ſing after the *European* manner, and in ſhort, always gratified and delighted them with one new thing or other; ſo that the Parents look'd upon them as the very beſt of Men, and were entirely captivated by theſe Methods.

Contentedneſs with their mean way of living.

As to worldly Grandeur and Riches, as there is very little of it to be ſeen amongſt the *Braſilians*, ſo they ſeem to be a People wholly void of all manner of Ambition and Deſire that way. They affect no ſtately Pallaces, ſplendid Equipages, or great and pompous way of living. If they have Kings amongſt them, they are crown'd with Feathers; and a Gentleman is not one that has 1000 Pound a Year, and is follow'd by half a dozen Footmen in gawdy Liveries; but a poor naked Fellow that has a Skin as thick as Parchment, and raced all over after ſuch a manner, that it looks as if they had been pricking Patterns upon it. They content themſelves with their homely Cottages, that juſt ſerve to defend them from the Injuries of the weather; and conſidering nothing but Convenience and a bare Supply of the Neceſſities of Nature, they move their Dwellings up and down, fixing themſelves here and there, according as they can beſt anſwer thoſe Purpoſes. Neither do they trouble themſelves any more about the getting a great deal of Land, than of building fine Houſes, making curious Walks and Proſpects, and other Delights of that nature. They have Ground indeed to improve and cultivate for the Service of their Families, but not with all thoſe Guards of Hedges and Ditches that we have: Every Maſter of a Family uſes at pleaſure what will be convenient for his own Houſe, without drawing Lines to mark out properly, or ſetting up any Land-marks for a Caution to his Neighbour: So that here are no Quarrels nor Contentions about the Diviſion of Lands and the Bounds of Eſtates; no going to law for a Hedge or a Fence, or ſpending whole Eſtates about a Foot of Ground. The *Braſilians* wou'd ridicule ſuch People to the laſt degree, unleſs they thought them mad, and ſpared them upon that account; for they look upon the Earth to be equally free for them all, and that 'tis every ones Priviledge to enjoy as much of it as ſerves his occaſion, and when that's done, as he has reaſon to be contented, ſo no body elſe has any thing to do to diſturb him in his Poſſeſſion.

Move their Dwellings up and down.

No diviſion of Lands.

Money

No Money amongſt them.

They work for Neceſſaries.

Money is a thing wholly unknown amongſt them, neither have they any manner of need of it in their happy and eaſy way of living. If they have occaſion for one another's Labour or Aſſiſtance, they make the Recompence in ſomething or other which Nature furniſhes to their Hands. Thus when they call others to help them in their Huſbandry Works, they make good ſtore of Wines for the Labourers to drink, and this is every whit as pleaſing a Reward to them, as ſo much Money a day wou'd be to others, neither do they care how long they work upon the ſame ſcore; their Neighbours that employ them give them the Neceſſaries they want, and they believe they have nothing beyond that in life to look after. And if there be any ſhadow of ſuch a thing as Trade amongſt them, its only bartering and exchanging one Commodity for another, unleſs we allow Shells, Feathers, and fine Stones to be Money, for then we may ſay indeed that there is buying and ſelling. Now conſidering theſe things, one muſt yield the *Braſilians* to be thus far a happy People; and by their great contentment with ſo little of the World, to reprove the covetous and ambitious temper of others who (tho' ſuperiour to them in many excellent Qualifications) yet are ſo far from reaching this Point of Vertue, that they have no other care nor paſſion left in them, but that for hording and raking up together as much Wealth as is poſſible. VVhat quiet and truly pleaſant lives do theſe Savages (if we muſt call them ſo) live in compariſon with them? Their Heads are burden'd with no great and mighty Deſigns, nor do they break their reſt with thinking of the Fortune of ſuch an Adventure at Sea, or ſuch a Project at Land: They ſleep ſound in their Hammocks, dreaming of no Shipwracks nor Plunders, and their Minds lie as eaſy as their Bodies in thoſe ſoft hanging Beds. 'Tis true, a Muſqueto or ſome troubleſome Inſect or other may poſſibly viſit them ſometimes, but the ſting of a Flie is much eaſier to be born than that of painted Thoughts, and Fears, and Cares; ay, a Scorpion is a more tollerable Companion than theſe.

A Diſcourſe between the Author and a *Braſilian.*

'Twas a Conference well worth obſervation, which *Lerius* once had with a *Braſilian* upon theſe Matters, and admirably well ſhews the Sence of their Minds about thoſe things which the reſt of Mankind commonly dote ſo much upon. *What is the meaning* (ſays the *Braſilian*) *that you* Mairs *and* Pero's (that is, *French* and *Portugueſe*) *come ſo far as our Country to fetch Wood? does your own Country afford you no Fuel for the Fire?* To this *Lerius* anſwer'd, *That they had in his Country Wood enough to burn, but that was not the Uſe they put the* Braſile-*wood to; they uſed that in the Buſineſs of Dying, which none that grew in his part of the World was fit for. But* (replies the other) *have you need of ſo great quantities of it, and won't leſs than you fetch away ſerve your turn?* He told him No, *one rich Merchant alone in his Country was Maſter of as many Scarlet Cloths, Looking-glaſſes, Knives, and Beads, and all the fine things that they admired, as would buy ſeveral Ships Lading of the* Braſile-*wood. Ah!* ſays the *Braſilian, You tell me very ſtrange and wonderful things; but pray does that great rich Man you ſpeak of never die? and if he does, who is Heir of all thoſe Goods he leaves behind him? Lerius* told him, *His Children, or if he had none, his next Kindred. Surely by this* (replies the wiſe old Savage) *a Man may eaſily perceive that you* Mairs *are very great Fools; for what need you tire and turmoil your ſelves at that rate in ſailing over the Ocean, where (as you tell us your ſelves) you ſuſtain ſo many Hardſhips and Dangers? Is it that you may get Riches for your Children and living Kinsfolk? Simple Men! Is not the Earth that has nouriſhed you, ſufficient alſo to maintain them? We have Children and Kinsfolk as well as you, and them (as you ſee) we love dearly; but ſince we confidently hope that it ſhall come to paſs, that after our departure beyond the Mountains, the ſame Earth which has nouriſhed us, ſhall alſo relieve and cheriſh them; herein we repoſe our ſelves and reſt content.* Here the Dialogue broke off, and what our Author anſwer'd to the laſt Sentence of the *Braſilian*, is not told us; it may be he held his Tongue and ſaid nothing, which perhaps was the beſt reply he could make in this caſe.

The *Braſilians* liberal.

The good Temper of theſe People is farther ſeen in their diffuſive bounty and Charity: A Man can't offer them a greater affront, than by calling them Niggards, or any way ſuſpecting their generoſity and good nature; and they are much pleaſed on the other hand, if a Man will make uſe of their Kindneſs, and ſuffer them to ſupply his Wants. They make a conſtant Practice of giving one another Fiſh, and Meal, and Fruits, or almoſt any thing that they are Maſters of, and if they know of any one that wants what they have in the Houſe by them, they'll be ſure to ſend him a Supply. They carry it after the ſame free and kind-hearted way to Strangers too, and tho' they have the Name of Barbarians put upon them, yet none are certainly more truly hoſpitable than they. * 'Tis true, their ways of receiving Strangers is ſomething odd, and may look a little barbarous, tho' the worſt of it is, that it may probably frighten thoſe that are not accuſtomed to it; but if a Man can ſtand the firſt Shock of their rude Salutations, and hear all their Weepings and Out-cries without fear, he'll have no cauſe to be afraid afterwards, but may promiſe himſelf to be made very much of.

**Knivet's* entertainment in another part of the Country was in many things like this.

This was amongſt the *Tououpinambaltians.*

An Adventure of the Authors amongſt them.

They ſtrip him.

Lerius profeſſes that he was not a little confounded at their manner of treating him at his firſt arrival amongſt them; and expected no other than firſt of all to be rifled, and afterwards ſent beyond the Mountains. As ſoon as ever they ſaw him, they came ſwarming about him, and jabber'd out all together, their *Marapè Derere?* that is, *What's your Name?* In the mean time one takes off his Hat and puts it upon his own Head, another gets his Coat, and a third his Sword and Belt, which he threw over his naked Shoulders; and thus dreſs'd up with his Spoils, they run up and down ſhewing the fine things to their Companions. A little while after, this firſt Tranſport was over, and they came and very civilly reſtor'd every thing again; which was ſo much beyond *Lerius*'s expectation and deſire, that he would freely have given all that and more, to have had them kept away for good and all, and not have come near him a ſecond time. But his Interpreter then told him, they greatly deſired to know his Name; now they are not able to pronounce any of our *European* Names, neither can they make any ſence of them if they could ſpeak them; for all the Names in uſe amongſt them being taken from things, and things that they ordinarily converſe with, it would appear a kind of mockery to them, to tell them of any other but ſuch. *Lerius* therefore ſuppreſſed his Chriſtian Name *John*, and that of *Lerius* ſignifying an Oyſter in the *Braſilian* Tongue, he took that hint from the Interpreter, and told him he was call'd *Leriy-ouſſou.* This gave them a great deal of Satisfaction, and they often uſed their word *Teh* at it; at laſt they replied, *Surely this is a very excellent Name, nor have we ever yet met with any* Mair *that had ſuch a one as this.* All this while *Lerius* cou'd not well tell what to make of them, and was ſtill under ſome fear leſt they ſhould eat the Oyſter, as they had done many others of the ſame kind before; however, his Interpreter who knew their Cuſtoms perfectly well encouraging him, he reſolved to venture a little farther amongſt them. When they came into the Village where they intended to lodge for that Night, they found the People dancing and very merry upon the account of one of their Enemies whom they had taken and killed that day; but *Lerius* could not find in his Heart to bear a part with them in their Mirth; one of the firſt Sights he ſaw, was the Limbs of the dead Man broiling upon a Gridiron, and this made him relapſe into his former fear, and begin to doubt whether his own wou'd not be the next to be ſo dreſs'd. Yet he went into the Houſe, and, according to the cuſtom, immediately laid himſelf down in a Hammock, where he had not been laid long, but the Wives and Daughters of his Hoſt came weeping and lamenting about him: They rejoiced at his happy coming in tears, and ſpoke abundance of things in his commendation: *Have you taken ſo much pains to come and ſee us? you are good, you are valiant, you are wiſe, you have brought many excellent Merchandizes along with you which we want here.* But *Lerius* underſtood neither their Complements nor their Wants, only the Preſence of his Interpreter was a Comfort to him, and made him hope all would end well. Now they always expect that their Gueſts ſhould diſcover ſome ſort of Paſſion and Concern while they are entertaining them after this manner; and therefore they muſt ſit with a very ſober ſettled Countenance, and if they can't cry in good earneſt, they muſt pretend to do ſo at leaſt, and fetch many deep and bitter ſighs: But ſome of the *French*-men did not need to counterfeit a Paſſion; for whether 'twas out of fear or meer ſympathy, is uncertain, but however they cried and ſobb'd as well as the Women, and *Lerius* himſelf was obliged to make them believe he was not far from doing the ſame. When this Scene had held a while, in came the *Mancaſſat* (the Maſter of the Houſe) very buſily employ'd about making an Arrow, which he minded for ſome time without ſo much as once caſting an Eye upon his Gueſts, or ſaying any thing to them. At laſt he came up to *Lerius*, and gave him the Salutation, expreſſing a great deal of ſatiſfaction at his coming thither, and enquiring preſently whether he were not hungry or no; then he order'd his People to bring in what the Houſe afforded, which

Enquire after and are pleaſed with his Name.

tho' but their ordinary Fare, and ſerv'd up in a homely courſe manner, yet gave plain Indications of a ſincere and hearty Welcome. The *Braſilians* of this Village were (as was hinted before) making merry upon the death of a Captive, to which Sports *Lerius* had no mind to go, being weary and indiſpos'd, but inſtead of that, betook himſelf to his reſt in his Hanging-Bed; but he had not ſlept long, before the noiſe which the Savages made (dancing and carowſing upon this Occaſion) waked him, and had not that done it, what follow'd would; for preſently upon this, one of them comes up to him, with a roaſted Foot of the poor Victim in his Hand, which he held out to him, intending thereby that they look'd upon that ſort of Food as a Dainty, and had ſent him that piece to taſte. But *Lerius* who look'd about him and found his Interpreter gone, began now to act that part himſelf, and interpreted that the holding up of this roaſted Foot to him, ſignified the like piece of Cookery ſhortly to be performed upon himſelf. Had there been any way of eſcape for him left, he had that Minute quitted his Hammock, and ventured out into the Woods, but there was none; for he ſaw a Guard of *Braſilians* ſtanding about him, and theſe he thought were to keep him for the Gridiron next Morning; but were indeed no other than the Waiters which they always make attend upon Strangers, as a piece of civility they think due to them. Seeing himſelf therefore ſhut up on every ſide, he betook himſelf to his Prayers, and ſpent the whole Night in Devotion; as any Man duly touch'd would, who expected he muſt be executed next Morning. All this while the *Braſilians* wondred what had come to the Man, that he was in ſuch an agony; he mutter'd to himſelf, and ſigh'd and groan'd, and had a world of uneaſy Poſtures in his Hammock; yet they ſaid nothing to him, but let him alone. The honeſt Interpreter for his part had ſpent the Night with the Savages at their merry Bout, and was in no concern about his Maſter, becauſe he knew the Fidelity and good Diſpoſition of the People among whom he was. However at break of day home he comes, and finds him very ill, as pale as Aſhes, and taken with a Feavour, at which he was ſurpriz'd, and therefore ask'd him whether he had not reſted well that Night. One may eaſily imagine what Anſwer *Lerius* gave to this Queſtion, and how the Interpreter was ſchool'd after his Night's Paſtime; but yet to compleat the Jeſt, he tells the *Braſilians* in what a Terrour his Maſter had lain in all Night, and how they had frighten'd him with holding up the Leg of the roaſted Man to him. They ſaid they were very ſorry they had made him ſo uneaſy, and that indeed they perceived he was out of order; then they were not able to hold out any longer, but broke out into ſuch an extravagant fit of laughter, that *Lerius* inſtead of being afraid, was now more aſhamed that he had made them ſo much ſport. One may venture to relie upon the Credit of this Story, ſince the Author tells it of himſelf, and it does not ſeem to make much for his advantage. But beſides this, he had ſeveral other Adventures amongſt the *Braſilians*, all which (as he declares) gave ample teſtimony of their Courteſy and Hoſpitality to Strangers, and makes it very certain that no Man need fear to go amongſt them, provided he does not exaſperate them by Injuries and Affronts.

How to procure the good will of the Savages.

On the other hand, at the expence of a few Trifles, ſuch as Knives and Combs for the Men, Sciſzers, Bracelets and Looking-glaſſes for the VVomen, and Fiſh-hooks for the Children, a Man may purchaſe the Friendſhip of a whole Nation of them; for they value all People (that diſcover any thing of a bountiful temper) at a high rate, and therefore, tho' if you have nothing to give, you may freely have the Refreſhment their Houſes afford, yet if you oblige them with any of theſe little Toys, they'll be even Horſes to you into the Bargain: If you are weary and can't travel, they'll take you up aſtride their Shoulders, and go along with as much briskneſs as can be. *Lerius* ſays, he often made uſe of theſe two legg'd Hackneys, and the Hire perhaps was a two-penny Knife. They need no VVhip nor Spur, but rather a Bridle, for they never ſtop till they come to the End of their Journey. He out of pity one time deſired the *Braſilian* that carried him, to ſtand ſtill and take a little breath, but he anſwer'd him laughing, *What*, ſays he, *do you think I am ſo effeminate, or of ſo weak a courage, that I ſhould faint and lie down under my Burthen? no, I would rather carry you all the day without any Intermiſſion.* This Drudgery the *Braſilians* are train'd up to from their Cradles as it were; for there are no Beaſts of burthen amongſt them, ſo that all the heavy Loads that ſhould be laid upon the Backs of Horſes, Camels, and the like, are forced to come upon their own; and indeed they are broad enough to bear them.

The *Braſilians* carry Men upon their Backs.

We have hitherto ſeen ſomething of the more civil Manners and Cuſtoms of this People, we muſt now conſider thoſe that relate to War, and their Treatment of their Enemies, in all which we ſhall find them as fierce and violent, as we did the others tame and good-natur'd. The *Braſilians* live in perpetual Wars with one another; there's hardly two Nations of them that agree and league together, unleſs perhaps to the deſtruction of ſome others to which they are both Enemies. And where a Quarrel is once ſprung amongſt them, it is immortal, and goes on from one Generation to another; neither (conſidering the Principles and Notions they go upon) can it poſſibly be otherwiſe; for they are not led by thoſe Motives to make War upon one another that other People are; it is not Ambition and the Fame and Glory of a Victory, they are not ſolicitous about enlarging their Territories, nor puſh'd on with a covetous Deſire of poſſeſſing the Goods and Spoils of their Enemies; they fight purely for revenge, and to do themſelves juſtice upon thoſe that have killed and devoured their Friends and Kinsfolk. Now then every Battle that is fought beſides revenging the old Injuries on both ſides, muſt unavoidably introduce new ones; for 'tis hard to imagine any Action of this nature, without ſuppoſing ſome ſlain or taken Priſoners at the ſame time. So that here are new Wrongs and new Occaſions of fighting continually added to their old ones; every time they fight their Paſſion and Revenge has a freſh Spur added to it, and every ſucceeding Generation has all the Quarrels of the foregoing ones entail'd upon it.

Cauſes of their Wars.

Old Men make Speeches.

The elder Men, by long Speeches and Harangues made for that Purpoſe, excite their Courages, and prompt them on to Battle; this is a ſolemn Cuſtom amongſt them, and they ſeldom go to war without having firſt ſeveral Sermons made upon the noble Actions of their Anceſtours, and paſſionate Exhortations to initiate them in the Vertues of ſlaying and devouring their Enemies. Thus do theſe rude Oratours ſtir up the People in every Village, and they being eaſily moved and enflamed, aſſemble themſelves together, and meet at the appointed place of Rendezvouz. Theſe old Men have alſo the Charge of the Army, and the Conduct of all the Military Affairs, and tho' they march their Troops in no manner of order at all, yet they obſerve this Rule, to keep the moſt valiant Men in the Front, and make them give the Enemies the firſt of his Entertainment.

Their Furniture.

As for Weapons, they are provided with thoſe that are ſufficient to anſwer all the bloody Purpoſes of War.

Swords.

The Swords are made, ſome of a red and others of a black wood, that is very cloſe and heavy; they are five or ſix Foot long, and a Foot broad in the wideſt part, of a kind of an oval form; the thickeſt part of the Back is at leaſt an Inch, but the Edge is exceeding thin and ſharp; 'tis true, they are wooden Swords, but they don't cut after a wooden manner; for the Author ſays a very ſharp Ax will hardly do more execution.

Bows.

Their Bows are made of the ſame ſort of wood, and exceed ours ſo much in length and thickneſs, that few *Europeans* are able to bend or unbend them; nay, 'tis taſk enough to manage even the Bows they make for their Children of 10 or 12 Years old. The Bow-ſtrings are made of a Plant call'd *Tocou*, which tho' it be very ſlender, yet it is ſo tough and ſtrong, that it will bear the force of a Horſe pulling it.

Arrows.

Their Arrows are about an Ell long, conſiſting of three Joints, the middle part is Cane or Reed, and the two Extreams are black wood, and theſe Joints are ſo firmly bound together with the Bark of Trees, that Glew it ſelf could not make them faſter: The Tails of them are furniſh'd with Feathers of a Foot long to make them fly the more ſteadily; and the Heads arm'd with the Tooth of ſome Beaſt, or ſome ſharp Fiſh-bone, or a Reed four or five Inches long, and made ſmooth and thin like a Surgeon's Launce. Since the *French* and *Portugueze* came amongſt them, they have learn'd to make the Heads of their Arrows of Iron, and ſometimes perhaps ſtrike in a very long ſharp Nail at that end: But which way ſoever 'tis, they are a bloody Weapon, and will go thro' any thing almoſt; they'll cleave a large Stick aſunder, and have been known to flie quite thro' a Man's Body and ſtick faſt in the Ground on t'other ſide. Many times they poiſon them too, and and notch and jag the Heads at that rate, that they carry as certain death along with them almoſt as a Cannon Bullet, tho' much more cruel and painful.

Skilful Archers.

But they are ſtill more terrible Weapons, by being in the Hands of ſuch ſkilful Shooters; for there's hardly any Mark, tho' ever ſo ſmall, but they will hit it, and they can not only fetch down the ſmalleſt Bird from a Tree, but ſtrike even any little Vermine whatſoever that crawls upon the Ground; and they are every whit as quick and dextrous as they are exact and ſure in the uſe of their Bows; they'll ſend one Arrow flying after another with a wonderful nimbleneſs, and 'tis as much as the beſt *European* Archer can do to diſpatch four or five in the time that they will a dozen.

Targets.

For defenſive Armour, they have only Targets made of the Hide of a Beaſt, with which they cover themſelves in Battle, and receive the Arrows of their Enemies: Neither do they care for or deſire any more, and they are ſo far from fancying the Cuſtoms of other Nations that uſe Coats of Mail, Head-pieces, and the like, that if they had but a Shirt on, they would throw it off before they went to fight, becauſe they look upon any thing of this nature as a burthen and an incumbrance to them. As for Iron Swords, they did not eſteem them for the Purpoſes of War, and when the *French* beſtow'd ſome amongſt them, they always kept them out of the Scabberds, and us'd them to cut Sticks and Boughs of Trees withal, as they wou'd any other Domeſtick Inſtrument.

Trumpets and Pipes.

To encourage their Souldiers, they have alſo a kind of warlike Muſick, which keeps playing as they march: Some blow with a ſort of Horns that are about an Ell and half long, and broad like a Trumpet at the lower end; others pipe with little VVhiſtles, which they make of the Bones of their Enemies, and theſe to be ſure have a mighty influence to inſpire them with courage and reſolution.

Their way of attacking an Enemy.

Their Armies are more or leſs numerous, according to the Occaſion, but when they have aſſembled what Forces they judge convenient, they begin to march towards the Enemies Country; and when they have enter'd their Borders, a ſelect number of the beſt Souldiers advance a Day or two's Journey before the reſt, and poſt themſelves in the VVoods, waiting there till they have an Opportunity to fall upon the Enemy with ſome advantage; or if that Deſign fails, and the Enemy keeps out of their reach, they take their time to ſurprize them in their Villages, which they may eaſily do, ſince they lie all open, and have no manner of fence about them; yet ſince the coming of the *Europeans* amongſt them, they have learn'd to fortify themſelves a little, making certain Intrenchments about their Villages, and defending the Entrances with ſharp Stakes, by which means they grew more cautious of aſſaulting one another in the Night than they uſed to be before. But when they agree of both ſides to decide the Controverſy fairly in the Field, and come to a pitch'd Battle, nothing (as *Lerius* tells us, who was an Eye-witneſs) can be more fearful and horrible. He with ſome of his Country-men, accompanied the *Tououpinam-baltians* in an Expedition againſt the *Margaiates*, that moſt deadly Enemy, tho' all the Service they did, was only to ſet the others on, and every now and then to let fly a ſmall ſhot or two.

The fury of their pitch'd Battles.

As ſoon as ever the *Tououpinam-baltians* had ſight of their Enemies, they broke out into ſuch loud and horrible Out-cries, that they made all the Shoar ring again, and *Lerius* ſays, he believes Thunder cou'd ſcarce have been heard at that time. VVhen they were advanc'd nearer to each other, they redoubled their Cries on both ſides, blew their Horns and whiſtled with their Bone Pipes, and when that Shout was over, they ſtood threatning one another for ſome time; ſome held up the Bones of their dead Enemies, and others ſhew'd the Teeth of them, which they had hung in Strings about their Necks; in ſhort, they had ſo many frightful Actions and Geſtures, that 'twas enough to ſcare a Spectator to ſee only what they then did: But when they once came to join Battle, the Terrour of all the former Scenes was quite forgotten; the Rage and Fury that tranſported the *Tououpinam-baltians* was hardly to be expreſs'd; they expoſs'd their naked Bodies (cover'd only with their Targets) without fear or diſcretion, to the Showers of Arrows their Enemies threw upon them; thoſe that were wounded, tore the Arrows out of their Fleſh, bit them for madneſs like ſo many Dogs, and then went on fighting as before. No VVounds nor loſs of Blood, no Danger nor Pain could make them leave fighting, only thoſe that died were quiet; as for the others, their Fury held up to the ſame pitch, and the inſatiable thirſt of Blood ſtill hurried them on, till the Enemy not able to endure ſo much violence, gave ground, and left them entire Maſters of the Field.

Horrible and pleaſant ſight together.

But notwithſtanding the Horrours of ſo bloody a Field, the Author ſays, that there was ſomething very pleaſing and entertaining to the Eye in it too; for beſides the comical Actions of the Combatants, in their whiſtling, leaping, and throwing themſelves about into ſeveral Figures, with a ſurprizing nimbleneſs and dexterity, their Habits of Feathers with the Sun ſhining upon them, and putting a luſtre upon all thoſe varieties of Colours, was a very agreeable ſight; then the vaſt numbers of Arrows flying to and fro in the Air with thoſe long and beautiful Feathers faſtned to them, made a very glaring Shew, and a Spectatour that ſtood ſafe out of the way, might be very well pleaſed with the bare Phenomenon. *Lerius* and his Friends purchaſed no little good will amongſt the Savages, by going to War with them, for they are mightily pleaſed at any Strangers being witneſs of their valour (the virtue they moſt value themſelves upon) and therefore upon ſuch Occaſions, always deſire their Company along with them, and take it extreamly well if it be granted. But the plain truth on't is, 'tis a dangerous piece of Civility to yield to them in this matter, for here a Man may (not unlikely) complement himſelf out of Life or Limb; while the Arrows thus flying about at randome, he that does not fight, but only gapes upon them that do, may chance to have one in his Mouth, and that would go near to ſpoil him for an Oratour for the time to come.

Their Triumphs after Victory.

When the War is ended, the victorious Troops march home with a great deal of noiſy clamorous Triumph; now the Bone Whiſtles and the Horns of an Ell long, make all the muſick they can, and the Songs of the Women that follow the Camp (like the Out-cries of the Men before the Battle) make all the Country ring about them. Of all the Honours attainable in this life, theſe People are ſenſible of none greater than that of beating their Enemies and leading home a multitude of Captives; And therefore they celebrate no Feaſts with ſo many Ceremonies, nor with ſo profuſe and extravagant a Mirth, as they do thoſe they obſerve upon theſe Occaſions. But all this Joy is a ſad preſage to poor Priſoners, and denounces to them their approaching fate. They are to furniſh the Materials of the Feaſt, and whatever be the Drink, their Bones muſt be pick'd to find Meat for't.

How they manage their Priſoners.

He that has taken a Captive (as a mark of his condition) ties a ſmall Cord about his Neck, and if he be thought likely to attempt an Eſcape, faſtens one Hand alſo to his Neck; beſides this, he paints his Eyelids, Eyebrows and Beard, and polls him after his Country faſhion, and then trimming him up with Feathers (ſo thick that nothing elſe can be ſeen about his Head) makes a ſhow of him in every Town he comes to. Thus are theſe miſerable Wretches inſulted all the way till they come into the Conquerour's Country, and here they are met upon the Borders by the Women, who come ſhouting to receive them: After this, they don't any way torment or deal hardly with them, nor ſo much as impriſon them; they only put a hard Collar about their Necks, and inſtead of Shackles, tie their Legs below the Knees with a very weak ſort of Bandage, which a Man may eaſily get himſelf free from. But this they don't often do neither, unleſs they apprehend any danger of looſing their Prey; on the other hand they appoint him a Keeper or two, that never ſtir from him, and ſo give him all the liberty imaginable of going about the Fields and the Woods: And 'tis pleaſant enough that the *Braſilians* ſhould think their Women fitteſt for this Office, and make them guard the Priſoners as they do: They had ſure a mighty confidence in the Vigilence and Fidelity of that Sex, to commit that to their keeping, the loſs of which would ſpoil all their Sport. But however they have been well enough rewarded ſometimes for their good Opinion; for theſe truſty Guardians have not only let the Priſoners go, but alſo run away themſelves after them: 'Tis true, they have endeavour'd to prevent this, by employing thoſe Women, whoſe intereſt and relation to the principal Perſons concern'd, ſhould oblige them to be faithful in the Caſe; but notwithſtanding all that, they expoſe themſelves to hazards, and they ought to be ſure the Woman does not like the Priſoner before they make her his Guardian; for if ſhe does, ſhe lies under a powerful temptation to put him in a way of ſaving his life, and then when ſhe has done that, ſhe muſt run after him to ſave her own. 'Tis much pleaſanter ſtill, that this Woman who is the Priſoner's Keeper, and beſides, his Cook to dreſs his Victuals, is alſo commonly given him for a Wife too. This is yet a ſtronger Motive to Infidelity; but 'tis a ſad Dilemma the poor Woman is brought to, ſhe muſt either betray her own Friends (perhaps her own Father) or reſign her Huſband up to a barbarous death, when 'tis in her power to deliver him; and certainly whatever puniſhment ſhe deſerves for the former Crime, yet if ſhe were guilty of the latter, ſhe ſhou'd e'en go down upon the ſame Gridiron and broil together with him.

Some of the Captives content to die.

him. But it happens ſometimes that there needs not very much caution and vigilence in the matter; the Priſoner himſelf deſpiſes liberty, and is contented to be eaten. He eats, and drinks, and ſleeps, and grows fat upon't; he keeps company, and takes his pleaſure, as if he were condemn'd to live, and to live merrily too; and ſome of them are ſo far beſotted as to be pleas'd with their fate, and to think it a mighty great Priviledge (by being buried in the Mens Bellies) to be excus'd from the noiſome Putrefactions of a Grave, and being eaten by ſuch vile Creatures as Worms are. But they need not trouble themſelves about that, for their Enemies are ever ready to do them that favour, and will find Burying-places for as many Corps as they pleaſe; only this is to be fear'd, that they may'nt lye altogether ſo ſecure as they promiſe themſelves; for the Worms is a very common Diſtemper in thoſe Parts, and thoſe Vermine may poſſibly meet with them at ſecond hand, in the Bellies of the other People.

Feſtival Uprours.

'Twould be endleſs to tell all the Particulars of theſe Feſtivals, how they drink and dance, and dreſs up the Victim with Feathers, and diſguiſe him with Paints, till they have made him look like a Monſter, that is indeed more fit to be knock'd o'the Head, than ſuffer'd to live. In a word, they are all drunk and mad upon this Occaſion, there's nothing but noiſe, babbling, and confuſion amongſt them; they are not contented to talk, but they ſtand whooping and ſcreaming out Stories to one another, of their own and their Great Grand-father's Acts in the Wars: And here every Man will be heard, tho' it coſts him the breaking of a Vein; ſo that the great Point is, who can be loudeſt, and moſt effectually drown the reſt of the pretending Voices about him. Theſe ſort of Entertainments laſts for three or four days, neither is there any intermiſſion of noiſe for all that time (including the Nights too) any longer than while they juſt drink, or go aſide to eaſe nature. After this, the Captive is ſacrific'd, and not without abundance of odd Ceremonies and Conjurations; the fatal Inſtrument is wav'd this way and that way, paſs'd forwards and backwards between the Legs of the Victim, and then deliver'd (conſecrated as 'twere for that Office, and with no little formality) to him that is to do the Execution. But this is many times not preſently diſpatch'd, for he that is to die, what by wrigling about, inclining his Head, and ſometimes dapping quite down when he ſees the Sword lifted up, makes them ſo much work, that tho' they begin to prepare early in the Morning, yet 'tis high Noon before the Slaughter is over. Theſe People have prodigious hard thick Skulls too, and 'tis not an eaſie matter to beat out their Brains; yea, *Lerius* tells us of one that had a Skull invincibly hard, and the ſtrongeſt Executioner of them all (with that formidable heavy VVeapon they uſe) was not able to break it. VVhen this bloody work is done, the more ſolemn Feaſts begin; for now the grand Materials for them are ready, and there needs only the Fire to compleat all: And this may be ſaid of them, that the moſt luxurious Man in the VVorld, the moſt abſolute Epicure does not ſwallow his choiceſt and fineſt bits, either with more greedineſs or true reliſh, than the *Braſilians* do the Fleſh of their Enemies.

Ceremonies of making a Gentleman.

As for the Executioner, if he was a vulgar Fellow before, he is now become a Gentleman; this Action makes him ſo, or at leaſt gives him an undoubted Title to that Badge of Gentility, which none that ſee can pretend to deny. His Relations proclaim what he has done thro' all the Village, then they rub him with ſome part of the dead Man, and lay him down in his Hammock as if he was ſick; within a few days after they make him ſo, for they race his Skin (all over the Body) with the Tooth of a certain Beaſt, and then ſoak him with the Juice of ſome Plant mix'd with a Powder very finely Ground, which torments him to no ſmall degree; but Honour is the Conſolation he has in his Miſery, and the enduring this ſmart is one ſtep towards his being a Gentleman. Thus he lies in his Hammock till he is perfectly well again, and never ſpeaks a word, nor opens his Mouth upon no occaſion whatſoever; and that he may have no occaſion to do otherwiſe, all his Victuals ſtand by him, that he may take it when he pleaſes; but this is neither Fiſh nor Fleſh, but VVater, Flour, and a little Fruit. VVhen this Mortification is over, they celebrate his riſing with a Feaſt of VVines; he cuts his Hair, and paints himſelf with black, and from thenceforth has the Honours and Priviledges of a Gentleman.

CHAP. X.

An Account of Sir Richard Hawkins's *Voyage into the South Sea; Collected from his own Obſervations, and thoſe of ſome curious Perſons that went along with him.*

April, A. D. 1593.

THE Deſign of this Voyage was to viſit the celebrated Kingdom of *China*, the Iſles of *Japan*, the *Molucca's* and *Philippines*, by the way of the *Magellanick* Straits and the South Sea; in order to which Sir *Richard Hawkins* furniſh'd at his own charge two ſubſtantial Ships and a Pinnace, with Men and all Neceſſaries, intending, if Providence favour'd him, to fetch no leſs a Compaſs than *Drake*, *Candiſh*, and the reſt of the famous *Circum-navigatours* had done before him.

Sir Richard Hawkins's Misfortunes at ſetting out.

VVe ſhall paſs over all the Diſaſters he met with in the Channel by the roughneſs of the VVinds and Sea, but much more by the rudeneſs and knavery of his Mariners. Thoſe ſhifting Fellows, who cared for nothing but how to get a Sea of Drink into their Bellies, took the advantage of the idle time (that a Storm found them to ſpend aſhoar) to run themſelves and their Maſter in debt, pawning their very VVeapons, Inſtruments and and Shirts upon their Backs, and after all abſenting themſelves from their Ships, and upon pretence of a Preſs then going on, running quite away; ſo that if the Admiral had not prudently provided againſt ſuch Miſchiefs as theſe, by raiſing at firſt more Men than he had need of, he muſt have gone to Sea with his Ships half mann'd, or have loſt time, and ſtaid till he had ſupplied himſelf.

By this means it came about that three Months were ſpent by that time they came to the *Canarie*-Iſles, which are famous in the VVorld upon ſo many accounts. The VVine of the Iſle *Palma* is well known by the Merchants, the lofty Pike of *Teneriff* by all the Men that uſe the Sea: The Pitch which theſe Iſles afford is no new thing to the Sailors neither, and 'tis remarkable for that Property, that the heat of the Sun won't melt it. The Corn that grows here is very good, but there's a ſort of worm that breeds in it, which eats out all the Subſtance, and leaves the Huſk entire. Between the Iſles *Forteventura* and *Lancerota* (which are two of the ſeven *Canaries*) is a very good Sound, and fit for the meeting of a whole Fleet, eſpecially too upon the account of the ſecure Anchorage, and the abundance of Fiſh there to be met with.

Canarie Iſle. The wonderful Tree in the Iſle *Fierro*.

But the greateſt Rarity of all theſe Iſlands, is the Tree in the Iſle *Fierro*, whoſe Leaves continually diſtil pure water, and ſufficient both for the ſervice of Man and Beaſt there: It ſtands upon the Declivity of a Hill, and is ſhaded about with a multitude of ſtately Pines, that defend it from the ſcorching Sun: It is of the bigneſs of a middle-ſiz'd Oak, and ſix or ſeven Yards high; the Bark is white like Hardbeame, the Boughs are very ragged, the Leaf like that of the Bay, white on one ſide and green on the other, but it bears neither Fruit nor Flower. In the Night time a thick Cloud or Miſt always hangs about it, and the water drops off from the Leaves very faſt and in great quantities. The Inhabitants have laid Pipes of Lead from the Tree to a great Pond in the Valley, ſo that all the VVater diſcharges it ſelf in there: This Pond is handſomly pav'd with Stone, and holds 20000 Tun of VVater, but notwithſtanding the largeneſs of it, it will be fill'd in the ſpace of a

Night

Water for the whole Iſle.

Night. The Iſland contains about 7 or 8000 People, and many more thouſands of Mules, Camels, Goats, and other Beaſts, and all are ſupplied from this Fountain; for the great Pond communicates the Water it receives to ſeveral other leſſer ones, which diſperſe it abroad thro' the Iſland.

Note for Sailors.

The City of the *Grand Canaria*, and the chief Port, is on the Weſt ſide of the Iſland; the principal Town and Port of *Teneriff* is on the South ſide; and the Towns and Ports of *Palma* and *Gomera* on the Eaſt ſide. In *Gomera*, ſome three Leagues Southward from the Town, is a very large River, but all theſe Iſlands are ſomething dangerous to land upon, becauſe of the violent waſh of the Ocean. Thoſe that are not obliged by any neceſſity to do otherwiſe, may do better to go to the Eaſtwards or Weſtwards of theſe Iſlands, as well to avoid the Calms that ſometimes hinder eight or ten days ſailing, as the Diſtempers and intemperate heat of the Climate is apt to cauſe.

Cape de Verd Iſles.

Violent heat there.

Dangerous Conſequences of taking cold by the Breezes.

Remedy uſed by the Natives.

Pernicious Effects of the Moon.

Neither are the Iſles of *Cape de Verd* a jot better in this Reſpect; Sir *Richard Hawkins* ſays, that both times he was at thoſe Iſles, it coſt him near half his Company by Feavors and Fluxes, and other Maladies. They lie within 14 Degrees of the Equinoctial, and therefore it may well be imagin'd that the Sun has no little Power there, even all the Year round; ſometimes they paſs three or four Years alſo without rain, and the Earth is ſcorch'd in that manner, that a Man well ſhod can ſcarce endure to go where the Sun ſhines. This violent heat fatigues People at that rate, that they are greedy of any ſort of Cooling whatſoever, and apt incautiouſly to expoſe themſelves to it whenſoever it comes. Thus the N. E. Wind that generally blows every Afternoon at four a clock, comes very cool and freſh, and they conſidering nothing but the pleaſure and eaſe of being deliver'd from a burdenſome heat, lay themſelves open to it, and conſequently to many very diſmal Diſorders by that means. 'Tis not ſtrange that a Flux or a Feavour ſhou'd follow, upon ſo ſudden a ſhutting up of all the Pores of the Body by a cool brieze of Wind; that the Limbs ſhou'd be diſtemper'd, the Blood boil, and all the Fluids be put in tumultuous Motions, when what was fairly going out thro' thoſe Vents in ſo large quantities, is violently repealed and forc'd back again. Strangers who are more liable to theſe Inconveniencies than the Natives, have now learn'd this way of prevention of them; they defend their Heads and Bodies with as many Coverings as they can almoſt endure on; upon the former they wear a Night-cap, a *Montero*, and over both them a Hat, and upon the latter a Suit of thick Cloth, and over that a Gown furr'd or lin'd with Cotton or Bays; in ſhort they arm themſelves againſt the Heat, as the People in *Nova Zembla* would againſt the cold, and by this means they not only feel leſs of it, but alſo are more out of danger of catching cold by the Breezes. They find alſo by many and common Experiences, that the Moon has here very ſenſible but thoſe pernicious Effects upon humane Bodies, that are expos'd to the Rays of it; and therefore they take care never to ſleep in the open Air, or in a Houſe with the Windows open, thro' which her Beams can come. Sir *Richard Hawkins* had in this matter the Experience of a very credible Perſon, who ſleeping one Night in his Cabin with the Moon ſhining in upon him, had ſo extraordinary a pain, accompanied with a violent burning in that Shoulder, that for more than 20 Hours he was like a Man down-right diſtracted; and 'twas not without a great many Applications (beſides a world of torment and pain that it coſt him) that he was freed from it at laſt. This Accident happen'd upon the Coaſt of *Guinea*, in which Country the bad Effects of this Planet are very commonly felt this way.

Obſervations of the Canaries.

The *Cape de Verd* Iſles, which are ſix in number, belong to the Crown of *Portugal*, as the *Canaries* do to that of *Spain*. The chief of them all is St. *Jago*, well known to the *Engliſh*, as having been ſack'd twice by them, once under Sir *Francis Drake*, in *A. D.* 1585, and another time under Sir *Anthony Sherley*, in *A. D.* 1596, as it had alſo been once before, in *A. D.* 1582, by *Manuel Serades*, a *Portugueze*, with a Fleet of *French*: And the Iſle *del Fogo* is known to all the VVorld for its burning Mountain, the Flames of which are ſeen in the Night time 20 Leagues off at Sea. The beſt watering place in any of them is on the VVeſt part of the Iſle *Brano*, where there is a great River; but then the Anchoring is bad, as 'tis for the moſt part all about theſe Iſles. The *Canaries* have much the advantage of the *Cape de Verds*, for Corn and VVine, Iron, Pitch, and ſome other Commodities perhaps, but theſe latter pretend to Ambergrice, Civet, Elephants Teeth, Gold, (which they have from the Main of *Guinea*) Salt, Rice, Cotton-wool and Cotton-cloth, Spunges and Pumice-ſtones; as for Sugars, both the one and the other have good ſtore of them: Neither are the two *Madera* Iſles inferiour to either of them in this reſpect; they are known to produce excellent Sugars, rich VVines, and fine Sweet-woods.

The Fleet having paſt all theſe Iſles, and being now within five Degrees of the Equinoctial, was in no ſmall danger by reaſon of the Shoals, as they apprehended. They obſerved the colour of the water to change, and be much whiter than it ever is known to be where there's any thing conſiderable of depth: And accordingly having made the Experiment with their Lead, at 14 Fathom they found Ground; but at the ſame time ſending ſome up to the top of the Ship, they preſently diſcover'd the main Land of *Guinea*. Now the Reckonings of all the Ships agreed in this, that they were at leaſt 70 (ſome ſaid 80) Leagues from the Land, which notorious Errour therefore immediately forc'd them to conclude ſome ſtrong Current ſetting to the Eaſtward had been the cauſe of it. And this Errour was no other, than what all muſt unavoidably fall into, that come within the reach of Currents, while there is no infallible rule for finding the Longitude.

The Current from the Equinoctial to 20 Degrees North, is very ſtrong, and ſets very nearly Eaſt, directly upon the *Guinean* Shoar, as they found by experience to their no little danger; but what particular Shiftings and Variations it may have, they are able to give no Rules as to that: So alſo the Current that is met with between *Newfoundland* and *Spain*, ſets nearly Eaſt and Weſt, and did a long time impoſe upon the Mariners and put them out in their Reckonings: And Sir *Richerd* tells us, that he has ſeen in ſome Sea Charts the difference of above 30 Leagues between the Iſle *Tercera* and the Main: That ſome have aſſured him, that coming from the *Indies*, and looking out for the *Azores*, they have got ſight of *Spain*; and others looking out for *Spain*, have had ſight of the *Azores*. There's the ſame Current in the *Levant*; but it runs trade betwixt the Mains, and changes ſometimes to the Eaſtward, and other times to the Weſtward. Upon the *Braſilian* Coaſt and the South Sea, the Current is likewiſe changeable, but it ever runs along the Coaſt, keeping company with the Wind; and it is an infallible Rule, that 12 or 24 Hours before the Wind alters, the Current begins to change. In the more Northerly parts of the *Weſt-Indies*, the Current is found to run continually one way, and ſets along the Coaſt from the Equinoctial to the North, and in this caſe when it ſets North or South, the Effects of it are eaſily diſcover'd; but how to know truly the ſetting of a Current from Eaſt to Weſt, and in the open Sea too, is difficult, beyond the reach of any Rules hitherto given to account for't. When they came within three or four Degrees of the Line, the Company began to be miſerably afflicted with the Scurvy, abundance of 'em died, and the reſt were ſo frightened and diſcouraged with it, that they grew uneaſie, wiſh'd the Voyage were at an end, or that the Admiral wou'd make it be ſo, and ſail homewards. The Winds alſo had been contrary, and continued ſo for a good while after they had paſs'd the Line, and as they approached the Coaſt of *Braſile*, it veer'd to the Eaſtward. About the middle of *October* it grew large and fair for them, ſo that in few days they got thwart Cape St. *Auguſtine*, and near the latter end they were in ſounding of the great Shoalds, which lie along the Coaſt betwixt the Bay of *Todos Sanctos*, and the Port of *Santos*, otherwiſe call'd *Nueſtra Senora de Victoria*, between 17 and 18 Degrees South Latitude. Theſe Shoals are diſcover'd by the multitudes of ſmall Birds that live upon the Rocks and broken Lands about them, and are ordinarily met with many Leagues before a Ship comes in any danger of them.

A Story of the Dolphins.

Amongſt the Accounts given of ſome Fiſhes, as Dolphins, Bonitoes, Sharks, Swordfiſhes, Threſhers, and the like, which have been deſcrib'd in other places, the Author tells us one thing of the Dolphins, which is ſomewhat remarkable. It was an old Story of this Fiſh, that it is a mighty Lover of Mankind, and lov'd to follow Ships upon that account: Now as for their following of Ships, Sir *Richard Hawkins* aſſerts that to be a Truth upon his own knowledge, for he ſays, that ſetting out from the *Weſt-Indies* in 1583, he met with a Shole of them, which followed him from thence to the *Azores*, which is near 1000 Leagues; and to make it paſt all doubt that they were ſome of them the very ſame Dolphins that attended the Ship at firſt, he ſays that the Sailors had mark'd ſeveral of them, hurting one upon the Back, another near the Tail, and another about the Fins ſo that they were very eaſily to be known from the reſt; and then if thoſe that had ſo bad entertainment from them by being thus wounded, would not for all that forſake the Ship, 'tis leſs probable that the others who had no ſuch cauſe ſhould do it. But the reaſon of this he does not aſcribe to any ſuch Affection to Mankind as is talk'd of, but a Love to their own Bellies, for they get a great many Scraps of Proviſion out of a Ship; the Seamen throw out broken Victuals ſometimes into the Sea, and the Dolphins love to gather up that, as may be eaſily imagin'd; ſo that they are Hangers on to a Ship upon no other ſcore, than a Company of Beggars are to a good Houſe, where they ever now and then meet with a belly ful.

Sport with the Sharks.

The Seamen in this Voyage had a great deal of Paſtime with the Sharks, of which they catch'd abundance; and as they are the moſt mercileſs Devourers in the World, ſo they had no mercy at all upon them, but ſtudied a thouſand ways to torment them: At the Tail of one they tied an empty Hogſhead well ſtop'd, another they yok'd like a Hog, and ſet him a ſwimming, from a third they would pluck out the Eyes, that he might never ſee to do any more miſchief; another's Belly they would rip up and throw him into the Water with all his Guts hanging out, which every one of his Fellows would be ſure to have a ſnatch at; ſometimes they would take two together, and bind them Tail to Tail, and ſo leave it to themſelves to part afterwards as well as they cou'd in the Ocean. And the Reaſon why they made this horrid havock amongſt the Sharks was partly becauſe they depriv'd them of the pleaſure of ſwimming and waſhing themſelves, which a Man dares not as long as a Shark is in the way; but Superſtition perhaps had ſome hand in it too, for the Seamen look upon it as a bad Omen to have theſe Fiſhes attending about a Ship; it looks as if ſome of them were ſhortly to die, and the Sharks were come already in expectation of their Carkaſſes: And they who are altogether for a jolly life, don't care to have any of theſe melancholly Preſages about them; it muſt needs be a diſturbance over a Bowl of Punch for a Man to ſee one of theſe Devourers hankering about him, and ſhewing him his Coffin and Grave both at the ſame time.

How the Sharks manage their young.

The Sharks don't ſpawn as moſt other Fiſh do, but whelp like Terreſtrial Animals, and their young ones upon occaſion, go in and out of their Mouths very frequently, till they are of a conſiderable bigneſs; as ſuppoſe there were a Storm, or any other danger that threaten'd, the old Shark immediately receives them into their Shelter, where they are out of harm's way: And Sir *Richard Hawkins* ſays, that he has ſeen them do thus when they have been more than a Foot and a half long, and after the killing of the Dam, the young ones have been all found in her Belly or Pouch.

The Threſher.

Thoſe that go to Sea too very often, ſpeak of the formidable Battles between the Whales and his two grand Enemies, the *Swordfiſh* and the *Threſher*; and as to this, our Author tells us, that he has heard the ſound of the mighty Stroaks the Threſher gives, at leaſt two Leagues off, and at the ſame time the roaring of the Whale might have been heard much farther; 'tis with the Tail that Fiſh lays on at this rate upon the Head of the Whale, and indeed conſidering how hard he labours, he well deſerves the name of a Threſher.

Obſervations of the Wind.

Concerning the Winds, he gives us theſe Obſervations farther too; that from the North Tropick to three or four Degrees from the Equinoctial, the Breeze (which is the N. E. Wind) obtains generally throughout the Year, only near the Shoar it's variable: That in three or four Degrees of the Line, either North or South, the Wind hangs Southerly; the Months of *July*, *Auguſt*, *September*, and *October*, and all the reſt of the Year, from the Cape of *Good Hope* to the *Azores*, you find the Breeze continually: That the beſt of all times to croſs the Line from North to South, is in the Months of *January*, *February*, and *March*, tho' the Paſſage be good enough alſo in *September*, *October*, and *November*; yet not ſo ſure as in the former. When they had made betwixt 19 and 20 Degrees to the Southward of the Line, the troubleſome Winds and the Diſtempers of the Company, made them reſolve to look out for the Shoar: And that which firſt offer'd it ſelf to their ſight, was the Port

Porto Santo.

of *Santos*, or *Nueſtra Senora de Victoria*, which is eaſily known by the great high Hill over the Port, which riſes in the form of a Ball, and coming near the Shoar, a white Tower or Fort is ſeen, which ſtands upon the top of a Hill over the Harbour. Entring the Port, within a quarter of a Mile is a ſmall Village, and three Leagues higher up is the chief Town, where they have two Forts, one on either ſide the Harbour, and within them ride all the Ships which come to load or diſcharge. In the ſmall Village ſpoken of, is ever a Garriſon of about 100 Souldiers, part whereof watch there, and the other part in the white Tower upon the top of the Hill which commands it. But their Expectations from this place were not at all anſwer'd, for the Governour ſent word, that he had expreſs Orders from his Majeſty of *Spain* to ſuffer no *Engliſh* Ships to come there, and therefore required them to depart the Port in three days. All the comfort was, that they got two or three hundred Oranges and Limons aſhoar, which was no little help to them that were down with Scorbutick Diſtempers, there being hardly any Remedy in the World known to be comparable to this Fruit, for all that contract theſe ſort of Illneſſes at Sea. Being obliged to conform themſelves to the Governour's Orders (for they were too weak in all Sences to pretend to force any better Treatment from him) they ſet ſail and held a W. S. W. Courſe.

A ſtrange ſtory.

And here Providence, which but a little before had very ſtrangely preſerved them from the horrible Effects of fire in their Ships, now as wonderfully deliver'd them from a Shipwrack, and a Wrack ſo ſudden and ſurprizing, that they had been all loſt before they cou'd have had the leaſt ſence of their Danger, if a ſtrange accident had not prevented it. The Maſter of the Ship (who was gone to ſleep) had committed the care of the Steerage to one of his Mates, and he either being drouzie, or over confident of the ſkill of the Man that manag'd the Helm, neglected the overſight of him, and left him to ſteer entirely according to his own mind: And in ſhort he ſteer'd ſo, that they were now e'en almoſt upon the Shoar, and neither the Mate nor Helms-man diſcover'd any thing of the matter: But the Maſter who was fallen into a very deep ſleep, by reaſon of his Labours and long Watchings before, all of a ſudden waked out of it in a terrible fright; he knew no reaſon why he ſhou'd be ſo diſcompos'd, there was no noiſe nor alarm in the Ship, the Winds and Sea were both very ſtill and quiet, and 'twas a fine clear Night; he endeavour'd to compoſe himſelf and go on with his ſleep, but he cou'd not conquer his uneaſineſs, nor forbear yielding to a powerful Inclination to riſe and go upon Deck, and this he had no ſooner done, than he ſaw the Ship juſt as it were running aground; but there being time enough yet to give a command, he made him at the Helm immediately put cloſe a Sterboard and ſo edge her off; and preſently ſounding their depth, they found hardly three Fathom water, by which they more clearly ſaw in how good time this turn was given to the Ship, and the wonderfulneſs of their Deliverance from a Danger that had otherwiſe been unavoidable.

Cape Blanco.

The next day they came athwart Cape *Blanco*, which is very low ſandy Land, and extreamly dangerous; for, for a matter of four Leagues into the Sea (acroſs it) lie Banks of Sand which have a little water over them; and here by ſending out their Boat and Shallop to ſound, they obſerved their depths and ſo kept clear of them.

Iſles of St. Ann.

From hence they ſteer'd to the Iſles of St. *James*, or (as others call them) of St. *Ann*, where they purpos'd to refreſh their ſick Company. Theſe Iſles are two in number, and lie 22 Deg. and a half South Lat. the Air of them is good (as many of the ſick People found to their benefit) but the Water very bad; for in one of them, what Water there is, is a meer Pool, and a filthy one too, full of ugly Worms and Serpents; and that of the other, tho' it be a running one, yet paſſing along by the Roots of certain Trees, which have a ſtrong rank ſcent like Garlick almoſt, contracts ſuch a hogo from thence, that 'tis not to be drunk. Beſides, they ſuſpected it to have ſome pernicious quality, for ſome of their Men died here with a ſtrange ſwelling of their Bellies, which they could not attribute to any thing elſe, but the drinking of this Water.

Fruits growing there.

The Fruits the Iſles afforded were a ſort of Cherry, or a Fruit to which they gave that name for its reſemblance to our Cherry in colour and reſpect of the Stone, but it differ'd from them in ſhape, for it was not round but oblong, and ſomething dented about, however of a very pleaſing and grateful taſte.

They found alſo Palmito-Trees, the Fruit of which was exactly like a Coco, but no bigger than a Walnut; and a Fruit growing in Cods very like Beans, both as to the thing it ſelf and the Cod wherein 'twas incloſed; but the Effects of them were not very pleaſing, for they made thoſe that eat them evacuate both upwards and downwards.

Another Fruit they met with here, was the Prickpear, as the Sailors call them; it grows ſomething like an Artichoke, but leſs, and in the out-ſide red, white within, and compaſs'd about with Prickles: The Fruit grows

upon

Seamens rule for eating unknown Fruits.

upon the ſide of the leaf, and is of ſo good a taſte, that they ſay the *Indies* hardly affords any of a better. The Birds, and other Creatures, find them out as faſt as they ripen, for they love them mightily, which our Seamen cou'd find by the marks they had left of their eating; and this (by the way) is the great Rule they go by in judging what Fruits they ſhall eat, and what they ſhall let alone, when they light of thoſe they are not acquainted with: they look to ſee whether the Birds or the Cattle have been beforehand with them or no at the ſame; if they have, they think they may fall on boldly, for they conclude they wou'd not eat it if 'twas poiſon, and what is good and healthful for thoſe Animals, they conclude is likewiſe ſo for themſelves. But this Rule may chance to deceive them, for it will by no means follow, that that which does not kill a Horſe or a Dog, ſhall not do a Man any harm; 'tis well enough known, that ſome Creatures have their peculiarities in this kind, and what's Meat or Phyſick to one, is as bad as poiſon to another. There's no doubt, but as ſome of our Vomits and Purges wou'd kill a great many other Animals, ſo abundance of thoſe things that are ſalutary and beneficial to them, wou'd make ſad work in our Bodies, if not quite unhinge them. Beſides, when one ſees a Fruit that ſome Creature has been nibbling at, who knows what effects it has had, and how dear the Animal has paid for taſting? So that if one can't make trials, a body had better uſe one's Reaſon and Judgment, than follow the conduct of the Brutes in this matter.

Two Rocks by the Iſland.

Animals upon the Iſland.

Tides.

Danger of the *Portugueſe* and *Indians.*

Adjoining to theſe Iſlands are two great Rocks, about which they light of great ſtore of young *Gunnets* in their Neſts, the broth of which they found did their ſick People ſervice; as alſo the *Purſlane* which they met with about thoſe Rocks, which boil'd and eaten for a Sallet, was very grateful to their weak Stomachs, and renew'd a languiſhing Appetite. In theſe Iſlands are abundance of venemous Creatures, as Adders, Scorpions, and ſeveral other ſorts. The chief of the Fowl they obſerv'd were Parrots, and a kind of Pheſants, but much bigger than thoſe with us. The water highs and falls here about 5 or 6 foot, and but once in 22 hours, as 'tis in all this Coaſt, and in many other Parts of the *Weſt-Indies*, as upon the Coaſt of *Peru* and *Chili*, except where there are great Bays or Nidraughts, and there the Tides keep their ordinary courſe of twice every 24 hours. In the leſſer of the Iſlands is a Cove for a ſmall Ship to ride in, Land-lock'd, and ſhe may Moor her ſelf to the Trees on either ſide; to this they gave the name of *Palmito* Iſland, for the plenty it has of the larger ſort of thoſe Trees. All about this Coaſt the *Portugueſe* keep ſtrict Watch and Ward, ſurprizing many Ships when their Companies are aſhore, and oftentimes (if that Feat be not to be done) making Priſoners of the Men themſelves, if they don't ſtand nicely upon their guard to prevent them. They make great uſe of the *Indians* for theſe thieviſh purpoſes, for they are generally great Maſters of all the Arts of Treachery and Surprize, and have their Canoes always ready by them to carry them where any ſuch work is to be done.

Caution to them that go aſhore.

A pleaſant Story.

The power of Imagination.

Several of our *Engliſh* Commanders have found this to their coſt, and Admiral *Candiſh* particularly loſt 80 Men by them, together with his Boat, at the Iſland of *St. Sebaſtian*, which was one (and not an inconſiderable) ſtep towards the overthrow of his Voyage. Sir *Richard Hawkins* being aware of this, and the beſt part of his Company lying aſhore, he had given them a particular charge not to neglect their Watch, but to keep themſelves always in a due poſture of defence. And to try whether his Orders were obſerv'd or no, as alſo to make them watchful from a more lively principle of fear for the time to come, himſelf, with a few Soldiers, came over from the Ships, and landed at a conſiderable diſtance from the place where the Booths were erected for the company that was aſhore. They march'd as ſilently along as they cou'd, and did their endeavours to ſurprize them, but by that time they were come within 40 Paces of them they were diſcover'd, and all the well and the ſick together came out to oppoſe them, and fight for their lives. Here were Men that had not ſtirr'd out of their Beds but by the help of others for many months, that now buſtled and beſtirr'd themſelves; they cou'd not move their dull Scorbutick Limbs before, but this Alarm put ſtrength and ſpirits into them, and the apprehenſion of the *Indians* being come to knock them all o'th' head, ſuſpended their pains for the preſent. The other Party came upon them with a horrible noiſe, (as the *Indians* always do in their aſſaults) and theſe receiv'd them as briskly; but having juſt begun a Skirmiſh (in which there was no damage done on either ſide) upon the report of a Gun from one of the Ships the aggreſſors retired, made haſte to their Boats and got away, but having rowed about to the uſual Landing-place, they came aſhore in all haſte, and march'd up to them, as if they had been juſt come from the Ship on purpoſe to aſſiſt them. The Defendants told them, if they had come a little ſooner their company might have done them ſome ſervice, but the action was now over, and the enemy quite gone away. They ſaid the *Indians* (who thought to ſurprize them) had aſſaulted their little Camp with a wonderful deal of fury, but finding them better provided than they expected, and hearing that the Ship had taken the alarm, they run away to their Cano's as faſt as they cou'd. And to put the Admiral out of all doubt that they were *Indians*, ſome ſaid they ſaw their Cano's, others their Bows and Arrows; nay, there were them that ſwore they plainly ſaw their long ſhaggy hair, and the very paint upon their skins. Neither did Sir *Richard* go about then to undeceive them, but let them alone in the miſtake, and left the fancy of the long hair and painted skins to work its utmoſt effects upon them, in making them watchful againſt the time when ſuch things ſhould come in reality. Had the Iſland had the ill reputation of being haunted, theſe Men cou'd as well have fancied Devils as *Indians*, and deſcrib'd their Horns and Tails, and flaming Eyes; 'tis an eaſie matter for a Man, when he is prepoſſeſs'd, to ſee all thoſe Figures with his Eyes which his diſturb'd Imagination draws, and to deſcribe them to other People in great order too.

A good cure for Negligence.

Placentia Iſland.

Some time after they were gone from this dangerous place, and out at Sea, where it cou'd do no harm to reveal the Plot, Sir *Richard*, for the Jeſt's ſake, told them how he had ſerv'd them; but 'twas all one, the moſt of them held in the ſame opinion, and the Picture of the *Indians* was ſunk ſo deep into their heads, and ſo lively figur'd there, that all that could be ſaid cou'd neither convince them, nor obliterate that. And it ſeems it did them a great deal of good, for they were wonderfully careful and vigilant ever after, in all places where they were obnoxious. The ſick company was ſo well refreſh'd here, that there was but few of them that continued to be ſo at their going away; the whole time of their ſtay was above a month, and from this place they ſail'd to Cape *Frio*, and ſo to *Ilba Grand*. They commend the Harbour of this Iſland, its Bays, and excellent Water. But as there are abundance of other ſmaller Iſlands (for it is it ſelf 8 or 10 Leagues long) that lie within it, ſo there is one particularly, which for its fertility and pleaſant ſituation has deſervedly the name of *Placentia*. This is Peopled, but all the other lie deſert; it affords Plantanes, Pines, Potatoes, Sugar-canes and Hens, with all which our company ſtored themſelves.

Ilba Grand.

As for *Ilba Grand*, they ſay 'tis a meer Wilderneſs, cover'd ſo thick with Trees and Shrubs, that a Man can hardly find a place there, if he paſſes, he is not in danger of leaving ſome of his Skin behind him. Theſe Woods are full of wild Beaſts too, that are continually howling day and night; and there are ſo many diverſities of tones and voices, that 'tis a very diſturbing muſick to them that lie thereabouts. The greateſt curioſity it affords are the delicate Shells found upon the ſhore, like thoſe of the Mother of Pearl, which are brought out of the *Eaſt-Indies* to make ſtanding Cups; but theſe are vaſtly beyond the others for fine natural Works, inſomuch that they are commended by our Travellers for ſome of the greateſt rarities they ever ſaw.

Sail for the Streights.

Trade of Slaves to the R. of *Plate*.

From hence they ſet ſail for the *Magellanick* Streights, in their way to which they took a *Portugueſe* Ship laden with *Caſſani* Meal and Sugars; ſhe was bound for *Angola*, and there to be laden with Negroes for the River of *Plate*, which is a mighty great Trade, and very much uſed. The Negroes are carried from the head of the River of *Plate* to *Potoſi* to work in the Mines, and 'tis a very ſorry Slave that is not worth there 5 or 600 Pieces, every piece of 10 Rials; all which Money they pay and receive in Rials of Plate, for there is no other current thereabouts.

* His name was *Tharlton*, the ſame perſon who by a like treachery blaſted Adm. *Cavendiſh's* laſt Voyage.

About the heighth of the River of *Plate*, and 50 Leagues from the Coaſt, a violent ſtorm overtook them, and in theſe the * Captain of the other Ship took the opportunity to ſlip away for *England*, and thereby effectually fruſtrated all the deſign of the Voyage, and laid them open to all thoſe diſaſters that afterwards befel them, as will plainly appear in the following relation. While this ſtorm laſted, there were abundance of Fowl as large and big as Swans, that came hovering about the Ship, and as the Wind calm'd they ſetled themſelves in the Sea, and fed upon the ſweepings of the Ship. Being therefore deſirous to ſee what they were, they threw out a line and hook, which one of theſe ravenous Fowl preſently ſeized, but ſwallowing the bait was himſelf

A Sea-Fowl.

taken, but the Men that went to lay hold of him were ſoundly paid for their attempt, for the Bird laid on ſo faſt and ſo hard upon their Fingers, that they both let go their hold, and came off, ſhewing their hands all black and blue. After this manner they fiſh'd up ſeveral others, but were forc'd to faſten a Cord about their necks, and ſo drew them up into the Ship, for they were too fierce and furious to be handled. They prov'd very good Meat, tender, and of kindly nouriſhment; they were of two colours, ſome white, and others grey, their beak was more crooked than that of a Falcon; in each Wing they had three joints, and both Wings being extended to their full ſtretch, from the extremity of one to that of the other was more than two fathom.

An unknown Country.

Holding on their courſe for the Streights, in the Latitude of between 48 & 49 degrees, they diſcover'd Land, but were utterly ignorant what Land it ſhou'd be, for no Plat nor Sea-Chart made mention of any which lay in that manner, and about that heighth: 'Twas a goodly Champion Country, and well Peopl'd, as they ſaw by the multitudes of Fires upon the Coaſt, but they could not come near enough to ſpeak to any of them, wanting their Pinace to diſcover the ſhore before them. It had abundance of freſh Rivers, and the out-ſhoots of them diſcolour'd the Sea in many places as they paſs'd along.

The Streights of *Magellan* are well known, and have been deſcrib'd already, upon which account there needs no inſerting of their relation of them; and ſo alſo of the *Penguin* Iſlands, which are juſt by: But as thoſe Kingdoms are viſited by moſt Seafaring-men that come this way, for the ſake of the Fowls which they afford in ſuch plenty, ſo did our Company make a ſtep thither too for the ſame refreſhment.

Penguins.

This Fowl dwells and feeds in both Elements; at Sea it lives upon Fiſh, and at Land upon Graſs and Weeds as a Gooſe does, which it reſembles in its proportions, tho' it has no feathers, but only a ſort of down all over the body: but Nature, that has not furniſh'd them for flying, has in ſome meaſure made it up by ſwift running, and they are able to move that way as faſt as moſt Men. They harbour themſelves under-ground in deep Burrows, in which they hatch their young, and the bigger Iſland is all over undermin'd by them, except one Valley only which they have reſerv'd to feed in. The Seamen here had one day a ſolemn bout of *Penguin*-hunting; their way was to caſt themſelves into a Ring, and ſo encloſing the Fowl, with Sticks and Staves to knock them down. They are not to be taken without ſome ſuch Stratagem as this, and the aſſiſtance of a great many hands; nay, they would very often break the Ring, and get out into the open Field, and then there was no little ſport in the following of them, for the ground being all hollow'd and undermin'd, the purſuers in the middle of their running ſlipt into thoſe holes: one perhaps leap'd to eſcape a hole before him, and lighting upon falſe ground tumbled into a worſe; another lifting up his Arm to deliver a blow upon a *Penguins* head, ſunk up to the Arm-pits, and had need of help to draw him out, however they made a bitter ſlaughter amongſt the poor *Penguins*, and they were ſo afraid of coming into their hands, that they wou'd run down Rocks and Precipices, or any thing to avoid them; a Man wou'd have thought they ſhou'd have kill'd themſelves with ſuch falls, but yet they ſay they wou'd preſently run away to the Sea, and be as brisk and lively as ever. They are good Meat either roaſted, bak'd or boil'd, but beſt the former way, tho' which way ſoever they are dreſs'd they muſt be flea'd; the Seamen pouder them up in Hogſheads.

Hunting of *Penguins.*

Gulls and Gannets.

The ſame place afforded them good ſtore of *Gulls* and *Gannets* too, thò' not ſo plentifully as *Penguins*; but they commend the *Gulls* for moſt delicate Food. The *Ducks* were numerous too, but different from ours, and not ſo good Meat. They had one part of the Iſland peculiar too, and taken up only by themſelves, which was the higheſt Hill in it, and more than a Musket-ſhot over. The Art and Order which theſe Creatures ſhew'd in building and diſpoſing their Neſts was plainly wonderful; they are made of the ſelf ſame Mould that all the Hill conſiſts of, but becauſe this is too ſtiff to be wrought into a convenient Figure, they fetch water in their beaks and moiſten it, till they have made a ſort of Clay on't that they can manage. They are as regularly made as if done by Mathematical Rules, being a kind of Cylinders, the top and bottom about a foot over, and the heighth 8 inches. They are ſo exact in this matter, that you can't find any Neſts that differ from one another in any of their dimenſions; and as they are all of the ſame baſe, and heighth and depth of the inſide hollow, ſo they are plac'd at the ſame diſtances from one another, and their poſitions are ſo artificial, that a Man wou'd be puzzled to find a place for another Neſt to ſtand in, excepting only thoſe little paths that are left between the rows for the Ducks themſelves to paſs along. And had ſeveral Brooms been here to ſweep all about the Hill, it cou'd not lie more neat and clean than it's kept by theſe Birds; there was not a ſtick, a ſtraw, a feather, a bit of dung to be ſeen any where, and the Neſts themſelves were as clean in the inſide as thoſe little Walks and Avenues were in the outſide.

Ducks.

The admirable Art of their Neſts.

Seals.

Another ſort of Animals that gave them ſome diverſion here were the *Seals* or *Sea-Wolves*, as ſome call them. One of the Mariners by chance ſpied a company of theſe lying aſleep, with their bellies toaſting againſt the Sun, and went to call the reſt of his company, who thought to ſteal upon them unawares and ſurprize them; but theſe Creatures always provide againſt that, and ſet a Watch. One of the number ſtands Sentinel while the others ſleep, and at the approach of any danger gives them warning; and by this vigilance of theirs, it came to paſs that the Seamen were diſappointed of their ſport, for as ſoon as ever the Sentinel diſcover'd them, he ſet up a great howl and wak'd the reſt, and they all preſently fell a running towards the Sea. Some of the Mariners got betwixt them and the water, thinking to cut off their retreat, but the *Seals* run againſt them with ſuch a force that they tumbled them all down; and tho' they dealt a few blows amongſt them, yet they could not ſtop them in their career, a Sword won't pierce their thick Hides, and to give them a blow with a ſtick is to beat upon a Rock, there's no way for't but to ſtrike them upon the Snout, if poſſible, which makes them fall down dead preſently.

Their vigilance to prevent a ſurprize.

Deſcription of the *Seals.*

This Fiſh is like a Calf, it has 4 legs, but thoſe not above a ſpan long each, and the skin of it is very well known in *Europe* for its manifold uſes, but theſe upon *Penguin* Iſland, our Authors ſays were different from all they ever ſaw, not only that they were of a ſize ſo much larger, but in their foreparts had ſo much reſemblance to a Lion, their hair very long and ſhaggy, and beſides they had Muſtachoes.

The troubleſomneſs of ſailing through the *Magellanick Streights*, is very well known to all thoſe that have made the experiment; there are ſo many turnings and windings, ſo many Nooks, Points and Reaches, that the wind that ſerves at this place will perhaps be contrary to a Man a few Leagues off, tho' it keeps ſtill in the ſame Point. This was one cauſe why they made but a ſlow progreſs, they were driven to and fro by the Winds, and having got a conſiderable way out of a Harbour, were many times forc'd back into the ſame again.

While they thus loiter'd up and down in the *Streights* they mended their Ships, and repaired as well as they cou'd the damages done to their Casks by thoſe peſtilent Worms which the *Spaniards* call *Broma*, and the *Engliſh Arters*: Theſe Vermin are a ſad plague to Ships, and when once they have work'd themſelves into the Planks, will bring all in danger in a little time unleſs the Ships be ſheathed. They enter at firſt no bigger than a needle, but by degrees grow to be as large as a Man's little finger, and the Planks look like Honey-combs by the holes they eat in them: In order to prevent this inconvenience, Sir *Richard* propoſes his Father Sir *John Hawkins*'s method of ſheathing Ships, which he affirms to be vaſtly better than all the ways formerly uſed, and indeed ſufficient for the purpoſe, which none of them can be allowed to be; and that is, before the Sheathing-board is nail'd on, to ſmear it all over with Tar half a finger thick, and upon the Tar to lay another Stratum of hair ſuch as the White-Limers uſe, as thick as the former, over all which the ſheathing is laid and nail'd on faſt, the nails ſtanding very cloſe to each other, the thicker and cloſer the better. Experience has prov'd that this way does effectually defend a Ship againſt theſe Worms; but beſides, it has this farther to recommend it, that 'tis of all other the cheapeſt. It has been the common Opinion, that theſe Worms are bred in the freſh Water, and carry'd along with their ſtreams into the Sea; but Experience has taught the contrary, and aſſures us that they breed in the great Ocean, and that in all Climates, but eſpecially near the Equinoctial.

The Worms *Broma*, that eat the Planks of Ships.

Beſt way to ſheath the Ships.

In paſſing along the *Streights* they ſaw but very few ſorts of Animals, and fewer of the humane kind; ſome of their Habitations indeed they ſaw ſometimes at a diſtance, but theſe People come down and live by the Sea-Coaſts in the Summer-time, and then retire up into the Country, where they have warmer ſhelters, when the Winter ſtorms come upon them.

Winter's Bark.

The Tree which affords that Bark call'd by ſome *Cortex Winteranus* they met with here, the leaf is of a whitiſh green, and in form not unlike the *Aſpeni*; the Fruit, The Tree and its Fruit.

which is green, grows in cluſters, each Berry being of the bigneſs of a Pepper-corn, and containing within it 4 or 5 grains twice as big as a Muſtard-ſeed, and being broken is white within-ſide, and has a hot biting taſte like Pepper, but is rather more afflictive to the Tongue than that. The Bark is a kind of univerſal Spice, for it has the taſte of all together; 'tis very comfortable to the Stomach, and preferr'd by many to any Spice whatſoever.

Muſcles in the *Streights* with the Pearl they yield.

They found likewiſe abundance of Muſcles, which were very good, and no ſmall part of their refreſhment here; they had moſt of them ſome Pearl in them, but not very large, nor ſhewing any thing of that bright Orient colour which is ſo deſirable in them, and is found in the Oyſter-Pearl, but ſome Muſcles had no leſs than 20 or 30 Pearl in them, which lay diſpers'd up and down in ſeveral parts of the Fiſh.

'Twas with no little trouble that our Ship, after ſo long labouring up and down in the *Streights* of *Magellan*, got her ſelf free, and came to have the open proſpect of the great South Sea; however being out, they ſhap'd their Courſe for the Iſland of *Mocha*, paſſing along by *Baldinia*, which was then in the hands of the *Spaniards*, but afterwards (together with the *Conception*) taken from them by the *Indians*, and were the two principal places they had in that Kingdom, and both Ports.

Baldinia.

Baldinia ſtands in 40 degr. S. L. in a fine woody Country, it has a pleaſant River, and navigable, ſo that a Ship of good burthen may go up as high as the City.

Iſland *Chule*, not known from the Main.

Some degrees to the Southward, before one comes to *Baldinia*, lies the Iſland *Chule*, which according to the Information given by ſome *Spaniards*, is not eaſily to be diſtinguiſh'd from the Main, and it lies ſo, that thoſe that paſs by it are apt to think 'tis a part of the Main; it's rich in Gold, and therefore inhabited by the *Spaniards*, who as certainly flock to all ſuch places, as Eagles and Vultures do about thoſe that are full of Carrion.

Iſland *Mocha.*

Our Company made no diſcovery of this Iſland, but held on their Courſe and came to the Iſland of *Mocha*. It lies in 39 degr. S. L. and is about ſome 4 Leagues over; it is moſtly a high mountainous ground, but round about the foot of it, at half a League diſtance from the ſhore, it's Champion, well cultivated, and ſtock'd with Inhabitants. They had ſome Commerce here with the People, but forc'd to be very wary, and always to ſtand upon their guard while they did ſo, for theſe *Indians* are wonderfully ſly and ſubtle, and ſuch mortal Enemies to the *Spaniards*, that they are jealous of all Foreigners upon their account, and ſuſpect them to be either *Spaniards* themſelves, or to come amongſt them with ſuch deſigns, and for ſuch purpoſes as the *Spaniards* did. 'Twas for this reaſon that they dealt ſo inhoſpitably with Sir *Francis Drake*, and deceiv'd him with ſo fine a treachery; the reſult of which was the killing or wounding all his Company, and grievouſly hurting himſelf into the bargain. He had fewer wounds than any of his Men, but yet he had three, and two of them upon his Head. Sir *Richard Hawkins*, who had this example before his Eyes, endeavour'd to manage matters ſo with them as not to be made a Second himſelf, but yet they had very near been too hard for him with all his care and vigilance, and he was forc'd to deal roughly with ſome of them to prevent their doing him a miſchief.

Subtle People.

Their Habits and Houſes.

Theſe *Indians*, for their Manners and Cuſtoms, are pretty near akin to them of *Arawka*, which have the reputation of the moſt valiant and hardy Soldiers in all that part of the *Indies*: They are all Cloath'd in Woollen, their Caſſocks are made like a Sack, ſquare, with two holes for the Arms, and one for the Head, but they are all open below, without Lining, or any other Art to be found in the compoſure of them. Their Houſes are built round like our Pigeon-houſes, with a ſort of a Funnel (which ſerves for a Chimney) at the top to diſcharge the ſmoke. As for the People themſelves, they are generally tall, ſtrong and well made, of very great agility and dexterity in the uſe of their Arms, or any ſort of Exerciſes; they have much better Countenances than moſt of the *Indians* in other Parts, and thoſe better Faces in them are the Companions of much better Senſe, and more Ingenuity too. They uſe the common Weapons of the barbarous Countries, but not after the common and barbarous manner, for they are skilful and valiant Soldiers, and capable of making an Adverſary tremble that has to do with them. The Iſland affords excellent Sheep, but the People were not willing to part with any of them, ſo that they only juſt taſted the Mutton to be extraordinary good, but could not purchaſe any ſtore of it upon any terms whatſoever. There's no doubt, but thoſe that had come hither before ſuch things as *Spaniards* were known amongſt theſe People, might have found very good Entertainment; for as the Country is able to afford it, ſo the Inhabitants don't ſeem to be naturally ſo ill-diſpoſition'd as they ſhew'd themſelves to be, but rather to be ſour'd by ill uſage, and provok'd into ſuch a fierce and froward temper by the Cruelties and Barbarities that have been practis'd amongſt them. As for our Men, they plainly ſaw that there was no good to be done here, nor no way to perſwade the *Indians* into a good opinion of them, for they made great fires upon the Iſland and upon the Main, which was evidently to give notice to one another to be in a readineſs either to reſiſt or attempt ſomething, and either way was proof enough that they deſign'd to have nothing to do with them; and therefore they determin'd not to ſpend any more time a courting of their Friendſhip, but having well refreſh'd themſelves ſet ſail.

Good Mutton.

Miſchief of the *Spaniards* ill treatment of the *Indians*.

Note.

On the S. W. of this Iſland lies a great ledge of Rocks which are very dangerous, and 'tis good to be careful how one approaches with a Ship to the Iſland on any ſide. Over againſt this Iſland of *Mocha* lies the City Imperial, 8 or 10 Leagues up in the Country; and all along the Sea-coaſt from *Baldinia* to 36 degr. the *Indians* have in a manner rid their hands of the *Spaniards*.

Imperial.

St. Mary's Iſland.

They held their Courſe now for Iſland *St. Mary*, which lies in 37 degr. 40 min. which is little and low, but fertile and well peopled. Some 10 Leagues to the Northward of this Iſland lies the City *Conception*, which has a very good Port; from whence they Coaſted along till they came in 33 degr. 40 min. about which height lies the Iſlands of *Juan Fernandes*, betwixt 60 and 80 Leagues from the ſhore, known for the plenty of Fiſh they yield, and the good refreſhment to be had there. Sir *Richard Hawkins*'s deſign was not to diſcover himſelf upon this Coaſt till he was got paſt the great Port of *Lyma*, and there were many weighty Reaſons that inclin'd him thereto; but his head-ſtrong company would not hear of this, their minds were ſet upon Spoil and Plunder, and they were for taking the firſt they met with, whether it expos'd them to the *Spaniards* notice or no. To comply with their humour, therefore he hal'd the Coaſt aboard, and diſcover'd that Evening the Port of *Valparizo*, which ſerves the City of *St. Jago*, ſtanding ſome 20 Leagues into the Country; in this Harbour they found 4 Ships, who no ſooner ſaw them coming, but thoſe that were aboard them turn'd in, and run aſhore with that little they cou'd ſave, leaving them the reſt, and the rifling alſo of all the Store-houſes upon the ſhore. The Pillage of theſe Ships was more for the Belly than the Pocket, conſiſting of Wines, Hens, Beef, Bacon, Wax, Tallow, and other Commodities; beſides which, there were Planks, Spars and Timber, for *Lyma* and the Valleys, which is a very rich Trade, ſince they have no Timber but what is brought from other places. But another Ship that came into the ſame Port while they were there, ſupplied the defects of the others, and brought them a pretty good quantity of Gold which ſhe had brought from *Baldinia*, *Conception*, and ſome of thoſe places: and then the Owners of the other Ships coming to terms with them, for the redemption of the beſt part of their Goods, there was Money coming in that way alſo, ſo that what with one and the other the Booty was not inconſiderable; but then a part of the Eatables, and other uſeful Commodities, were reſerved for the uſe of their own Ship, ſo that upon all theſe accounts they were as well furniſh'd with Proviſions, and other Neceſſaries, as at their firſt ſetting out of *England*.

Perverſe tempers the overthrow of a well deſign'd Voyage.

Valparizo Harbour.

This Harbour of *Valparizo* is good for all Winds, except thoſe that blow from ſome point to the North, for it runs up S. & by W. and S. S. W. but 'tis to be conſider'd that it has abundance of foul ground. A League to the Southward, or better, before a Man diſcover this Bay, there lies a great Rock or ſmall Iſland near the ſhore, under which a Ship may ride: It is a good mark, and a ſure ſign of the Port; and when the Bay is diſcover'd, a Man muſt give a good birth to the Harbour, for there are dangerous Rocks lying a good diſtance off. There is neither in this Port, nor any other place till you come to *Guayaquill*, any thing of flux or reflux; which *Guayaquill* is in 3 degr. S. L.

Quintera Harbour.

About 10 Leagues to the Northward of this Harbour is the Bay of *Quintera*, which is very open, and affords good anchoring. Here 'twas that Admiral *Candiſh* was betray'd, and ſeveral of his Men murder'd and taken by the treachery of a raſcally *Spaniard*, whom he had brought out of the midſt of a hundred Deaths at the *Magellanick Streights*, and maintain'd, together with his Company, (who muſt all have ſtarv'd elſe) till he had ſet him down here.

Coquinbo an Admiral's Port.

From *Valparizo* they ſail'd to *Coquinbo*, which is in 30 degr. This is one of the beſt Harbours in the whole S.

Directions to find it.

Deſcription of the Country of *Coquinbo.*

Gold.

Commodities.

Sea, it is Land-lock'd for all Winds, and capable of holding a great many Ships; but the ordinary place where Ships lade and unlade is between a Rock and the Main, on the Weſt-ſide, about half a League up within the entrance of the Port, which lies S.&S. by E. In the Country directly over the Port is a round piked Hill like a Sugar-loaf, and before the entrance on the S. point of the Port, coming in out of the Sea, is a great Rock, a good birth from the ſhore; and theſe are the beſt marks to know the Port by. While *Baldinia* and *Arawca* were in Peace, and free from the troubles and combuſtions of the War, that is, before the raking *Spaniards* got thither, the moſt plenty of Gold was reckoned to be there, and perhaps is ſtill; however, the Mines of *Coquinbo* have ſince got the reputation. But this Country is not only rich in Mines of Gold but Copper alſo, which they carry to *Peru*, and ſell it cheaper there than 'tis ſold in *Spain*. In *Coquinbo* it ſeldom rains but a ſhower proves a golden one to them, for the violence of the water waſhes the Gold off from the Mountains, and beſides furniſhes them with water for the ſetting their Engines a work. It affords a great deal of Linen and Woollen Cloth, and great ſtore of *Indian* Mantles, with which they furniſh other Parts, but 'tis very courſe Stuff. They have no Iron nor Pewter, as alſo no Silk nor fine Linens, and therefore all theſe are mightily eſteem'd; and ſo are all Haberdaſhers Ware, Edge-tools, Arms and Ammunition, and the like.

Arawca.

An excellent Country.

Fruits and Animals.

Gold out of the Mines, and from the Mountains and Rivers.

Bezoar Stone.

Qualities of the People.

Courage of the *Arawcans.*

A Story of an *Arawcan* Captain.

From the Port of *Coquinbo* they ſhap'd their courſe for *Arawca*, one of the fineſt Countries that the Sun ſhines upon, for the temperate and wholſome Conſtitution of the Climate, and the abundance of all things ſerviceable in life, either for Pleaſure or Neceſſity. The Mines of Gold and Copper are innumerable, and all manner of Proviſions are ſo plentiful, that the meaneſt of the Inhabitants have their Houſes always furniſhed with Bread, Wine, Fleſh and Fruits; and out of their Stores, or rather Superfluities, they ſupply the neighbouring Parts. The *Spaniards* brought in the Country at firſt *European* Horſes, Oxen and Goats, which took ſo well, and multiplied to that degree, that they are to be ſeen thouſands of them together in Droves and Herds, wild, and without any Owner; but beſides theſe, there are thoſe which are bred in the Country, and common to moſt Parts of *America*, in vaſt numbers too. Amongſt theſe kinds of Animals, the greateſt curioſity is the *Chinchilla*, a little Beaſt like a Squirel, but grey, and its Furr the moſt ſoft and delicate of any that's known, for which reaſon all the Princes and Noblemen are very fond of them, and buy them almoſt at any rates. They have all the Fruits that are to be found in *Spain*, except Plumbs, Cherries and Almonds, beſides thoſe that are of the peculiar growth of the Country; but as for them three ſorts of Fruits, our Travellers tell us they never obſerv'd any of them in theſe Parts of the *Indies*. Their Gold they got two ſeveral ways, one by waſhing away the Earth and Droſs from it in great Trays of Wood, which requires no little Art and Care, and the other by drawing it out of the Mines, which is much more laborious, not only in the procuring the very Ore, but ſeparating and purifying the Gold afterwards. Another Commodity they have alſo, which ſome *Europeans* have made almoſt as valuable as Gold, which is very fine and large Bezoar Stones; thoſe they have great plenty of, for the Animals that afford them are far from being rarities amongſt them. The People are very Induſtrious and Ingenious, of great ſtrength and invincible Courage. This is ſufficiently prov'd by their ſuſtaining a violent War againſt the *Spaniards* for above 40 Years together, and maintaining their Liberty inviolate at laſt, for the *Spaniards* could not by any means conquer and enſlave them as they had done by the reſt of the *Americans*; and 'tis certain that they never did meet with ſo vigorous an oppoſition, and ſo rough a treatment any where, take it all over the *Weſt-Indies*, as they did here. They fight either on foot or a Horſeback: thoſe that uſe Horſes, are arm'd with no ſtouter Armour than a Beaſt's Hide, which they put on upon their own backs juſt as it comes off from the others, green and raw, without any farther dreſſing or preparation; and if it be wet at firſt, they wear it till 'tis dry, if ſoft and pliable, the heat of their Bodies will make it hard and ſtiff, and ſit like a Coat of Mail. Notwithſtanding, one *Arawcan*, in this leathern Sute, let him have but a Lance, will fight hand to hand with the beſt *Spaniard* cover'd with Steel from head to foot. And for an inſtance of the indomitable Courage and Reſolution of theſe People particularly againſt the *Spaniards*, we have this Story related of a famous Captain amongſt them. This Perſon had ſignaliz'd himſelf in ſeveral very conſiderable Actions againſt the *Spaniards*, and was known always to be one of the forwardeſt to undertake or enterprize any thing that tended to the freeing his Country from the Tyranny of ſuch cruel enemies; but at laſt, 'twas his hard fortune to fall into their hands, and they very well knowing him, and his particular ſpleen againſt them, reſolved to prevent his fighting for the future, and for that end cut off both his hands. They were ſure now indeed never to fall into his, but he had a pair of ſtumps yet left to plague them, and a heart as full of courage as ever; and therefore to have made themſelves ſecure, they ought not to have truſted this bold *Arawcan* with a Head upon his ſhoulders, but have taken that into their keeping too as well as his hands. However it was, whether by policy he made his own eſcape, or the *Spaniards* deſpiſing his (now) impotent rage and fury, ſent him back into his own Country, yet home he came, and inſtead of being baulk'd at ſuch a loſs as he had ſuſtain'd, or ſitting ſtill as a Man that had no more to do with the concerns of War, he beſtirr'd himſelf more vigorouſly than ever, aggravating the barbarities committed by the *Spaniards*, and doing all that cou'd be to provoke his Countrymen to a ſevere revenge; and they who needed but little perſwaſion to fight with the *Spaniards*, were now incens'd to the higheſt degree to ſee one of their principal Leaders thus ſerv'd by them. In the ſucceeding Battel this brave *Arawcan*, who cou'd not fight, diſcharg'd the Office of a General; he was continually going about from one place to another, to encourage and hearten the Soldiers, and having loaded his two ſtumps with bundles of Arrows, he ſupplied thoſe that wanted with freſh, as faſt as they ſpent upon the Enemy. In a word, what with his Preſence and Soldier-like exhortations, he did as much ſervice without ſtriking a ſtroke, as a part of the Army did with fighting; and tho' the particulars of the Battle are not told us, yet there's reaſon to believe the *Spaniards* had cauſe to wiſh they had taken his Head the ſame time they did his Hands.

Arawca.

The *Indians* of *Moormoreno*, and their kindneſs to the *Engliſh*.

The *Spaniards* kindneſs to them.

A fine Inſtructor.

As for the Town of *Arawca*, it ſtands in a great large Bay, in about 18 degr. S.L. before you come to it, a League to the Southward of the Town and Road is a high round Hill, much higher than the reſt of the Land of the Bay about the Town. When our Ship came to an Anchor here, they met with a Bark laden with Fiſh from *Moormoreno*, a high Head-land between 24 and 25 degr. S.L. whether the Boats ordinarily go a fiſhing every Year. Our *Engliſh* were much beholding to theſe *Moormorenians*; 'tis true they were their Captives, but they complimented them exceedingly, and gave them particular marks of their friendſhip and eſteem. They call'd the *Engliſhmen* Brothers, and were themſelves the greateſt Brutes in the World, and had hardly any thing of Men except the ſhape; they were, to ſpeak properly, rather Fiſh than Men, for they liv'd as naturally in or under the water, as in the open air, and wou'd dive as well as if they had been ſpawn'd in that Element. Their Country is barren, and affords them little or no ſuſtenance, and therefore they go into the water for't, where if they meet with a live Fiſh they ſwallow him preſently, and eat without the Ceremonies of Sawce and Dreſſing, as other Sharks do. The *Spaniards* make their Markets of them, and uſe them as they would Otters in the water to catch Fiſh, or Aſſes upon the Land to carry Burdens: they give them neither Food nor Wages, but leave them to ſhift for themſelves; their other Slaves they uſe like Men, in reſpect of the Body, but theſe they uſe like Beaſts, taking care neither for Body nor Soul. But one wou'd not expect much care for the Souls of Men from ſuch, one of whoſe Inſtructors of a Town of *Indians*, had no more to teach them than this, To ſay *per ſignin ſancti cruces*; a profound Doctor, and who ought to have learn'd Grammar along with his Catechize.

Bay of *Piſco.*

Cape of *Sangalean.*

Spaniſh Armado comes after them.

From the Town before-mention'd, they continu'd their courſe along the Coaſt till they came athwart the Bay of *Piſco*, which lies in 15 degr. 15 min. S.L. after which, being clear of Cape *Sangalean*, with its Iſland, they Anchor'd two days athwart of *Chilca*. But now the Vengeance they had pull'd down upon their heads by ſailing upon theſe Coaſts began to purſue them, a formidable Armado was rigg'd out and in queſt of them: Advice had been given by Sea and Land, and the Viceroy of *Peru* had had more than ſufficient Information that ſuch Enemies were beating about upon the Coaſt. In order therefore to put an end to their Piracies, he fitted out 6 Warlike Ships, furniſh'd with 2000 Men, and all other Neceſſaries, under the command of one of his Relations; and our Ship had gone but a little way from the Port of *Chilca* before ſhe diſcover'd them. The *Spaniards* and they being in ſight of one another, great preparations were made of both ſides for a fight, but the Wind interpos'd, and fought ſo well on our Mens behalf,

that

Their Ships beaten with the weather.

Engliſh eſcape thro' them.

that the unweildy Ships of the *Spaniards* came off with broken Maſts and ſhatter'd Tackling by the bargain. The Admiral ſnapt her Main-maſt aſunder, and ſo began to lagg a-ſtern, and with him two other Ships. The Vice-Admiral ſplit her Main-ſail, and the Rear-Admiral crack'd her Main-yard, and one only of the Armado (that was gotten to the Windward of them, and had none of theſe afflictions) was at leiſure to fight, but ſhe had no ſtomach to it, and durſt not begin the Attack. Thus they lay for a whole day viewing one another; but as night came on, Sir *Richard* began to conſult with his Officers what courſe was beſt to take, they were in a manner ſurrounded, for the *Spaniſh* Admiral, with two more, were a-ſtern of them, the Rear-Admiral right a-head, the Vice-Admiral to the leeward, and one upon the loof, and moſt of them within ſhot. In ſhort, after many debates, 'twas concluded that they ſhou'd bear up before the Wind, and endeavour to make their eſcape between the Admiral and Vice-Admiral, which they accordingly put in execution (before the Moon was up) and very happily perform'd, ſhaping their courſe for the Bay of *Atacames*, where they intended to take in Neceſſaries, and to purſue their Voyage. Inſtead of being puniſh'd by the *Spaniards* for what they had already done, they were now going on to do more, and an opportunity ſhortly offer'd it ſelf, which was a good Ship coming in their way about 50 Leagues to the Northward of *Lyma*, and in ſight of the Town of *Mongon*; ſhe was laden with Wheat, Sugar, Cordovan Skins, and *Miele de Canas*, of all which they took what they had a mind to, and ſo burnt her, but the company they ſet aſhore.

Sailing with few Men in the South-Sea, and the reaſons of it.

It's ſtrange to ſee with how few Men they'll manage a Ship in the South Sea, for in this Prize, which was above 100 Tun, there were but 8 Men, and they don't uſe to beſtow above 14 or 15 in a Ship of 300 Tun; nay, more than that, 'tis credibly reported that a Ship has been ſail'd from *Guayaquill* to *Lima*, which is above 200 Leagues, by 14 Men only, and yet deep loaden too. But then the buſineſs is, they are forc'd to gain their Voyage by turning to Windwards, which is the greateſt toil and ſlavery the Mariners have, and they ſail at a very ſlow rate in all theſe ſort of Voyages, inſomuch that they are ſometimes 4 or 5 Months between *Guayaquill* and *Lima*; but they are pretty ſecure in that Sea from Storms, and have aſſurance of a never-failing Breeze, which is the reaſon that every Seaman ſtrains himſelf to the uttermoſt to do the work of two Men.

Port *Malabrigo.*

They held on their courſe till they came thwart the Port of *Malabrigo*, which is in 7 degr. S. L. In all this Coaſt the current runs with a very great force, but never obſerving any ſtated Courſe, except that ſometimes it runs along the Coaſt to the Southward, and at other times to the Northward. As for inſtance, at this time the Courſe of it was to the Northward, and it forc'd them ſo violently to the Landwards, that without eſpecial Providence calming the Wind, they had there had a miſerable end put to their Voyage. 'Twas about the Point of *Aguſſa* that they were in this imminent danger (which they note thus particularly, that others may be aware of the ſame when they come thereabouts.) Thwart of this Point lie two Deſert Iſlands called *Illas de Lobos*, for the multitudes of Seals that haunt the ſhore; in the bigger of them is very good and ſecure Harbour, and they both lie in 6 degr. 30 min. S. L. or near thereabouts.

After this they continued their Courſe along the ſhore, and came athwart the River of *Guayaquill*; this has two Iſlands in the mouth of it, the Southerly and biggeſt call'd *Puma*, in 3 degr. S. L. and the Northerly call'd *Santa Clara*. *Puma* is inhabited, and 'tis here that the *Spaniards* build their principal Ships, becauſe of the vaſt quantities of Timber hereabouts; for from this River, both *Lima*, and all the Valleys, are furniſh'd with Timber, and they have none but what is brought from hence or from *Chili*. By this River alſo paſſes all the chief Trade of the Kingdom of *Quito*; it's Navigable ſeveral Leagues into the Land, and is all along well-ſtock'd with Timber. The water of it is found by experience to be good for all aches of the Bones, and for the Stone and Strangury; the reaſon of which, ſome will fetch from the Vertues of the Sarſaparilla, with which 'tis impregnated, all the Banks and Low-lands adjoining being abundantly repleniſh'd therewith, but how wiſely or truly the Philoſophers and Phyſicians muſt judge. Another thing the River affords, which ten to one cures all diſtempers if a Man happens to light on't, and that's a very fierce and ravenous Alligator; many poor *Indians* and *Spaniards* have had their Bones cruſh'd by theſe, and they are ſo numerous too, that they are ſeen here in whole ſhoals together, as Fiſh are in other Rivers.

In *Puma* the Tide riſes 15 or 16 foot, and from this Iſland to *Panama* they keep the ordinary regular Courſe. Some 5 or 6 Leagues to the Northward of *Puma* is *la Punta de Santa Elena*, under which is good Anchoring, and very clean ground. Having paſs'd this Point, they made the Iſland *de Plata* in 2 degr. and *Puerto Vicio* in 2 degr. 10 min. and Cape *Paſſaos* which lies directly under the Equinoctial. Some 80 Leagues to the Weſtward of this Cape lies a heap of Iſlands, call'd by the *Spaniards Illas de los Galapagos*, which are deſert, and afford no manner of refreſhment. From Cape *Paſſaos* they directed their Courſe to Cape *St. Franciſco*, which is plac'd in 1 degr. N. L. 'tis remarkable enough not only for its heighth, but being all cover'd with Trees, as is alſo the Land over the Cape, and all the Coaſt from hence to *Panama*. From the *Magellanick Streights* to this Cape *St. Franciſco*, in all the Coaſt from Headland to Headland, the Courſes lie betwixt the N. & N. by W. and ſometimes more W. tho' that but ſeldom. It's a bold Coaſt, and but little ſubject to foul Weather, or alteration of Winds, for the *Breeze* (which is here the Southerly VVind) blows continually from *Valparizo* to Cape *St. Franciſco*, except it be a great chance indeed.

They ſee the *Spaniſh* Fleet.

Noiſe and boaſting amongſt the Seamen.

Perfidious Gunner.

The Bay of *Atacames* (which they had propos'd to come to) lies about 7 Leagues from the Cape; in the midway, ſome Leagues from the ſhore, you meet with a a Bank of Sand, to avoid which, ſome care muſt be taken, for in ſeveral parts of it there's but little VVater. This Bay appears like an Iſland, and in high Springs 'tis believ'd that the Sea goes quite round about it. To the Eaſtward it has a high ſandy Cliff, and in the midſt of the Bay, a fair Birth from the ſhore, lies a big black Rock above water, from which to the ſandy Cliff is a drown'd Marſhy ground, and a River which is broad, but has no depth. The Bay of *Atacame* is in 1 deg. N. L. the fatal place in which the Voyage was terminated, and all their deſigns ruin'd. But for a clear account how this came about we muſt know. That after Sir *Richard Hawkins*, with his Ship and Pinnace, had got thro' the Armado, they being diſappointed of their hopes, return'd back again to *Lima*; but here they were moſt miſerably inſulted and mock'd for their fruitleſs Expedition. The Women, to abuſe them the more ſenſibly, put on Swords, and took Fire-Arms in their hands, and demanded of the Viceroy that they might be diſpatch'd to fight with the *Engliſh* Ship. This went ſo near the hearts of theſe gallant Soldiers, and beſides provok'd the Viceroy ſo far, that he commanded the Armado forth again, making them ſtronger than they were before; ſo that theſe buſie Goſſips were the cauſe of all the miſchief, if they could but have held their Tongues, and been contented to have ſate down with the diſgrace as well as the Men, (who were more concerned in it than they) our *Engliſh* might have preſerv'd their Ship and their Liberty; but they muſt be paſſing their Jeſts upon the Soldiers, and putting Swords by their ſides forſooth, as if they knew how to manage them as well as Ladles, Pokers and Fire-pans, their own proper weapons. They were very angry no *Engliſh* Priſoners were brought home, (which we muſt ſuppoſe they expected) and therefore wou'd not, or cou'd not be quiet, till they had ſent the Armado abroad again to get ſome. VVell; it was in the Bay of *Atacames* that our People firſt ſpied the enemy approaching, and as ſoon as they knew who they were, they gueſs'd without much trouble what they came for. The Mariners were all in general very uppiſh upon this Occaſion; there was nothing but hectoring and bouncing amongſt them, and no noiſe cou'd be heard but the Proclamations of the great Actions they wou'd do. One promis'd to cut down the Admiral's Main-yard, another to take his Flag; and the Gunner, for his part engaged, that with the very firſt tire of ſhot he would lay one of them in the Suds. Others wiſh'd they had never come out of their Country to be ſo diſgrac'd, becauſe Sir *Richard Hawkins* made ſome demur about fighting this Armado, ſo well provided as it was, and ſo much ſuperiour in number. But (as commonly it happens) theſe very bluſtering People were as much cool'd when they came to the trial; they did little or nothing of the many mighty things they had talk'd of, and the Gunner, for his part, was like a Man without life and ſoul. But there were ſhrew'd ſuſpicions of his ſullenneſs and treachery, and if he were not a Villain, he was the likeſt to one that ever ſtood in ſuch a Poſt, for all his Implements were out of order, ſpoil'd, and not fit for uſe; and he was either ſuch a Coward, or ſo great a Raſcal, that he himſelf ſtood as uſeleſs as a great many of his Tools. Notwithſtanding this, the fight was long and tedious, and (there being ſome good hearts and diligent hands on both ſides) briſk and ſharp too; they fought, and then breath'd, as it were by conſent, and then fell

to

Dreadful fight.

Engliſh yield upon good terms.

Engliſh make their terms.

Spaniards accept them.

The kind uſage of Sir *Richard* and all the *Engliſh* by the *Spaniſh* Admiral.

Cuſtom amongſt the *Spaniards*.

to it again, and held it at this rate for three days, and almoſt all the nights too. The *Spaniards*, for the moſt part of that time, kept pouring in the great and ſmall Shot, which could not be anſwered ſo warmly by the *Engliſh*, as wanting both materials and hands to manage it. But they were ſo civil too, as ever now and then to call upon the *Engliſh* to ſurrender, promiſing them good Quarter upon that condition; and this the company were fond of ſubmitting to, and importun'd Sir *Richard Hawkins* to take pity of their diſtreſſed Caſe, and not make them all Sacrifices or Slaves to the *Spaniards*, whoſe fury 'twas impoſſible for them now to eſcape. But this thought of yielding (tho' of a ſingle Ship to a whole Armado) wou'd not down with him, and therefore he commanded them all to their reſpective Stations again; yet he was now ſo wounded and weak himſelf, that he had little reaſon to expect to ſee the iſſue of the matter, and was beſides obliged to undertake the diſcharge of the hazardous and laborious Office of a Gunner. In ſhort, they maintain'd the fight till the 3d day in the Afternoon, and then it appear'd to be impoſſible to do ſo any longer, for all the Sails were torn, the Maſts ſhatter'd, the Pumps ſhot to pieces, the Ship all over mangled, with the beſt part of the Men kill'd, and 7 or 8 foot of water in the Hold. Being therefore in this ſinking condition, there was no farther time to diſpute whether the *Spaniards* Offer ſhou'd be accepted or no; and therefore Sir *Richard* order'd a certain *Spaniſh* Pilot, which he had Priſoner aboard, to go in his Name to Don *Beltran de Caſtro* the *Spaniſh* Admiral, and tell him, That if he wou'd give his Word and Oath (as the King's Officer) to receive them all a *buena querra*, to give them Life and Liberty, and Paſſage as ſoon as might be into *England*: And farther, to ſend alſo ſome certain Pledge for the confirmation of all this, that then he wou'd ſurrender his Ship; but if he would not engage to do thus much, he ſhou'd never enjoy any of the Fruits of his Victory, ſince they were all reſolv'd to periſh with their Ship, rather than endure any manner of ill treatment from the *Spaniards*. And really, by their Demands, one wou'd not have thought they were in much danger of any, or that they muſt the next hour, by an unavoidable neceſſity, be either ſwallow'd up of the Sea, or fall into the hands of the *Spaniards* without any terms at all. And 'tis no ſmall wonder that the *Spaniards*, under ſuch circumſtances of advantage, ſhou'd ſtand to argue *Pro* and *Con* about the matter, and not rather purſue what they had begun, and accompliſh the fate of the crazy Ship, and its as weak Defendants. But whatever were the reaſons, 'tis certain they did otherwiſe; the Admiral ſwore by his Maker, and by his Knighthood, (to bind the bargain more firmly) that he wou'd receive them all to fair Quarter, and grant every thing elſe they demanded, and in token of this he drew off his Glove, and ſent it for a Pledge. Upon this the *Spaniards* enter'd the Ship, crying *buena guerra* as they came; neither was there any ſort of Outrage or Inſolence committed by them. And which was a particular mark of the Admiral's civility to Sir *Richard Hawkins*, he ſent for him into his own Ship, that he might be ſure to be out of all harms way when the multitude came aboard. The kind and honourable uſage he had from that generous *Spaniard*, as it was hardly to be expected from an Enemy whoſe patience had been ſo tried, ſo not eaſily expreſs'd. Neither did his Humanity and Courteſie ſtop there, but extended it ſelf to all the Seamen and Mariners who were now become his Priſoners; he gave Order for the ſupplying them with all Neceſſaries, and the looking to their Wounds, which was done with ſo much care and diligence, that not one of all the whole company died that was alive at the ſurrender of the Ship. 'Tis true, there were ſome of the *Spaniards* that were of quite another temper, that grumbled at this kindneſs, and ſaid that the *Engliſh* ought to be treated as Pirates, and Faith was not to be kept with Hereticks, and many other things of that nature; but the Admiral put Sir *Richard* out of all doubt and fear, by repeating his ſolemn promiſe that all things ſhould be managed according to the agreement, and that provided the King of *Spain* (according to cuſtom) left him to his diſpoſal, his Liberty ſhould coſt him no more than a Brace of *Engliſh* Greyhounds, a Ranſom ſmall enough, conſidering what 'twas in his power to have demanded. Neither did the *Spaniſh* Admiral's making this proviſo (if his Maſter left Sir *Richard Hawkins* to his diſpoſal) ſeem to be any way capable of giving a juſt ſuſpicion of any ſiniſter deſign on foot againſt his liberty, for the King might poſſibly uſe his Prerogative againſt Cuſtom, and not allow his Admiral the Privilege that us'd to be allowed as his Right, otherwiſe the matter was plain enough, and the preſumption as ſtrong as well cou'd be, that Sir *Richard* might be ſure of his liberty, for in the *Spaniſh* Armado's the Cuſtom obtains thus: If there be an abſolute Admiral, the 10th part of all Spoil and Plunder belongs to him, and he has it not by Lott, and as it happens to fall to his ſhare, but by Choice, for he takes what he pleaſes himſelf; in the ſame manner he proceeds if there be ever ſo many or ſo few Ships of the enemy taken, but if there be but one, ſhe is entirely at the Admiral's diſpoſal, and ſo are the Fortunes and Liberties of all that are aboard her.

Pearl-Iſland.

A great Pearl.

With this hope and expectation, our *Engliſh* went away with the *Spaniſh* Fleet towards *Panama*: In this Courſe they came by the famous *Pearl*-Iſland, which lie along the Coaſt, beginning ſome 8 Leagues W. S. W. from *Panama*, and run to the Southward near 30 Leagues. There are ſeveral of them, and moſt of them inhabited by *Spaniards*, and *Negroes* which are their Slaves, and kept only to fiſh for Pearl. The Pearl lie in ranks in the uttermoſt part of the Oyſter which is call'd its Ruff, and the biggeſt are generally found next to the end or joint of the Oyſter. Thoſe in the *Eaſt-Indies* have commonly the Character of the beſt and fineſt, tho' the *Weſt-Indies* (in the judgment of our Author) do produce as good; and perhaps one of the largeſt in the VVorld was found in theſe Pearl Iſlands, it was as big as the Pommel of a Ponyard, and was given by King *Philip* the Second of *Spain* to his Daughter *Elizabeth*, Wife to *Albertus* Archduke of *Auſtria*. Within the Pearl Iſland lies a ſmall Iſland which they call *La Pachete*, which contains not a League of ground, but is a moſt fruitful ſpot; it belong'd to a private Man, who by his own and his Slaves induſtry, made it bring him the value of 50 or 60 pound every Week in Fruit, which he conſtantly ſent to the Market at *Panama*.

Direction in failing to *Panama*.

In their Courſe to *Panama*, they ſail'd between the Iſland and the Main, where there is a very good Channel of 3 or 4 Leagues broad, and without any danger, except a Man come too near the ſhore on any ſide; and yet this is thought the better Courſe than to go a Seaboard of the Iſland, becauſe of the ſwift running of the Tides, and the advantage to ſtop at Ebb; as alſo for Succour and Aſſiſtance, if a Man ſhou'd happen to be calm'd, which may happen here ſometimes.

Perico, the Port.

At laſt they came to an Anchor under *Perico*; theſe are two little Iſlands which make the Port of *Panama*, which is about two Leagues W. N. W. from the City, yet the City has alſo a Port for ſmall Barks at full Sea, having then about 7 foot water, but at ebb 'tis quite dry.

Joy amongſt the *Spaniards*.

News being ſent to *Panama* of the ſucceſs of the Expedition, there was great rejoycing there, expreſs'd by the diſcharge of all their Artillery, and the prodigious Illuminations, which made the City at a diſtance look as if it had been all of a blaze. The Armado alſo came thundering on with their Artillery, and the Triumph wou'd have better befitted the Conqueſt of another Armado, than one poor Ship, which was yet all they had to ſhew for it.

As to the particulars of Sir *Richard*'s Entertainment, Detainure there, Liberty and Travels homewards, we have no account of them, for here his Relation breaks off, tho' he promiſes a ſecond Part, wherein theſe ſeveral Paſſages ſhou'd be largely handled.

The reſt of Sir *Richard*'s Adventures.

In general, we find by what is occaſionally dropt, that after being ſome time at *Panama*, where he was very civilly entertain'd by the ſame Don *Beltran de Caſtro*, he was ſent into *Peru*, and reſided both at *Lima* and *Cuſco*, the two moſt celebrated Cities of that glorious Empire. That he was a Priſoner here is paſt all doubt, but that he was treated by the Vice-Roy, and all the Noblemen of the Country, more like a Prince than a Priſoner, is alſo moſt certain. How 'twas with him at the Iſland of *Tercera*, at *Madrid* and *Sevil*, (for at theſe places he was alſo confin'd) and what accidents befel him there, the ſecond Part which he promiſed muſt diſcover. This muſt be ſaid, that he no where diſcovers the leaſt degree of ſuſpicion of any treachery in the *Spaniards*, nor complains of any hard uſage; and his company were every where as eaſie as himſelf.

One thing is to be obſerv'd, that Don *Beltran de Caſtro* ſhew'd him a Letter from the King of *Spain* to the Vice-Roy of *Peru*, wherein was given an account of his Voyage, the Ships, their Number, their Burden, their Ammunition, and whither they intended to go; adding withal, *You may ſee* (ſays he) *by this, whether the King my Maſter has not ſome good Friends in* England. To this Sir *Richard* reply'd, *That 'twas no wonder his Maſter had ſo many Friends every where, ſince he had ſo much Gold and Silver; and 'twas no uncommon thing to ſee them make People tell Tales out of School, and out of Country too. And the truth of it is, the* Spaniards *ought not to be blam'd in this caſe for getting Advice, but the baſe and perfidious* Engliſh *for giving it.*

CHAP.

CHAP. XI.

An Account of the taking of St. Vincent, *and* Puerto Bello, *in the* Weſt-Indies, *by Captain* William Parker *of* Plimouth.

Nov. A. D. 1601.

A great Tornado.

THE Fleet which did theſe great Exploits was but ſmall, conſiſting of no more than two Ships, one Pinnace and two Shallops. The *Prudence*, Admiral, was but of 100 Tun, and had about 130 Men aboard her; the *Pearl*, Vice-Admiral, was of 60 Tun and 60 Men; the Pinnace of 20 Tun and 18 Men. The Perſons that ſignaliz'd themſelves in this Action, and had a part of the Command, were theſe that follow: Captain *Giles*, Capt. *Ward*, Capt. *Fugars*, Capt. *Loriman*, Capt. *Aſhley*, with ſome other Gentlemen as Volunteers. In their paſſing by the Cape of *St. Vincent* in *Spain*, commonly call'd the South Cape, they met with ſuch a violent Tornado, or guſt of tempeſtuous Wind, that their Pinnace, with all her Men but three, were loſt with it, and glad to come off themſelves without any more damage.

St. Vincent taken.

Directing their Courſe from thence to the Iſlands of Cape *Verd*, immediately upon their arrival there they ſet upon *St. Vincent*, which is one of them, and took the Iſland and the Town; the Spoil of which was given to the Soldiers, and the Town it ſelf after that to the Flames.

Pearl Fiſhery taken.

Hence they haled over to the Coaſt of *Terra Firma*, and coming to the *Rancherie*, or Pearl-Fiſhery in the ſmall Iſland of *Cubagna*, they found the Governour of *Cumana* there with a Company of Soldiers; notwithſtanding which they landed their Men, and were receiv'd with great warmth and briskneſs by the Enemies, however at laſt they got the better on them, took the Place, with divers of the beſt Men Priſoners, together with ſeveral of their Barks and Boats at the ſame time; for the Ranſom of all which, Capt. *Parker* had 500 *l.* in Pearl paid him.

Portugueze Ship taken.

This done they proceeded with their Voyage, ſailing directly for Cape *de la Vela*, where they met with a great *Portugueſe* Ship laden with Negro's from *Congo* and *Angola*, and bound for *Carthagena*, from whence thoſe wretches were to be ſent to the Mines. This Prize, with very little trouble and reſiſtance, came into their hands, and the Redemption of theſe Slaves came to 500 *l.* more; 'tis true they had no benefit by it, being ſtill where they were before, (and 'tis certain are Men that can't alter their condition, being every where doom'd to Slavery) but the Seamen had ſome benefit by it, and tho' 'twas not much, yet 'twas better than lying ſtill upon the water and doing nothing.

They enter the Haven.

After this they went to the Iſland *Cabecas*, where they embark'd 150 of their Men in two ſmall Pinnaces and two Shallops, and then ſail'd to the Iſland *Dos Baſtimentos*, where they pick'd up ſome Negroes for their Guides, and ſo with their Boats and Pinnaces preſently enter'd the mouth of the River of *Porto Bello*; it was night, but they had a bright Moon ſhining upon them, by the help of whoſe light the Watch had quickly diſcover'd them. At their very firſt entrance into the Haven (which is by the way above twelve ſcore over, and very deep at the mouth, and a good way upwards) they were haled by the ſtrong Caſtle of *St. Philip*. Here is always 35 good Braſs Pieces ready mounted to bid an Enemy welcome, and Soldiers enough to manage them. Theſe, as was ſaid, haled our Pinnaces, and ask'd whence they were; to which they (having ſome *Spaniſh* Tongues aboard them for that purpoſe) immediately anſwer'd that they came from *Carthagena*. Upon this, the others commanded them to come to an Anchor, which they did; but about an hour afterwards, Capt. *Parker* took his opportunity to go up the River with his two Shallops, leaving the Pinnaces there at Anchor before the Caſtle of *St. Philip*. But as there is another leſs Fort, called the Fort of *St. Jago*, that lies directly oppoſite to the Caſtle, ſo it happen'd that ſome of the Soldiers there ſpied the Captain moving on with his Shallops, and cried out to him to ſtay, running after him along the ſhore; but he neglected their outcries, went on directly to the Town of *Triana*, and landed his 30 Men, (for he had no more with him upon this deſign) and in a trice, tho' the alarm was given, ſet it on fire, and leaving it burning, march'd into the great and rich Town of *Porto Bello*, to which *Triana* was as it were an inlet. Being entred here, he directed his march immediately to the King's Treaſure-Houſe, where he found a Squadron of Soldiers drawn up to receive him, with two Braſs Field-pieces well mounten on their Carriages. The fight that ſucceeded was ſharp and long, and Capt. *Parker* had loſt the beſt part of his 30 Men, when thoſe which commanded the Pinnaces hearing the alarm, and finding 'twas high time to advance, timely came into his relief with 120 freſh Men, which aſſiſtance turn'd the Scale, and quickly put an end to the conflict, for the *Spaniards* now began to ſecure themſelves by flight, and a good number of them got into the King's Houſe, where they defended themſelves very reſolutely. The beſieging of this took up at leaſt four or five hours, all which time they continued in ſome Action or other with the Defendants; but at laſt the *Engliſh* made their way in, and became Maſters of it, as they were alſo of the whole Town entirely. Amongſt the Priſoners of Quality were the Governor, and the *Scrivano*; as for the *Alcade*, he was run out of Town, and had taken care to have the company of a great gold Chain along with him, which he fled with about his neck. As for the Treaſure found in the Treaſure-Houſe, it was nothing to what they expected, for this place is the Repoſitory at one time of the Year, of all the Treaſure that comes from *Peru* and *Chili*, which ſometimes amounts to more than 6 Millions of Ducats. They, for their parts, now met with no more than 10000 at this time, but if they had come 7 days ſooner had got a Booty of 120000, which were gone in two Frigats for *Carthagena*. The Spoil of the Town otherwiſe, in Money, Plate, and Merchandize, was not inconſiderable, and was all given to the Soldiers, to their no little ſatiſfaction. They did not think fit to make a Penny of the Priſoners that were taken, but rather by ſetting them free without Ranſoms, to give the *Spaniards* an example of civil and generous Deportment towards their Enemies. This Town had two goodly Churches, 6 or 7 fine Streets, 3 ſmall Forts on the one ſide, beſides the great Caſtle of *St. Philip* on the other; and the *Engliſh* were ſo kind as to ſpare all theſe Buildings too, when it was in their power to have demoliſh'd them all, and left nothing but Ruins behind them.

Capt. *Parker* goes on with 30 Men.

Triana taken.

The fight in *Porto Bello*.

The Town taken and ſpar'd by the *Engliſh*.

The *Spaniards* don't diſturb them in the poſſeſſion of it.

In a word, they ſtaid in the Town for a day or two, to ſhew that they were abſolute Maſters of it; in all which time they had not the leaſt diſturbance from any rallied Forces of the *Spaniards*, nor no alarm given, only as they were ſailing away again the Enemy began to appear, and make ſome little ſtir, but 'twas only the exchanging of a few Bullets, and taking leave of each other at parting out of the mouths of their great Guns.

They leave it.

This Action of the taking a Town of ſuch great ſtrength with ſo few Men, bred ſuch an Idea of the *Engliſh* Valour in ſome of the *Spaniards*, that the Governor of *Carthagena* particularly, ſwore he would give a Mules lading of Silver to have a ſight of Captain *Parker* and his Company; and had they been ſure he would have parted with what he had upon ſo eaſie terms as they at *Porto Bello* did, 'tis very likely they might have ſold him that favour, but his ſtrength being uncertain as well as his pay, they did not think fit to attempt him.

The little Fleet came ſafely into *Plimouth* Harbour again, having had the Honour of taking with a few Men, in a little time, and an inconſiderable loſs, one of the fineſt Towns the King of *Spain* has in the *Weſt-Indies*.

CHAP. XII.

Some Notes relating to the General Hiſtory of that Part of the Weſt-Indies *under the Dominion of the* Spaniards: *Collected from the broken Obſervations of* Alexandro Urſino, *a* Roman, *who lived in* Peru *and* Chili 34 *Years; of* Pedro Ordonnes de Cevallos, *a* Spaniſh *Prieſt; of* Lopez Vez, *a* Portugueſe, *taken by Captain* Withrington *at the River of* Plate, *with his* American *Notes about him.*

AS to what concerns the Hiſtory of Nature, the Civil Policy, Cuſtoms and Government of theſe noble Countries, we ſhall afterwards produce, and theſe things in a large and particular Account by it ſelf; wherein the Hiſtories of the two Celebrated Empires, *Mexico* and *Peru*, ſhall be trac'd in all the moſt valuable Heads, and whatſoever we can pick out of Authors of any Character writing upon thoſe Subjects, ſhall be preſented to the Readers view. What is offer'd now, is only a Collection of ſome looſe Notes relating more to the Geography of ſome particular Parts and Places, than of the general Heads that will allow them to come in fairly afterwards; they were thought to be of ſome uſe by their Authors, and therefore by them diligently preſerved and tranſmitted to us. But as things of this kind (being independant upon one another) wont run on (as other relations have done) in a continued uninterrupted Story, ſo the Reader muſt be contented to take them in pieces and parcels, as their Authors have deliver'd them, and the nature of the thing admits of.

Country of New Spain. *Ports.* *Veragua rich in Gold.* Unhealthy. *A ſhort cut to the Sea.*

The Country of *New Spain* has ſeveral very excellent Ports both on the North and the South ſide: The principal of them on the North is *St. Juan de Lua*, at which place all the Armadoes that come from *Spain* are diſcharg'd, and the Merchandizes are carried to the great City of *Mexico*. There are ſeveral alſo which it has upon the South Sea, from whence they trade with *Peru*, *Parawna*, the *Philippine* Iſlands, the *Moluccas* and *China*. The firſt part of the Country (reckoning as you proceed along the Coaſt) that is inhabited by the *Spaniards* is *Veragua*, the richeſt perhaps of Gold in the whole *Indies*, but intolerable ſickly, and hardly fit to be dwelt in. The air is very hot and ſultry, yet not clear and ſerene withal, but thick, and always full of rainy Clouds. It yields little or no Fruit neither, and moſt of the ſuſtenance of the Inhabitants comes from other places; and yet all theſe inconveniences do the *Spaniards* endure for the ſake of the beloved Gold, and wont quit a place that has ſo many contrarieties to nature, for one thing that makes it agreeable to a ſordid covetous humour. There is no more than 4 Leagues between the River *de Carinas* (which iſſues from the Lake of *Nicarague*) and the South Sea, and to bring theſe two together, and open a communication between both ſides of the *American* World by this means, is thought by our Authors to be a much leſs difficult work than ſome of thoſe of the like nature, that were projected formerly by the *Egyptians* and *Romans*.

Terra Firma. *Nombre de Dios.* *Carriage of Goods to Panama.*

From this tract of *Veragua* unto the Iſland of *Margereta*, the Coaſt along is call'd *Terra Firma*; the *Spaniards* gave it that name, becauſe 'twas the firſt firm Land they conquer'd after they had paſs'd the Iſlands. This is alſo hot, wet and unhealthy, like the former. Particularly the Town of *Nombre de Dios* has a ſcandalous reputation upon this account; 'tis the firſt place inhabited after you have paſſed *Veragua*, and were it not for a convenience, the air of it certainly wou'd never have recommended it to have been inhabited at all. But it has a good Port, and 'tis the way by Land to the South Sea, and the trade of *Peru*; and then over againſt it (as it were) on the South Sea Coaſt, ſtands the well-known City of *Panama*, which is not above 18 Leagues from *Nombre de Dios*. To this Town of *Nombre de Dios* does the *Spaniſh* Shipping come and unlade, the Goods being carried from hence in Barks up a River to a Houſe which is call'd *the Houſe of Croſſes*, and from thence upon Mules by Land to *Panama*, which is but 7 Leagues from that forementioned Houſe; and this Carriage is very laborious and chargeable to them, becauſe of the great Rains, and the uneven mountainous rugged ways.

Carthagena. Great Trade. Gold from *Granada.* Carriage of Goods to *Granada from Carthagena.*

From *Nombre de Dios* you proceed to *Carthagena*, the the Country about which is much more healthy, and fuller of Proviſion; the Town it ſelf alſo is larger and fairer by much, and has a Port which far ſurpaſſes all the reſt. If the Trade of *Spain* has made *Nombre de Dios* a rich place, that and others have done much more for *Carthagena*, for here the Ships always ſtay when they go and come from *Spain*; and if they chance to Winter before they go home, they are ſure to lie at *Carthagena*. Beſides, there's abundance of Goods and Merchandize diſcharged here to be carried into the Kingdom of *New Granada*, and great quantities of Gold come from that Kingdom hither. But there is no Land-carriage of Merchandize from *Carthagena* into *Granada*, not only in that this lies 200 Leagues within the Land, but there are vaſt unpaſſable Mountains, and ſtanding Waters in the way, ſo that they carry all up the great River *Magdalen*. This River, tho' it be both large and very deep, yet they cannot go with their Barks above 20 Leagues up it, becauſe of a great current; ſo that the Barks diſcharge all their Goods into ſmall Canoes, which row cloſe along by the ſhore ſide.

Paſſage into *Peru.*

There is a paſſage by the new Kingdom and *Popayan* from *Carthagena* to *Peru*, which is in all about 500 Leagues; ſo that taking the 200 Leagues which they go up the River, the other 300 are thro' a Country well inhabited, and where there is good and quiet travelling. The Poſts do often paſs to and fro this way, but becauſe 'tis very long and tedious, the Merchants don't uſe it but when they are conſtrained to it.

St. *Marta.* High Mountains. Valley of *Tagrona.*

Santa Marta lies 50 Leagues diſtant from *Carthagena* along the ſame Coaſt; 'tis but a poor Town in reſpect of Trade or Building, yet great quantities of very fine Gold are ſaid to be gather'd up hereabouts, which one wou'd think ſhould alter the Character of the place. Here begins the great tract of Mountains whoſe tops are cover'd with Snow, that run thro' the whole Continent almoſt to the *Magellanick Streights*, and are eaſie to be ſeen by their white heads above 3 Leagues into the Sea. Adjoining to them there is a Valley call'd *Tagrona*, the richeſt place yet known; but the Inhabitants are very numerous, and a valiant courageous People too, and uſe ſuch artifices in poiſoning their Arrows, that they have lived hitherto pretty free from invaſions and diſturbances by Foreigners. The *Spaniards* have indeed made ſome attempts upon them, but they have as often been baffled and defeated, and the Valley lies ſtill unconquer'd.

Diſcovery of the River of *Amazons.*

Omitting the Iſlands upon the Coaſt of *Terra Firma*, which are above 70 in number, our Authors proceed with the Port Towns along the Coaſt of the Main-land, and tell us, That paſſing once the Iſlands of *Margareta*, there are none inhabited by *Spaniards* till you come to *Fernambuco* on the Coaſt of *Braſile*. Between this Iſland and *Fernambuco* is the River of * *Maranyn*, one of the greateſt in the World, and firſt found when the *Spaniards* were ſeeking out the other Coaſt. 'Tis impoſſible to enter this River, becauſe of the mighty current that comes down; and withal, there are many ſandy ſhelves lying about the mouth of it, upon which account it came to paſs that 'twas a long time before the Riches, which the River affords, could be known. It was not till the time that *Peru* was conquer'd that this diſcovery was made, but it was then done by *Gonſalo Pizarro*; for travelling up into the Country he came to a great River, where he ſaw the Natives in their Canoes bringing Gold to exchange with the *Spaniards*. Finding this, he was deſirous to ſee the end of this River, but could not travel by Land

becauſe

* They certainly mean the River of *Amazons.*

Riches of it.

A ſecond attempt.

A third attempt.

Pedro de Oruza goes from *Peru* down the River.

Foundation of a Town.

Mutinous Company.

Lopez de Agira, a ſeditious Fellow, kills the Captain.

A K. choſe.

becauſe of the Mountains, and for that reaſon he made a ſmall Pinnace, and ſent *Orillana*, one of his Captains, with 30 Men, who went down the River: But they cou'd not poſſibly return again, becauſe of the violent current that was againſt them, and forc'd them quite out into the Sea, ſo that they came to the Iſland of *Margareta*, however they were very near a Year and half upon the River, for it has abundance of turnings and windings, which make a long paſſage on't; but they never durſt go aſhore, ſeeing ſuch a multitude of People inhabiting about it, and not knowing how they wou'd entertain them. But thus far they obtain'd their deſign, that they were fully aſſured the River was a very rich one in Gold, and had ſome of it to ſhew for undeniable proofs; which they did not think fit to return with and ſhew to their General *Pizano*, but, in ſhort, went home into *Spain*, and preſented it to the King. And this ſame Captain his Majeſty diſpatch'd back again with a Fleet of Ships, and 600 Men, to take poſſeſſion of the rich River; but the Project came to nothing, for the Captain himſelf died, with many of his Men, by the unhealthineſs of the Country, and thoſe that remain'd diſpos'd of themſelves as they thought fit, every Man his own way. Notwithſtanding, the Fame of the River and its Riches being mightily ſpread abroad, and ringing particularly in the Court of *Portugal*, a certain *Portugueſe* Gentleman, *Leus de Melo* by Name, ask'd Leave of King *John* the Third to go upon this Expedition; for 'tis to be noted, that that part of *America*, from the mouth of this River to the mouth of the River of *Plate*, is held by the Kings of *Portugal*, according to the Treaty of Partition made between them and the Kings of *Spain*. This Perſon had 10 Ships and 800 Men, but coming to the mouth of the River, he loſt all his Ships but two; and as for the Men, tho' the moſt part of them were ſaved, and got aſhore, yet they did not proſecute the Diſcovery, but went to the Iſland *Margareta*, and from thence were diſpers'd all over the *Indies*. This bad fortune of two Fleets deterr'd others from making the attempt; yet two or three Captains from the Kingdom of *New Granada* did afterwards endeavour to diſcover it by Land. Yet none had any conſiderable ſucceſs, till ſome years after one *Pedro de Oruza*, a Native of *Navarr*, but in the *Spaniſh* Service, came to the head of this great River, with at leaſt 700 Men out of *Peru*. Here he made Pinnaces and Canoes, in which he carried above 2000 *Indians* along with him, to be ſerviceable to him in his deſigns, together with a great many Horſes, and good ſtore of Proviſion; all which was of neceſſity to be carried by water, for there's no doing it by Land, not only becauſe of the Mountains, but alſo the many Rivers which run between them, and communicate with the great one of *Maranoyn*. They went down the River with their whole Company and Cargo till they came to a plain Country, where they began to lay the foundations of a Town, but being moſt of them Men not uſed to ſuch ſorts of Labours, and withal tired with the hot and rainy Seaſons, they quickly laid it down again, and having nothing elſe to do, began to murmur at their Captain, and wiſh themſelves at home in *Peru* again; not but that the Country where they were afforded Proviſions enough, and beſides was capable (one wou'd have thought) to have charm'd them into good humour, with the proſpect of Gold which it gave them. But their ſeditious Minds were not to be quieted with any thing, and there was a certain Fellow amongſt them (one *Lopez de Agira* a *Biſcaian*) that made it his buſineſs to blow up the coals, and by his cunning inſinuations to heighten the diſcontent they had already receiv'd. He had been an old Mutineer in *Peru*, and had had his hand in many ſuch buſineſſes as this, and therefore finding now a fair occaſion wou'd not ſtick to lay hold on't, but fell to his old way of practiſing againſt his Officers. In a word, by his means they were work'd into the humour and deſign of making away with their Captain, which they did, ſtabbing him in his ſleep, and murdering at the ſame time all his Friends; and yet theſe factious Fellows muſt needs be Loyal and Dutiful to their King too, they wou'd huzza, and cry out, *God ſave the King*, at the ſame time that they were cutting the throats of his Officers. But they did not ſtop here, for now *Lopez* falls to making Orations to them; and, in ſhort, harangues them ſo long, till he had perſwaded them to make a certain Creature of his their Supreme Head, and himſelf their Captain, to manage the Affairs of War. And having gone thus far, he thought he had e'en as good carry them one ſtep farther, and that was, to change this Title of Head into King, and renouncing all Allegiance to the King of *Spain*, to acknowledge this Tool of his as their Sovereign for the future, and do homage to him as ſuch. All which they did, and to bind the bargain with ſomething more than ordinary ſolemnity, the Rogues built an Altar, and upon that forſwore all Duty and Obedience to the K. of *Spain* for ever, and engaged their Allegiance to the Upſtart, the new created King *Fernando de Goſman*. But his Majeſties reign was but ſhort, for *Lopez*, who had a mind to his Place and Title, within 20 days took an occaſion to diſpatch him; this he did with his own hand too, to ſhew that he had Authority to make and depoſe, or murder Kings, Captains, Generals, or who elſe he pleas'd. And now he had his deſire, and was King himſelf, but for all that being no Gentleman, he was reſolv'd to rid his hands of all them whoſe better and more deſerving Blood might reproach his baſe Pedigree, or whoſe Vertue might be any way an impediment to his deſigns. And therefore, one of the firſt things he did was to cut the throats of all the Gentlemen, and thoſe that were of any conſiderable degree; in order to effect which, and ſuch like deſigns, he choſe him out of the whole Army a ſelect number of Ruffians, which he always kept about his Perſon, and were his Tools to do any of the bloody work his barbarous Mind projected. But as it commonly happens, that a great deal of Guilt and Impiety brings horrid fears and ſuſpicions along with it, and thoſe that are conſcious of evil deſigns and practices againſt others, are as apt to be afraid of the ſame from others; ſo it was here, this Miſcreant cou'd not enjoy himſelf with his new Dignity, the Title of King was no eaſe and ſecurity to him, and he was jealous that every one would be as ready to violate the reſpect owing to the Character as he had been himſelf. If he had but ſeen two Men talking together, it was a certain ſign of a Plot againſt his Life, and conſequently to prevent the execution of it, they muſt loſe theirs. At this rate he tyranniz'd over the multitude, which by ſuch methods was reduc'd to a number that cou'd by no means deſerve that name; and for the concluſion of all, at his going away from the Country, he left all the Women and the ſick Men behind him for a prey to the Natives, or the wild Beaſts, which come firſt. And theſe were no inconſiderable number, for the Climate being ſomething intemperate, (at leaſt the Seaſon was ſo) it bred many diſeaſes amongſt them.

And kill'd by *Lopez*.

Lopez King himſelf.

Jealous of ill practices againſt him.

Lopez leaves the ſick.

Gold.

Amazons.

During their ſtay here, they took a great many Canoes of the People of the Country, in which they found ſtore of Gold; and in ſhort, by one way or another, partly upon the Water, and partly upon the Land, enrich'd themſelves to a conſiderable degree. Here 'twas alſo that they ſaw thoſe warlike Women which have given an occaſion to ſome to raiſe a Story of *Amazons* dwelling hereabouts, and the River has been Chriſten'd by that name upon this very account. The buſineſs was only this, that the *Spaniards* fighting with ſome of the Natives, the Women came and fell on too, their Husbands they thought were in danger, and they came to help them, like truly tender and loving Wives. And they ſay, that they fought more valiant than the Men; what weapons they uſed they don't tell us, but 'tis pretty certain 'twas not their nails. The *Spaniards*, it ſeems, were ſomething ruggedly dealt with by them, and talk as if they had rather have fought with the Hnsbands than the Wives, if they had been to chuſe one of the two. So that all the Stories of thoſe warlike Heroins, the one breaſted Ladies, that call Men out of the next Country when they have occaſion for their Service; that ſend the Boys back to their Fathers, and keep the Girls to breed them up to the War, and are, in ſhort, an entire Society of Females. This, I ſay, all vaniſhes into this one point of fact, That there were a parcel of honeſt Women that had ſo much courage and love to their Husbands, that when they ſaw them aſſaulted, wou'd chuſe rather to run the hazards of the Battel, than ſtand by and ſee them knock'd on the head.

Lopez's treachery, and the riſing of the Country againſt him.

But to proceed: *Lopez* with his company ſail'd down the great River of the *Amazons*, and came to the Iſland *Margareta*, by which time his number was reduced to 230 Men. The Governor thinking him to be one of the King's Officers (but little imagining he was King himſelf) receiv'd him handſomly, and for his reward the Villain kill'd him; and having landed upon the Iſland, and rummag'd about there, he went off again to the main Land, forcing ſome few Soldiers along with him. And now he was for conquering the whole *Indies*, for he was ſo vain as to tell himſelf, that as he march'd, all wou'd turn to his ſide; but he was deceiv'd, for the alarm having ſpread about the Country, the Governor of *New Granada* rais'd an Army, and follow'd him into the Continent. And whereas he fed himſelf up with hopes, that the King's Army wou'd run over to him when it came to the trial, he was ſadly cozen'd in that too, for

Lopez's death.

his Army run over to the Kings. Thus every way forſaken, and out of all hopes of ever retrieving his Affairs, and ſure beſides, if taken, to be made an example, to the terror of all ambitious Traitors in the World, he reſolv'd to prevent that, and be his own Executioner. In order to this, he firſt gave his Daughter a mortal Stab, (that ſhe might never have the reproach of his infamous actions) intending afterwards to do the like to himſelf; but in the interim, the King's Soldiers broke in upon him and hack'd him to pieces. This was the fate of *Lopez de Agira*, that of a common Soldier became a Captain, of a Captain a General, and of a General a King; and for his laſt Preferment would have been his own Hangman, but cou'd not.

The River of the *Amazons*, which we had occaſion to mention, has engaged us in this Diſcourſe of its Diſcovery; which finiſh'd, we proceed with the general Account of the reſt of the Continent.

All the Coaſt between this great River and the River of *Plate*, is properly the Coaſt of *Braſile*; and, as has been ſaid, belongs to the Kings of *Portugal*, by vertue of the Treaty between them and the Crown of *Caſtile*.

Braſile diſcover'd.

Braſile was firſt found by Don *Pedro Arnales Cabrell*, the ſecond time that the King of *Portugal* ſent his Ships to the *Eaſt-Indies*, and was then taken poſſeſſion of in his Name.

River of *Plate*.

The diſcovery of it.

Strange multiplication of Horſes.

The River of *Plate* was diſcover'd by *Solis* firſt of all; next by *Sebaſtian Cabot*, who went up it 150 Leagues and built a Fort; afterwards by Don *Pedro de Mendoza*, who made no great matters of any particular Diſcoveries himſelf, but left a conſiderable number of *Spaniards* behind him. Theſe Men got Boats and went up the River, and leaving at a certain place, where they were, three Mares and Horſes, they multiply'd to that degree in the ſpace of 40 Years, that for 20 Leagues together the Country was crouded almoſt with thoſe Creatures.

Spaniards dwell with the *Indians* at *Aſcenſion*.

More People come out of *Spain*.

City of *Aſcenſion*.

Unknown Coaſt.

The *Spaniards* ventur'd at leaſt 300 Leagues up the River, and found the Country very full of Inhabitants, and well provided with the Neceſſaries of Life; and the *Indians* proving very kind and friendly to them, they lived together with them in a Town on the North-ſide of the River, which they gave the Name of *Aſcenſion* too. And they had lived here full 20 Years, before thoſe in *Spain* knew any thing of their being here, for the Admiral *Mendoza* loſt moſt part of his Ships, and died himſelf in the way homewards. But they now growing old, and doubting their Children, born and brought up in this heatheniſh Country, (for the *Spaniards* here took *Indian* Wives) wou'd become at laſt one People with the Natives, and quite loſe their Chriſtianity, for this reaſon ſent into *Spain* to give the King notice of their Affairs; who, thereupon, diſpatch'd two or three Ships with more Men and Women for the good of the Plantation, and a Biſhop, Prieſts and Friers, for the ſupport of the Chriſtian Religion amongſt them. When this Relief was come, they planted two places more on the North of the River, and travell'd 300 Leagues beyond the Town of *Aſcenſion*; but finding no Gold nor Silver to invite them to ſettle there, they return'd to the place from whence they came. This Town by degrees grew ſo populous that 'twas inlarg'd into a City, and from a City became one of the moſt conſiderable in the whole *Weſt-Indies*. The Country about it is fruitful, and yields plenty of all ſorts of Proviſion; and as for Trade, the two principal Commodities are Sugar and Cotton. The Coaſt along from this River of *Plate* to the *Magellanick-Streights* has been very little diſcover'd either by Sea or Land, only ſome Ports have been taken notice of by Ships going to the *Streights*.

Country from the *Streights* to *Chili*.

As for the Land that lies from the *Magellanick-Streights* to the Coaſt of *Chili* its little known, becauſe of the great Mountains of Snow that hinder travelling by Land; and the Shoals, and the multitude of little Iſlands that lie off the Main, have alſo hindred any exact Diſcoveries to be made by Sea.

Caſtro.

Chili.

The firſt known Country on the Coaſt of *Chili* (coming from the *Streights*) is that of *Caſtro*; 'tis the worſt of all thereabouts, becauſe there's very little Gold, and as little Proviſion, and then 'tis exceſſively cold. The whole Country of *Chili* is above 100 Leagues long N. & S. but not more than 25 Leagues in breadth. There run from the high Mountains into the Sea a great number of Rivers, which make it one of the pleaſanteſt Countries in the World, and that 'tis as fruitful and rich too is paſt all doubt.

Arauco.

The Province of *Arauco* is not above 20 Leagues long, but has a fine plain Country, which lies juſt over againſt the Iſland of *Mocha*.

The chief City of all *Chili* (and the richeſt too) was *La Conception*, but it has been plunder'd and burnt by the valiant *Araucans* ſo often, that it became a poor decay'd place upon't.

Several Towns.

Bounds of *Chili*.

Peru.

No rain.

Province of *Tucuman*.

Santa Fee.

Camana.

Acari.

St. *Jago* (which ſtands 25 Leagues up in the Country) ſucceeded *La Conception* in the character of the principal City, which it has kept, and is a conſiderable place. The Port of *Valparizo* upon this Coaſt, is that whither all the Ships come from *Lima* and unlade their Goods. Next to *Coquinbo* (which is the next Town by the Seaſide beyond *Valparizo*) is *Copiapo* a Port Town, but more remarkable for being the utmoſt Boundary of the Country of *Chili*; when you are paſs'd this, you come into a Country that leads you to *Peru*. The tract of Land between *Capiapo* and *Peru* is near 160 Leagues, but it lies deſolate 'tis ſo rugged and mountainous. *Peru* is at leaſt 800 Leagues from North to South; upon above 600 of which 'tis ſaid that no Rain ever falls, and yet the moſt wanton and luxurious appetite in the World can crave for nothing which this Country will not yield. The reaſon of which, ſome attribute to the vaſt ridge of high Mountains that runs along upon the Weſt frontier, which defends thoſe ſweet Valleys of *Peru* from the rainy Clouds that wou'd otherwiſe water them. But however, from theſe Mountains there iſſue out abundance of Rivers which diſcharge themſelves into the South Sea, and as they run along their waters are drawn off by Sluces and Channels cut for that purpoſe, by which the Vineyards and Corn-fields are ſufficiently refreſh'd, and the whole Country made exceeding fruitful. Betwixt theſe Mountains and the Mountains of *Chili*, that ſtretch to the *Magellanick Streights*, there lies a mighty Plain of 60 leagues over, which is ſo cold, that it is unfit for the production of Corn, but yet is very fruitful as to ſeveral other ſorts of neceſſaries. Behind the ridge of ſnowy Mountains lies the Province of *Tucuman*, wherein the *Spaniards* have ſome Towns; the laſt of them is called *Cordova*, from whence to *Santa Fee*, upon the River of *Plate*, is about 70 leagues; which Town of *Santa Fee* was built in that place to favour the deſign of ſeeking a way to *Peru* by the River of *Plate*. The firſt Town in *Peru*, as you come from *Chili*, is called *Atacama*, and from hence to *Arica* all the Coaſt is inhabited by *Indians*, that acknowledge the *Spaniſh* Authority. From hence you go to *Camana* (the next Port Town) and ſo to *Acari*, famous for the beſt and greateſt quantity of Wine made in all *Peru*; from thence along the Coaſt to *Calao*, the well known Port of *Lima*.

Guayaquill.

Timber and Saſſaparilla.

Proceeding ſtill Northward, you come to the rich City of *Truxillo*, which is one of the principal ones of *Peru*; the next to which of note is *Guayaquill*, which ſtands 40 leagues up into a great Bay or River, at the entrance of which ſtands *Tambez* an *Indian* Town. *Guayaquill* is remarkable for the quantities of Saſſaparilla they gather here, and the ſtore of Timber it affords for the building Ships, but much more for its being the firſt place in *Peru* where it rains, for all between *Atacama* and *Guayaquill* there is none.

Emeraulds at *Puerto Vicio*.

From hence you go along the Coaſt to *Puerto Vicio*, formerly a noted place for Emeraulds, but it ſeems the plenty and commonneſs of theſe Stones have ſo ſunk the value of them, that the trade is decay'd, and the Town grown poor; by the way, 'tis much more likely that theſe ſhou'd not be true Emeraulds, than that a Town which had plenty of ſuch noble Jewels ſhou'd ever go to decay.

Popaian.

The *Symmarons*.

Their Habitation near *Panama*.

Coſta Rica.

Nicaragua.

Within the Main, ſome 50 or 60 leagues from hence, ſtands *Popaian*, a place of ſome trade; but from thence, as far as *Panama*, you meet with no Town at all, for the Country is very mountainous, full of Rivers, and unwholſome too. About this Country dwell the *Symmarons*, a company of fugitive Negroes, that being run away from their *Spaniſh* Maſters, here eſtabliſhed themſelves into a Community. The reaſon of this Revolt was the hard uſage they had from their Maſters, and tho' there were ſeveral attempts made to reduce them to their former Obedience, yet they all prov'd unſucceſsful; the Negroes ſtoutly defended their Liberty, and very often made the *Spaniards* feel the effects of their indignation and reſentment. At laſt they came to a ſort of a Compoſition, and becauſe the *Spaniards* cou'd make no better terms, they yielded the Negroes ſhou'd have their liberty, and live in a place by themſelves, provided they wou'd be quiet. Their principal place is St. *Jago de los Negros*, not far from *Panama*, where they have all Officers of their own, only a *Spaniſh* Governor reſident amongſt them. The Coaſt running along betwixt *Panama* and *Nova Eſpanna*, is call'd *Coſta Rica*; next to which is a mountainous Country call'd *Coſta di Nicaragua*, inhabited by the *Spaniards*, and containing ſeveral good Ports, to which great ſtore, and many varieties of Merchandize are brought. This have we gone round this whole great

Continent, and ſeen the Coaſts of both ſides of it; it remains now that we add ſome other Remarks of our Authors.

Muſo the beſt Emeraulds.

The Town of *Muſo*, in the Kingdom of *Granada*, has the beſt Emeraulds known in all the *Indies*, and are taken out of a Rock, which is it ſelf an inexhauſtible Treaſury of that ſort of Riches. A certain *Indian* found here a Stone which was ſent to King *Philip* of *Spain*, the value of which was not to be fix'd, and all the Jewellers were puzzell'd to ſay what 'twas worth.

Mines of *Potoſi*.

The great Mountain in *Potoſi*, where the Mines are, has always a Cloud hanging over the top of it, even in the pureſt and cleareſt weather. At the foot ſtands the City, but there's no ſuch thing as Graſs or Paſture within 6 leagues all about. The entrance into the Mine-works, and the working there, are ſo dangerous, that they which go upon that deſign uſe to take the Sacrament of the Altar, expecting never to return more. The Metals lie at a vaſt depth in the Earth, at leaſt 200 times a Man's heighth: Rain is very neceſſary for theſe Works in the Mines ſometimes, and this they uſually have about *Chriſtmaſs*. In *February* the Silver comes from *Potoſi* and *Porco* to *Lima*, and about the ſame time the Ships come with Gold from *Chili* to the ſame place, and this amounts to near 3 Millions, half of which is the King's, but in all, both Gold and Silver, 'tis about 12 Millions. From *Lima* it goes to *Panama*, in the Month of *April*; from *Panama* by Land to *Nombre de Dios*, and from thence by Sea to *Carthagena*. The Gold that comes out of the Kingdom of *Granada*, and the Province of *John de Salina*, is alſo brought by a River to *Carthagena*, ſo that at that place there's a good Booty to be met with every Year, if ſome well-laid project were as well put in execution.

Times of carrying the Treaſure, and the places.

Mines of *Oruto* and *Guacovelica*.

The Mines of *Oruto* are given over through the defailure of the Quickſilver; and the rich Silver Mines of *Guacovelica*, which uſe to yield 8000 Quintals yearly, have been ſtopp'd up by the falling in of ſome Mountains.

Wine and Aſſes ſcarce in *Quito*.

To conclude theſe Remarks, they tell us that two things are exceſſively ſcarce and dear, conſequently in the great City of *Quito*, and thoſe are Wine and Aſſes. The former is worth 8 Rials a Quart if brought from *Lima*, but 12 if it comes from *Spain*. The latter are ſuch rarities, that one has been ſold for 1500 Pezo's; and 'tis a ſort of Proverbial Queſtion in the Country, What's deareſt at *Quito*? To which the Anſwer is, An Aſs. But they were always reckon'd a very ſenſible ingenious People, and 'tis but agreeable to their Character to have few of theſe Animals amongſt them.

The diſcovery of *Solomon's* Iſlands.

It may not be amiſs to add to this, the Account they give us of the firſt Diſcovery of the Iſland of *Solomon*. The *Spaniſh* Vice-Roys in this part of the World, to ingratiate themſelves the more with the King their Maſter, and keep his favour, that they may the longer keep theſe profitable Poſts, uſe to ſet themſelves to make new Diſcoveries. Thus Don *Luis de Velaſco*, Vice-Roy of *New Spain*, ſent out a Fleet and diſcover'd the *Philippine* Iſlands. After the ſame manner one *Caſtro*, Vice-Roy of *Peru*, ſent out a Fleet from *Lima*, a principal Commander in which was *Pedro Sarmiento*, a famous ſearcher of the *Magellanick Streights*. They ſail'd 800 leagues to the Weſt of the Coaſt of *Peru*, and in 11 degr. S. L. they found ſeveral Iſlands inhabited with People of a tawny complexion, and quite naked. Theſe Iſlands afforded Ginger, Cloves and Cinnamon, tho' not the very beſt; there was alſo ſome appearance of Gold. Between 9 and 15 degr. S. L. they diſcover'd 11 great Iſlands, the largeſt of which had its Name *Guadalcanal* from the firſt Obſerver, and upon the Coaſt of this they ſail'd 150 leagues, before they cou'd know whether 'twere an Iſland or part of the Main-land; nay, they cou'd not at laſt find the end of it, ſo that they concluded it might poſſibly be part of a Continent ſtretching to the *Magellanick Streights*. However, theſe were thoſe afterwards call'd *Solomon*'s Iſlands, and they afforded excellent Victuals of all ſorts; ſo that they are the moſt convenient refreſhing places that can be as a Ship ſails from the Coaſt of *Chili*, *Peru*, or the *Magellanick*, for the *Moluccas*. Here is alſo Gold to be had, which the Natives will give in truck for other Commodities. The *Spaniards* did not think of finding Gold hereabouts, but yet they brought home to the value of 40000 Pezo's, and good ſtore of Spices too. The Natives were very ſtout Men, and fought continually againſt the *Spaniards*, ſo that they got no more Spoil of one ſort nor another, than what they got by main force. They were at leaſt 14 Months in diſcovering theſe Iſlands from one to another; at the end of which they return'd home, ſailing to the North of the line, and ſo falling with the Coaſt of *New Spain*.

Spices

Gold

Store of Proviſions.

The reaſon of their Name.

That the *Spaniards* might be encouraged to go and Plant theſe Iſlands, the Diſcoverers politickly gave them the Name of *Solomon*'s Iſlands, as if they ought to ſuppoſe theſe were the very Iſlands that Prince fetch'd all his Gold from to adorn the Temple at *Jeruſalem*. This was a good contrivance to ſend ſome away, and ſo make more room for the reſt in the rich and delicious Country of *Peru*. And the trick took ſo far, that Colonies were actually going to be ſent thither, but at the ſame time they had notice that Sir *Francis Drake* was gone into the South Sea; upon which, Orders were ſent that they ſhou'd not be inhabited, to the end that the *Engliſh*, and all other Nations paſſing that way to the *Moluccas*, might meet with no other refreſhment there than what they cou'd get from the Natives, who are not very forward to entertain Strangers.

CHAP. XIII.

The Natural Hiſtory of the Spaniſh Indies *in general.*

We are here to run over thoſe things that relate to the Hiſtory of Nature in this part of the World, and therefore ſhall make no diſcourſe of Long. and Lat. of length and ſhortneſs of Days, of Shadows, Twilights, and other things of Mathematical conſideration. For theſe things we muſt go to our Globes, till we find them determin'd by infallible Obſervations made in the Country. In the mean time, we may ſurvey with pleaſure the Land, Rivers and Springs, the Mountains, Meadows, and fruitful Valleys, Animals, and all the rich Products of the Earth; amongſt which variety of Subjects, we ſhall meet with ſome that will poſſibly entertain us.

The temper of the Climate.

What the quality and temper of the air for the moſt part is, may be pretty eaſily gueſs'd from the ſituation of the Country; yet this is not a Rule that holds without exception, neither are the degrees of heat and cold in any Country preciſely to be determin'd by its nearneſs to, or remoteneſs from the Equinoctial, ſince there are abundance of other cauſes that concur to theſe effects, and are to be conſider'd in their ſeveral influences and relations thereto. The Torrid Zone is in a great many places truly ſo, and the Inhabitants are as it were continually roaſting; thus 'tis in *Ethiopia*, and almoſt all Parts of *Africk*; in ſome Parts of the *Eaſt-Indies*, and many others of *Aſia*; and ſo in part of *Braſile*, and others for the *American* World. But yet in the ſame Zone, in other places, 'tis quite otherwiſe; the air is cool and temperate, and the Sun, tho' he comes directly over the heads of the Inhabitants, yet does not torment them at that rate with his heat. At *Quito* in *Peru*, the heat is very gentle and moderate, and ſo 'tis generally upon the Plains of that Country, but about *Potoſi* 'tis downright cold, and by the bare feeling of the temper of the air thereabouts, a Man wou'd gueſs that he were much farther removed from the Equinoctial than he is. And 'tis the ſame too moſtly in the Kingdom of *New Granada*, which enjoys a pleaſant temperate air, rather inclining to cold than heat, as is very well ſeen in the skins and complexions of the Inhabitants. But this difference is not only obſervable by Land, but at Sea too; for as about all the Sea of *Panama*, and the Coaſt of *Braſile*, you have violent and hardly tolerable heats, ſo upon the *Peruvian* Sea it has been taken notice, that even when the Sun has been directly over the heads of thoſe that have ſail'd along, they have had as much cold as they car'd

Difference of heat and cold in the burning Zone.

Difference of heat and cold upon the *American* Seas.

The influence of the winds in this matter, and the difference between the ſame winds in thoſe Parts and *Europe*.

for. 'Tis paſt all doubt, that the Winds and Breezes are the principal cauſes of this difference, and tho' we can give no particular account of the various Laws obſerv'd by them in all Parts of this great Country, yet ſome few things, which pretty conſtant experience has juſtify'd, are to be taken notice of. In *Europe* we find, that in the Summer time our moſt cool and pleaſing Seaſons are in the Morning, the Evenings being more frequently (if compar'd with them) hot and ſultry. Contrariwiſe in *Peru* (and it holds too in many places in the middle Zone) they feel ſome of their greateſt heats in the Morning, becauſe at that time the freſh Winds from the Sea don't blow upon them, but towards the middle of the Day thoſe Winds (with their conſtant and ſtated courſe) return and make the air cool and pleaſant. Again, the North Winds which with us are ſharp and piercing, yet diſperſes Miſts and Clouds, and clears the air, is in many Parts of *Peru* troubleſome and unwholſome, darkens the air, and brings Rain along with it very frequently.

Effects of the N. & S. winds.

On the other hand their South Winds are healthy and refreſhing, and make very bright and pleaſant weather along the Plains and Coaſt of that Country; and yet neither of theſe Rules will hold univerſally, for they have there extremely cold and dry North Winds, and their Rains wet South ones, as is well known in ſome mountainous Parts of *Peru* and *Chili*.

Of the E. & W. ones

Again, our *Solanus*, or Eaſt Wind, is reckon'd far leſs mild, kindly and healthful, than the *Zephyrus* is; but here (and ſo 'tis all over the Torrid Zone, the Eaſterly wind, which they call the Breeze, blows not only pleaſure and refreſhment, but health and advantage to the Body: One can't ſay it does more ſo than the Weſterly does, becauſe that Wind that is the full Weſt, ſeldom or hardly blows at all between the Tropicks.)

The wet and dry Seaſons.

As for the order and conſequence of the dry and wet Seaſons one upon another, the Rule obtains here that is eſtabliſh'd by univerſal Experience every where in the Torrid Zone, that when the Sun is fartheſt from them they have their faireſt and dryeſt weather, and the contrary when he returns and comes over their heads again. Thus in *Peru*, when the Sun makes his courſe towards the Tropick of *Cancer*, the air is very clear and calm, they have nothing of Rain or Snow, all their Rivers fall, and ſome are quite dried up. On the other hand, as the Sun approaches to them, and comes to ſhine with more direct and forcible beams upon them, the Rain and Snows come on too, and the Rivers ſwell and overflow their Banks. The ſame Law is obſerved in proportion in the Coaſt of ***New Spain***, the Iſlands of *Hiſpaniola*, *Cuba*, and *St. John de Porto Rico*, and univerſally on the North-ſide of the Line, with reference to the Sun's acceſs to the Tropick of *Capricorn*, as on the South-ſide with reſpect to that of *Cancer*.

Difference between the Torrid and Temperate Zones in the point of weather.

But this Law ('tis well known) holds only in the Torrid Zone, for all the Regions without the Tropicks have Rain and Snow, and all that foul weather when the Sun is fartheſt from them, and together with the return of that Luminary, not only their great heat, but cleareſt sky and drieſt weather too. This Rule is ſo well confirm'd by Obſervations throughout the World, that 'tis not to be in the leaſt queſtion'd.

Conſtitution and Diviſion of the Land.

The temper and conſtitution of the Land is to be conſider'd with reſpect either to the low, the high, or the middle Lands. In general, the low Parts towards the Sea-Coaſt are hot and moiſt, and not ſo fit to be inhabited, nor near ſo healthy as others are.

Sands and marſhy grounds.

There are ſome of them that are plainly uninhabitable, not only by reaſon of the Sands which lie in vaſt mountains in many places, but the watry plaſhy Grounds, which is the other extreme; for the waters that fall from the Mountains, finding no outlet in theſe flat and low Lands do perfectly drown them, and render them unfit for living in. And what by one and the other of theſe, eſpecially the latter, the greateſt part of the Coaſt of this Empire, particularly that upon the South Sea, is made a very ill ſort of a Habitation. Only 'tis to be ſaid, that this admits of an exception, with reſpect to ſome Parts of *Peru*, where the low Lands are cool, fertile and healthy.

High lands.

Paſture and Cattel.

Mines.

The high Lands are cold and dry, very healthy, but not very fruitful nor pleaſant; yet there are Paſture Grounds, and good ſtore of Cattel, out of which they ſupply their want of Corn and Grain, but then they have the advantage of having the rich Mines amongſt them, and all things we know obey Gold and Silver. Theſe two advantages of Paſture and Mines in the high Lands, do countervail the other two of Trade, and abundance of Wines which are found in the lower along the Sea-Coaſt. The middle Lands are moderate in temper as well as ſituation, they have not the hot muggy air of the one, nor the piercing cold of the other;

Products Corn and Grain.

they abound in many ſorts of Grain, as Wheat, Barley and Maize, which grows not at all in the high Countries, but pretty well in the lower. There's alſo delicate Paſture-Grounds, Fields full of Cattel, Orchards and Gardens of Fruit, and an admirable mixture of Woods and Foreſts. This is the part of the Country that is beſt form'd for Health and Pleaſure; and 'tis the moſt crouded and thronged with Inhabitants, who live here a ſort of Paradiſiacal life.

Nature of the Land in *Mexico*.

But for a more particular Account of the Nature and Quality of the Land, we may conſider how it is in the two well-known Parts of this vaſt Empire the Countries of *Mexico* and *Peru*. As to the former, 'tis obſerved that what way ſoever you enter it you are upon the aſcent, and having mounted a good heighth you begin to fall again, tho' but a very little. All the Land about *New Spain* and *Mexico* is of this nature, not but that there are high Mountains and deep Valleys; but the buſineſs is, that the main of the Country lies thus conſiderably elevated above that which runs along the Sea-Coaſt.

The Land in *Peru* *Lanos*, *Sierras*, *Andes*.

Peru is to be conſider'd as divided into three Parts, which are call'd by the *Spaniards* the *Lanos*, the *Sierras*, and the *Andes*. The *Lanos* runs along the Sea-Coaſt, the *Sierras* be all Hills with ſome Valleys, the *Andes* are ſteep and craggy Mountains. The *Lanes* takes up ſome 10 leagues in breadth, in ſome Parts leſs, and in others a little more; the *Sierras* run ſome 20 leagues in breadth, the *Andes* as much, ſometimes more and ſometimes leſs. It never rains upon all the *Lanos* or Sea-Coaſt, but ſometimes there falls a ſmall dew; to defend themſelves from which the Inhabitants need no more than coverings of Mats, with a little Earth upon them. Upon the *Andes* it rains almoſt continually, tho' ſometimes the Seaſons vary there as to more and leſs. In the *Sierras*, which lies betwixt both the Extremes, the Rains obſerve the ſame Seaſons that they do in *Spain*.

Goats and Sheep.

Apes and Parrots.

Plant Coca.

The *Sierras* abounds with a ſort of wild Goats and Sheep, and their Valleys are very pleaſant and full of Fruits. The *Andes* afford great numbers of Apes and Parrots; and here alſo they find the Plant *Coca*, which is ſo greatly eſteemed of the *Indians*, and of the Trade of which they make ſo much Money. The *Andes* and *Sierras* run along for above 1000 leagues in view with one another, and almoſt parallel too.

Great Champian.

Beyond the Royal City of *Cuſco* they open from one another, and form a large and ſpacious Champian, repleniſh'd with abundance of fine Rivers and flouriſhing Paſtures. It is a healthful Soil, the beſt Peopled, and the richeſt of all the *Indies* for all kinds of Proviſions, Corn only excepted; but they have all the Cattel of *Europe*, beſides thoſe that are peculiar to the Country, and excellent Fowl, particularly ſtore of Partridges.

Store of Fowl.

Province of *Callao*.

This is call'd the Province of *Callao*; the next to which, namely *Charcas*, has abundance of very fruitful Valleys, and Mountains that afford the richeſt Fruit in the World, which is the charming Metals of Gold and Silver.

Lakes.

Great Lake of *Titicaca*.

There are ſeveral very great Lakes in this Country: The Lake of *Titicaca*, in the Province of *Callao*, (juſt now mention'd) is full 35 leagues in length, and 15 in breadth at the wideſt place, and there are 10 or 12 great Rivers that empty themſelves into it. The water is not ſalt nor brackiſh like that of the Sea, but has ſo many ill qualities that 'tis not fit to be drunk; there are ſeveral Iſlands in it which formerly were inhabited and cultivated but now lie waſte, but for all that Lake is inhabited ſtill, and you may ſee a great many Villages of *Indians* floating in it.

Floating Villages.

For 'tis to be noted, that there grows here a ſort of Reed which they call *Tortora*, of which they make a ſort of Boats, and then tying a good number of theſe all together they compoſe a Village, which removes from place to place according as their Occaſions lead them.

Fiſh and Fowl.

The Lake is well repleniſh'd with Fiſh and wild Fowl, which are the things theſe *Indians* mainly depend upon for their livelihood. Tho' it receives ſo great quantities of water, yet it has but one vent only, which running in a current for at leaſt 50 leagues, forms at laſt another Lake; this is leſs than the Original one, but yet very large in it ſelf, and upon the Banks of it feed abundance of Cattel that grow very fat with the fine Paſturage they meet with there. At the end of the Valley of *Tarapaya*, near *Potoſi*, there's a Lake ſo round in its circumference, that it ſeems as if it had been deſcrib'd by Compaſs. But 'tis ſtranger ſtill, for the quality of its water;

Boiling Lake

in the middle it boils up like a Pot for at leaſt 20 foot ſquare, which is the very riſing of the Spring, and 'tis ſo hot, that that compariſon is juſt enough alſo upon this account. They very frequently bathe in it towards the outward Parts, and near the Banks, but going farther 'tis ſo hot that 'tis not to be endured. They have cut a great Channel which draws off a conſiderable ſtream of water from the Lake, (for the

ſervice

Great Lake of *Mexico.*

Two ſorts of water.

Hot Baths.

Great ſtore of Fiſh.

ſervice of their Metal-Engines) notwithſtanding which the Spring works up ſo very faſt, that the Lake always keeps full without any apparent decreaſe. The mighty Lake of *Mexico*, upon ſome accounts deſerves more admiration than the former. That great City it ſelf is ſeated in it, but the proſpect of the floating Gardens is not leſs fine and agreeable than that of ſo many Houſes, for here you ſhall ſee large Plats of ground full of all ſorts of pleaſant Herbs and Flowers ſwimming along upon the water, and floating from one part to another. The Lake affords two ſorts of water, one ſalt like that of the Ocean, and another ſweet and clear, from the many Rivers that enter into it. In the midſt of it is a great rocky Iſland, which has ſeveral Baths of hot water, very wholſome and medicinal, and much us'd upon that ſcore. The quantities of Fiſh it affords are ſo great, that the Revenue of the Lake is ordinarily reckon'd at 300000 Ducats *per Annum*. In general, all the Lakes of *New Spain*, and *Mechoacan* particularly, are very full of Fiſh; and as there are not a few of them, ſo 'tis plain that the Inhabitants can't want that ſort of Proviſion.

Rivers. *Alvarado. Magdalen.*

River of the *Amazons.*

Wide Channel.

River of *Plate.*

Great Floods.

Swift Rivers.

Divers ways of paſſing the Rivers.

This Country is admirably well water'd with Rivers, and ſome of the greateſt in the World have their riſe from ſome parts of it. The River of *Alvarado* in *New Spain* is a very conſiderable one; and that of *Magdalen*, which falls into the Sea betwixt St. *Martha* and *Carthagena*, runs with a ſtream of above two leagues breadth into the Ocean, which it does with ſuch a force, that for above 10 leagues it preſerves it ſelf diſtinct and unmixt with the Salt water. But the great River of the *Amazons*, and that of *Plate*, are ſtill more wonderful for their largeneſs, velocity, and the great quantities of water they pour into the Ocean. They both riſe out of the Mountains of *Peru*, where they receive conſiderable additions from the Rains, and other little Rivers. The former opens into the Sea with ſo wide a mouth, that 'tis almoſt incredible; a Man ſees only Sky and Water there, and 'tis juſt as if he were in the great Ocean; 'tis much about or near the Line that it thus communicates with the Sea. Some allow it 70 leagues of breadth in that place, others not ſo much, but all agree 'tis the greateſt River known in the World, and neither the *Danube*, *Nile*, *Volga* or *Ganges*, are comparable to it. The Tides flow almoſt 100 leagues up the River, in which reſpect alſo it may claim precedency of all the Rivers in the World that have been yet diſcover'd. The River of *Plate* runs into the Sea in about 35 degr. S. L. and ſometimes 'tis ſo overcharg'd with waters, that it drowns all the Fields about it, and the Country looks like a Sea; this Deluge holds for a matter of 3 Miles, and then the River returns to its ordinary Courſe or Bounds again. The Natives, when they find this coming upon them, they quit their Habitations, and retire with all their Goods into their Canoes, and ſo float up and down till the ſwelling River ſinks again, and makes way for them to return to their Houſes. On the South-ſide of the Mountains of *Peru* the Rivers are not uſually ſo great, becauſe their Currents are not long, and many waters cannot join their forces together; but then they are very ſwift in their deſcent from the Mountains, and have ſudden falls, upon which account they are very dangerous, and many have loſt their lives in attempting to paſs them. The methods that the *Indians* have to help People over their Rivers are various, and ſuch, as they that try them had need be above the fears of drowning. In ſome places they make uſe of a long Rope that reaches from one Bank to the other, on to which is faſten'd a Basket, and in that the Party that is to paſs over puts himſelf; ſo then the *Indians* that undertake the buſineſs ſwimming over to the other ſide, they drag him by the Rope along to them. In other places they ride aſtride upon a wadd of ſome light ſtuff or other, and mount the Paſſenger behind them, and ſo with a piece of board, inſtead of an Oar, they row themſelves over. Others of them again, do compoſe a kind of a Float of Gourds or Pompions faſten'd together, upon which they place all the People, and their ſeveral things that are to go over; on to this Float they fix certain Cords, which the *Indians* that go ſwimming before do pull, and ſo tow along the whole Machine, while at the ſame time others come behind, and do that ſervice by thruſting which the others before do by pulling. Sometimes they have undertaken to carry Men over Rivers upon a Table-board, which they have born upon their ſhoulders, and this without any manner of fear or concern; and the learned Jeſuit *Acoſta* paſs'd the *Alvarado* in *New Spain* after this manner, and tho' 'twas in a ſhallow part of the River, yet ſometimes the *Indians* were many times out of their depth and loſt their footing, and then when 'twas ſo they preſently fell to dabbling and treading the water; ſo that bottom or no bottom 'tis all one to them. As for Bridges they uſe none, unleſs floating ones made of Hair and Straw ſometimes; the *Spaniards*, 'tis true, have built Bridges of Stone over ſome Rivers, and the *Indians* may uſe them 'tis poſſible when they lie in their way; that is, if they have not Gourds or Pompions at hand to make a Float of, or a wadd of Straw, or ſome ſuch conveniency, which is much better than a Bridge, which may tumble down into the water while a Man is going over it. In ſhort, there's no need of Bridges for People that are as ſafe in the water as upon the dry land, and in no more danger of drowning than the Fiſhes themſelves.

Indians uſe no Bridges.

Springs and Fountains.

A petrifying water.

Inca's Baths.

A Fountain that yields Salt.

Medicinal waters.

Smoking water.

Waters of various colours.

There are Springs and Fountains in this Country that have ſomething rare and wonderful in them. In *Guancavelica* in *Peru*, there's one that ſends out hot water, which as runs along petrifies and turns to perfect Rock. It's true, this ſtrange ſort of Stone is ſoft, light and eaſie to cut, but yet 'tis ſtrong and laſting, and ſo fit for uſe, that almoſt all the Houſes of the adjoining Village are built of it. They ſay alſo, that 'tis very fatal for Men or Beaſts to drink of this water, and there's no doubt to be made on't, if it turns to ſtone in their Bellies; to be ſure 'tis no good Diuretick, and wont paſs quite ſo well as a Chalybeat. But by means of this petrifying quality of the water, it comes to paſs that the Fountain blocks up its own way, and ſo neceſſarily changes its Courſe, and is continually forcing it ſelf new paſſages. At the Baths which they call the *Inca's* Baths, there are ſome ſtreams which come almoſt boiling hot out of the ground, and cloſe by theſe are others that are as cold as Ice. In the Province of *Charcas* eſpecially, there are a vaſt number of theſe hot Springs; and the *Spaniards*, who meaſur'd Time by *Ave-Maries*, won and loſt Wagers about holding their fingers in the water while thoſe ſhort Devotions paſs'd, but a Devotion as warm as the water, wou'd have made them find out ſome other way to meaſure the Time, while they were playing the fool thus with one another; a Man can't well burn his finger to purpoſe without crying oh! for't, and that's very pretty ſport in the middle of a Prayer. Near *Cuſco* there's a Fountain that has its waters impregnated with a Salt very white and good, which it leaves behind as it runs along, and that in ſuch quantities, that if the People thought it worth their while they might make it turn to ſome good account; but they have ſo much of this Commodity thereabouts that they altogether neglect it. The waters which run in *Guayaquill* in *Peru* near the Line, are reckon'd good for the *French* Diſeaſe, and many other caſes of the like nature; for which reaſon they are viſited by People that live at a great diſtance all round about, and they talk of very great cures that are wrought by them. They attribute the vertue of theſe waters to the Saſſaparilla, that the Country is known to abound with. Out of the Mountain *Bilcanota* in *Peru* there iſſues a Spring, the water of which, as it comes juſt from the Rock, is of an Aſh-colour, and looks like Lye; beſides it caſts a fume from it like a thing that's on fire: it continues after this manner for a great way, till the ſtream has ſo many other waters mix'd with it, that all the heat and fuming is quite gone. There are alſo Springs, the waters of which are of very odd colours; thus in *New Spain* there's one, whoſe water is blue, and in *Peru* another of a blood red colour, the ſtream of which the Inhabitants call the Red River, but as to the Vertues and Properties of either of theſe, we can give no account.

Volcanoes.

A great one by *Mexico.*

That of *Arequippa.*

Thoſe of *Guatimalla* in the South Sea.

If we Survey theſe Parts of the World, we ſhall find two burning Mountains and Volcanoes, no leſs terrible than thoſe famous ones of *Ætna* and *Veſuvius* in *Europe*. That of *Mexico*, which is near the Village of *Angels*, is a very conſiderable one, and takes up ſo much ground, that they go turning and winding about it in the aſcent a matter of 30 leagues. There has been no fire obſerv'd yet breaking out of it, but thick Clouds of ſmoke are very common, and ſeen almoſt every day; and ſometimes it throws out great quantities of Aſhes and Cinders too. Theſe Paroxyſms are ordinarily in the Morning and the Evening, tho' *Acoſta* tells us he has obſerv'd them at other times of the day. That of *Arequippa* is alſo vaſtly high, and the Mountains is all over nothing but Sand; it has never flam'd viſibly, tho' the effects of an inward fire are diſcernible enough in the ſmoke which at certain times it ſends out. Thoſe of *Guatimalla* are more remarkable ſtill, as well for their heighth and greatneſs, as the horrible flames that are ſeen to aſcend out of them; this Phenomena is often diſcover'd by thoſe that ſail a great way off in the South Sea, they can ſee at that diſtance, by the vaſt Columns of ſmoke and flame, when the Volcanoes are in their raging fits. The Country about *Quito* has a conſiderable ſhare in this ſort of Calamity

The influence of the winds in this matter, and the difference between the ſame winds in theſe Parts and *Europe*.

for. 'Tis paſt all doubt, that the Winds and Breezes are the principal cauſes of this difference, and tho' we can give no particular account of the various Laws obſerv'd by them in all Parts of this great Country, yet ſome few things, which pretty conſtant experience has juſtify'd, are to be taken notice of. In *Europe* we find, that in the Summer time our moſt cool and pleaſing Seaſons are in the Morning, the Evenings being more frequently (if compar'd with them) hot and ſultry. Contrariwiſe in *Peru* (and it holds too in many places in the middle Zone) they feel ſome of their greateſt heats in the Morning, becauſe at that time the freſh Winds from the Sea don't blow upon them, but towards the middle of the Day thoſe Winds (with their conſtant and ſtated courſe) return and make the air cool and pleaſant. Again, the North Winds which with us are ſharp and piercing, yet diſperſes Miſts and Clouds, and clears the air, is in many Parts of *Peru* troubleſome and unwholſome, darkens the air, and brings Rain along with it very frequently.

Effects of the N & S winds.

On the other hand their South Winds are healthy and refreſhing, and make very bright and pleaſant weather along the Plains and Coaſt of that Country; and yet neither of theſe Rules will hold univerſally, for they have there extremely cold and dry North Winds, and their Rains wet South ones, as is well known in ſome mountainous Parts of *Peru* and *Chili*.

Of the E. & W. ones

Again, our *Solanus*, or Eaſt Wind, is reckon'd far leſs mild, kindly and healthful, than the *Zephyrus* is; but here (and ſo 'tis all over the Torrid Zone, the Eaſterly wind, which they call the Breeze, blows not only pleaſure and refreſhment, but health and advantage to the Body: One can't ſay it does more ſo than the Weſterly does, becauſe that Wind that is the full Weſt, ſeldom or hardly blows at all between the Tropicks.)

The wet and dry Seaſons.

As for the order and conſequence of the dry and wet Seaſons one upon another, the Rule obtains here that is eſtabliſh'd by univerſal Experience every where in the Torrid Zone, that when the Sun is fartheſt from them they have their faireſt and dryeſt weather, and the contrary when he returns and comes over their heads again. Thus in *Peru*, when the Sun makes his courſe towards the Tropick of *Cancer*, the air is very clear and calm, they have nothing of Rain or Snow, all their Rivers fall, and ſome are quite dried up. On the other hand, as the Sun approaches to them, and comes to ſhine with more direct and forcible beams upon them, the Rain and Snows come on too, and the Rivers ſwell and overflow their Banks. The ſame Law is obſerved in proportion in the Coaſt of *New Spain*, the Iſlands of *Hiſpaniola*, *Cuba*, and *St. John de Porto Rico*, and univerſally on the North-ſide of the Line, with reference to the Sun's acceſs to the Tropick of *Capricorn*, as on the South-ſide with reſpect to that of *Cancer*.

Difference between the Torrid and Temperate Zones in the point of weather.

But this Law ('tis well known) holds only in the Torrid Zone, for all the Regions without the Tropicks have Rain and Snow, and all that foul weather when the Sun is fartheſt from them, and together with the return of that Luminary, not only their great heat, but cleareſt sky and drieſt weather too. This Rule is ſo well confirm'd by Obſervations throughout the World, that 'tis not to be in the leaſt queſtion'd.

The temper and conſtitution of the Land is to be conſider'd with reſpect either to the low, the high, or the middle Lands.

Conſtitution and Diviſion of the Land.

In general, the low Parts towards the Sea-Coaſt are hot and moiſt, and not ſo fit to be inhabited, nor near ſo healthy as others are.

Sands and marſhy grounds.

There are ſome of them that are plainly uninhabitable, not only by reaſon of the Sands which lie in vaſt mountains in many places, but the watry plaſhy Grounds, which is the other extreme; for the waters that fall from the Mountains, finding no outlet in theſe flat and low Lands do perfectly drown them, and render them unfit for living in. And what by one and the other of theſe, eſpecially the latter, the greateſt part of the Coaſt of this Empire, particularly that upon the South Sea, is made a very ill ſort of a Habitation. Only 'tis to be ſaid, that this admits of an exception, with reſpect to ſome Parts of *Peru*, where the low Lands are cool, fertile and healthy.

High lands.

The high Lands are cold and dry, very healthy, but not very fruitful nor pleaſant; yet there are Paſture Grounds, and good ſtore of Cattel, out of which they ſupply their want of Corn and Grain, but then they have the advantage of having the rich Mines amongſt them, and all things we know obey Gold and Silver.

Paſture and Cattel.

Mines.

Theſe two advantages of Paſture and Mines in the high Lands, do countervail the other two of Trade, and abundance of Wines which are found in the lower along the Sea-Coaſt.

Products Corn and Grain.

The middle Lands are moderate in temper as well as ſituation, they have not the hot muggy air of the one, nor the piercing cold of the other; they abound in many ſorts of Grain, as Wheat, Barley and Maize, which grows not at all in the high Countries, but pretty well in the lower. There's alſo delicate Paſture-Grounds, Fields full of Cattel, Orchards and Gardens of Fruit, and an admirable mixture of Woods and Foreſts. This is the part of the Country that is beſt form'd for Health and Pleaſure; and 'tis the moſt crouded and thronged with Inhabitants, who live here a ſort of Paradiſiacal life.

Nature of the Land in Mexico.

But for a more particular Account of the Nature and Quality of the Land, we may conſider how it is in the two well-known Parts of this vaſt Empire the Countries of *Mexico* and *Peru*. As to the former, 'tis obſerved that what way ſoever you enter it you are upon the aſcent, and having mounted a good heighth you begin to fall again, tho' but a very little. All the Land about *New Spain* and *Mexico* is of this nature, not but that there are high Mountains and deep Valleys; but the buſineſs is, that the main of the Country lies thus conſiderably elevated above that which runs along the Sea-Coaſt.

The Land in Peru Lanos, Sierras, Andes.

Peru is to be conſider'd as divided into three Parts, which are call'd by the *Spaniards* the *Lanos*, the *Sierras*, and the *Andes*. The *Lanos* runs along the Sea-Coaſt, the *Sierras* be all Hills with ſome Valleys, the *Andes* are ſteep and craggy Mountains. The *Lanos* takes up ſome 10 leagues in breadth, in ſome Parts leſs, and in others a little more; the *Sierras* run ſome 20 leagues in breadth, the *Andes* as much, ſometimes more and ſometimes leſs. It never rains upon all the *Lanos* or Sea-Coaſt, but ſometimes there falls a ſmall dew; to defend themſelves from which the Inhabitants need no more than coverings of Mats, with a little Earth upon them. Upon the *Andes* it rains almoſt continually, tho' ſometimes the Seaſons vary there as to more and leſs. In the *Sierras*, which lies betwixt both the Extremes, the Rains obſerve the ſame Seaſons that they do in *Spain*.

Goats and Sheep.

The *Sierras* abounds with a ſort of wild Goats and Sheep, and their Valleys are very pleaſant and full of Fruits.

Apes and Parrots.

Plant Coca.

The *Andes* afford great numbers of Apes and Parrots; and here alſo they find the Plant *Coca*, which is ſo greatly eſteemed of the *Indians*, and of the Trade of which they make ſo much Money. The *Andes* and *Sierras* run along for above 1000 leagues in view with one another, and almoſt parallel too.

Great Champian.

Beyond the Royal City of *Cuſco* they open from one another, and form a large and ſpacious Champian, repleniſh'd with abundance of fine Rivers and flouriſhing Paſtures. It is a healthful Soil, the beſt Peopled, and the richeſt of all the *Indies* for all kinds of Proviſions, Corn only excepted; but they have all the Cattel of *Europe*, beſides thoſe that are peculiar to the Country, and excellent Fowl, particularly ſtore of Partridges.

Store of Fowl.

Province of Callas.

This is call'd the Province of *Callao*; the next to which, namely *Charcas*, has abundance of very fruitful Valleys, and Mountains that afford the richeſt Fruit in the World, which is the charming Metals of Gold and Silver.

Lakes.

Great Lake of Titicaca.

There are ſeveral very great Lakes in this Country: The Lake of *Titicaca*, in the Province of *Callao*, (juſt now mention'd) is full 35 leagues in length, and 15 in breadth at the wideſt place, and there are 10 or 12 great Rivers that empty themſelves into it. The water is not ſalt nor brackiſh like that of the Sea, but has ſo many ill qualities that 'tis not fit to be drunk; there are ſeveral Iſlands in it which formerly were inhabited and cultivated but now lie waſte, but for all that Lake is inhabited ſtill, and you may ſee a great many Villages of *Indians* floating in it.

Floating Villages.

For 'tis to be noted, that there grows here a ſort of Reed which they call *Tortora*, of which they make a ſort of Boats, and then tying a good number of theſe all together they compoſe a Village, which removes from place to place according as their Occaſions lead them.

Fiſh and Fowl.

The Lake is well repleniſh'd with Fiſh and wild Fowl, which are the things theſe *Indians* mainly depend upon for their livelihood. Tho' it receives ſo great quantities of water, yet it has but one vent only, which running in a current for at leaſt 50 leagues, forms at laſt another Lake; this is leſs than the Original one, but yet very large in it ſelf, and upon the Banks of it feed abundance of Cattel that grow very fat with the fine Paſturage they meet with there. At the end of the Valley of *Tarapaya*, near *Potoſi*, there's a Lake ſo round in its circumference, that it ſeems as if it had been deſcrib'd by Compaſs.

Boiling Lake

But 'tis ſtranger ſtill, for the quality of its water; in the middle it boils up like a Pot for at leaſt 20 foot ſquare, which is the very riſing of the Spring, and 'tis ſo hot, that that compariſon is juſt enough alſo upon this account. They very frequently bathe in it towards the outward Parts, and near the Banks, but going farther 'tis ſo hot that 'tis not to be endured. They have cut a great Channel which draws off a conſiderable ſtream of water from the Lake, (for the

ſervice

Great Lake of *Mexico.*

Two ſorts of water.

Hot Baths.

Great ſtore of Fiſh.

ſervice of their Metal-Engines) notwithſtanding which the Spring works up ſo very faſt, that the Lake always keeps full without any apparent decreaſe. The mighty Lake of *Mexico*, upon ſome accounts deſerves more admiration than the former. That great City it ſelf is ſeated in it, but the proſpect of the floating Gardens is not leſs fine and agreeable than that of ſo many Houſes, for here you ſhall ſee large Plats of ground full of all ſorts of pleaſant Herbs and Flowers ſwimming along upon the water, and floating from one part to another. The Lake affords two ſorts of water, one ſalt like that of the Ocean, and another ſweet and clear, from the many Rivers that enter into it. In the midſt of it is a great rocky Iſland, which has ſeveral Baths of hot water, very wholſome and medicinal, and much us'd upon that ſcore. The quantities of Fiſh it affords are ſo great, that the Revenue of the Lake is ordinarily reckon'd at 300000 Ducats *per Annum*. In general, all the Lakes of *New Spain*, and *Mechoacan* particularly, are very full of Fiſh; and as there are not a few of them, ſo 'tis plain that the Inhabitants can't want that ſort of Proviſion.

Rivers. *Alvarado. Magdalen.*

River of the *Amazons.*

Wide Channel.

River of *Plate.*

Great Floods.

Swift Rivers.

Divers ways of paſſing the Rivers.

Indians uſe no Bridges.

This Country is admirably well water'd with Rivers, and ſome of the greateſt in the World have their riſe from ſome parts of it. The River of *Alvarado* in *New Spain* is a very conſiderable one; and that of *Magdalen*, which falls into the Sea betwixt St. *Martha* and *Carthagena*, runs with a ſtream of above two leagues breadth into the Ocean, which it does with ſuch a force, that for above 10 leagues it preſerves it ſelf diſtinct and unmixt with the Salt water. But the great River of the *Amazons*, and that of *Plate*, are ſtill more wonderful for their largeneſs, velocity, and the great quantities of water they pour into the Ocean. They both riſe out of the Mountains of *Peru*, where they receive conſiderable additions from the Rains, and other little Rivers. The former opens into the Sea with ſo wide a mouth, that 'tis almoſt incredible; a Man ſees only Sky and Water there, and 'tis juſt as if he were in the great Ocean; 'tis much about or near the Line that it thus communicates with the Sea. Some allow it 70 leagues of breadth in that place, others not ſo much, but all agree 'tis the greateſt River known in the World, and neither the *Danube*, *Nile*, *Volga* or *Ganges*, are comparable to it. The Tides flow almoſt 100 leagues up the River, in which reſpect alſo it may claim precedency of all the Rivers in the World that have been yet diſcover'd. The River of *Plate* runs into the Sea in about 35 degr. S. L. and ſometimes 'tis ſo overcharg'd with waters, that it drowns all the Fields about it, and the Country looks like a Sea; this Deluge holds for a matter of 3 Miles, and then the River returns to its ordinary Courſe or Bounds again. The Natives, when they find this coming upon them, they quit their Habitations, and retire with all their Goods into their Canoes, and ſo float up and down till the ſwelling River ſinks again, and makes way for them to return to their Houſes. On the South-ſide of the Mountains of *Peru* the Rivers are not uſually ſo great, becauſe their Currents are not long, and many waters cannot join their forces together; but then they are very ſwift in their deſcent from the Mountains, and have ſudden falls, upon which account they are very dangerous, and many have loſt their lives in attempting to paſs them. The methods that the *Indians* have to help People over their Rivers are various, and ſuch, as they that try them had need be above the fears of drowning. In ſome places they make uſe of a long Rope that reaches from one Bank to the other, on to which is faſten'd a Basket, and in that the Party that is to paſs over puts himſelf; ſo then the *Indians* that undertake the buſineſs ſwimming over to the other ſide, they drag him by the Rope along to them. In other places they ride aſtride upon a wadd of ſome light ſtuff or other, and mount the Paſſenger behind them, and ſo with a piece of board, inſtead of an Oar, they row themſelves over. Others of them again, do compoſe a kind of a Float of Gourds or Pompions faſten'd together, upon which they place all the People, and their ſeveral things that are to go over; on to this Float they fix certain Cords, which the *Indians* that go ſwimming before do pull, and ſo tow along the whole Machine, while at the ſame time others come behind, and do that ſervice by thruſting which the others before do by pulling. Sometimes they have undertaken to carry Men over Rivers upon a Table-board, which they have born upon their ſhoulders, and this without any manner of fear or concern; and the learned Jeſuit *Acoſta* paſs'd the *Alvarado* in *New Spain* after this manner, and tho' 'twas in a ſhallow part of the River, yet ſometimes the *Indians* were many times out of their depth and loſt their footing, and then when 'twas ſo they preſently fell to dabbling and treading the water; ſo that bottom or no bottom 'tis all one to them. As for Bridges they uſe none, unleſs floating ones made of Hair and Straw ſometimes; the *Spaniards*, 'tis true, have built Bridges of Stone over ſome Rivers, and the *Indians* may uſe them 'tis poſſible when they lie in their way: that is, if they have not Gourds or Pompions at hand to make a Float of, or a wadd of Straw, or ſome ſuch conveniency, which is much better than a Bridge, which may tumble down into the water while a Man is going over it. In ſhort, there's no need of Bridges for People that are as ſafe in the water as upon the dry land, and in no more danger of drowning than the Fiſhes themſelves.

Springs and Fountains.

A petrifying water.

Inca's Baths.

A Fountain that yields Salt.

Medicinal waters.

Smoking water.

Waters of various colours.

There are Springs and Fountains in this Country that have ſomething rare and wonderful in them. In *Guancavelica* in *Peru*, there's one that ſends out hot water, which as runs along petrifies and turns to perfect Rock. It's true, this ſtrange ſort of Stone is ſoft, light and eaſie to cut, but yet 'tis ſtrong and laſting, and ſo fit for uſe, that almoſt all the Houſes of the adjoining Village are built of it. They ſay alſo that 'tis very fatal for Men or Beaſts to drink of this water, and there's no doubt to be made on't, if it turns to ſtone in their Bellies; to be ſure 'tis no good Diuretick, and wont paſs quite ſo well as a Chalybeat. But by means of this petrifying quality of the water, it comes to paſs that the Fountain blocks up its own way, and ſo neceſſarily changes its Courſe, and is continually forcing it ſelf new paſſages. At the Baths which they call the *Inca's* Baths, there are ſome ſtreams which come almoſt boiling hot out of the ground, and cloſe by theſe are others that are as cold as Ice. In the Province of *Charcas* eſpecially, there are a vaſt number of theſe hot Springs; and the *Spaniards*, who meaſur'd Time by *Ave-Maries*, won and loſt Wagers about holding their fingers in the water while thoſe ſhort Devotions paſs'd, but a Devotion as warm as the water, wou'd have made them find out ſome other way to meaſure the Time, while they were playing the fool thus with one another; a Man can't well burn his finger to purpoſe without crying oh! for't, and that's very pretty ſport in the middle of a Prayer. Near *Cuſco* there's a Fountain that has its waters impregnated with a Salt very white and good, which it leaves behind as it runs along, and that in ſuch quantities, that if the People thought it worth their while they might make it turn to ſome good account; but they have ſo much of this Commodity thereabouts that they altogether neglect it. The waters which run in *Guayaquill* in *Peru* near the Line, are reckon'd good for the *French* Diſeaſe, and many other caſes of the like nature; for which reaſon they are viſited by People that live at a great diſtance all round about, and they talk of very great cures that are wrought by them. They attribute the vertue of theſe waters to the Saſſaparilla, that the Country is known to abound with. Out of the Mountain *Bilcanota* in *Peru* there iſſues a Spring, the water of which, as it comes juſt from the Rock, is of an Aſh-colour, and looks like Lye; beſides it caſts a fume from it like a thing that's on fire: it continues after this manner for a great way, till the ſtream has ſo many other waters mix'd with it, that all the heat and fuming is quite gone. There are alſo Springs, the waters of which are of very odd colours; thus in *New Spain* there's one, whoſe water is blue, and in *Peru* another of a blood red colour, the ſtream of which the Inhabitants call the Red River, but as to the Vertues and Properties of either of theſe, we can give no account.

Volcanoes.

A great one by *Mexico.*

That of *Arequippa.*

Those of *Guatimalla* in the South Sea.

If we Survey theſe Parts of the World, we ſhall find two burning Mountains and Volcanoes, no leſs terrible than thoſe famous ones of *Ætna* and *Veſuvius* in *Europe*. That of *Mexico*, which is near the Village of *Angels*, is a very conſiderable one, and takes up ſo much ground, that they go turning and winding about it in the aſcent a matter of 30 leagues. There has been no fire obſerv'd yet breaking out of it, but thick Clouds of ſmoke are very common, and ſeen almoſt every day; and ſometimes it throws out great quantities of Aſhes and Cinders too. Theſe Paroxyſms are ordinarily in the Morning and the Evening, tho' *Acoſta* tells us he has obſerv'd them at other times of the day. That of *Arequippa* is alſo vaſtly high, and the Mountains is all over nothing but Sand; it has never flam'd viſibly, tho' the effects of an inward fire are diſcernible enough in the ſmoke which at certain times it ſends out. Thoſe of *Guatimalla* are more remarkable ſtill, as well for their heighth and greatneſs, as the horrible flames that are ſeen to aſcend out of them; this Phenomena is often diſcover'd by thoſe that ſail a great way off in the South Sea, they can ſee at that diſtance, by the vaſt Columns of ſmoke and flame, when the Volcanoes are in their raging fits. The Country about *Quito* has a conſiderable ſhare in this ſort of Calamity

That by *Quito* in *Peru.*

too; there's one in that neighbourhood that throws out Aſhes and Cinders for many leagues about, and ſometimes fills the air at that rate with them that 'tis quite darken'd, and there's little difference between Day and Night while that combuſtion laſts. And the forementioned Author tells us, that he was in the City of *Quito* at a certain time when the Volcano raged, and threw out ſuch a prodigious quantity of Aſhes, that the People were not able to walk the Streets for't.

Earthquakes.

To the Volcanoes we may not improperly add Earthquakes, which are another, tho' a very formidable head of the Natural Hiſtory of this Country. The Empires of *Mexico* and *Peru* are both liable to them, but eſpecially the latter, which if it were not for this inconvenience wou'd be above objection in every point, and compariſon in moſt; but it muſt be acknowledg'd that 'tis ſubject to theſe direful concuſſions, and its neighbour *Chili* is equally expos'd to the ſame calamity too. It was but in *A. D.* 1586. that the City of *Guatimala* was almoſt all ſwallow'd up with an Earthquake, and the great Volcano there had then been vomiting out whole torrents of fire for ſix months together, without any conſiderable intermiſſion by day or by night. The ſame was the fate of the City of *Arequippa* about three years before that. A little before that there was an Earthquake that, as it were, run along from *Chili* as far as *Quito*, which is above 100 leagues; but this was not ſo terrible as another which happen'd upon the Coaſt of the ſame Country of *Chili*, which entirely demoliſh'd ſeveral Towns, overturn'd great Mountains, which tumbling down into Rivers ſtopt the Courſes of them, and converted them into Lakes; the Sea at the ſame time was in a fearful commotion, and relinquiſhing the Channel, the Ships in ſeveral places were left upon dry ground.

City of *Guatimala* deſtroy'd.

Arequippa likewiſe.

A ſhock from *Chili* to *Quito*.

Dreadful Earthquakes in *Chili*.

A terrible one in *Peru*.

In the forementioned Year 1586. or thereabouts, there was the like confuſion at the City of *Kings* in *Peru*, and the adjoining Country; 'tis true there were not many lives loſt at that time, for the People were warn'd of the approaching miſchief by a diſmal grumbling noiſe in the Bowels of the Earth, upon which they left their Houſes and Gardens, and betook themſelves to the open Fields. But a great part of the City was ruin'd, and the Inhabitants themſelves muſt have been deſtroy'd too, if they had not retir'd farther up into the Country, for by the convulſion the Sea was furiouſly thrown out of its Bounds, and carried near two leagues up into the Land, the water riſing above 14 Fathom, ſo that the Country was perfectly delug'd for that diſtance, and there was no living there but in Boats or very high Trees.

Leſs violent in *Mexico*.

Mexico alſo has its ſhare of theſe Misfortunes, but they are not near ſo violent there as in *Peru* and *Chili*. Theſe two laſt Countries have not the horrible Commotions of the airy Region, the frightful Thunders and Lightnings that many other places have; but inſtead of that, they are paid off with Earthquakes, which ſort of Commotion is the more formidable of the two, and moſt commonly attended with the greater miſchiefs.

The Riches:

This part of the World has had the name for wonderful Riches ever ſince 'twas diſcover'd; and not without juſt reaſon, for none all over the Globe can pretend to ſo great Treaſures as it, if we reſtrain the word to Gold and Silver, not but that there are Jewels and Pearl to be found here too in no ſmall plenty in many places; but perhaps the *Weſt-Indies* will give the precedency to the Eaſt in this matter, and acknowledge its own Pearl and Jewels leſs beautiful and valuable than thoſe of the other. As for their Gold, they find it one of theſe three ways; either in Grains, which is always pure, without any manner of mixture, and needs no melting nor refining in the Fire; or in Duſt, which is found about Rivers and Places where much water hath paſs'd, and is to be ſeparated by waſhing away the Sand and Earth that contains it; or elſe in Veins in a kind of Stone which comes out of Pits and Mines, and requires much labour to dig it out of the Earth at firſt, and refine it in the Fire afterwards. The firſt ſort is not ſo plentiful as the ſecond and third, but 'tis the ſecond ſort that they get the largeſt quantities of in the *Indies*; tho' there are Mines that afford the Gold Stone, in ſome pieces of which you ſhall ſee the Stone intermix'd and ſtreak'd as it were with gold, in others you ſhall have half Gold and half Stone. And this Stone runs in a perfect Vein in the Mine as Silver does, as *Acoſta* tells us, he was an Eye-witneſs in the Mines of *Caruma* in this Country.

Ways of getting Gold.

Gold Mine.

Beſt Gold.

The fineſt Gold is reckon'd to be that of *Caranava* in *Peru*, and of *Baldivia* in *Chili*; and next to this the Gold of *Veragua*. The Gold is commonly found mix'd with Silver or Copper, but that which is found mix'd with Silver is, generally ſpeaking, of fewer Carrats than that mix'd with Copper. What abundance of this rich Metal theſe Provinces yielded may be gueſs'd by this, that the *Incas* of *Peru* had almoſt all their Houſhold Materials, and other Utenſils, made of it. They did not content themſelves with ſmaller Veſſels of Gold, as Pots, Cups, Goblets, Flaggons, nor with the larger ones, as great Kowles, and others of that ſort, but had even their Chairs of State, and Litters of Maſſy-gold. And 'tis certain alſo, that at *Mexico* the *Spaniards* found in the Temples Images of various forms, and of a very great magnitude too, all of the ſame ſolid Metal. As for Silver, the chief Places from whence they draw that are the Mines of *New Spain* and *Peru*, but thoſe of *Peru* do vaſtly ſurpaſs the others; and amongſt all theſe, the Mines of *Potoſi* are the moſt admirable. 'Tis true thoſe of *Porco*, which are 6 leagues diſtant from *Potoſi*, were diſcover'd long before them, being open long before the *Spaniards* ever ſaw the Country; but tho' the Metal there be very good and rich, yet by reaſon of ſome obſtructions they have left off to dig there. 'Twas at leaſt 12 Years after the *Spaniards* had entred the Country that the Mines of *Potoſi* were diſcover'd, which was brought about by this accident: A certain *Indian* of the Province of *Cuſco* (whoſe Name *Gualpa*, for this Diſcoveries ſake, we ought to mention) being one day a Hunting, his Game running up ſome part of this great Mountain of *Potoſi*, where the way was very full of Buſhes and Shrubs, he, to help himſelf along, catch'd hold of a branch or twig of ſome Buſh, and by that means pull'd it quite up; but happening to obſerve the Earth about the root of it, he ſaw the Silver Ore, which he preſently knew to be very good, having had conſiderable Experience in thoſe Matters by attending the Mines at *Porco*. At the ſame time alſo, ſearching a little farther, he found ſeveral pieces of Metal which lay diſpers'd about the ground near the place where he had pierc'd this Vein. Being thus ſecure of his good fortune, he came ſeveral times, and drew Silver out of this vaſt Treaſury, never giving the leaſt hint to any body. At laſt another *Indian* his Neighbour (*Guanca* by Name) obſerv'd not only that his way of living was alter'd mightily for the better, and he ſpent at a very great rate, (as a Man might well do that had the Mines of *Potoſi* to bear him out in't) but alſo that the Silver which he refin'd was quite different from that of *Porco*; this gave him a ſuſpicion of the truth, and he never left working till he had work'd it quite out, and *Gualpa* confeſs'd the whole matter to him; nay, more than that, went and ſhew'd him the place whence he had all his Riches. And now theſe two Men agreed to ſhare this glorious Mountain between them; *Gualpa*, for his part, kept the Vein he had firſt diſcover'd, and *Guanca*, for his, had another rich Vein very near the former. A very comfortable Subſiſtence this was for each of them, and a fine Inheritance to be left to a Son, and this, 'tis very probable, they might have enjoy'd a long time, if they had not claſh'd and fell out with one another; but as Diſcord helps to bring a great many things to light, ſo 'twas here. *Guancas* Vein was very fine and rich, but 'twas harder to work than *Gualpas* was, and therefore he wou'd fain have come in a ſharer with his Comrade in the Profits of his; but the other not being willing to admit of this, they fell out about it, and *Guanca* preſently went and diſcover'd the Secret to his Maſter *Villaroel* a *Spaniard*. And he having aſſur'd himſelf, by Ocular Demonſtration, of the truth of what was told him, open'd the buſineſs to the Governor, and ſo, according to the Law, he and his Servant *Guanca* remain'd Lords of the Mine, to dig and draw forth the Silver as their own, paying only the King's Duty, which is a fifth part. For 'tis to be noted, that thoſe that diſcover a Mine have the Profits of it granted to them, and their Names are Regiſtred in the King's Books, with the Place and Time of diſcovery.

Riches of the *Incas.*

Silver Mines.

Porco-Mines a long time open.

Potoſi-Mines how diſcover'd.

More Veins diſcover'd.

Quickly after this, there were two Veins more diſcover'd in the ſame Mountain of *Potoſi*, ſo that there are four in all that they draw Silver out of; but the firſt was the beſt and richeſt, being half Silver; and beſides that wonderful frequency of it, it went on at that rate for 50 or 60 Stades, which is ſo many times a Man's heighth, but there it fail'd. All theſe Veins lie of the Eaſt-ſide of the Mountain, neither is there any ſuch thing to be diſcover'd on the Weſt-ſide. They run in very irregular forms, divers other leſſer ones ſhooting out of them as ſo many branches out of the arm of a great Tree; in the wideſt part they have 6 foot, and in the narroweſt a ſpan breadth. Every Vein has ſeveral diſtinct Mines, which are parts and portions of the ſame, and are divided between ſeveral Proprietors whoſe Names they alſo bear. The largeſt of theſe contains about 80 Yards, neither may it be more by the Law, and the leaſt about 4 or 5. By continual working and

The odd figure and running of the Veins.

drawing

The depth of them.

The Soccabones or Horizontal Mines.

The hard task of them that work in the Mines.

drawing ſuch vaſt quantities of Ore out of the Bowels of them they are become very deep, and in the rich Mine they reckon the depth in ſome places to be 200 Stades; 'tis true this is the greateſt depth, but they have gone in many other places, both of that and the other Mines, to 60, 70, and 80 Stades. To remedy the inconveniencies ariſing from hence, they have made certain Mines or Paſſages Horizontal ways from the lower parts of the Mountain, which running acroſs, meet with the Veins at laſt; and by this means, they work with much leſs pains, charge and danger. Theſe croſs Mines they call Soccabones, and they make them a matter of 8 foot broad, and a Stade in heighth, having Doors to ſhut and open them as they pleaſe. They coſt no little charge and trouble to finiſh, and one only of them was 29 Years a making; but there are ſeveral of them, and the Proprietors of every Soccabone have this advantage allow'd them, that the 5th part of all the Metal drawn forth is theirs. But the Men that do all the work of the Mines, that labour at drawing out the Silver, are Slaves indeed. They work in continual darkneſs, without knowledge or diſtinction of Day and Night. They breathe a groſs unwholſome air, or indeed rather Metallick fumes and vapours, which breed horrible Diſeaſes, and make them very ſick. They have the raw ſmell of the Earth continually in their Noſtrils, and are expos'd to all the damps that riſe, which many times are attended with fatal conſequences. But then the dangers of being cruſh'd with the falling Earth, or their own falling from ſuch heighths, they are forc'd to mount too in carrying up the Silver; as they are very great, ſo they are continual, and it can never be ſaid that they live one moment in ſafety while they are in thoſe diſmal Caverns. They carry up all the Metal upon their ſhoulders, from the lower depths of the Mine, perhaps 150 Stades high, where they deliver it. For which purpoſe they have pendulous Ladders made of twiſted leather, and croſs'd with Staves of wood, by which they are continually aſcending and deſcending with their burdens upon their Backs. At the end of each of theſe Ladders, there are Platforms of Wood rais'd with Seats for the poor Labourers to ſit and breathe themſelves. And 'tis a vaſt deal of pains they take in hewing out the Metal at the bottom of the Mines, for 'tis commonly very hard, and they are forc'd to uſe great Hammers to overcome it; they weary themſelves with ſtrong and heavy blows upon the hard and untractable Rock, and get no more ground many times than by working upon ſo much Flint.

Pliny's Account of Mines.

Mines of *Spain.*

Riches of the Mine of *Bebello.*

The vaſt quantities of Gold and Silver that are brought from *America.*

What *Pliny* has ſaid of the workers in Mines at that time, agrees very well with the caſe of theſe poor Labourers at *Potoſi*: *We enter even into the very Bowels of the Earth* (ſays he) *and go hunting after Riches to the place of the Damned. Thoſe that ſeek for Metals perform Works more than Giants, making Holes and Caves in the depths of the Earth, and piercing Mountains by the light of Candles, where Day and Night are all alike, and they ſee no light of the Sun for many Months. With heavy Wedges and Hammers they pierce the hard Rock, and break the Flints how ſtrong ſoever, for the hunger of Gold is yet more ſharp and ſtrong.* Thus that Author, who talks as if the Mines of *Potoſi* had been diſcover'd in his time, and he had ſtood by and ſeen the Workmen in all their toil and drudgery. But however it comes to paſs that the *Spaniards* are come abroad into the New World to fetch Gold and Silver, 'tis certain from the forementioned Author that they had it in no ſmall plenty within their own Territories. He reports that *Spain*, above all other Countries of the World, (that is which were known and under the *Roman* Juriſdiction) did abound with Gold and Silver, eſpecially *Galicia* and *Portugal*, and above all the *Aſturias*, whence (he ſays) they brought every Year 20000 pounds of Gold, and that they did not find ſo great plenty in any other place. Particularly he tells us, that the Pits or Holes of thoſe Mines in *Spain*, which they began to dig in *Hannibal*'s time, were remaining in his time, and held till then the Names of their Diſcoverers. Amongſt theſe, that which *Bebello* diſcover'd was very famous, and kept that Name in *Pliny*'s time, and was then alſo dug to the depth of 1500 paces into the Mountain, which they having continued to labour in it from the time of *Hannibal* till then. But the advantages which that great *Carthaginian* made of it were very conſiderable, for according to the account of our Hiſtorian, they brought every day 300 *l.* weight of Silver out of it; yet is all this in a manner inconſiderable to the Riches brought out of the *American* World, for *Acoſta* tells us, that the Fleet in which he came from thoſe Parts, brought 12 Caſſons of Gold, every one of which was 100 *l.* weight, beſides a vaſt deal more in Bars, all which was the King's ſhare, not reckoning that which came for Merchants and private Men, which was all Regiſtred, and much leſs ſtill that which was not Regiſtred, which amounted to a greater Sum yet. At the ſame time there were above 11000000 of Silver tranſported in the two Fleets of *Mexico* and *Peru*, and very near half of it was for the King. In ſhort, it appears by the Regiſter-Books for the Province of *Potoſi*, that they did every *Saturday* enter ſometimes 150000, ſometimes 200000 Pieces into the Books, whereof the King's fifth Part amounted to 30000 or 40000 Pieces; ſo that every day they drew from this Mine to the value of 30000 Pieces, (every Piece worth 13 Rials and half) and the King's daily ſhare was at leaſt 6000 Pieces.

At this rate have the Mines of *America* poured out their Riches to the *Spaniards*, which will appear vaſtly greater yet, if it be conſider'd that the beſt part of the Silver, which the *Potoſi* Mines have afforded, was never Cuſtom'd, which notwithſtanding went about amongſt the *Indians* and *Spaniards*; nay, if we may depend upon the credit of *Acoſta* in this matter, not the one third Part, no not half of the Silver of *Potoſi*, ever was Cuſtom'd, or came into the open light.

No water in the Mines at *Potoſi.*

The work goes on ſo much the eaſier in the Mines of *Potoſi*, becauſe they never yet have met with any water to ſtop them in all their diggings; and 'tis the happineſs (one may ſay the wonder) of this Mountain, that they have gone to the depth of 200 Stades, and never had any hinderance upon that ſcore. But as this is a very common impediment in Mines, ſo perhaps 'twas partly owing to this that they made no more progreſs formerly in thoſe in *Spain*, or that they did not think fit to continue working in them: For *Pliny* reports, that the fam'd Mine of *Bebello* was very full of water ('twas even like a River coming in upon the Labourers) and therefore that the *Gaſcoignes*, who were employ'd to work in it, beſides all their toil of hewing and hammering out the Metal, were incredibly fatigu'd with drawing out and emptying the water: till which was done they were not able to work, at leaſt with any manner of eaſe and quiet; and this was alſo the caſe of the Mines of *Porco* in *Peru*.

Qualities of the Silver.

As for the quality of the Silver they got at *Potoſi* 'tis very different, for in one and the ſame Vein you ſhall meet both with very rich and very poor Ore, ſome of it is red, another ſort aſh-colour, and ſo of divers colours; but the richeſt of all is of the colour of Amber, and the next to that inclines to a black. They have uſually drawn out of one Quintal of Ore, 30, 40 and 50 Pieces of Silver, but out of the fineſt 200, and 250; the pooreſt of all is that which yields 3, 4, 5 or 6 Pieces.

Method of refining by fire out of uſe.

Their way of refining the Silver was firſt of all by melting, and diſſolving the Maſs over the fire, and in that ſtate of liquefaction the Droſs, and all heterogeneous Mixtures, were caſt off by themſelves. For this purpoſe they built abundance of ſmall Furnaces all about the Mountain of *Potoſi*, (there were above 600 of them) where with Wood and Coal-fires they carry'd on this Work; but becauſe it conſum'd vaſt quantities of Wood to do ſo, one who it ſeems ſet himſelf to contrive a way how to ſave that charge, and yet do the work too, found out the way of uſing a ſort of Straw inſtead of Wood and Coal. It is a thing almoſt like a Reed, and they call it *Ycho*; but 'tis wonderful to ſee what an influence the flame of it has to diſſolve theſe Metals, and how much better it does than any other ſort of fuel. Then there's this conveniency too, that there's great plenty of it throughout almoſt all the Mountains of *Peru*: And this is agreeable to what *Pliny* tells us upon this Head, that there is Gold which melts more eaſily with the flame of Straw than with hot burning Coals.

A ſtrange note.

In ſome of theſe Furnaces they uſe the natural, in others an artificial Wind from Bellows; and 'tis worth obſervation what has been confirm'd by long Experience, that the Metal of the *Porco* Mines is eaſily refin'd with Bellows, and that of *Potoſi* cannot be but by the natural air from the Mountains; but of later Years they have for the moſt part left off their Furnaces, and make uſe of Mercury for the refining of their Silver.

Method of refining by Mercury.

In order to this, they beat and grind the Silver-ſtone or Ore very ſmall in the firſt place; after which they ſearch it, reducing it to as fine a Powder as they can. This Powder they put into Veſſels over the fire, mixing a good quantity of Salt with it, which promotes the deſign of ſeparation of the Impurities; the common proportion is 5 Quintals of Salt to 50 of the Metallick Powder. Then they ſtrain the Quickſilver into the Veſſel, ſtirring it about well that all may incorporate together. And whereas they at firſt us'd to do all this off from the fire, mingling their Silver and Mercury in great Troughs, and ſo ſtirring and letting it ſettle ſeveral times one after another, which took up almoſt a Month to accompliſh, Separation of the Silver and Mercury.

Difference of the Ore as to the Mercury it takes up.

Obſervation.

Refining by Mercury unknown to the Ancients.

pliſh, they have ſince made uſe of fire, which mightily promotes the work and ſhortens the time, ſo as that in the ſpace of 5 or 6 days the Mercury is ſufficiently incorporated with the Silver. After this union of the two Bodies, the great work is to ſeparate them again, which they do in this manner: They pour the whole mixture into water, and ſtir it about well, by which means all the Earth and Droſs is clear of the Mercury and Silver, which being by far the more ponderous, take their places at the bottom accordingly. This operation they repeat ſeveral times, till they have perfectly cleanſed it from all the feculencies. When the Silver and Mercury are clean and begin to ſhine, they put all into a Cloth and ſtrain it pretty forcibly, ſo that all the Quickſilver runs out and leaves the Silver behind. But becauſe there is ſome of the Metal that ſlips away with the Earth and Droſs (which they call the waſhings) they therefore waſh this over again, and draw out the remainder. The Silver Ore differs much as to the proportion of Mercury it conſumes, and the quantity of pure Metal it yields, for ſome yields a great deal of Silver, and waſtes but little Quickſilver: Another again conſumes a deal of Quickſilver, and yields little Silver; a third ſort conſumes much Quickſilver, and at the ſame time brings a great deal of Silver; and a fourth, as it requires but little Quickſilver, ſo it affords but little Silver. But yet 'tis obſerv'd, for the moſt part, that the richeſt Ore, as it gives the moſt pure Metal, ſo it conſumes the moſt Mercury, and the quite contrary in that which is poor and thin. The Silver drawn with Mercury is ſo fine, that the Workmen are forc'd to allay it with ſome mixture; but this Art of refining, as uſeful as it is, there is ſome good reaſon to believe 'twas unknown to the Ancients, in *Pliny*'s time at leaſt, ſince when he makes mention of the refining of Silver, he ſpeaks only of melting, and ſays in one place plainly, that Mercury will aſſociate it ſelf with no metal but Gold alone, which this way of refining is a ſufficient confutation of.

Quickſilver Mines of Guancavilica.

Indians value the Vermilion.

The uſes ſome other Nations put the Vermilion to.

Quickſilver Mines in *Spain*.

How the Mines of Guancavelica were found.

Having had occaſion to ſpeak of the Uſes of Mercury, it mayn't be amiſs to go a little farther into the Hiſtory of this wonderful Metal: The Country we are treating of affords it in abundance, eſpecially the Mountains of *Guancavilica*, near the City of *Guaruangua* in *Peru*; there is the vaſt Treaſury of this Metal, as in the Mountains of *Potoſi* is of Silver. The *Indians* have had indeed Mines of Quickſilver open amongſt them for many Ages before theſe of *Guancavelica* were diſcover'd, but it was not for the ſake of the Quickſilver (for they knew not what it was till the *Spaniards* came amongſt them) but for the ſake of the Vermilion which is incorporated with it; for we muſt know that Quickſilver is found in a ſort of Stone, which likewiſe yields the Vermilion, or Minium, as the Ancients call'd it. The *Indians* give it the name of *Limpi*, and having a very great eſteem for it, they took abundance of pains to open the Earth, and dig it out of the deepeſt Mines: and the principal uſe they made on't was, to paint and colour themſelves with it, eſpecially when they went to the Wars; as alſo now a-days, upon all Publick Solemnities, Feaſtings, Dancings, and the like. Neither is it amongſt theſe People alone that this Mineral has been in ſuch eſteem, for *Pliny* reports that both the *Romans* and *Ethiopians* were very fond of it, for theſe and ſuch like purpoſes; that the former were accuſtom'd to paint the face of *Jupiter* with it, and the latter not only the faces and bodies of their Idols, but alſo their own; and that the *Romans* ſometimes did this too as well as they. That all the Vermilion was brought to *Rome* from *Spain*, where they had a great many Pits and Mines of Quickſilver, and that the *Romans* wou'd not ſuffer it to be refin'd in *Spain* for fear they ſhou'd ſteal ſome of it, but had it all brought to *Rome* ſeal'd up juſt as it came out of the Mine, and ſo refin'd it there. In a word, that they brought every Year from *Spain*, eſpecially from *Andaluſia*, a matter of 10000 weight; and this, he ſays, the *Romans* valued as an infinite Treaſure. This Mineral however (as was ſaid before) the *Indians* had known of a long time, but knew nothing of the Nature and Uſes of the Quickſilver which is to be drawn out of the ſame Maſs. And the *Spaniards* themſelves had been in the Country a conſiderable while before they knew of any of theſe Mines; and the firſt diſcovery, as it was of the Mines of *Guancavelica*, ſo it was purely accidental like that of the Silver at *Potoſi*. For a certain *Portugueſe* (*Henrique Guarces* by Name) having a piece of this *Limpi* which the *Indians* uſed, obſerving it well, found that it muſt needs be the very ſame thing with that which they call'd Vermilion in *Caſtile*, and knowing that this and Mercury were lodg'd together, he went to the place whence they drew their *Limpi* to make trial of it, and found it to be ſo. Immediately upon this diſcovery the Mines began to be opened, and vaſt quantities of Quickſilver were tranſported to *Mexico*, where they firſt began to refine their Silver with it; and from thence the method was brought to *Potoſi*, where they us'd it ever afterwards. The largeſt of all theſe Mines extends above 80 yards in length, and 40 in breadth, in which they have made ſeveral Pits and Ditches of 70 Stades deep, ſo that at leaſt 300 Men may very well work altogether in it.

How they draw the Quickſilver.

Engines for grinding the Metal.

Ponds and Sluces.

The Mountain of *Potoſi*, its barrenneſs and dimenſions, &c.

The way of drawing out the Quickſilver, is to take the Stone and beat it well, and then ſet it in Earthen-pots, cloſe luted, over the fire to melt, by which means the Mercury is ſeparated into a body by it ſelf; for mounting up in fumes it encounters the Veſſel, and ſo falls down again congeal'd. When 'tis thus drawn they put it into Skins, and lay it up in the King's Store-houſe, from whence it goes by Sea to *Ariqua*, and from thence by Land upon their Sheeps back to the Mines at *Potoſi*. 'Twill be of little uſe here to ſtand to deſcribe their Engines and Mills for grinding the Silver Ore, to prepare it for the receiving of the Mercury; 'tis enough to ſay in general, that in ſome of them they uſe the ſtrength of Horſes, in others the force of Water to ſet them awork. And this water being for the moſt part Rain, they have made 7 Ponds for the receiving of it, which are three Stades deep, and 1600 Rods in compaſs, and each provided with their proper Sluces; ſo as that when they have need of any water, they open a Sluce, and let out a ſtream of water as much as they have occaſion for: but becauſe for the moſt part they have little Rain, except in the Months of *December*, *January* and *February*, and then if they come plentifully, their Ponds are well fill'd, and the grinding holds for 6 or 7 Months; for this reaſon, all about *Potoſi*, they pray for Rain for the ſake of the Silver, as they do in other places for Bread-corn. After the Silver is melted and caſt into Bars, the next work is to give it the Alloy; for which 'tis carried to the Aſſay-maſter, whoſe buſineſs we will leave to himſelf, and not dive into it. Having been thus long in the Mine, 'twou'd be unpleaſant to detain the Reader any longer in the Mint; we ſhall only obſerve a little farther concerning the Mountain of *Potoſi*, that the Air about it is very cold, the Soil dry and barren, the Ways very rough and uneven. There grows neither Graſs, Grain nor Fruit, and what thro' the infertility of the Earth, and the intemperature of the Climate, 'twou'd be utterly void of Inhabitants, if the charms of Silver did not draw them thither. But the outward Poverty of the Mountains is not valued, ſince 'tis ſo extravagantly rich within; covetouſneſs has made People overlook all thoſe defects and inconveniencies, ſo that 'tis more plentifully ſtock'd with Inhabitants than any other place in all the Kingdom of *Peru*. You may have there all ſorts of Meats, Wines, yea, the moſt exquiſite Dainties whatſoever, tho' the place it ſelf is hardly able to keep a Man or a Horſe from ſtarving for one Night. The Mountain is vaſtly higher than all others about it, 'tis reckon'd from the top to the bottom 1680 yards, and 'tis a league in circuit at the bottom.

Pearl in the North Sea as well as the South.

Emeraulds.

The Kingdom of Emeraulds.

Differences between them.

The other part of the Riches of this Country lies in Pearl and Emeraulds. Of the former we have ſpoken up and down already, ſo that we ſhall need to ſay no more here; only taking notice, that whereas the greateſt plenty of them has been commonly ſaid to be at the *Pearl-Iſlands* in the South-Sea, near *Panama*, *Acoſta* relates that the beſt and greateſt ſtore were found at the time of his being in the *Indies* in the North-Sea, near the River of *Hatch*. But to ſpeak the truth, the *Pearl-Iſlands* ſeem to have been diſcover'd ſince that time, ſo that the North-Sea might afford the moſt and beſt then, and the South-Sea have the reputation afterwards. As to the Emeraulds, the greateſt ſtore of them is found in the Kingdom of *New Granada*, and in *Peru* near *Manta* and *Port-Viel*, according to the accounts of the ſame Author. He tells us alſo, that towards that place there is a certain happy Soil which bears the Name of the *Land of Emeraulds*, for the abundance of them which are found there; but the *Spaniards* had not been able to reduce that Country, and make themſelves Maſters of the Emeraulds in his time. Theſe Jewels grow in Stones like Cryſtal, and (as he tells upon his own Obſervation and Experience) appear faſhion'd like a Vein in the ſame. There's a vaſt difference amongſt them as to the perfection of colour, and the diffuſion of the green tincture thro' the body of the Jewel; for ſome are half white and half green, others very near all white, others very perfect, and tinctur'd with the true noble green all over. Their ſizes are as different too as their colours, and tho' there are ſome reported to be of a vaſt magnitude indeed, yet the foremention'd Author never pretends to have ſeen any larger than a good Nut. Both Pearl and Emeraulds are little eſteem'd in the *Indies*, in compariſon to what they are in *Europe*; and there is no other reaſon for't but only this, That things that People converſe with very familiarly and frequently (whatever they are) at laſt become little and vulgar to them. Even Diamonds themſelves wou'd not be exempted from this common fate of loſing their reputation, if they came abroad in the World as much as many other things that do. It was perhaps not upon this account however of ſeeing ſo many Jewels together, that an *Italian* Lapidary valued them at no greater a rate. There was a certain *Spaniard*, who having an admirable Emerauld, ſhew'd it the *Italian*, and ask'd him the value of it, who told him he priz'd it at 100 Ducats; upon which he ſhew'd him a larger than the former, and that the *Italian* valued at 300 Ducats. The *Spaniard* quite drunk with this diſcourſe, carries his Lapidary home to his Lodging, and ſhews him a whole Caſket full of the ſame Jewels, deſiring his opinion of them: Oh, Sir, (ſays the *Italian*) they are very good Stones, and take them one with another they are worth a Crown apiece. 'Tis pretty likely he had ſome deſign upon a bargain, but whether the *Spaniard* let him have it or no is uncertain.

A Story of a *Spaniard* and an *Italian* about the price of Emeraulds.

Vegetables in the *Spaniſh Indies*.

We have done now with the Riches that are buried under the Earth, or hidden in the Waters, and it follows next to take a little ſurvey of thoſe upon the ſurface, the Plants and Animals, which are more uſeful to humane Life by far than the former. But here we ſhall endeavour to take care, that thoſe Animals or Vegetables which are common to this part of *America* with thoſe Parts which have been already deſcrib'd, ſhall be here omitted, at leaſt as far as the varieties and ambiguities of Names will allow us to make a judgment of them.

Maize.

The deſcription of it.

Uſes of it.

Ways of preparing it in order to making drink.

Obſervation of the Maize.

The moſt noted Grain in this part of *America* is the Maize, of which the *Indians* make both Bread, and a very ſtrong ſort of Liquor, which intoxicates the drinker ſooner than the Juice of the Grape. It is thought to be no way inferior to our Wheat in ſtrength and ſubſtance, only the eating much of it, where a Man has not been accuſtom'd to it, is ſaid to incline him to Scabs and Swellings. This Grain grows upon Canes or Reeds, every one of which bears one or two bunches or cluſters, in each of which there ſhall ſometimes be 600 or 700 grains. They ſow the grains one by one, and not very thick nor cloſe together; it requires a Soil both hot and moiſt, and where it meets with ſuch a one it thrives wonderfully. The green Leaves and Canes, or Stalks of the Maize, is very good Provender for the Horſes and Mules, and when 'tis dry it ſerves them inſtead of Straw: and to give them the Grain it ſelf, they eſteem much better than the giving them ſo much Barley, becauſe of the goodneſs of the nouriſhment it affords; only they obſerve this Rule always, to water them before they feed them with this, becauſe 'tis of ſo ſwelling a nature. The *Spaniards* and *Indians* eat the Maize both boil'd and roaſted, and the buds of it being very fat and oily, do ſerve them inſtead of Butter. As for the ways of making Liquor of it, ſome ſteep the grain till it breaks, and then they boil it to ſuch a degree of ſtrength, that a little will overturn a Man. Others go a more cleanly way to work, which is firſt of all to chaw and ſqueeze it well in their mouths, and ſo making a kind of a Leven of it, to boil it well afterwards: Nay, ſome of the *Indians* are of opinion, that to make good Leven it muſt be chaw'd by Old Women, which if they drivel ſubſtantially, may without all doubt put ſome vertue in it. This Drink is commended for the ſervice it does to the Back and Kidneys, and for eaſing pains in thoſe Parts: one wou'd rather think (as the Old Women prepar'd it) it ſhou'd ſerve for a Vomit, and while it cured one illneſs in the Back, ſhou'd bring another in the Stomach. 'Tis remarkable, that neither this Grain nor Wheat will grow ſo as to come to any perfection in any of the *Spaniſh* Iſlands, as *Hiſpaniola*, *Cuba*, *Porot-Rico*, and *St. Domingo*, tho' there has been not a little care nor pains taken to bring it to paſs. For when they have been ſown (for inſtance Wheat) it comes up well 'tis true, and is green preſently, but ſo unequally that it comes to nothing; for at one and the ſame time ſome is ſpindled, ſome is in the ear, and ſome does but bud, here 'tis great and there ſmall, in one place in the graſs, and in another in the grain. And ſuch is the quality of the Soil, that no Art nor Tillage cou'd ever cure this diſtemper of it. The ſame thing is obſerv'd in ſome parts of the Continent, as on the heights of the *Sierras* of *Peru*, and the Provinces of *Colao*, none of this Grain will grow there; tho' the cauſe of it in theſe Parts is the great drought and coldneſs of the Region, contrary to what it is in the forementiond places, where the ſame effect proceeds from too great heat and moiſture. For want of Wheat and Maize in thoſe Parts of *Peru*, the Natives uſe a ſort of Roots to make their Bread of, which they call *Papas*; they are like Ground-Nuts, very ſmall, and ſend out a great many Leafs. They dig up theſe Roots and dry them well in the Sun, after which they beat them, and make them into a kind of Bread, which is not noly eat privately in their Houſes, but great quantities of it alſo are carried to the Mines of *Potoſi*.

Papa Roots.

This is, in ſhort, the chief of all their Roots for Bread, and 'tis of the ſame uſe and ſignificancy for that purpoſe in theſe Parts of the Country, that the *Caſſani* Root is in others. The *Caſſani* is alſo found here, and a great many others, which ſerve partly as common Food, and partly as Dainties, which we ſhall not ſtand here to recite the Names of, ſince we know little more of them than that comes to. They have ſeveral ſorts of Pulſe amongſt them anſwering to our Lentils, Beans and Tares; but *Acoſta* is of opinion, that none of theſe were in the Country before the *Spaniards* came, who brought them out of *Europe* hither, where they grow and increaſe to a wonderful degree. And there is hardly any ſort of Plant brought out of the *European* Countries into theſe Parts, but what meets with a Soil ſomewhere or other that ſuits it as well as the natural; tho' on the other hand, thoſe that go from the *Indies* into *Spain* or *Portugal*, very ſeldom thrive and do well. In ſhort, 'tis hard to think of any ſort of *European* Grain, Pulſe, common Garden Herb, or Fruit-tree, but what the *Spaniards* have brought into *America*, and grows there as well as can be deſir'd. There is only an exception as to Cherries, which don't proſper ſo well: Medlars and Services are not very common neither, as alſo Nuts and Filberds; Oranges, Limons and Citrons, do grow and multiply moſt extravagantly, and of the former eſpecially, a Man may ſee whole Woods and Foreſts. The ſame is to be obſerv'd (in proportion) of Apricocks, Peaches and Figs; as for Apples, Pears and Plumbs, tho' they are to be metwith, yet they are not ſo very plentiful as the former, but none of theſe defects are perhaps to be imputed to the Soil, but rather to the negligence or unſkilful management of the People. The *Indian* Melons and Pompions grow to ſuch a monſtrous bigneſs, that 'tis almoſt incredible. The Valley of *Yoca* in *Peru*, is particularly famous for the former of theſe; the Root continues ſeveral Years in the ground, and brings Melons every Year, and they trim and dreſs it as they wou'd a Tree. The Pine-apples are of the ſame form and faſhion with thoſe of *Spain*, but otherwiſe they differ, having nothing of a ſcale, but are all one entire pulp as it were, fit to be eaten when the skin is pull'd off. 'Tis an excellent Fruit both for ſmell and taſte, and the way that they dreſs it is to cut it in pieces, and ſteep it a while in Salt and Water. They grow one by one upon a Cane or Stalk, which riſes up amongſt a great many leaves like a Lilly, but bigger. The Apple is on the top of every Cane, and it grows only in hot moiſt ground. We muſt note, with reference to this and ſeveral other Fruits, (and not only them, but various other vegetable Productions, and Animals too) that the *Spaniards* at their firſt coming over gave thoſe *European* Names to things they found here, which reſembled any way what they had converſ'd with in *Europe*, and were call'd by thoſe names there. Thus, I ſay, they call theſe Pine-apples, upon the ſcore of a bare reſemblance in one particular reſpect as to the form; and ſo likewiſe 'tis the ſame by theſe that follow. The *Indian* Cucumbers are ſo call'd, becauſe (for the moſt part) in length and roundneſs they reſemble the *Spaniſh*; but they are not green, but of ſeveral colours, as violet, yellow and white. They are very pleaſantly taſted, full of liquor, eaſie of digeſtion, and very refreſhing in hot weather. The Meat does not taſte quite ſo ſharp as that of the Pine-apple, and the outſide is not at all rough and prickly, but very ſmooth and even. They require temperate Soil, and muſt have pretty much watering. That which they call the little Fruit of *Chili* is of a very pleaſant taſte, nearer that of a Cherry than any other *European* Fruit, but in colour and grains reſembles a Mulberry not ripe, tho' more rough and bigger than that. The Plant it ſelf is very little and low, ſpreading it ſelf upon the Earth, and grows naturally up and down in the Fields of *Chili*. Of the Fruit which they call Prunes there are divers ſorts; thoſe call'd the Prunes of *Nicaragua* are very red and ſmall, and have little Meat upon the Stone, but that little is of an admirably pleaſant taſte, and 'tis given to ſick People to provoke an appetite. There are others which are very large, and of a dark colour, and have each two or three ſtones apiece, but hardly of any taſte at all. The *Capolie* is a Fruit ſo like a Cherry in form and taſte (only 'tis ſomething bigger) that it may well paſs for the

Almonds of *Chachapoyas.*

Almonds of the *Andes.*

Cacao mightily eſteem'd in *Mexico.*

Coca is much valued in *Peru.*

Cherry of this part of the World. The *Capote* and *Chicocapote*, are call'd the Marmelade Fruits by ſome, in that their taſte and colour do both come pretty near to that of this Sweet-meat; there is but little difference between them, and both are cried up by ſome People for the moſt excellent Fruit of the *Indies*. Others give this title to the *Blankmanger*, which is reported to taſte like a mixture of Almonds and Cream. The form of it is like a Pear; the Meat within is white, tender and ſoft, like Butter or Cream, and contains ſeveral black kernels in it. The *Mamey* is like a Peach, but bigger; they have one or two ſtones, and the meat and rind both very hard; the Fruit is but indifferent, but the Conſerves made of it are like Marmelade. The Tree is large, well-faſhion'd, and bears a pretty broad leaf. The Fruit of *Guayves*-Trees are like little Apples, but ill taſted, and full of ſoure kernels, and hardly wholſome. Upon this account neither Man nor Beaſt eats it, and therefore the Trees are infinitely multiplied, for the Fruit falling down, and receiv'd upon the hot moiſt Soil, ſprings up into a new Tree; and ſo the multiplication proceeds. In *Peru* the *Guayvos* differ from others, in that the Fruit is not red but white, neither has it any ill taſte, but is altogether as good as the beſt of thoſe in *Spain*, and paſſes for a Fruit reaſonably wholſome and agreeable to the ſtomach. The *Palto* is a Fruit like our Pears in form, but in the inſide very different, for it has a large ſtone, and the meat is ſo ſoft, that when they are full ripe 'tis of the conſiſtence of Butter, and has a very delicate taſte. In *Peru* this Fruit is very large, and has a hard tough ſcale, which may be taken off whole; in *Mexico* it has a very thin skin, which may be peel'd off like that of an Apple. As for *Coco's* and *Plantane*, or *Plantane*-Trees, with their reſpective Fruits, they have been deſcrib'd in the relations of other Parts; they are very common here in the *Indies*, and of both there are various ſorts. Altho there are excellent Almonds in *Spain*, yet this Country affords a ſort that far exceeds them; they call them the Almonds of *Chachapoyas*, and beſides their pleaſing delicate taſte, the Phyſicians have pronounc'd in favour of them, that they are the wholſomeſt Fruit in the *Indies*. 'Tis known that the Coco yields a ſort of an Almond, and there is abundance of them brought out of the *Andes* of *Peru*; but as theſe are fatter and richer than thoſe of *Spain*, ſo the Almonds of *Chachapoyas* are much richer than them of the *Andes*, tho' they both come out of the ſame Country, namely *Peru*. They grow upon very high Trees bearing great leaves; they are incloſ'd not in a ſhell, but a ſort of a husk ſomething like that of a Cheſnut, but beſet with prickles. The *Cacao* is a Fruit not quite ſo big as an Almond, but ſo much eſteem'd amongſt the *Indians*, that it has been one of the richeſt and beſt Merchandizes of *New Spain*; it has paſs'd amongſt them for Money upon all ſorts of occaſions, and they uſe to give it the poor inſtead of Alms. It is hard to tell for what reaſon this Fruit ſhou'd be ſo much valued, for it does not ſeem to be any way extraordinary either as to taſte, ſmell, colour, or any other property that one can think upon; it is more fat and oily than an Almond, and when roaſted has no ill taſte, which is the moſt that can be ſaid of it, and is by far too little to procure it ſuch an eſteem as it has. As for the drink they make of it, 'tis in very great repute, the *Spaniards*, both Men and Women, are vaſtly fond of it, and the *Indians* give it for an Entertainment to Great Men as they paſs up and down the Country; but after all, 'tis a loathſome thing to them that are not uſed to it, and the ſcum, or froth of it, is little better than a Vomit. So that the beſt account of the matter is, that the People have taken a fancy to it, and having done ſo they may eaſily imagine it to have all the fine properties in the World. The Tree whereon this Fruit grows is pretty big, but ſo very tender, that they are forc'd to ſet ſome large ſpreading Tree always by it, to ſhelter it from the heat of the Sun. The Province where there is the greateſt Traffick for this ſort of Commodity is *Guatimale*, and 'tis about thoſe Parts and *Mexico* where 'tis in ſo very great eſteem; but the People of *Peru* are even with them as to another fancy which they have, and the *Mexicans* can't be fonder of their *Cacao* than the *Peruvians* are of their *Coca*. This is a ſmall green leaf which grows upon a Tree about a fathom high, and requires as much care in the Planting and Dreſſing as the leaf it ſelf does in the keeping after it is gather'd; but it has this remarkable property, that every 4 Months it comes forth with a freſh ſpring of theſe leafs. The *Coca* is as great a Commodity in *Peru* as the *Cacao* is in *Mexico*, and the Trade of it in *Potoſi* it ſelf amounts every Year to above half a Million of Pieces. A Baſket of it there is worth 4 Pieces at leaſt ready Money, and in *Cuſco* it goes for two or three Pieces; in ſhort, all the Markets and Fairs almoſt depend upon it, and 'tis a ſort of univerſal Merchandize.

Difficulty of managing the *Coca.*

It grows in the *Andes* and Valleys of *Peru*, where there is an extreme and abundance of Rain; and abundance of poor *Indians*, that come out of other Parts to labour about the cultivating of this Plant, do here loſe their lives, what with the hardneſs of the work and the intemperateneſs of the weather, for 'tis a very nice tender ſort of a Vegetable, and ſince it coſt the lives of ſo many Men to manage it, the *Spaniſh* Doctors fell into hot Diſputes whether it ſhould not be quite deſtroy'd or no, however at laſt they agreed that they ſhou'd ſtand.

The *Maguey* Tree.

The *Maguey* is a Tree of which abundance of Wonders are written; and to ſum up the character of it in ſhort, it yields Water, Wine, Oil, Vinegar, Honey, Needles and Thread, and they ſay a great many other things beſides. It is moſtly a Native of *New Spain*, where the *Indians* eſteem it at a great rate, and commonly have one of them about their Houſes to furniſh them with theſe Neceſſaries. At the end of the leaf (which is very large) there comes out a ſtrong and ſharp point or prickle, which ſerves for a Needle, and the leaf it ſelf is to be drawn out into a kind of thread. The body of the Tree being cut, affords a Liquor very ſweet and freſh, which they drink like water: this Liquor boil'd becomes a Wine, and that ſuffer'd to ſtand open a while, ſoures and turns to Vinegar; and the ſame Wine boil'd for a conſiderable time longer, thickens into the conſiſtency of a honey. The wood of this Tree being very light and ſoft keeps fire a long time, and ſerves for a ſort of Touch-wood; the *Indians* that have Guns uſe it inſtead of Match.

The *Tunal.*

The *Tunal* is another noted Tree in *New Spain*, but 'tis the moſt deform'd and irregular of all Trees, and more properly to be call'd a confuſed heap of Leaves than a Tree. For firſt, one leaf comes out of the ground, then another upon that, and ſo they continue upwards; but as they grow up, thoſe below become ſo large that they almoſt loſe the form and quality of leaves, and are rather great branches, but of very odd figures and ſhapes, and beſides ſo ſharp and prickly, that the Plant has in many places the name of a Thiſtle upon this ſcore. There are ſome of theſe *Tunals* that bear Fruit much eſteem'd amongſt the *Indians*; they are bigger than Plumbs, and have a ſort of a ſhell, within which is the meat which is very like that of a Fig. There are two kinds of them, the white and the red; the former of which are by much the beſt, both for ſweet taſte and fine fragrant ſmell.

Quinces and *Pomegranates.*

As for *Quinces* and *Pomgranates*, they abound in all parts of this Country, only of the latter 'tis to be obſerv'd, that they are all very ſweet; neither do they value thoſe that have any thing of ſharpneſs, ſo that there's none of that kind to be found.

Grapes and *Olives.*

Plenty of Wine.

Vines of *Peru.*

Here's great plenty alſo of thoſe two moſt uſeful and ſerviceable Fruits, *Olives* and *Grapes*; each of which affords a Liquor, the benefit of which all Mankind is acquainted with. The *Indians* don't much trouble themſelves with making Oil of their Olives, but think it much better to eat the Fruit it ſelf; neither do the *Spaniards* follow this Trade much, but content themſelves with the Oil they bring from *Spain*. The Grapes grow in all Parts of the *Spaniſh* Dominions, Iſlands and all, but they don't thrive any where ſo well as in *Peru*; neither do they make any quantities of Wine comparable to what is made in that Country. The truth is, the Grapes don't ripen ſo kindly, the exceſſive Rains that fall keep them from coming to that perfection and maturity that Wine requires; and therefore they bring Wine from *Spain* and the *Canaries* to all the Parts of the *Indies*, *Peru* and *Chili* only excepted, which need no ſupplies from thoſe Countries in this caſe. The Vines of *Peru* are commonly in very hot Valleys, where there are Waters running along for the refreſhment of them; and they are forc'd to make uſe of that to water their Vines, for the Heavens there afford no Rain. But yet there are ſome places, where the Vines are neither watered by the Clouds nor from the Rivers, and for all that they bring forth in abundance; but they generally ſay (to account for this) that the Soil is well moiſtned by the waters that fall from the adjoining Mountains, and that this keeps the Vines in heart, and is the reaſon why they are ſo fruitful under ſo viſible a want of water. The moſt fertile Valleys for Vines are *Victor* near *Arequippa*, yea, in the Territory of *Lima*, and *Caraguato* in the Country of *Chuquiavo*; and from all theſe together are drawn ſuch ſtore of Wines, that the Revenue is very conſiderable. 'Tis remarkable, that in the City of *Cuſco*, and ſeveral Valleys beſides, there are ripe Grapes to be met with all the Year round: But 'tis ſtranger ſtill what *Acoſta* relates

lates

A ſtrange Fig-tree.

lates of ſome Trees in *Peru*, one part of which yields Fruit for one half of the Year, and the other part for the other half; and he gives a particular inſtance of this in a Fig-tree at the Town of *Malla*, 13 leagues from the City of *Kings*, one half of which that is towards the South is green, and yields Fruit when 'tis Summer upon the *Sierras*, and the other part towards the *Lanos* or Sea-coaſt is green, and bears Fruit in the contrary Seaſon when 'tis Summer upon the *Lanos*: For the truth or falſhood of this, that Author ſtands accountable; we ſhall only ſay, that if it be a truth 'tis a very odd one, and if a lye 'tis as roundly and boldly told.

Sugar. Cotton. *Anir.* *Cochinile*, an Inſect. Silk.

To the Vegetables we may alſo ſubjoin thoſe Vegetable productions that are of note in this Country, as Sugar, which brings in a great Revenue, and goes from hence in vaſt quantities to *Spain*: Cotton, which is not leſs plentiful and profitable than the former, eſpecially in the Valleys of *Peru*, *New Spain*, and the Province of *Tucuman*, where the Cotton-ſhrubs grow in abundance; *Anir*, a thing that comes from ſome Herb, and ſerves for the dying of Cloth, and is a very profitable Commodity, but what the thing it ſelf is, or what the name or nature of the Plant that affords it, we cannot inform the Reader. *Cochinile*, tho' not a Vegetable, or part of a Vegetable it ſelf, yet being a ſort of an Appendix to a Vegetable, may be mention'd here likewiſe. Thoſe Inſects which we give this name to (for *Cochinile* is no other than a dried Inſect) are found breeding in great numbers upon the leaves of one of the kinds of the *Tunal*-trees; that Tree, 'tis true, bears no Fruit of its own, but the *Cochinile* is ſo valuable a one that the Tree is excus'd, and not only ſo, but mightily priz'd, tho' otherwiſe barren. Silk is an Animal production too, but the Mulberry-trees (that maintain thoſe uſeful little Animals that make it) will allow it a place here. Originally there were no Mulberry-trees in the *Indies*, and conſequently no Silk-worms nor Silk, but the *Spaniards* ſettling here, brought theſe out of *Europe*, where they thrive incomparably well; they make abundance of good Taffata's in the Country, but in *Acoſta*'s time were not come to the making of either Damasks, Sattins or Velvets.

A great Tree. Another taken notice of in Hiſtory.

We ſhall not trouble the Reader with a long Catalogue of Names of other ſort of Trees, after we have been thus long upon the more uſeful ones, which by their Fruit, or ſome production or other, are ſerviceable to the Neceſſities of Mankind. Oaks, Cedars, Pines, Firrs, Palms, Ebeny, are the moſt common and well-known, as well as the moſt profitable ones of the Country, for all the uſes of Life. The *Molle* is a Tree from whence the *Indians* draw a ſort of Wine; it came originally from *Peru*, and it has the name of the *Peruvian*-tree at *Mexico*, but they do much better there than in their own native Country. It mayn't be amiſs here to take notice of a vaſtly great Cedar (as 'twas reported to be) about 3 leagues from *Guayaca* in *New Spain*; this Tree was ſtruck with Lightning from top to bottom, and ſo ſtrangely too, that 'twas by that means all hollow'd in the inſide. Being meaſur'd within, it was found to be 9 fathom in circumference, and without, near the Root, it was 16 fathom, and a little higher 12. The People of the Country ſay, that before the Lightning ſhatter'd it, it was able to ſhelter 1000 Men, who might very well ſtand under the ſhadow of it; and 'tis pretty certain that they did uſe to come and dance, and perform ſeveral of their ſuperſtitious Ceremonies under it. All that remains of it now beſides the ſtock, is only ſome of the great branches, which renew their verdure with the Spring ſtill, and ſhew ſomething (tho' but very little) of the ancient beauty and majeſty of the Tree. Thoſe that think this ſtrange, may remember what *Pliny* reports of the Plantane-tree of *Lidia*, the hollow of which was 81 foot, its vaſt boughs made it appear more like a Wood than one Tree, and the ſhadow of it cover'd a great part of the Field where it ſtood.

Spices. *Axi*, or *Indian* Pepper. The uſes of it. Excellent Gums, and other Drugs.

But we ſhall quit this Diſcourſe of the Trees, and take a ſhort view of the Spices, Gums, and other valuable and uſeful Drugs. 'Tis true this Soil is not ſo happy as to produce the noble Spices of Cloves, Cinnamon and Nutmegs; neither is Ginger natural to it, tho' vaſt quantities of that Spice have been tranſported from ſome Parts of the *Weſt-Indies* into *Spain*, particularly from *Hiſpaniola*, whither it was firſt brought from the *Eaſt-Indies*, and where it thrives ſo well, that it grew to be an incumbrance at laſt. But the natural Spice of the *Weſt-Indies* is a ſort of Pepper which they call *Axi*, and is uſed generally all over the Country; it grows in the hotteſt Valleys, and is of ſeveral ſorts, ſome green, ſome red, ſome yellow and of a burning colour, which latter they call *Caribe*, and is extremely hot and biting. There is indeed a ſort which is not at all diſpleaſing to the taſte, and may be very well eaten alone as other Fruits are; but as for the common ſorts, they have no little ſhare of the ſtrength and fire of Pepper, and are us'd by them in Sauces for that purpoſe. To correct this *Axi*, and render it more temperate and fit for uſe, they mix it with Salt, and ſometimes with a ſort of Grain call'd *Tomates*, which is very cool and full of juice, and gives a very pleaſing reliſh to any Sauce 'tis an ingredient in. *Acoſta* ſays, that ſeveral of the *Spaniards* have been of the opinion that this *Indian* Pepper was cold in its nature, but the moſt do ſay that it burns in their mouths and ſtomachs at a ſtrange rate, and beſides that 'tis a ſtrong provocative to Venery, if any thing liberally taken; ſo that thoſe Men that will have a thing that produces theſe effects to be of a cold nature, may poſſibly come in time to diſpute whether fire it ſelf ben't ſo or no. This Country has furniſh'd ſeveral excellent Gums for the increaſe of the *Materia Medica*. Here's the famous *Gum-Animi*, the *Tacamahacca*, *Caranna*, and *Storax*; the uſes of which are well known in Medicine. Here's alſo the *Caſſia*, *Fiſtula*, *Mechoacan*, *Guajacum* and *Saſſaparilla*, all in vaſt plenty, but the former comes for the moſt part from the Iſland of *St. Dominick*.

Indian Balm. Two ſorts. Uſe of it in the Church. Obſervation of the Balm-tree.

To theſe alſo may be added Liquid Amber, *Copal*, and Oil of *Aſpick*, which the Phyſicians and Painters both make uſe of, the one for Plaiſters, and the others as a Varniſh for their Pictures; but the moſt celebrated of all is the rich Balm, which is an admirable Perfume and Medicine too. The Tree that affords it is as big as a Pomegranate-tree, and not much unlike it in faſhion. The Balm is of various colours, white, red, greeniſh and dark-colour'd, of which the firſt is commonly moſt eſteemed. The pureſt of all is that which diſtils of its own accord upon the inciſion of the Bark, and this is call'd *Opobalſamum*; the other is drawn from the leaves and bark boil'd and ſtrain'd, which has the name of *Xylobalſamum*, and that very properly. Although it be to be had in many places up and down in this ſpatious Country, yet that which comes from *Tolu* (not far from *Carthagena*) bears the beſt Character. The *Spaniards* and *Indians*, tho' they eſteem it, yet don't value it at that rate that we do; the Balm has the fortune of abundance other rich things, not to be much minded becauſe they are common and eaſie to be had. However, amongſt the *Spaniards*, a great deal of it goes off upon Spiritual Occaſions, and in the Service of the Church; for they had leave from the Apoſtolick See to uſe this Balm inſtead of Cream in their Unctions, and other daubing Ceremonies. How much this *Weſt-Indian* Balm-tree differs from that of *Paleſtine*, which yielded the noble Balm of *Gilead*, as 'tis vulgarly call'd, is evident from all the accounts that both Antiquity and Modern Travellers have given of that Tree. *Pliny*, who had ſeen it himſelf, ſays 'twas a ſmall Tree, and faſhion'd like a Vine; and thoſe that have viſited thoſe Parts of the Eaſt where it grows ſay much the ſame thing. Notwithſtanding this, *Strabo* affirms that the ancient Balm-tree was of the bigneſs of a Pomegranate-tree, which very well agrees to the deſcription of the *American* Balm-tree, but not at all to that of *Judea*.

Animals. Four-footed Beaſts. Great ſtore of Sheep and Paſturage in *Peru*. Vaſt numbers of Sheep. Wooll and Clothiers.

And thus we have done with the Vegetables of this Country; we are next to conſider the Animals. As for the *Quadrupeds*, we may conſider three Claſſes of them, either ſuch as were carried by the *Spaniards* into the Country, or ſuch as were found there by them of the ſame kinds with the *European*; or laſtly, ſuch as are peculiar to the *Indies*, and not known on this ſide the Globe. Of the firſt ſort are Sheep, Kine, Goats, Swine, Horſes, Dogs, Cats, and ſeveral others; for of all theſe there is very great plenty. The ſmaller ſort of Cattle, Sheep eſpecially, have multiplied here to a very great degree, and if they thought it worth while to make profit of their Wooll by ſending it into *Europe*, there's no doubt but it would be a very rich Trade; for the Stocks of theſe Animals, that are in the Country, are hardly to be imagin'd, and there is ordinarily ſo much Paſturage for them, that they can hardly go any where but they'll find it. In *Peru* there is ſo much, that they don't trouble themſelves to bound and limit, to fence and hedge it in; no Man has any proper to himſelf, but ſends his Flocks roving about where they will, to pick and chuſe their own feeding. There are ſome that are Maſters of 60, 80, nay 100000 Sheep a-piece, as *Acoſta* tells us he knew of a certainty in his time, and yet with all theſe vaſt Flocks they are put to no ſhifts to find feeding for them, ſo fruitful is the Country in Graſs and Paſturage. Some little uſe they have made of their own Wooll both in *Peru* and *New Spain*, in both which there are a great many Clothiers, (eſpecially in the latter) and tho' the Cloth which they make ſerves the poorer People of the Country, yet they don't much value it themſelves, but are very deſirous of the Cloths that come from *Spain*, which generally bear a very great price. 'Tis certain that they are much better than the *American* ones, either becauſe the Wooll is finer, or the Workmen more expert; or from both theſe reaſons together.

Wild Kine and tame.

As for Kine, there are no ſmaller numbers of them than of the Sheep in compariſon, and they are of two ſorts. Some are tame, (as they may be call'd) and feed together in Herds in the Paſtures, of which they make conſiderable profit, partly by their Fleſh, and partly by the Milk, Butter and Cheeſe that comes from them; neither are they of little uſe to them in their Country Labours, as Tilling the ground, and the like. The other ſort is altogether wild, and live at liberty in the Mountains and Foreſts, without Owners or Government. He that firſt takes or kills any of them is their Maſter, for they treat them in this reſpect as they do any other wild Beaſts.

Numbers of them at *St Domingo.*

There are ſuch multitudes of them, that ſome Parts of the *Indies* are quite over-run; in *Santa Domingo* they are to be ſeen by thouſands in the Fields and Woods, and 'tis a Solemn Exerciſe with the People to mount on Horſeback on purpoſe to Courſe and kill them.

Uſe of the Hides.

They do this only for the ſake of the Hides, which are a good Commodity; for as to the Fleſh they never meddle with it, but having flead off the Skin, they leave the other for meat to other Animals that may be glad on't.

Goats Tallow us'd.

There are alſo great numbers of Goats, the chief profit of which is their Tallow, uſed by almoſt all ſorts of People to make Lights of; the Skins they uſe for Shoes.

Horſes.

Horſes have multiplied in the Country exceedingly, and in many places there are found as good as the beſt in *Spain*, either for Pomp or for Service.

Camels.

Aſſes and Camels are both very ſcarce; of the latter there were ſome brought into *Peru* from the *Canary Iſlands*, but they have not multiplied very much: but one thing is, they uſe another ſort of Animal for carrying burdens, which is their Sheep, of which we ſhall ſee more by and by.

Dogs *Alco.*

The *Indians* had no Dogs amongſt them, till the *Spaniards* brought them from *Europe*; a little Creature they had ſomething like a Dog, which they call *Alco*, and upon that ſcore of the reſemblance, they call all Dogs by that Name. Of this Animal they were ſo exceſſively fond, that they wou'd ſpare the Meat out of their own bellies to feed it, and when they travell'd always carry'd theſe along with them for Companions, either in their boſoms or upon their ſhoulders. But ſince the Conqueſt, Dogs have been no rarities in the *Indies*, in the Iſlands eſpecially, and particularly at *St. Domingo*; at this Iſland they have been an affliction and a plague to the People, for they go about in troops and devour the Sheep, ſo that they were forc'd to endeavour the extirpation of them, by propoſing rewards to them that kill'd a Dog, as they do to them that kill Wolves in *Spain.*

Wild Beaſts.

Lions, Tigers, Bears, Boars and Foxes, are to be found in great numbers in the Woods, and were Inhabitants of thoſe wild places before the *Spaniards* came to be Inhabitants of any. Stags and Deer are alſo very numerous in the Foreſts; but amongſt theſe, the moſt common are a ſort of Deer without Horns, like the *Corcos.*

Saines.

The wild Hogs go in great Herds in the Woods, and are of a very ſmall ſize, but extremely fierce, and are ready to aſſault any that haunt them if they don't ſecure themſelves in the Trees; and therefore their way is to climb for't, and ſo while the Hogs are biting and gnawing the Tree below, to dart down their Lances at them and kill them. The fleſh of them is very white and tender, and when they fat them with Maize, their greeſe paſſes amongſt the *Indians* inſtead of Oil.

Creature that has a Navel on the back.

The Name they go by in the *Indies* is *Sainos*, and had they no Name at all they wou'd be remarkable enough, if 'twere only for that one odd mark which Nature has ſet upon them in their formation, which is, to have a Navel upon the ridge of their backs; this is expreſly what thoſe who pretend to have ſeen them declare of them.

Guadatinias.

There is another ſmall Creature which ſeems to be ſomething of the ſame nature with this, which they call *Guadatinias*, and are reckon'd very good meat.

Dantes.

And as the *Sainos* reſemble Swine in all other points but that laſt mention'd, ſo do the *Dantes* come as near to ſmall Kine, the furniture of the horns only excepted, which theſe Creatures want.

Uſe of the Hides.

That which is moſt eſteem'd of them is their Hides, which they make Jerkins and other Coverings of; and it has this property, to be ſo hard and ſtout as to be a good defence againſt any blows whatſoever.

Chinchille.

The *Chinchille* is a ſmall Beaſt like a Squirel, having a wonderful ſmooth ſoft skin, which they uſe very frequently to wear next their ſtomachs, reckoning it very wholſome; of the hair they make Rugs, and ſeveral other ſorts of Coverings.

A warm skin.

The Hares and Conies, which are very plentiful in the Country, need no deſcription; as alſo neither the Ant-Bears, Armadilloes and Monkies, with many others which have been mention'd before in the other accounts of *America*.

Various other Animals.

Only as to the Monkies, we may note that there are ſome of them in theſe Parts of the *Indies*, very extraordinary both as to their ſize and their colours too, for beſides black, grey and bay-colour'd, there are ſome that are ſpotted after a very curious manner.

Strange Monkies.

But ſome things are yet more wonderful in them than all that can be imagin'd in their make, and that is their agility, their ſubtilty, and their ſence. *Acoſta* ſays he ſaw a Monkey leap from one Tree to another which ſtood upon the other ſide of a River; he does not ſay what the River was, or how broad, but to be ſure 'twas not the great River of the *Amazons.* The ſame Author tells us of a Monkey of his acquaintance that belong'd to the Governor of *Carthagena*, which had abundance of very clever tricks with him; but if the Reader thinks they argue too much ſence for ſuch an Animal, and that we make a Man of a Monkey, he is deſired to remember that the Story is not ours.

Obſervation of a Monkey at *Carthagena.*

This Animal wou'd very orderly go to the Tavern for Wine, carrying his Pot in one hand, and the Money in t'other; neither wou'd he give the People the Money before he had his Pot full of Wine. Sometimes, when he was diſpatch'd upon theſe Errands, the Boys wou'd aſſault him in the Streets, and throw Stones at him, but Pug (who wou'd take no affronts from them) in that caſe always ſet down his Pot, and pick'd up Stones and pelted the Boys again, and ſo when he had clear'd the way march'd home with his Wine. And tho' he lov'd this Liquor entirely (for *Acoſta* ſays he has ſeen him drink luſtily ſeveral times) yet he wou'd never touch a drop till his Maſter had given him leave. If he ſaw any Woman patch'd, he wou'd expreſs a great deal of indignation, and not only chatter and make faces, but if he cou'd come at her wou'd have left the print of his teeth behind him. Mankind have born their teſtimony againſt this vanity a long time ago, but now it ſeems the very Monkies take notice of it, and rebuke the pride and folly of that Sex. The Ladies had better pull off their patches themſelves, than have Apes and Monkies ſcratch them off, for this wou'd be the way to have occaſion for patches in good earneſt.

The Slow-Dog.

But there is another Beaſt, of which *Oviedo* gives us an account, that deſerves a particular notice. The *Spaniards*, by the rule of contraries, call it *Cagnuolo Leggiero*, or the Light-Dog, whereas 'tis one of the heavieſt dulleſt Animals in the World; 'tis ſo ſlow in its motion, that it can't go above 50 paces in a day. They are as odd ſhap'd as can well be imagin'd; about two ſpan in length, their feet arm'd with long claws like Birds, and their bellies trailing upon the ground, for their legs are not able to ſupport them. One can't ſay whether the face be more like that of an Owl or a Baboon, for it has ſomething of the beauties of both theſe Creatures; the ſmall eyes and noſtrils ſhou'd belong to the Baboon, and the very round face to the Owl: but beſides this, it has a very little mouth, and a ſtrait high neck every where of a bigneſs, and is like a Cylindrick Rouling-pin. By the help of thoſe long nails, which Nature has furniſh'd them with, they eaſily climb Trees, which is their great delight, and they are moſt commonly found up in ſome Tree or other. Their colour is moſt like that of a Weaſel, and they have this obſervable mark over and above, to be wholly without a tail.

Its note.

But the ſtrangeſt thing of all is the Muſick they make; *Oviedo* ſays that they have ſix notes very clear and diſtinct from one another, and are heard ſinging them always in the night. This Author declares he has kept them in his Houſe, and cou'd never diſcover what ſort of food 'twas that they liv'd upon, for they were never ſeen by any to eat, only they frequently open'd their mouths, and ſuck'd in the freſh air or wind. They are no way harmful or miſchievous, but a dull lumpiſh unprofitable Creature, that takes no other pleaſure it ſelf, (nor affords none to Mankind) but only that of crawling up into a Tree, and making that noiſe in the night.

Bardato.

The ſame Author deſcribes a ſort of Beaſts which he calls *Bardato*, which he ſays reſembles a barbed Horſe; that is, a Horſe cover'd with Armour for the Wars. But by the particulars of this deſcription, this Creature ſhou'd be no other than the *Armadillo*, which we have given an account of before; and the rather, becauſe he recommends them for ſo good meat, which the *Armadilloes* are generally reported to be.

Before we leave the *Quadrupeds*, we muſt ſpeak a little more particularly of the *Indian* Sheep and Goats, which we have hitherto only mention'd by the by. Thoſe Beaſts which we here call Goats, are call'd *Vicugnes* in the

Country,

Vicugnes or Goats.

The Hair fine.

A good Medicine for the Eyes.

The *Pacos* and *Guanacos.*

Burden Carriers.

Their Wooll.

Country, and we give them the name of Goats only for this reaſon, that they have more reſemblance to a Goat than any other Animal. They have no horns, and are ſomething larger than common Goats; they feed upon the higheſt tops of the Mountains, and are ſo far from being offended with Froſt or Snow, that they ſeem to delight in it. They uſe to Shear theſe Creatures, and of their fleece or hair to make ſeveral ſorts of Coverings; and whatever they make on't 'tis very fine and durable, and ſo is the colour alſo, for they never Dye it, but uſe the natural colour, which is like that of dried Roſes, and has this good property never to fade nor change. The fleſh of the *Vicugnes* is no good meat, tho' the *Indians* ſpend pretty much of it; they aſſemble in great companies, to the number of 1000 or 2000 Men, on purpoſe to hunt them, taking 300 or 400 at a time, out of which they chuſe what is fit for their turn, and let go the reſt. But yet they are no extraordinary Breeders, and for that reaſon the *Incas* of *Peru* did formerly forbid the taking any of them unleſs it were by their ſpecial commandment. The greateſt uſe of this fleſh is in Phyſick, and 'tis reported to be a certain remedy for weak and ſore eyes. *Acoſta* tells us he made the Experiment himſelf: He had one time travell'd a long way through the Snow, which diſturb'd his eyes at that rate, that he was afraid he ſhou'd have loſt the uſe of them, but coming into an Inn, an Old Woman told him of this remedy, and promiſed him relief if he wou'd but try it; ſo a piece of the fleſh of one of the *Vicugnes*, juſt kill'd and all bloody, was applied to his eyes, which accordingly perfectly cured him. But the moſt profitable Beaſt in all the Country (all things conſider'd) is the Sheep; of this there are two ſorts, one that they call the *Paco*, and the other the *Guanaco*, the main difference between them being this, that the former have a pretty good fleece of Wooll upon their backs, and the latter are almoſt bare. Theſe Creatures ſerve not only for Food, but Beaſts of Burden: they are their Horſes, their Aſſes, and their Camels; the moſt part of the Silver that comes out of the Mines of *Potoſi* goes upon their backs to *Arica*, which is at leaſt 70 leagues. Each of them will carry five or ſix *Arrobes* of Silver Bars, tho' when they have a very long Journey indeed, they don't drive them above 4 leagues a day. And 'tis a ſtrange thing to ſee with how ſlender a Guard the *Spaniards* ſend along a vaſt Treaſure of Silver upon the backs of theſe Creatures; you ſhall meet a troop of them laded with as much as comes to 400000 Ducats, and no more than a few *Indians* or *Spaniards* perhaps to drive them along, and theſe fellows ſometimes ſhall lie down to ſleep in the midſt of the open Fields, and leave the Sheep to take care of themſelves. The *Pacos* and *Guanacos* both are of ſeveral colours, ſome white, ſome black, others grey or ſpotted, and they dye the Wooll they get from the *Pacos* of as many ſeveral colours as the Animals themſelves are; but the *Guanacos*, as was ſaid, ſupply them with no Wooll, tho' they are generally the fitteſt for burden.

The odd qualities of the *Pacos.*

Bezoar-ſtones.

The beſt found in the *Tarugues.*

Great Bezoar-ſtones.

A Pine-apple found within one.

This ſort of Cattel delights in a cool freſh air, for which reaſon they live and do well upon the *Sierras*, and die in the *Lanos* becauſe of the heat; nay, in all the extremities of the weather, and when they are cover'd over with Ice and Froſt, they continue very ſound and well. They ſometimes make a great deal of ſport to the Beholders by a motion they have, which is indeed ſomething pleaſant; for as they are going upon the Road they'll ſtop all of a ſudden, and raiſe up their long Necks, looking very wiſtly upon every one that ſtands about them, which to be ſure has ſomething very ſignificant, and expreſſive of a concern the Animal is under, if one cou'd interpret their meaning, and know what. But then they have ſome very ugly tricks, at leaſt thoſe that drive them have reaſon to ſay ſo; for without any apparent reaſon, they'll ſometimes ſet a running as if they were mad, and run up Mountains or Rocks, or whatever lies in the way, ſo that very often they are forc'd to ſhoot them dead as ſoon as they can, that the Silver Bars they carry may not be loſt. Again, at other times, they ſhall grow reſty and lie down under their burdens; and when this humour takes them, they'll endure rather to be cut in pieces than riſe and go on the Journey. The only remedy the Driver has in this caſe is patience, he muſt e'en ſubmit to the Creatures humour; he muſt ſtroak him, and make much of him, and ſo by fair and gentle methods entice him out of his ſullenneſs, and bring him to the uſe of his legs again. Notwithſtanding this, 'tis many times a long and a tedious work to make them get up; and whatever weather there be, the poor Drivers are forc'd to ſpend many hours in't in the open Fields, meerly attending upon theſe perverſe Animals. But we are farther to take notice both of theſe *Indian* Goats and Sheep, that they afford the ſo much valued and admired Bezoarſtone; and not only theſe, but the Stags in *New Spain* do the like, tho' there are few of theſe in *Peru*, as there hardly is any of the former in *New Spain*. They find them indifferently both in the Males and Females of both ſorts; the greateſt Stones are generally found in the *Vicugnes*, and they are white or grey, or of a dark green. Thoſe that are drawn from the *Pacos* and *Guanacos* are leſs, and black, and not ſo much eſteem'd for their Phyſical uſes: but above all, thoſe that come from the *Tarugues* (before-mention'd) are of the greateſt value, at leaſt vulgar fame has made them ſo; they are commonly of a light colour, inclining to grey, and have their films bigger and thicker than the reſt. They differ alſo as much in their forms and ſizes as they do in their colours and other properties: ſome are round, others long, ſome as ſmall as Filberds and Wall-nuts, others as big as a Hens-egg; yea, *Acoſta* ſays he has ſeen them as large as an Orange. 'Tis pretty odd to ſee upon what ſort of Stuff theſe Stones do grow, and are form'd in the Animal as pieces of Wood, bits of Iron, or ſome other Metal; and the Author juſt now mention'd ſays, he ſaw a couple in *Peru* that were form'd upon Pines, which were very diſtinctly to be ſeen in the cavity of the Stone when it was open'd. As for the Philoſophy of the *Indians* about the generation of this Stone, and why theſe Creatures alone do yield it, and not others as well as they, we believe it a little too extravagant to preſent the Reader with it: We ſhall only obſerve, that together with this natural, they have alſo this piece of immoral Philoſophy amongſt them, which is to cheat the World with counterfeit Bezoars inſtead of true and genuine ones; they have found out ways of imitating Nature, and make a ſort of artificial Stones that are not to be known from the other but by nice Experiments.

Other Animals of the Country.

As for the other Animals, both Fowl, Fiſh and Reptiles, we ſhall not hold the Reader ſo long in the deſcription of them, as perhaps the greatneſs of the Country, and the variety of theſe Animals found there, may ſeem to require. But it muſt be conſider'd, that the *Spaniſh Weſt-Indies* and *Braſile* do not lie ſo far from one another, but we may well ſuppoſe them to have a multitude of the ſame Animals common, and that therefore many of the *Mexican* and *Peruvian* ones are already inſerted and deſcrib'd in the *Braſilian* Collection. Beſides, all Travellers have not the ſame degrees of care and curioſity in obſerving, and in this caſe we may ſay that many (even of conſiderable reputation) have hardly done their Parts ſo well with reſpect to this Country, as others of leſs name have done for *Braſile*.

Fowl.

As to Fowl, we may ſay in general that the Country yields great varieties both of Land and Water-Fowl, of wild and tame, of Birds for Game and for Pleaſure, and that either in reſpect of their Muſick or their fine Colours. And certainly, as to the point of entertainment of the Eye, by admirable Colours, the *Weſt-Indies* do infinitely outdo all the Countries of the known World; for 'tis not only the ſeveral ſorts of Parrots that are to be brought in upon this account, but a great many others too, amongſt which the *Tomineois* (thoſe very minute Birds which a Man wou'd almoſt miſtake for Bees or Butterflies) are thought to have ſome of the perfecteſt colours imaginable in their feathers.

But there are ſome others that deſerve to be mention'd, tho' not ſo much upon the account of any particular Beauties that pleaſe the eye, as upon the ſcore of that Senſe and Sagacity that Nature has endow'd them with, and which they diſcover upon ſeveral Occaſions.

The *Picuti.*

A ſtrange beak.

Good way of keeping guard.

The *Picuti* is a Bird no bigger than a Quail, but cover'd with a mighty number of feathers, and thoſe of ſeveral colours too: But (which is very ſtrange) the beak of this little Bird is at leaſt one quarter of a yard long, and three fingers broad towards the upper part, ſo that this alone weighs much more than all the reſt of the body beſides; it is not ſtrait, but bent and crooked, and 'tis of ſingular uſe and ſervice to them in forming their Neſts, and Repoſitories for their young. Their way is by the help of theſe beaks to bore holes in the Trees big enough to go in and out, where they lay their Eggs, and hatch and breed up their young. And becauſe the wild Cats are very apt to come and viſit their Neſts, and wou'd plunder them too if they were not well guarded, therefore they uſe to defend themſelves in this manner: When they ſee any of theſe ravenous Beaſts coming they preſently whip into their Neſts, and thruſting their long beaks out thro' the hole, they ſtand in that poſture ready to give a puſh (or rather a peck) at the face of the Enemy when he comes: And the Paſs being thus guarded with ſo ſharp a weapon, is commonly very ſecurely kept; the Cats dare not come within reach of it, and are forc'd to go away diſappointed of their prey.

Another proviſion againſt the wild Cats.

An excellent defence.

The *Matti* are a ſort of Birds ſomething bigger than our Thruſhes, almoſt all black, only they have ſome few white feathers in their necks: They ſhew no leſs cunning and contrivance than the former in the defence of their young; for becauſe the wild Cats are very good at jumping, and will eaſily throw themſelves from one Tree to another, unleſs they are ſo far aſunder as to be beyond their leap, therefore theſe Birds always build their Neſts in Trees that have no others near them. And if they ſhou'd climb up into thoſe Trees where their Neſts are, they form them after ſuch a manner that there's no entrance; for they make them very large and wide at the bottom, but growing narrower and narrower ſtill towards the mouth, ſo that the hole by which they enter is juſt big enough to receive them, and no more. Beſides, they defend them with ſharp and ſtrong thorns, which they ſtick in of all ſides of them, and are ſo cunningly faſten'd about them, that no humane Art can do any think like it; and the Cats can by no means come at the hole to thruſt their paws in to do the young ones any harm, as well upon this account of the thorns, as alſo that the Neſts are made ſo deep, that they cou'd never reach them unleſs they ſcratch'd them to pieces. Another thing they obſerve, is for a great many of them to make their Neſts together in the ſame Tree; which ſeems not to be ſo much for Society as mutual Defence and Preſervation, for always when the Cats come they make a moſt fearful noiſe and chattering, and the others generally run away as ſoon as they hear them begin to grow ſo clamorous.

The like Policies are obſerv'd in the *Gazzuoli*, which are bigger than *Stares*, all over black, and have their tails very long, and beaks reſembling thoſe of the *Popingayes*.

Neſts over the water.

Wild Cats don't ſwim.

The *Pintadelli* have a mixture of ſeveral colours in their feathers, and they go quite another way to work to defend their Neſts from the wild Cats; for they build always in Trees that hang over the water, and in the very utmoſt parts of the boughs too, ſo that Cat or Dog that comes there muſt expect to tumble into the water. But the wild Cats, they ſay, do ſeldom venture at theſe, for they never care for coming near the water; and of all the Land-Animals known, they are the only ones almoſt, that can't by ſwimming preſerve themſelves from drowning. The Birds indeed don't know this natural defect of the Cats, but as theſe are the moſt hungry devouring Creatures that can be, and will let no Animals live in peace about them that are but within their reach, ſo Nature has taught the *Pintadelli* this way of avoiding them.

The *Picuti* have ſharp long bills to bore holes in the Trees to lay their young ones there in ſafety; and the *Matti* build very deep hollow Neſts, and fortify them with a Crown-work of thorns; and the ſame Wiſdom has taught the *Pintadelli* another artifice, which is to make their Neſts in Trees over the water, where their Perſecutors can never come.

Serpents and Reptiles.

The other Fowl, Fiſhes, Reptiles and Inſects, are ſuch as have been deſcrib'd in other places up and down: *Oviedo* tells us of Dragons in the *Weſt-Indies*, and of a formidable ſort of Serpent call'd a *Juanna*, which he makes to be an amphibious Creature, and no certain Inhabitant either of the Land or the Water.

As for his Dragons, we believe he means no other than ſome ſort of very great Serpent, of which we know there are abundance in thoſe Parts of the World, and not a Creature with a ſpiral Tail, great flaggy Wings, and a crooked Snout, ſuch as St. *George* is pictur'd trampling under his Horſes feet.

Juanna.

As for the *Juanna*, he ſays it has four feet, and very long claws, a ſet of very ſharp teeth, a ſpotted skin, that it makes no noiſe, nor diſcovers any thing of a voice, that it will faſt for many days together, and is very good meat, even preferable to any Coney; in a word, as to the ſize of it, he ſays 'tis as big as a Coney, and ſometimes as an Otter. After all, 'tis not impoſſible that this may be ſome kind of *Lizard* or *Jacare*, to which many of theſe Characters agree, eſpecially ſince he alſo adds that the tail of it is very like that Creature.

Very hurtful Vipers.

He ſpeaks alſo of a ſort of very venemous Vipers, the effect of whoſe biting is a ſudden and ſpeedy coagulation of the whole Maſs of the Blood; and of this he gives ſomes inſtances of his own knowledge.

Fiery Adder.

The Adder that is as red as Blood, and appears at Night like a burning Coal almoſt, he ſays is 7 or 8 foot long, but not ſo dangerous as the Viper before-mention'd; but that it does appear with that fiery aſpect at night, he gives us his own experience.

Monſtrous Toads.

There are a ſort of very great Toads which agree with the *Braſilian* ones, in this reſpect that they are not poiſonous; but he ſpeaks of their having bones, and thoſe ſo large, that a Man wou'd think them to be the bones of Cats or Dogs.

Strange Spiders.

There are Spiders of a prodigious bigneſs too; and that Author declares he ſaw one that was larger than a Man's Hand, and another the Eyes of which were as big as thoſe of a Sparrow. Theſe Creatures, as well as the former, are of various colours; and we may eaſily believe our Author, when he ſays that they are both of them very ugly and diſagreeable ſights.

Wiſdom of the Ants.

But 'tis very remarkable what he ſays of the Ants, which are ſo miſerably perſecuted and devoured by the Ant-Bear, as it is call'd upon that very ſcore: Theſe Creatures (which for many actions of theirs have deſervedly been ſtil'd wiſe and prudent) in many places work themſelves up great hillocks of a Man's heighth, but of ſo hard and ſtubborn a ſort of Earth in the outſide, that 'tis like a defence of Lime or Stone; for Experiments ſake, he made ſome of them be broken open, but they wou'd hardly yield to pikes of Iron they were ſo denſe and compact. Under this hard ſhell lie the Ants in infinite numbers, very well skreen'd by this means from the ſearching Tongue of their enemy. It may not be wholly improper to add an account of two or three remarkable things in Nature, tho' ſome of them perhaps out of their due place.

Poiſonous Fruit.

Danger of it.

Stinking Wood.

The main thing the *Indians* uſe to poiſon their Arrows withal is a ſort of Fruit, which in form and ſize reſembles the Muſcadel-Pear of *Sicily* and *Naples*; 'tis ſtain'd with red ſpots up and down in many places, and is of a moſt ſweet and pleaſant taſte. The Tree that bears it has a leaf like that of a Pear-tree, only ſomething leſs and rounder, and is never found but near the Sea. The Fruit it ſelf is of ſo alluring and inviting an aſpect, that a Man can hardly ſee it without having at the ſame time a ſtrong deſire to taſte; the doing of which wou'd infallibly be attended with ſome fatal conſequences, for the miſchievous nature of it is hardly to be deſcribed: And 'tis credibly reported, that if a Man does but lie down to ſleep under the Tree, he will find his Head and Eyes ſwollen when he awakes again, and 'twou'd be little leſs than the loſs of ſight, to have a drop of the dew that falls from it come into the Eye. One thing farther is obſervable concerning it, namely, that the Wood of theſe Trees, when burnt, makes ſo horrible a ſtink that no Man can endure it, and the malignant fumes that iſſue from it do cauſe a violent pain in the Head. The *Indians* uſe this deſperate poiſon about their Arrows, ſometimes alone, and ſometimes mix'd with that of ſeveral venemous Animals; but either is ſufficient to anſwer the end and purpoſe of their uſing it, which is to deſtroy them that are ſo unfortunate as to be wounded by thoſe Arrows.

Tree *Xagua*.

A Medicinal Water from the Fruit.

The Tree *Xagua* is a very tall, ſtrait and well-made one, and of it the *Indians* make all their Darts, Pikes and Javelins: It bears a large Fruit almoſt like the head of the great Poppey, and very good for eating; but out of it they get a water which is an admirable remedy for weak, faint and weary Limbs; it renews their ſtrength and vigour, and makes the fleſh which was before looſe and ſoft, to become ſound and firm again, and all this only by waſhing the Part with it. Yet it has this ill quality, that it does the skin almoſt as much harm by blacking it, as it does the fleſh good other ways; it leaves ſo thorough and deep a black, that 'tis a hard matter to get it out again. And the ſame good effects, as to the Fleſh and Limbs, the Bark or Rind of the Tree *Hobi* is known by experience to have, if it be boil'd in water, and the Parts waſh'd with it. This Fruit is ſmall and yellow, of a very good taſte, and in form not unlike a Damſon.

The Deform'd Tree.

Remedy for broken bones.

The Deform'd Tree, which grows moſt frequently in *Hiſpaniola*, is yet more remarkable in every reſpect: 'Tis ſo confus'd a heap of leaves and thorns, that nothing but a Painter's Pencil can deſcribe it; but with all this irregularity of ſhape, there goes along a noble vertue and healing property, which render theſe leaves the moſt compleat remedy for broken Limbs that perhaps is known. They only take the leaves well ſtamp'd and ſpread upon a Cloth like a Plaiſter, and apply this to the broken Member; it ſticks of it ſelf ſo very faſt, that 'tis difficult to pull it off before the buſineſs is done, but when once the Part is throughly ſoder'd and heal'd, it drops off without any help, and the doing ſo is a ſign that the Cure is finiſh'd, and this is commonly about 15 days a performing. *Gonzalus Ferdinandus Oviedo*, Governor in the *Weſt-Indies* for the Emperor *Charles* V. affirms (in a Diſcourſe of the Country which he ſent to that Prince) that he himſelf (as well as ſeveral others of his knowledge)

knowledge) had made trial of the ſoveraign vertue of this Plant, and that it has really that property of cleaving ſo faſt to the Part, and then falling off its own accord when it has done the work it was laid on for.

Plant which affords Threads for cutting Iron.

There is a Plant which is like a yellow Lilly, about the leaves of which there grow and creep along certain Strings or little Cords, that are of very great uſe to the *Indians* upon many accounts. There are two ſorts of theſe Cords, a thicker and groſſer, almoſt like the wiek or twiſt of Hemp in compariſon to the other, and this they call *Cabuia*: The finer ſort is like Flax, and they give it the name of *Henequen*; but both one and the other are of the ſame colour, which is between white and yellow, and ſome quite white. Of theſe the *Indians* make very ſtrong and ſubſtantial Cords, by which they hang up their Hammocks, and they put them to all uſes wherein any thing of a ſtout ligament is wanting. But 'tis ſtranger ſtill, that by the help of the fine threads of the *Henequen* they ſhou'd be able to overcome the ſtubbornneſs and ſtrength of Iron, and to ſaw aſunder Fetters, Chains, or Iron Bars, as they can eaſily do, and often practiſe it. When they wou'd perform any of theſe operations, they take a thread of the *Henequen*, and draw it this way and that way upon the Iron in the manner of ſawing, putting ever now and then a ſmall matter of very fine Sand upon the Thread, or upon the Iron; and when the thread, by continual rubbing, is worn and grown feeble, they take a freſh one, and go on with the work, till the Iron is quite parted in two. And thoſe that have ſeen the *Indians* at this work, ſay that they do it with a great deal of eaſe and dexterity; and that Iron, tho' ever ſo big and ſtrong, is with little trouble conquer'd by this means.

After this little view of Nature in this Country, we come to conſider the Cuſtoms, Government and Policy of the ſame, and this diſtinctly for each of the two famous Kingdoms of *Mexico* and *Peru*.

CHAP. XIV.

The Civil and Moral Hiſtory of the Spaniſh Weſt-Indies.

The *Mexicans* had Notions of God.

Honour'd the Sun.

Multitude of Idols.

Famous Idol *Vitzilipuztli*.

Deſcription of him.

WE will begin with the Account of *Mexico*, as being the firſt of the two Kingdoms laid open to the knowledge of *Europe* by the *Spaniſh* Conqueſt. The People of this Country, tho' much ſuperiour to many other of the Nations upon the ſame Continent, both in reſpect of Civil Politeneſs and Natural Endowments, yet ſtand upon the ſame level with them all as to Matters of Religion. They are Idolaters as well as the moſt Savage and moſt Barbarous, tho' perhaps it may be allow'd them to have made their Idolatry more fine and pompous, as well as more ſolemn and ceremonious than many others of them have done. Notwithſtanding this, ſome there are that ſay the *Mexicans* had undoubtedly a Notion of one Supreme Being, the Maker and Preſerver of all things, and that the *Spaniards* at firſt found little or no difficulty to convince them of this Truth, their own natural Notions, tho' blind and confus'd, ſetting in with the Arguments urg'd upon them for that purpoſe. But whatever Notions they had of this kind, 'tis certain that all their viſible Services and Adorations were paid to Idols; and tho' they had a high veneration for the Sun, as the Fountain of Light, and ſo many other Bleſſings to the World, yet we can't find that ever they honour'd him with any formal Worſhip. What the *Peruvians* did we ſhall ſee afterwards, but the *Mexicans* ſeem not to have done any thing of this nature. As for them, their Deities were all of a groſs and terreſtrial compoſition; they dug the materials of them out of their Mines and Quarries, or cut them out of their Foreſts and Woods, and of the many hundreds they had, ſome were Gold, or other baſer Metal, others Wood or Stone, or what pleas'd their own extravagant fancies. The moſt celebrated of all this number was an Idol which they call'd *Vitzilipuzli*; what they imagin'd it the repreſentative of is uncertain, but they ſtil'd it the moſt Puiſſant Lord of all things, and erected a Temple in Honour of it, that was by far the proudeſt and moſt ſumptuous in the Country. The Image it ſelf was made of no finer Matter than Wood, but infinitely adorn'd with Gold, Jewels and Feathers. It was in the form of a Man, his Head cover'd with a Crown; in his Right Hand he held an Azure-colour'd Staff, and in his Left a white Target, and at his Sides were ſtuck 4 Darts. It was ſet upon a Stool mounted upon a high Altar, with a rich Curtain always drawn before it, to make all appear more Venerable and Sacred.

It would be to no purpoſe to deſcribe even all the principal Idols they had amongſt them, with the particulars of their Furniture and Decking, and the ſeveral odd Notions the *Mexicans* had of them; 'tis ſufficient to ſay, that they had one more which ſtood in an Apartment of the ſame Temple adjoining to the former, which they made almoſt equal in Dignity and Power with *Vitzilipuzli*.

Other Idols.

The Repreſentatives of their Power.

As for the reſt, they allow'd them their ſeveral peculiar Offices and Provinces, and accordingly made their applications to them: And they always made every Deity known what he was, and what he preſided over-govern'd or had care of, by ſome Devices of Painting, or Carv'd work about them. Thus the God of Famine, Peſtilence and Barrenneſs, was ſeen with Dead Men's Bones and Skulls drawn upon his Seat: The God of Merchandize and Traffick with a World of Toys and Trifles; and him of Repentance and Pardons with ſmoking Firebrands, to ſignifie the Prayers and Contritions of Sinners. A multitude of other Symbols and Characters were to be found about their Idols, the ſenſe and ſignification of which is a Task fit for their own Prieſts only to diſcover.

Temples.

Great Temple at *Mexico*.

The Deſcription of it.

The Temples wherein theſe fine Pageants are ſeated with ſo much State and Majeſty, are themſelves as rich and beautiful as all the Skill of that Part of the World, in conjunction with their Zeal and Superſtition, cou'd poſſibly make them. Perhaps they may be ſhort of the *Peruvian* Temples, for prodigious Riches and Treaſures in the inſide, but then they generally exceed in pomp of Building, in auguſt Figure, and all the beauties of Art and Contrivance. That of *Vitzilipuzli*, in the City of *Mexico*, is a wonderful Structure, whether one conſiders the bulk and dimenſions of it, the ſymmetry and regularity of the Parts, the goodneſs of the Workmanſhip, or of the Materials. It was built with great Stones cut in the faſhion of Snakes tied to one another, taking up a vaſt compaſs of ground, as may eaſily be gueſs'd from the bigneſs of the Court within; this Court wou'd contain better than 8000 People dancing in a round, which it very often did upon the account of thoſe Solemnities which were ſtatedly held there. Within the Circuit of the Court were all the Chambers of the Religious, the Oratories and Manſions of the Idols; upon the top of every one of which was a Column as black as jet, and very neatly wrought, and each Pillar adorn'd with a ſort of Battelment, which was ſupported with two *Indians* carved in Stone, and holding Candleſticks in their hands. Upon the moſt elevated part of the whole Structure were two Chapels of Stone, the Repoſitories of the two Grand Idols; they had all the Ornaments that Carving and Painting cou'd give to them, and the aſcent up to them was by 120 Stone ſteps. Before each Chapel was a Court of 40 Foot ſquare, and in the middle of each a lofty Pyramid, at which the Humane Sacrifices were always made. This magnificent Temple had four Gates anſwering to the four Cardinal points of the Compaſs; at every one of which begins a fair Cawſey of two or three leagues in length. For 'tis to be obſerv'd, that there are four large Cawſeys that run thus a-croſs, in the midſt of the Lake in which the City of *Mexico* ſtands, and at the end of each Cawſey is a handſome Portal or Entry, which faces directly ſome Gate of the Temple. And to render the appearance every way the more great and awful, they plac'd an Idol upon every one of theſe Portals, with the face turn'd to the Cawſey, that ſo all that advanc'd towards the Temple might have them in full view. Before the great Court of the Tem-

Walk of Trees.

ple (at ſome diſtance from it) was an aſcent of 30 Steps, upon the top of which was a Walk 30 foot broad. Thro' the middle of this Walk run a Paliſadoe of very high Trees, planted in order at a fathom diſtance from one another: The Trees were all pierc'd with ſmall holes from top to bottom, thro' which run a vaſt number of Rods from Tree to Tree, and theſe were all hung with the Skulls of thoſe humane Victims that had been offer'd to the great Idol. Theſe Objects ſtruck a deal of horrour into a Beholder; the mournful ſight made the place appear leſs lovely and pleaſant, tho' perhaps it contributed not a little to the Religion of it.

Multitude of Sacrifices at *Mexico.*

As to the buſineſs of Sacrifices, no People in the World perhaps have imbrued their hands in more Blood than the *Mexicans*, and that the Blood of Mankind too; only this is to be ſaid, that the *Peruvians* have outdone them in ſome particular circumſtances of theſe Sacrifices, ſhedding that blood which the others never pretended to. The *Mexicans*, as far as we can find, never offer'd any Victims of this nature, but what the fortune of War put into their hands; they were always Captives and Priſoners that were dealt thus with, and their Gods were ſerv'd only with what the Sword had left undevour'd.

Priſoners only Sacrific'd.

Indeed, this was one of the great Deſigns of their making War; they ſeldom fought for any thing but Victims for their Altars, and therefore took care to kill as few as was poſſible when they were engag'd in Battel, but made it their chief buſineſs to get Priſoners.

Diſcourſe of *Montezuma* and a *Spaniard*

The Great *Montezuma*, in a Diſcourſe with a *Spaniſh* Nobleman, that had aſſiſted at the Conqueſt of *Mexico*, ſignified as much as this came to. The *Spaniard* ask'd him how it came about, that being ſo great as he was, and abſolute Sovereign of all the reſt of the Kingdoms about him, he had not conquer'd the Province of *Tlaſcalla*, which was juſt by him? The Prince told him that there were two things that induc'd him to leave that Province unconquer'd; one was to keep his Soldiers in exerciſe, and prevent their growing idle, lazy and unapt for the Wars; but the other, and the principal one, was, to have a conſtant Supply of Captives for Sacrifices to his Gods. And there were abundance of Ceremonies us'd in the doing of this ſolemn Work:

Prieſts that perform the Sacrifices.

There were ſix Perſons particularly employ'd in it, who had each his peculiar Part and Office in the Bloody performance; two were appointed to hold the Hands, and as many the Legs of the Victim; another to hold his Head, and the laſt to open his Stomach, and pull out his Heart. The Name they gave theſe Perſons was *Chachalmuas*, which ſignifies as much as the Miniſters of holy Things; and that Office was very highly eſteem'd, and paſs'd from one to another by Inheritance. It was the buſineſs of the chief of them all (of him that was as it were a Biſhop in compariſon with the reſt) to give the fatal ſtroke, and do the whole of the Execution.

The Habits of the Prieſts at the Sacrifices:

The Name he went by was that of *Tepilzin*; his Habit was a red Robe with Taſſels beneath, a Crown of the richeſt Feathers upon his Head, and Pendants in his Ears. The others were attir'd in white Robes wrought with black, no Crowns upon their Heads, but their hair bound up, and circles of Paper painted with ſeveral colours ſtuck upon their Foreheads.

Strange Cuſtom.

When the Arch-Prieſt had opened the breaſt of the poor Victim, and taken out his Heart, he held it up reeking in its Blood to the Sun, and then preſently turning towards the Idol he threw it in the face of him; a coarſe Compliment to a Deity, and an odd way of making him an Offering. After this the dead Body was tumbled down the Temple Stairs, and thoſe that had the beſt Title to them took them up, and divided them amongſt themſelves, and ſo went to feaſting upon them. Thus were all the Captives ſerv'd one after another, for the moſt part 40 or 50 together; for they reckon'd it no honour to their Idol to offer him a ſmall number.

Idol of Paſte.

The Idol that ſtood by them at this Ceremony, was one which the Arch-Prieſt always brought with him from the top of the Temple; it was made neither of Wood, Stone nor Metal, but Paſte of Wheat and Maize mingled with Honey.

Prieſt holds it up to the People.

And ever before the Ceremony begun, the ſame Chief-Prieſt mounting up the Terraſs in the middle of the Court, held up an high this Image of Dough, ſhewing it to all the People, and bidding them behold their Deity. This was a ſort of excitement to the cruel Work that follow'd; and the People ſaw with leſs tenderneſs and compaſſion the miſerable fate of the Sacrifices, when they were thus prepar'd by the ſight of their Idol, and thoſe addreſſes of his chief Miniſter.

Captives fight for their Lives.

But the *Mexicans* ſometimes gave a Captive the liberty of fighting for his life; they furniſh'd him with a Sword and Target, but tied him by one of his Legs to a Pillar, ſo that he muſt either conquer him that he was to combat with or die. Here was no running away in this caſe, and nothing but downright Valour cou'd do any good. However, if the Captive got the better of his Adverſary they let him live, and live with Glory, for ever after that he had the Reputation and Dignity of a brave Captain; but if he was worſted, he was condemn'd to die, and the ſame hand that overcame muſt alſo Sacrifice him.

But they have alſo a ſort of a Sacrifice amongſt them, before which they treat the Slave that is to die after the moſt honourable manner in the World, and do all that can be to make him fat againſt the Day of Slaughter.

A Slave honour'd with the Idol's Name.

They pick out a certain Slave whom they will, and deliver him to the Prieſt's Cuſtody, calling him at the ſame time the Image and Repreſentation of their Idol. More than that, he went for the future by the very Name of the Idol, and was honour'd and reſpected in a manner like the Idol it ſelf. At his firſt entrance into this Dignity he was waſh'd, and cover'd with the ſacred Robes and Ornaments, and had the nobleſt Manſion in the whole Temple aſſign'd to him; but yet a Guard ſet upon him too, that he might not run away. He was ſerv'd by all the chief Miniſiers, and had none but great Perſons about him; and as for his Food, it was of the richeſt that cou'd be provided. When he paſs'd through the Streets a train of the Nobility follow'd him, and all the People came out of their Houſes to ſee him; the Women particularly, wou'd come and preſent their Children to him to have his Benediction. In ſhort, for a Twelvemonths ſpace, he lived at this rate honour'd and ſerv'd as ſomething more than Humane, and then his Heart was alſo ſhew'd to the Sun: They ſacrific'd and eat him up as they did the reſt; they firſt dubb'd him a Deity, and then made Stakes and Raſhers of him afterwards. If this Perſon happen'd to make his eſcape, the principal Man of his Guard ſucceeded him in his Honour, and afterwards had his fate.

Prieſts maintain theſe Cuſtoms.

This abominable effuſion of Humane Blood, as it was firſt of all introduc'd by the Prieſts, ſo the Cuſtom was continually held up by their artifices, and improv'd to ſuch a degree, that ſome Feſtival days no leſs than 4000 or 5000 have been ſacrific'd. Thoſe wretched Men having the Ear of the Princes always open to them, would inſinuate into them a belief of the pleaſure and delight the Gods took in thoſe Sacrifices: They wou'd tell them the Gods, at ſuch a time, demanded ſuch a number, and wou'd be diſpleas'd if a ſpeedy ſatisfaction were not given them. And then War muſt be made out of hand, right or wrong; ſome neighbouring Province or other muſt be invaded to get Captives for the Prieſts to butcher. 'Tis matter of no little admiration, that Humane Nature ſhou'd ever ſtoop to ſo intolerable a Servitude as this, and ſo peaceably wear the Fetters of a parcel of Men, whoſe only buſineſs and deſign was to tyrannize and govern all the World about them.

Indians groan'd under the Yoke of this Bondage.

Some of the *Spaniards* indeed ſay, that the *Indians* were weary of the Yoke impos'd upon them by the Prieſts, and were glad of the Occaſion of a new Religion appearing amongſt them (which was all full of Mildneſs and Goodneſs) to throw it off: But there may be ſome reaſon to ſuſpect partiality in their Accounts of the Matter, tho' it be not at all ſtrange either that they ſhou'd be tired with the Cruelties and Slaveries of their own Law, or invited and allured by the ſweetneſs of the Chriſtian. *Ferdinando Cortes*, in his Letter to the Emperor *Charles* V. aſſures him, that after the Conqueſt of *Mexico*, there came an Embaſſy to him out of the Province of *Mechoachan*; the deſign of which was, to deſire ſome information in the Nature of the Chriſtian Law, and to let him know that they had no very good opinion of their own, and intended to leave it. This requeſt *Cortes* granted, and *Acoſta* ſays that the *Mechoacans* made the beſt Chriſtians in all *New Spain*; which is poſſible, tho' if they were no better than a great many of their Teachers, one might conclude, without breach of Charity, that they were not very good ones.

But to return to the Prieſts: Theſe Men were highly honour'd and eſteem'd by the People, and had very great Offerings made them, beſides their ſtated Revenues, which their own ambition, and the blind fondneſs of the People, had made very conſiderable.

Office and Duties of the Prieſts.

The Prieſts of the Grand Idol *Vitziliputzli* had their Offices by Inheritance, but thoſe of the Inferiour ones by Election; at leaſt they were dedicated to the Service in their Infancy, and were along brought up in the Temple. Their moſt conſtant work was to Incenſe the Idols, which they did four times a day; at Day-break, at Noon, at Sun-ſet, and at Midnight. The laſt of theſe Exerciſes was the moſt ſolemn; the performance was attended with the Muſick of Trumpets, Cornets and Flutes, and after the Offering of the Incenſe, they all went into a Chapel to do one of the ſevereſt Penances imaginable. Each of them, with an Awl or a Bodkin, pierc'd the Calves of their Legs thro'

and

Their horrid uſage of themſelves.

and thro', drawing forth a deal of Blood, and were very careful afterwards to let the People know their Sufferings. Beſides this Mortification, they obliged themſelves to another, which was a rigorous Faſt for at leaſt a Week together, and this always before any of their great Feaſts. At theſe times they took no more Food than juſt was neceſſary to keep them alive; they drank no Wine, they hardly allowed themſelves any Sleep; and to make the Faſt univerſal, they denied themſelves all Converſation with their Wives. And as if all this were not enough, they wou'd diſcipline their fleſh with moſt unmerciful Whips, and give themſelves laſhes fitter to be born by Horſes than Men; which trick the People learnt of them too, and practis'd at the Feaſt of the God of Repentance.

What the *Spaniards* ſay farther of their Religion.

Some of the *Spaniſh* Writers here go on, and carry the buſineſs of the *Mexicans* Religion much farther yet: They tell us of Confeſſors and Confeſſions, of Unctions and Baptiſms, and Repreſentations of the Euchariſt amongſt theſe People. In ſhort, they trace out very near all the Sacraments, and make Popery to have been in the Country before they came to bring it thither. 'Tis true this is a good ſtroke enough, but a Man has no need of very nice Spectacles to ſee what lies at the bottom of ſuch Inſinuations as theſe are. They ſay the Devil has always been very buſie to form his Church like that of Chriſt's; to caſt his Worſhip in the ſame Mould as near as can be, and dreſs it up with reſembling Rites and Ceremonies. But if the Worſhip of the *Indians* be ſuch as they deſcribe it, pray whoſe Image and Superſcription is upon it? To what Church does the Character of ſeven Sacraments belong? If Satan then be for building his Church like that of Jeſus Chriſt, and has form'd that in the *Indies* after ſuch a manner as he has, we may underſtand from hence what the true Church is, and where 'tis to be found; 'tis the Original that anſwers to this Picture, and that can be no other than the Church of *Rome*.

An *Innendo* of the *Spaniards* concerning the Church.

Now if theſe things of the *Indians* be punctually true, 'tis an odd way enough to alledge the Devil's practiſe, in order to the inſinuating a belief of the Churches Authority; but if they are falſe, 'tis ſtill worſe to tell Lyes of him for the ſame purpoſe, and make the World believe he has been ſo buſie in *America*, that he has had no time to do work in *Europe*. We ſhall not trouble the Reader therefore with the Accounts of theſe Confeſſions, and the Penances enjoyn'd upon the Confeſſing Sinners; the Unctions, and the numbers of venomous Ingredients in the Matter of them; the Ceremonies of their Preparation, nor thoſe of their Application. As alſo neither with any Stories of the Witchcrafts, Sorceries and Enchantments perform'd by their Prieſts, nor the Deluſions and Jugglings of the Fortune-tellers, both theſe agreeing together to cheat the People of their Money; and which is worſe, of their Underſtanding too.

Pope amongſt the *Mexicans*.

We ſhall only obſerve, that to make the Repreſentation of the Natural Religion of the *Mexicans* yet more Romaniſh, *Acoſta* has found out a Pope amongſt them too; for he ſays, that in the ancient Tongue of the People, the High Prieſt was call'd *Papa*, which no doubt was of the Devil's inventing, for the ſake of the imitation of him in the true Church of Church.

Other Religious Men.

The *Mexicans*, in the Month of *May*, Celebrated the great and ſolemn Feaſt of their Idol *Vitzilipuzli*: For the clearer account of which Ceremony, we muſt underſtand that beſides the ſeveral Orders of Prieſts, who had their Manſions and Apartments in the Temple, there were alſo (according to the account of the forementiond Authors) two other ſorts of Religions, the one Men, and the other young Women, and each ſhut up in their ſeveral Cloyſters, within the Circuit of the great Temple, and under their peculiar Governors and Governeſſes; the former Miniſtred to the Prieſts, ſwept and made clean the Holy Places, and kept the Fire perpetually burning upon the Altar. They lived in extreme Continency and Modeſty, wou'd not dare to look upon a Woman if they met her in the Streets, and were perfectly obedient to their Superiors. They had no Incomes nor Revenues, but lived upon the Alms and Charity of the People; they ſuffer'd their hair behind to grow long, and tied it up in treſſes, but were ſhaved upon the crown: that is, they were faint reſemblances of Monks and Friers; differing chiefly in this, that theſe *Mexicans* were not condemned to perpetual Slavery and Poverty, to drudge in the Temple and beg all their lives long, but came out of it at the end of a Year, at which time a new Sett was brought in in their room.

Religious young Women.

The young Women likewiſe lived moſt chaſtly and regularly, as Virgins devoted to the Service of their God; they roſe at Midnight, as well as the Men, to the worſhip of the Idol, and perform'd all the ſame Exerciſes as the Religious of the other Sex, even to the ſhedding of their Blood. Their buſineſs was to prepare Meat for the Idol and his Miniſters, and do other Offices peculiar to their Sex. The leaſt indiſcretion, as to any Converſation with Men, coſt them their lives, and they died many times upon bare ſuſpicion, grounded only upon ſome of theſe prepoſterous Omens and Signs which that People had a world of, and were mightily govern'd by. But when the term of a Year was expired, they had the ſame Privilege with the Men, and went out of this Houſe of Bondage into the Comforts of Matrimony.

The Faſt of *Vitzilipuzli*.

In order to the Feaſt of *Vitzilipuzli*, theſe Virgins two days before made the Repreſentation of the Idol in Paſte, compoſed of Maize and the Seeds of Beets mix'd with Honey; it was cover'd with a rich Robe, and mounted in a Chair (which was placed in a Litter) in a poſture ready to be carry'd abroad. The Morning of the Feaſt being come, the Maids were dreſs'd all in white, and appear'd with Garlands of Maize upon their Heads; their Cheeks painted with Vermilion, and their Arms (from the Elbow to the Wriſt) cover'd with Parrots feathers of the ſame colour. They brought out the Idol of Paſte into the great Court with all imaginable Solemnity, where the Religious young Men receiv'd it, delivering them from the burden, and taking the Litter upon their own ſhoulders; theſe were dreſs'd in red, and had Garlands upon their Heads too. After this they carry'd it abroad to ſeveral places without the City, a vaſt multitude of People attending it. At their return they had Humane Sacrifices, and a greater number that day than any other; the Sacrifices were ſucceeded with ſolemn Dances in the great Court of the Temple, the Religious dancing in the middle, and the Nobility making one great Circle about them.

Jeſuits make the counterfeit of the Euchariſt of it.

The Romiſh Fathers will have it, that after this, the Idol of Paſte being conſecrated by the Prieſts, was deliver'd to be eaten by the People, and receiv'd with the greateſt reverence by them; yea, they call'd it the Fleſh and Bones of their Idol, and look'd no more on it as common Paſte. The ſick alſo had the benefit of it, as well as the healthy and well, and 'twas carried to them with no little ceremony; but 'tis plain whither all this tends, here's Tranſubſtantiation added on to the reſt, but we want Purgatory ſtill.

Feaſt of T. callipuca.

Next to this Feaſt came that of *Tezcallipuca*, the God of Repentance; this fell in the ſame Month with the former, and laſted 9 or 10 days. The Idol upon this Occaſion was adorn'd with a new Robe, and ſeveral Devices of feathers, and other fine things; and being thus trimm'd up, the Veil or Curtain was drawn from before his Manſion door, that he might be ſeen of the whole Aſſembly. Upon this, one of the Officers of the Temple ſounded a Muſical Inſtrument, turning to the four quarters of the Heaven, intimating thereby that all muſt hear him. Afterwards he gather'd up Earth, and put it into his Mouth, eating it in token of Adoration.

Humiliations and Prayers.

The multitude there preſent follow'd his Example, and afterwards proſtrated themſelves upon the ground, invoking the Idol, and ſhewing all the ſigns of Sorrow and Contrition for their Offences. This Exerciſe laſted for ſeveral days together, and then the Idol it ſelf was ſolemnly carried about the circumference of the great Court, which was all ſtrew'd with Flowers, Boughs and Garlands. All ſorts of People made Offerings according to their quality and ability; ſome brought Gold and Jewels, others excellent Meats and Fruits, which the Prieſts firſt laid at the foot of the Altar, and then carried to their Chambers. The next part of this Solemnity was a Humane Sacrifice according to the uſual manner, and then all concluded with Dancing, Muſick and Feaſting. The Perſon ſacrific'd at this time was he that had born the Character of the Idol for a Twelve-month before, according to the former Accounts; every three Years there was no more Humane Blood but that of this Perſon only ſhed at this Feaſt, but the fourth Year they had ſeveral others to bear him company, for the Solemnity was every way much greater at that time, and the Religion of it heightned.

Feaſt of *Quetzacoult*, or of the *Merchants*.

Not much unlike to this was the Feaſt of *Merchants*, celebrated in Honour of *Quetzacoult*, the God of Trade and Riches. The Sacrifice here Repreſented the Deity alſo, and was highly careſs'd by the Merchants; but his Reign was but ſhort, and he had no more than 40 days allow'd him to enjoy his Eaſe, and take all this Pleaſure. They had this Cuſtom in particular, to give him a ſolemn warning of his approaching Death, which was done by two of the Ancients of the Temple in a moſt humble and reſpectful manner. And they took a great deal of notice how he receiv'd it, whether he was ſad and me-

Heart offer'd to the Moon.

A Drummer of a Prieſt.

Temple at *Cholula*.

lancholly, or appear'd as brisk and gay as he us'd to be ; if the former, they concluded it an ill Omen, and the Merchants fear'd ill Succeſs in their Trade. When his Heart was taken out of his Body, 'twas offer'd to the Moon, and not to the Sun ; and the Carkaſs it ſelf was dreſs'd up with very fine Sawces, and made a Banquet for the Merchants. This ſort of Men took it in their turn to find one of theſe Sacrifices for every returning Year, neither cou'd any one that traded much be lawfully excus'd from it. The *Mexicans* gave *Vitzilipuztli* the Title of their moſt Puiſſant Lord, but in ſhort they honour'd *Quetzacoult* as much as he ; his Temple was much frequented, and his Rites punctually obſerv'd, ſo diligent a thing is Religion where there is Intereſt too. This Idol was more in eſteem at *Cholula*, the Capital City of a *Mexican* Province, than at *Mexico* it ſelf, and 'twas the Cuſtom there to have one principal Prieſt to officiate every Week. And one great part of his Work was to beat up a Drum at Sun-ſet and at Day-break, for at Night, upon the ſound of it, all People quitted Publick buſineſs abroad and retired to their Houſes, ſo that there was a profound Silence all through the Town ; and in the Morning, upon this Alarm, all Travellers and Strangers began their Journeys, neither was it permitted them to ſtir before they heard it. The Temple had an aſcent of 60 Steps to it, and a fine ſpacious Court, in which was a Theatre of 30 foot ſquare for publick Dances, Plays, and other Diverſions, which always follow'd the Celebration of the Feaſt.

Sacrifice of the *Tlaſcallans*.

Stags and Foxes burnt out of their holts.

The *Tlaſcallans* (the Neighbours, but moſt inveterate Enemies of the *Mexicans*) had their principal Sacrifice of Stags, and other Animals of the Woods and Foreſts ; for they were great Hunters themſelves, and he whom they honour'd as a Deity was a mighty Hunter too, and their Country the moſt fit for all thoſe Sports of any in the whole Empire of *New Spain*. When the time of their great Feaſt came, they went abroad into the open light to do what they did ; they did not ſhut themſelves up in Temples, nor make uſe of artificial Lights to perform their Matters by, but look'd the Sun in the face, and made him a Witneſs of their Actions. They erected an Altar upon the top of a high Mountain, and upon that they ſeated their Idol. Then a vaſt multitude of them march'd out of the City with all ſorts of Muſick in uſe amongſt them, and encompaſs'd the Mountain of all ſides. In ſhort, they ſet fire to the Trees and Buſhes all round, and burnt the Stags, Hares, Coneys, Wolves and Foxes, out of their ſeveral ſhelters and retirements, which thereupon made up to the higher parts of the Mountain in ſuch crouds, that they heap'd upon one anothers backs, and the Peoples too. The Hunters following of them hither, did here begin the Maſſacre ; they kill'd great numbers of them, and pull'd out their Hearts before the Idol, and then retired laden with all theſe Spoils to the City again, where they made their Feaſt, and concluded it with Dances, and ſeveral ſorts of Theatrical Repreſentations.

Funerals.

Riches buried with them.

Servants ſlain.

Soldiers Obſequies.

As to the point of Funerals, and the Obſequies of the Dead, the *Mexicans* were not Superſtitious and Ceremonious than in their Sacrifices. Amongſt ſome of them the dead Bodies were buried whole and entire, amongſt others they were burnt to aſhes, and thoſe remainders afterwards committed to the ground in Urns. The former were generally buried in their Gardens and the Courts of their Houſes ; the latter in their Temples, or ſome Dormitories adjoining to thoſe Sacred Places. But whether one way or the other, 'twas ſtill the Cuſtom for a dead Man, before he was Interr'd, to be ſaluted by all his Friends and Kindred as if he was living. They brought him (if a Prince or a Nobleman) Preſents of Gold and Jewels, and fine works, and buried a great Treaſure along with him, for his Expences in the other World. Upon the ſame ſcore, ſeveral of his Domeſticks were obliged to attend him, and die to continue their Service to him in that other ſtate. His Cook, his Butler, his Prieſt, his Dwarfs and common Slaves, all went after him to do their ſeveral Offices there. Yea, ſometimes ſome of the Kindred and Relations underwent this fate, for amongſt the Nobility 'twas look'd upon as a point of State to be ſerv'd by thoſe of their Blood. The Martial-men had particular Trophees and Marks of Honour, to diſtinguiſh them at their Funerals from other Men. Their Arms were carried along to the place of Interment before the Body, and whatever Heroical Actions the deceas'd had done in his Life-time, they were expreſs'd by a ſort of Blazonry, ſo that all the Aſſembly might be ſure to know them. The Ceremony of Interment was perform'd by the Prieſts with a world of ridiculous actions and geſtures ; yea, they were ſometimes dreſs'd ſo frightfully upon theſe Occaſions, that the very ſight of them was almoſt enough to have made more Funerals.

Marriages.

The Man and Woman faſten'd by a knot.

Divorces.

Diviſion of Goods.

Liberty of Marriage afterwards.

Ceremony at the birth of Children.

Marriage amongſt theſe People was even in the literal ſenſe the tying together of a Man and a Woman : When a Couple came before the Prieſt to be thus united, after having declar'd their mutual Conſent, he took the corner of the Woman's Veil, and the skirt of the Man's Gown, and tied them together in a knot, and ſo led them thus join'd away to the Bridegroom's Houſe. Here a fire was preſently kindled, and the Prieſt led Miſtreſs Bride ſeven times round the Hearth, which was the Conſummation of the Ceremony, and left them actually Man and Wife. The *Mexicans* being very jealous of the Integrity of their Wives, do many times part with them, when perhaps the Women have given no juſt Occaſion either for the Divorce, or the Jealouſie that is the cauſe of it. In this caſe, when it comes to ſuch an extremity, they divide their Goods, and the whole Stock, according to what each of them had when they came together ; the Man has his Part, and the Woman hers, and ſo ſhe has no more dependance upon him, nor concern with him ; and that they may be exact and punctual in theſe Diviſions, they have Inventories always drawn up at Marriage, which the Fathers of both ſides keep in their hands, and bring forth upon theſe Occaſions. The Children are divided too as well as the Goods ; the Daughters follow the Mother, and the Sons the Father. And the knot of the Veil and the Gown being now perfectly untied, the Man and Woman are both at liberty to go and tie it again where they pleaſe ; only they muſt never do it with one another again by the Law, for if they die for't ; and let them repent or change their Minds, or wiſh and deſire as much as they will, 'tis all one, the Separation muſt be eternal. If a Man and his Wife lives eaſily and pleaſantly together, without any manner of Jealouſies and Suſpicions, there's old Feaſting and Rejoycing of both ſides ; the Man treats and preſents the Kindred of ſo good a Wife, yea, expreſſes his gratitude to the Gods too, by very great Offerings upon the ſame account. The Children of Princes and Noblemen, when born, were waſh'd by the Prieſt, and a little Sword put into the Right Hand, and as ſmall a Target into the Left. The Children of the Vulgar had ſome Inſtruments of their Callings put into their Hands ; and the Daughters particularly, thoſe for Spinning, Knitting, and other Employments of the Women. This Ceremony was continued for four Days ſucceſſively, and always perform'd before ſome Idol.

Their Learning and Books.

No Letters.

Way of Writing.

Counting of Time.

Their Days, Months and Years.

Weeks of Years.

Ages.

The *Mexicans* had alſo their Books and their Learning too, tho' both much ſhort of what the *Europeans* cou'd pretend to ſhew them. Their Books were the leaves of certain Trees folded into a convenient form, but they had no ſuch things as letters in uſe amongſt them, but did all by Images, Symbols, and Hieroglyphick Characters. Where they intended things that cou'd be repreſented by their own proper natural Images, they made uſe of thoſe Images, but where thoſe were wanting, they expreſs'd them by other arbitrary Characters which they invented themſelves. The *Mexicans* write neither like the *Europeans*, *Africans* or *Aſiaticks*, but have a way by themſelves ; their way is the Inverſe of the *Chineſe*, for whereas they write from the top to the bottom, the others go upwards from the bottom to the top. Their computation of Time was very different from the *European* ; they divided their Year into 18 Months, each of which contain'd 20 Days, and ſo made up 360. The other 5 Days that compleated the number of 365, were entirely left out of the Account of the Year ; they reckon'd them apart by themſelves, and called them the Days of Nothing, and this with very good reaſon too, for during thoſe Days they did nothing ; that is, nothing of buſineſs for themſelves, nor ſervice to their Gods. The Temples were ſhut up, and the Sacrifices ceas'd, and they ſpent the whole time in viſiting one another. When thoſe Days were paſt they began the Account of the Year ; and *Acoſta*, who pretends to have look'd over their Kalendars, ſays the firſt Day of the Year fell in with our 26 of *February*. In the Kalendar, each of the 18 Months had its proper Name and Picture, both which always related to ſome Feaſt or other Accident of the Month, or perhaps to ſome Change or Diverſity of the Seaſon of the Year then coming on. Their Weeks conſiſted of 13 Days, and each of theſe was mark'd in the Kalendar with a Cypher. But beſides Weeks of Days, they had alſo Weeks of Years in their computation ; each of which took in 13 Years, and 4 of them Weeks being 52 Years, made up what the *Mexicans* call'd an Age. For every Age they had a Wheel, upon which all the leſſer Diviſions of Time were laid out in ſeveral Colours. In the Centre of the Wheel was pain-

Chronologick Wheels.

ted a Sun, from which paſs'd out four Rays, dividing the whole Circumference into four equal Parts, each of which repreſenting a great Week of that Age, was again divided into 13 Parts or Years more; and ſo the Diviſion of the Age were compleated. Every Year alſo had a certain Picture belonging to it, either of a Houſe, a Coney, a Reed, or a Flint; they had no more varieties than theſe four, and every Year had one or other of them. Along with this Picture they drew alſo any remarkable thing that happen'd that Year: Thus, to repreſent the Conqueſt of their Country by the *Spaniards*, they painted a Man in a Hat and a red Jerkin, which was the Habit of the firſt *Spaniard* that *Cortes* ſent to *Mexico*. So that to denote the time of any event, they expreſs themſelves after this manner; at ſuch a Houſe, or ſuch a Reed, in ſuch a Wheel, happened ſuch or ſuch a thing.

Education of Children.

Theſe People take care to give their Children a laudable and good Education, according to the Cuſtom of their Country. For this purpoſe they have in their Temples Schools and Seminaries, where they teach them to Sing, to Leap, Vault and Tumble, and to handle Arms; uſe them to Exerciſes for the increaſing both Strength and Courage; teach them the Hiſtory and Cuſtoms of their Country, and particularly make them learn by heart and Dialogues and Verſes made by ſome of their moſt eloquent and learned Men, and which their Maſters rehearſe over to them. Thus they fit them up for the Court, the Temple, or the Field, into the ſeveral Poſts and Offices, of which they are remov'd as faſt as they are qualified for them. One thing eſpecially is very commendable in them, that they endeavour, as ſoon as may be, to draw off their Children from all the little fooliſh Sports and Recreations that age is ſo fond of, and to fix their Minds upon more profitable and ſolid Diverſions, which may be of ſome ſervice to them in the World.

Dances and Exerciſes.

The *Mittote*.

Circles of Dancers.

The *Mexicans* perhaps have outdone all the reſt of the People of that ſide the Globe, as to the pomp and variety of their Dances. The moſt noted and ſolemn of all was that which was call'd the *Mittote*, in which the *Mexican* Emperors themſelves ſometimes aſſiſted and bore a part; of ſo high and honourable a Character was it amongſt them. Their Muſick was of ſeveral kinds, ſome reſembling Drums, others like Flutes and Cornets, but together with theſe they had Vocal Muſick alſo, and that not ungrateful to the Ear; they kept Time ſo nicely with the Inſtruments in all their motions, that that harmony was alſo very pleaſing to the Senſe. Theſe Dances were held either in the great Courts of the Palaces of the Emperors, or thoſe of the Temples of the Gods, tho' moſt commonly in the latter. The Muſick ſtood in the middle; round them was a Circle of the Nobility, who manag'd the Dance with much more ſlowneſs and gravity, and ſung with a more ſtately air than the reſt. This Circle was encompaſs'd with another of the Common People, who diſcover'd a great deal of briskneſs and jollity, as well in their ſinging as their light and quick motions.

Theſe Dances, 'tis true, were in ſome meaſure brought into their Religion, and made as it were a part of it, but being originally of another deſign, and only borrow'd by the other for the ſake of Pomp and Solemnity, the *Spaniſh* Fathers thought good to tolerate the *Mexicans* in the uſe of them, only taking care that they did not mingle their Superſtitions with them.

The nature of their Government.

The ſix Electors.

King not crown'd till after a Victory.

The *Mexican* Empire has been all along, from its firſt riſe, Elective, tho' the Electors themſelves have been changed. At firſt the Power of chuſing lay in the Commons, but afterwards 'twas transferr'd to the Nobility, and they conſtituted ſix Electors, four of whom were Grandees of *Mexico*, and the other two Princes that were Subjects to that Crown, the King of *Teſcuco*, and the King of *Tucuba*. In the Election, the main qualifications they required were a Martial temper, love of Glory, and ſome ability in managing Warlike Affairs. When the Election was made, there was a ſplendid Feaſt at the Prince's firſt taking poſſeſſion of the Throne; abundance of Orations and Speeches were made to him, and Sacrifices offer'd upon the Occaſion. At the Coronation there was ever another as ſumptuous and magnificent as the former; but then, before this Ceremony was perform'd, ſomething was to be done on the King's Part. The Imperial Crown was not to be ſet upon his Head till he had fought one Battel, and his victorious Arms brought home a great number of Captives to be offer'd to the Idols: This done, that Enſign of Honour and Dignity was added to him, the Crown was ſet on, and 'twas the King of *Teſcuco's* Place and Office to do it.

Duty to their Prince.

Dignities amongſt the Nobles.

Councils, Tribunals, &c.

Treaſurers, Receivers, &c.

The *Mexicans* are a People that have always expreſs'd the higheſt degrees of Duty and Loyalty to their Prince; they were never known to have their hands in any Plots or Treaſons, or to cheriſh any Factions or inteſtine Diſcords amongſt themſelves. Their Grandees have appear'd ſo free from Ambition and ſiniſter Deſign, and poſſeſs'd with ſo generous and untainted a love to their Country, that they have ſome of them put away the Imperial Crown when it has been offer'd them, purely upon this conſideration, that 'twou'd be more profitable for the Community to have it plac'd upon ſome other Head. The Government was in all Points regulated and diſpoſed very well, and whatever ſome of their Religious Cuſtoms were, their Politicks were far from being barbarous. There were four principal Degrees or Dignities amongſt the Noblemen; that of the Electors was firſt, and they were moſt commonly Princes of the Blood. Beſides theſe there were three more, and out of theſe four Orders the Grand Council of the Empire was made up. But then there were a great many other ſubordinate Councils, Courts of Audience, Tribunals and Juriſdictions, which for Number, Order and regular Dependance upon one another, are ſaid by ſome not to be at all inferiour to thoſe in *Spain*. And there was as good a Policy eſtabliſh'd for the gathering in the Revenues of the Crown, out of all the many Provinces of this great Empire. There were Collectors, Receivers and Treaſurers, in every Province; and all the Tributes were conſtantly return'd into the Royal Treaſury at *Mexico* every Month.

Valiant Men preferr'd.

Orders of Knights.

The higheſt Honours and Preferments in this Country, generally fell to the ſhare of the Men of Arms. Indeed the Nobility were (originally) only the beſt Soldiers, and always thoſe that cou'd perform noble Deeds in the Field, had their reward in ſutable Honours and Titles at Court. They enjoy'd Privileges that none elſe cou'd pretend to, and if the Princes were ever prodigal of their favours, it was to thoſe Men that had ſhewn him, by ſome good proofs, they had Military Vertues worth his taking notice of. They had three Orders of Knighthood inſtituted amongſt them, for the encouragement of Valour and Bravery: The firſt and moſt honourable of all had their hair tied up with a red Riband, and a rich Plume of Feathers ſpreading upon their ſhoulders; beſides 'twas allow'd them, as a particular diſtinguiſhing mark, to wear certain rouls of Feathers, and that as many as they had perform'd remarkable Actions in War. The next to theſe were call'd the *Lions* and *Tigers*, as being generally the moſt rough and hardy Soldiers of all, and put upon the moſt deſperate Services; their mark was to be compleatly Arm'd, but without thoſe gaudy Accoutrements which the former had. The laſt of all were the *Grey Knights*, which had their hair cut round about the Ear, and were never Arm'd but half way. All Knights were allow'd to carry Embelliſhments of Gold and Silver, to wear rich Cottons, to uſe gilt and painted Veſſels, and to have Shoes made after the *Mexican* faſhion; the Common People were denied all theſe, and incurr'd a Penalty by pretending to them. The Knights had alſo their Apartments and Lodgings in the Palace, mark'd with the ſeveral proper marks of their Order; under them were the Lodgings of the inferiour Officers, who were under ſo ſtrict Rules, that if any one of them Lodged out of his Place, he did not forfeit that, but his Life.

Original of the Empire.

The *Chichimecans*.

Their barbarous Manners.

Not to be conquer'd by the *Spaniards*.

Having thus given ſome account of the principal Cuſtoms and Policies of this Empire, it remains that we touch upon the Riſe and Foundation of it, and ſome of the moſt remarkable paſſages of its Hiſtory. Thoſe that have ſearch'd into the Records and Traditions of the *Mexicans*, do generally agree that they were not the ancient Inhabitants of the Country they now poſſeſs, and have done for ſeveral Ages, but were Foreigners that left their native Seats and planted themſelves here. The old Inhabitants were call'd *Chichimecas*, a Barbarous and Savage People, that liv'd altogether upon Rapine like the wild Beaſts themſelves. They had no Order nor Government, no Worſhip nor Ceremonies amongſt them; neither did they live in Societies together, but diſpers'd up and down in Caves and Woods, where they cou'd find the moſt agreeable ſhelters. They did neither Till the ground, Plant or Sow, or undertake any ſort of Labour, but ſpent their time in Hunting their Fellow Brutes up and down the Mountains and Foreſts. Their Food was any raw Fleſh they catch'd, and wild Herb, Root or Fruit, that came to their hands; there was no more of Art in their Diet and Dreſſing, than in the reſt of the circumſtances of their living. 'Tis reported that there are yet ſome remainders of them ſcatter'd up and down in *New Spain*, that maintain themſelves by Spoil and Robbery, and live much after the old rate. The *Spaniards* cou'd never reduce them by fair means, and to have made uſe of force had been the ſame thing as de-

Coming of the *Navatalcas* out of the North Parts into *Mexico*.

Their Tribes.

Their Plantations.

War between the Natives and *Tlaſcallans*.

The *Tlaſcallans* beat the *Chichimecans*.

Chichimecans a little Civiliz'd.

Vain Stories of the *Mexicans*.

Long time by the way.

claring War againſt the wild Beaſts, that can cover and hide themſelves in the Labyrinths of Caves and thick Woods from all the Armies in the World. According to the Computations of the *Mexican* Regiſters and Kalendars, 'twas in that Year which is co-incident with our *A. D.* 720, that their Anceſtors firſt left their own Country and came into this. That Country is ſome one of them that lie far to the Northward, and the People were call'd *Navatalcas*. This was a general Name that comprehended all their Tribes; for we muſt know, that they conſiſted of ſeven diſtinct Nations or Tribes, all of which were much more Polite and Civiliz'd every way than the *Chichimecas*, whoſe Country they came to poſſeſs. 'Tis farther to be obſerv'd, that all theſe ſeven Tribes did not come into the Country (afterwards call'd *Mexico*) at at the ſame time; but firſt one, and then ſome time after another, and laſt of all the *Mexicans*, which was at leaſt 300 Years after the firſt Tribe ſet out, according to the Accounts of their Hiſtories. Of theſe Tribes that came firſt, ſome planted themſelves about the great Lake (now call'd the Lake of *Mexico*) others ſpread themſelves abroad into other Parts of the Country, where they met with the beſt accommodations to invite them to a Settlement. They quickly after began to build Towns and Cities, the moſt remarkable of which were *Azcupuzalco*, *Teſcuco*, *Quahunachua*, and *Tlaſcalla*; of which we may have occaſion to ſay ſomething in the courſe of this Hiſtory. As for the Natives of the Soil, the *Chichimecans*, when theſe Foreigners firſt intruded themſelves upon them, they made no reſiſtance, but e'en quitted their Country to them, and betook themſelves to the ſecureſt ſhelters their Mountains and Dens cou'd afford them: Yet, after a while, they recollected themſelves, and gave ſome of the Invaders ſome trouble; the *Tlaſcallans* were frequently vex'd with their Inroads, and were forc'd at laſt to make uſe of a treacherous Policy to procure their own quiet. They invited them to a Banquet, and having made them all drunk, diſarm'd them; that is, they ſtole away their Weapens, and then ſet upon them. This afterwards produc'd a fierce Battel, in which the *Tlaſcallans* (having the advantage of Arms, and much better Diſcipline than their Enemies) carried the Victory; the conſequence of which was, that the *Chichimecans* let them alone for the time to come. But then ſeeing alſo how amicably and ſociably theſe Foreigners liv'd with another, (for all the ſix Tribes maintain'd an inviolable Friendſhip) and how much better it was to live in ſome Order, and under Government as they did, then like themſelves to run wild about the Woods, and be under no Rules nor Laws, but thoſe which a Savage appetite preſcribed, they began to think of conforming to their Example; they built them Cottages, put on Apparel, and had a ſhadow of Government and Society. Their barbarity wore off in ſome meaſure, and ſomething like Humane Nature began to diſcover it ſelf amongſt them; yet they would always live in the Mountains apart from the reſt, hardly knowing how to take Mankind for their Companions. 'Twas at leaſt 300 Years after the firſt 6 Tribes of the *Navatalcas* came hither (as was hinted before) that the laſt Tribe which took the name of *Mexicans*, from their chief Captain *Mexi*, follow'd them, and came into the Country too. They pretend to have had Inſtructions from their Idol relating to their Journey; that he commanded them firſt to go into that Country, deſcrib'd to them the place of their Settlement by infallible Marks and Signs, and gave them all along counſel and directions how to manage their Affairs. But leaving theſe ſuggeſtions, it is more credibly reported of them that they made a great many halts by the way, met with many letts and hindrances from Enemies, and were weaken'd by two or three Diviſions amongſt themſelves, in which ſome conſiderable numbers of their body went off from them, and planted in other places: ſo that 'twas no little time they ſpent before they came upon the Spot that they were to inhabit, even as their Hiſtories report of the 6 Tribes, that they were 80 Years making their Journey, for they built them Villages, cultivated the Grounds, and ſow'd Corn in abundance of places as they came along; ſo that tho' they ſet out from their own Country, *A. D.* 720. yet they made it *A. D.* 902. before they entred that of *New Spain*. However, the Tribe we are now ſpeaking of being come at laſt as far as the great Lake, they concluded to ſettle there; for the adjoining Country was rich and fruitful, and the Lake it ſelf afforded them all that they cou'd deſire of Fiſh and Fowl.

Story of the finding out the place where the City was to be built.

They tell a thouſand Stories of the marks their God gave by Revelation to the Prieſts, of the very place in the Lake where they ſhou'd lay the foundation of a City that ſhou'd be Sovereign Miſtreſs of all the reſt about it, and become famous through the World. That they ſhould find a *Tunal*-tree growing upon a Stone, and an Eagle ſtanding upon it, with diſplay'd Wings, devouring other ſmall Birds, which they ſay came to paſs, (and one may venture to receive it as a thing no ways impoſſible) upon which account they add, that they ſtill carry in their Arms an Eagle with one foot upon a *Tunal*, and the other lifted up, holding a little Bird in the tallon; and this was a Symbol of the future Glory and Grandeur of the City. Upon this ſcore alſo they gave it the name of *Tenoxtiltan*, which ſignifies as much as a *Tunal* upon a Stone, tho' the name that grew into common uſe was *Mexico*.

Mexicans trade with their Neighbours.

Quarters of *Mexico*.

Tlatelulco built.

Mexicans chuſe a King.

The City adorn'd.

In order to the building of this, the *Mexicans* were forc'd to go to trafficking with their Neighbours, and this they cou'd the more eaſily do, becauſe having had occaſion in their march hitherwards to make ſome of them feel the effects of their Valour, they had ſtruck a kind of terror into them, ſo that they were even forc'd to grant them the Trade and Commerce they demanded, tho' ever ſo much againſt their intereſt. To their Neighbours therefore the *Mexicans* brought all ſorts of Fiſh and Fowl that the Lake yielded, and had of them in exchange Stone, Lime and Timber, for their building. They fill'd up alſo a part of the Lake with Rubbiſh, made the Cawſeys, and divided the City into four quarters, which now at this day bear the names of the *Quarters of St. John*, *St. Mary the round*, *St. Paul*, and *St. Sebaſtian*. They had but juſt ſeated themſelves in this new Neſt, and were not yet warm in it, before another Diviſion happen'd, to the weakning of their yet young, but growing Power. The diſcontented Party that made this buſtle, was angry at the method taken in the diviſion of the City, looking upon themſelves not to be dealt with therein according to their Merit. Theſe therefore remov'd, and went and fixt upon another piece of ground in the Lake, where they built a City, and gave it the name of *Tiatellulco*, becauſe the ground reſembled a Terraſs. This City was the Daughter of *Mexico*, being ſprung as it were out of the very bowels of it; but it prov'd a very unnatural and rebellious one, endeavouring by all ways imaginable the deſtruction of her Mother, which yet notwithſtanding ſhe was never able to accompliſh. However, the fear of ſo many growing enemies about them, made the *Mexicans* think of eſtabliſhing their Government upon the ſureſt foundations, and caſting themſelves into ſuch a form as ſhou'd leave them the leaſt liable to any attacks. They therefore thought good to chuſe a King, and becauſe they wou'd prevent all private Feuds and Animoſities amongſt themſelves, as alſo to oblige a neighbour Prince, whoſe Predeceſſor they had grievouſly offended, they unanimouſly agreed to offer him their Crown. This was the Son of the King of *Culbuacan*'s Daughter by a *Mexican* Prince, his Name was *Acamapixtli*; him they requeſted for their King, and him they had, his Grandfather thinking it no unprofitable thing to have an Alliance with ſo Valiant and Polite a People as the *Mexicans* were. This Prince ſpent his whole long Reign in Peace and Quietneſs; he adorn'd the City with fine Buildings, large Streets and Conduits, and was a zealous promoter of the good of his Country. All his time the *Mexicans* groan'd under the Tyrannical Impoſitions of their Neighbours (and one of their own Tribes originally too) the *Tapanecans*, whoſe Metropolis was *Azcapuzalco*. Theſe People envied the riſing Grandeur of the *Mexicans*, and beſides fear'd to have them ſome time or other become troubleſome Enemies to them, they loaded them with heavy burdens of Tribute, and exacted even things next to Impoſſible of them. Neither did the *Mexicans*, in this Prince's Reign, make any Efforts towards their own Freedom, but patiently endured the Oppreſſion.

Alliance of the *Mexicans* with them of *Azcapuzaloo*.

To *Acamapixtli* ſucceeded his Son *Vitzilovitli*, by the favour and choice of the whole Community. This Prince married the King of *Azcapuzalco*'s Daughter, in order to the making ſome advantage for the *Mexicans* by ſuch an Alliance. And this was the happy conſequence of it, for when the new Queen of *Mexico* had brought a Son into the World, her Father pleas'd at that, diſcharg'd the *Mexicans* from all thoſe intolerable Tributes, and contented himſelf only with ſome ſmall acknowledgment, as a token that they were at his diſpoſal, and liv'd in his Land. But thoſe days of tranquility laſted not long, for both the *Mexican* King and Queen ſhortly after died, leaving a little Son of ten years old. This Prince's Name was *Chimalpopoca*, and as young as he was, he was choſen to ſucceed his Father, and crown'd with all the uſual Ceremonies. The *Mexicans* having a Prince who was Grandſon to their great Enemy, grew a little bold under his Protection, and began to make Demands.

They

Mexicans demand water.

A Rupture.

They wanted good water (that of the Lake being very thick and muddy) and therefore made their King beg Leave of his Grandfather to bring the water to *Mexico*, from a Mountain about a League off. This he granted, and they made a ſort of an Aqueduct of Faggots, Reeds and Flaggs; but that not ſerving the turn, they ſent to the King of *Azcapuzalco*, to require him to provide them both Workmen and Materials, that they might have an Aqueduct of Stone to ſupply their City with water. This Demand (ſo little becoming the ſervile ſtate and condition of thoſe that made it) diſpleas'd the King, but highly incens'd his Council, and made them take up Reſolutions very pernicious to the *Mexicans*. They forbid all Traffick and Correſpondence between their Country and *Mexico*; and not only ſo, but determin'd utterly to root out that Fugitive People ſhut up in the Mud, as they call'd the *Mexicans*, becauſe they dwelt in the Lake.

K. of *Mexico* murder'd.

A new Election.

Commons not for War.

Bold Undertaking.

Bargain between the Mobles and Commons about the reſult of the War.

Azcapuzal-*co* defeated. City taken.

All thoſe Governments were then ſo popular, that Kings ſignify'd little amongſt them beyond the Name and the Figure, for the People diſpos'd of all, and made War or Peace as they pleas'd. The King of *Azcapuzalco* cou'd do no more than make Remonſtrances to the contrary, and deſir'd them only at leaſt to ſecure his Grandſon, and then execute their pleaſure upon the *Mexicans*. But tho' ſome of the Nobility promis'd this, yet another Faction was againſt it, and reſolv'd to deſtroy the young King firſt, that the *Mexicans* being deſtitute of ſuch a Protection might be more entirely at their mercy. This Plot they put in execution a little while after, and treacherouſly murder'd the young King in his own Palace. The *Mexicans* were tranſported with all the choler and fury in the World at this outrage, and wou'd preſently have gone to Arms to revenge it; but being moderated by the grave Advice of ſome of their old Men, they reſolved to defer it till they had fill'd up the vacant Throne, and gotten a new King. Then having made complaint to their Neighbours of *Teſcuco* and *Culmacan*, of the barbarous injury they had ſuſtain'd, and deſired them at leaſt to ſtand Neuters in the War they were going to make with the *Azcapuzalcans*; they farther intreated them to aſſiſt at the Election of a new King, and ſo proceeded to that Affair. The Prince made choice of was *Izchoalt*, a Son of *Acamapixtli* by a Slave, and by Marriage allied to the King of *Teſcuco*. Preparations for War being preſently made of both ſides, the *Mexicans* found that their Enemies the *Azcapuzalcans* were by much too ſtrong for them, and therefore unanimouſly preſs'd the King to lay down his Arms, and ſue for Peace, chuſing rather to ſerve the King of *Azcapuzalco*, and diſſolving their own Government, to be thrown into the body of his Subjects, than run the riſque of ſo dangerous a War. And this had been done, (the King not being able to withſtand the importunities of the Populacy) if a young Nobleman nam'd *Tlacaellec* had not put a ſtop to theſe proceedings: He, by his Courage and good Advice, prevented this baſe ſubmiſſion, and the overthrow of the Government; he went alone, and gave a bold defiance to the Adverſary King in his Palace, proclaimed the War openly to his Guards, and had like to have been cut in pieces for ſo doing. The Commons of *Mexico* were like to be in a tumult upon this; they were ready to have broke up in confuſion, left the City and King both, and gone to find ſome places of Retreat for themſelves and their Families. But upon the King's promiſes and perſwaſions they came to terms, and an agreement was made between the Nobility and them to this purpoſe: That ſince the main ſtreſs of the War was to lie upon the ſhoulders of the Commons, if in the ſucceeding Battel the *Mexicans* were overcome, the Commons ſhou'd be at their full liberty, and diſpoſe of King and Noblemen as they thought fit; but if, on the other hand, they got the Victory, they ſhou'd quit all pretenſions to any Intereſt in the Government for the future, and be Vaſſals to the Noblemen, they and their Deſcendants after them. This wiſe bargain made, and confirm'd in the moſt ſolemn manner, they went and engaged the Enemy, where by the Courage and excellent Conduct of *Tlacaellec*, they gain'd an entire Victory: they took the City of *Azcapuzalco* it ſelf, with all the rich Spoil of it, putting all the Inhabitants to the Sword; and not contented with this, they purſued the broken Forces of their Enemies to the Mountains, and having reduc'd them to the laſt extremities, ſpar'd them upon condition of owning the Sovereignty of *Mexico* for the time to come.

Other Dominions added to *Mexico*.

Suchimilcos conquer'd.

Cuitvalaca taken by Boys.

Teſcuco ſubmits.

Chalco ſubdued.

Rite of the Cuſtom of Sacrifices at the Coronation.

Generous Action.

Tlacaellec's death.

Tequantepec ſubdued.

Tlatelulco conquer'd.

Thus had the King and Nobility two Victories at once, one over their own Party, and another over their Enemies; the Commons were now their abſolute Servants, and continued ſo to be, till a Foreign Power made King, Nobles and Plebeians, Slaves all together. This was the firſt ſtep of the greatneſs of *Mexico*; here was a potent City that now receiv'd Laws from it, and ſubmitted to its Yoke. And the good fortune of the *Mexicans* increas'd every day, Victorices and Triumphs came tumbling in upon them apace: For quickly after this, the little Governments of *Tucula* and *Cuyoacan*, (which were parts of the Kingdom of the *Tapanecans*, of which *Azcapuzalco* was the chief City) theſe I ſay were ſwallow'd up by the ſame growing Power. From theſe Cities there was a vaſt deal of rich Plunder, Gold, Silver and Jewels, carry'd away to *Mexico*, which now began to put on ſomething of an Imperial face, and her Prince to appear like a great Monarch. Theſe *Tapanecans* were the Poſterity of one of the Tribes that came out of the North to inhabit this Country, and were conſequently (originally) Countrymen to the *Mexicans*: however, now they were their Slaves, and ſhortly after another of the Tribes, the *Suchimilcos*, were ſo too; and being entirely defeated by *Tiacaellec*, preſented their Crown to King *Izchoalt*. The next Conqueſt was that of the City of *Cuitlavaca*, which ſtood in the Lake of *Mexico*; *Tlacaellec*'s Name was ſo formidable in all that Part of the World, that he himſelf was almoſt Army enough to have done the buſineſs. However, to affront the Enemy more, he carry'd an Army of Boys along with him, and having aſſaulted the City, he preſs'd it ſo cloſely with his young Soldiers, that the Defendants (who to be ſure did not do much, and were conquer'd by the very Fame and Character of the General) quitted their Poſts, and reſigned the City to him. This made ſo much noiſe, that the King of *Teſcuco* concluded he ſhould not be able to defend himſelf long from the Power of Arms, ſo fortunate as thoſe of the *Mexicans*, and therefore by the Advice and Conſent of his Council, he ſent his Ambaſſadors to offer his Submiſſion to King *Izchoalt* too, who by this means had another Crown added to what he had before. This fortunate Prince having enjoy'd theſe Crowns a while, died, and made way for a Succeſſor to put them on; leaving (beſides his many Conqueſts) this ſtanding Memorial of himſelf, namely, the great Cawſey extending along the Lake from *Mexico* to *Samilcho*, which was full four Leagues, a Work of no leſs uſefulneſs to both Cities, upon the account of Commerce and Trade, than it was of Coſt and Labour. The next Choice fell upon *Montezuma*, the firſt of that Name, who was Nephew to the famous General *Tlacaellec*, as this latter was alſo to the laſt King *Izchoalt*. This Prince was a mighty Conqueror too, he ſubdued the Province of *Chalco*, and paſſing the Mountain *Menade*, he conquer'd on to the North Sea; from thence returning towards the South Sea, he ſubdued ſeveral other Provinces, and by the ſurpaſſing Valour and Glory of his Unkle *Tlacaellec*, rais'd the *Mexican* Name and Glory to a very high pitch. He built the famous Temple of the Idol *Vitzilipuztli*, and augmented the Grandeur of the Imperial Palace, by appointing greater numbers of Officers and Miniſters than ever were us'd by any of his Predeceſſors. 'Twas he alſo that firſt ſet a-foot the Cuſtom of the King's going in Perſon to the Wars, to fetch in Captives for the Sacrifices of their Coronation Solemnities. He was crown'd with more pomp and ceremony than any Prince before him had been, and the publick Shews upon that Occaſion were much more numerous and ſtately. He being dead, the Crown was offer'd to *Tlacaellec*, in conſideration of his great Merit, but he as generouſly refus'd it, and gave his Vote for *Ticocic*, the doceas'd *Montezuma*'s Son. This Prince was directly the Reverſe of his Father; he was a Coward, weak and indiſpos'd to Action. The *Mexicans* (the moſt dutiful Subjects in the World) cou'd not bear him, and therefore poiſon'd him out of the way, and made room for a more worthy Succeſſor. This was *Axayca*, another of the Sons of the Great *Montezuma*, and brought into the Throne likewiſe by the Intereſt of *Tlacaellec*; that brave General did not live to ſee this ſecond King (which he had made) crown'd, but expired worn out with old Age, and the toil of buſineſs. The whole Empire was deeply afflicted at his Death, and they bury'd him with a Solemnity becoming the Quality of the greateſt of their Princes; no leſs than this was due to the Founder of their Empire, and the greateſt Man in that part of the World, as all agree he was. *Axayca* was a very ſucceſsful Prince in all his Undertakings, and the moſt valiant the *Mexicans* ever had. He added to the Empire the Province of *Tequantepec*, which lies 200 Leagues from *Mexico*, and carry'd his Conqueſts as far as *Guatulco*, a well-known Port in the South Sea. He reduc'd the Government of *Tlatelulco* to the Obedience of *Mexico* likewiſe, and made that Seditious Party, which had ſeparated it ſelf from the main Body, unite again, and become one People with them. The *Tlatelulcans* refus'd to do it by fair means, and their Prince, inſtead

of

Duel between the Emperor of *Mexico* and the Lord of *Tlatelulco*.

of acknowledging *Axayca* for his Sovereign, ſent him a Challenge to fight Hand to Hand with him. They had both of them their Armies ready drawn up, but they commanded all to ſtand ſtill till the Controverſie was decided betwixt them two. The effect of it was, that the Prince of *Tlatelulco* not able long to endure the furious blows of the *Mexican* Emperor, turn'd about and run away towards the City, and his own Men ſeeing him run, took their heels and run after him, and both were follow'd by the *Mexicans*, who purſued them very cloſe. The Prince of *Tlatelulco* got into the Town, and to ſave himſelf, run up to the top of a Temple, but *Axayca* being all this while in chaſe of him, enter'd the Temple almoſt as ſoon as he, and laying hold of him, he dragg'd him along, and threw him from the top of that lofty Building to the very bottom. The *Mexican* General (the fam'd *Tlacaellec*'s Son) had in the mean time entirely defeated the Forces of the *Tlatelulcans*, ſo that this City was alſo now forc'd to accompany a great many others in their fortune, and do Homage to *Mexico*.

Quaxalatlans conquer'd.

This Prince was ſucceeded by another who was one of the Electors, and his Name was *Autzol*: He ſubdued and quieted the Rebellious *Quaxalatlans*, who inhabited one of the chiefeſt Provinces of *New Spain*; in order to come at them, (for there was a little Arm of the Sea in his way) he made a floating Iſland of Earth, Faggots, Reeds, Canes, and divers other Materials, upon which he plac'd himſelf and his Army, and ſo got to the Enemy. He extended the Limits of his Empire as far as *Guatimala*, which is 300 Leagues from *Mexico*; but while he was augmenting the Buildings and Beauties of *Mexico*, he had like to have quite laid it under water, and that by bringing a mighty Water-courſe to the City, which ruin'd a good part of it, and had well-nigh drown'd the whole. But he quickly drew off that Flood again, and repair'd the Streets that had ſuffer'd, and left the City much more fine than ever, and encompaſs'd with water like another *Venice*.

Strange Boat.

Mexico almoſt drowned.

Story of the laſt and great *Montezuma*.

This Prince dying, made way for *Montezuma* the ſecond of that Name to come upon the Throne. And here the *Mexican* Greatneſs was come to the higheſt pitch; both the Monarch and the Monarchy it ſelf were the moſt Glorious that was ever. This Prince was he that ſaw the fatal period of all this Grandeur, and an Empire that had been ſo many Years growing Great and Rich, ſwallow'd up in one or two by a Foreign Power. But becauſe his Story contains more variety in it, and Matters that have been more talk'd of in the World, we ſhall be a little more particular in this than in the former ones.

His excellent qualities.

Montezuma was a Perſon of excellent Endowments, and for his Wiſdom and Gravity wonderfully reſpected in the Emperor's Privy Council, of which he was a Member. He was alſo Cunning and Politick in the higheſt degree, and underſtood all the Arts of Diſſimulation and Intrigue as well as he did thoſe of War: None had more Courage for the Field, nor more Wit and Management for the Court than he. And to poſſeſs the People with Notions of his great Piety and Reverence of the Gods (which was one, and not an unlikely way of getting their Affections) he us'd frequently to retire himſelf into a private Chapel in the great Temple, where he was very buſie in performing the Rites of his Religion. Upon all theſe accounts his Election was ſhort and eaſie, the Eyes of all Men were turn'd upon him as the fitteſt Perſon to be Intruſted with the Charge of the Empire. When he had Intelligence that he was choſen, he hid himſelf in the Temple, and ſeem'd very unwilling to accept the Honour; and the Lords were forc'd to come and fetch him out, and place him in the Throne as it were by violence. The Ceremony of his Inſtalment was attended with more Superſtitions than were uſually practis'd for his Predeceſſors; he drew Blood himſelf from his Ears and the Calves of his Legs, and had the griſtle of his Noſe pierc'd, and a rich Emerauld hung thereat. And as 'twas always the Cuſtom upon an Election, for ſome of the Great Men to make Speeches to the Prince elected, ſo hardly was any Prince ever ſo harangu'd as he, and ſo much rapture expreſs'd upon ſuch an Occaſion. The like exceſſes were alſo obſervable at his Coronation; the Feaſts, the Shews, the Plays, the Dances, the Sacrifices, the Illuminations, and, in a word, the whole Pomp of the thing was every way extravagant.

Publick Triumphs at the Coronation.

Amongſt the crouds of Strangers that came to *Mexico* to ſee the Solemnity, there were ſome of the *Tlaſcallans* and *Mechoacans*, the moſt inveterate Enemies of the *Mexicans*, whom when *Montezuma* had diſcover'd, he treated with all the kindneſs and generoſity in the World, and order'd all his Subjects to do the like. But never was any of thoſe *American* Princes (or perhaps hardly any other) ſo high and ſtately as he; all Plebeians were turn'd out of his Palace, and not ſuffer'd to bear any Office about him; he was ſerv'd only by his Noblemen; and no other dared ever to come into his Preſence; if a Plebeian look'd him in the face he was puniſh'd with Death. He never wore any Garment, or eat or drunk out of any Veſſel more than once. When he went abroad, the Noblemen carried him in a Chair of State upon their ſhoulders; he never ſet his foot upon the bare ground, but if he lighted at any time there were rich Carpets ſpread for him to walk upon. And always in his Progreſſes, he and his Nobles were enclos'd by themſelves, and all the reſt of the train kept without thoſe Bounds; none daring to ſtep within them. He was a moſt exact and impartial Diſpenſer of Juſtice, never abated an ace of the rigour of his Laws, and 'twas a woful Caſe that Man was in whom he found any way faulty in the diſcharge of his Duty. To keep a more ſtrict and watchful eye over his People, he wou'd pry into their actions himſelf, and not rely altogether upon the Reports of other Men. 'Twas not uncommon with him to throw off the King, and go up and down in a Diſguiſe, to ſee who were truſty and diligent in their Offices and who were not. Particularly he wou'd viſit his Judges, and try their Integrity, by offering them Fees and Bribes, which if any of them took, he certainly Executed them for it afterwards; and he made no difference between Nobles and vulgar Men, between Strangers and Kindred, yea, the neareſt of his Blood, if he found them tardy in the performance of their Duty.

Juſtice and Jealouſie over his People.

Prodigies and Preſages.

This great Prince had ſpent about 14 Years in all this Glory and Felicity, when the *Spaniards* came to thruſt him out of it. The Story ſays, that there were abundance of Prodigies that foretold this mighty change; Comets, ſtrange unaccountable Lights in the Air, Voices and Monſters. In a word, ſome Stupendious Signs or other in all the Elements, which together with the Predictions of the Magical People amongſt them, made the Emperor exceſſively melancholy, and confus'd the whole Country.

We ſhall not trouble the Reader with the recital of theſe, becauſe a great part of them perhaps were owing to the Superſtitious fancies and conceits of the *Mexicans*; and on the other hand, we don't ſuppoſe but that ſome extraordinary things might happen before ſo remarkable a Cataſtrophe as this was, and the fate of ſo mighty an Empire be uſher'd in with Events and Appearances very ſurprizing, as credible Hiſtories aſſure us concerning ſome other Parts of the World. But then this is to be added too, that the *Indians* are ſo very full of whimſical ſuperſtitious Notions, that they are ready to make Miracles and Prodigies of every thing they don't underſtand the reaſon of; and ſo 'tis with reſpect to Omens and Preſages, a Bird can hardly fly in the Air, or a Beaſt move upon the Ground, but they'll find ſomething or other of an Omen in't. However, in *A. D.* 1517. the Calamities they fear'd began to come nearer in view, for there appear'd in the North Sea certain huge Bodies moving along upon the water, and the *Indians* upon the ſhore were under ſome concern to know what ſort of Animals they were. We in *Europe* call theſe things, Ships, but they took them to be Whales, or ſome other Monſters of the Sea. But they were much more aſtoniſh'd and frighted when they ſaw them draw near to the ſhore, and living Men come out of the Bellies of them, and Men with long Beards and Muſtachoes too, and in a ſtrange Garb; they believed theſe to be of the ſame Species of Animals with themſelves, becauſe they ſaw them go erect, and heard them talk, but thoſe Beards and Whiskers were very puzzling circumſtances, and made the Matter a little doubtful to them. The *Spaniards* however treated them well, and pleas'd them with ſome *European* Toys, informing themſelves at the ſame time of the Greatneſs of the Prince, and the Riches of the Country. Having got this notice they diſmiſs'd the *Indians*, and theſe latter preſently ſent tidings to Court of what they had ſeen, and together with that the Pictures of the *Spaniards*, their Habits and Ships, drawn upon Cloth, and the trifles they had given them. All this went ſpeedily to Court, and miſerably confounded both the Emperor and his Council; hereupon he gave Orders that Watches ſhou'd be ſet upon all the Sea-Coaſts, to give notice when theſe ſtrange things appear'd again. And this was no longer than till the next Year, for then they diſcover'd the *Spaniſh* Fleet which had *Cortes* and his Men aboard. The Council now (to encourage the Emperor, or elſe out of a blind belief of what the Prieſts told them) aſſur'd him that this was only their great Lord *Quetzalcoalt* come again to them,

Spaniards come the firſt time to get notice of the Country.

Indians Notions of the Ships and them.

News ſent to Court.

Spaniards come the ſecond time.

Embaſſy ſent to Cortes.

who had been for ſome Ages in the *European* World, and was now return'd into the Weſt according to his Promiſe. Upon this *Montezuma* ſent a ſplendid Embaſſy to *Cortes*, with abundance of noble Preſents, to congratulate his arrival; to tell him alſo, that he knew he was his Lord *Quezt zalcoalt*, and therefore acknowledg'd himſelf his Servant, and that he held his Country only in his Name, and as his Repreſentative. This was no little advantage to *Cortes*, and therefore he humour'd the buſineſs accordingly, pretending he was that very Perſon they expected, and made the beſt figure poſſible at the reception of the Ambaſſadors, who (poor wretches) paid him even Divine Honours and Reverence.

Spaniards terrifie the Indians.

Cortes and his Officers now conferr'd together upon this Matter, and concluded that they ought not let ſlip this opportunity of making an entrance into the Country; in order to this, to give the *Indians* the greateſt Notions of them and their Valour poſſible, and to appear in all the terrors of a Warlike figure before them. This reſolution being follow'd, they accordingly ſhew'd them all their *European* Arms, and made the Attillery be diſcharg'd from all the Ships; the roaring noiſe of which aſtoniſh'd the *Mexicans*, as much as if they had ſeen the Heavens fall before them.

In a word, the Embaſſadors went home with quite another opinion of *Cortes* than they had at firſt; they ſaid they were ſure their Lord was not come in that Troop, but as for theſe, they were ſome Powers that were their Enemies, and came only to deſtroy them.

Montezuma receiv'd theſe Embaſſadors with abundance of Superſtitious Ceremonies in his Palace of Audience, where he always ſate upon ſuch Occaſions as theſe. There were a great number of Humane Sacrifices prepar'd, the Blood of which was ſprinkled upon them as they went into the Emperor. However, the News they brought was ſo perplexing to him, that now he was almoſt beſides himſelf; and to omit all the Stories of his conſulting the Sorcerers and Magicians, to put a ſtop to the progreſs of theſe Foreigners by their pernicious Arts, as alſo the fruitleſs attempts they were reported to have made for that purpoſe, 'tis more credible that he went another way to work, and that was to endeavour to ſoften his Enemies by ſhews of Humility and Submiſſion, whom he deſpair'd of overcoming by open Force.

For this end, he ſent Orders to the Provinces all about to receive the *Spaniards*, as Men ſent from Heaven, and to ſerve them with all the reſpect imaginable; and indeed, the conſternation and fear the whole Country was in, as well as their Emperor's poſitive Commands, diſpos'd them well enough to this tame and quiet ſubmiſſion to the *Spaniards*.

Tlaſcallans join with the Spaniards.

In the mean time, *Cortes* had been joyn'd by the *Tlaſcallans*, (the old Enemies of *Mexico*) who were a very great help to him, and without whom he could never probably have done any thing to the purpoſe. For they inform'd him of all things neceſſary for a Foreigner to know, that was come to Invade anothers Country; they ſhew'd him all the beſt and ſafeſt ways, and, in a word, conducted his march to *Mexico*.

Montizuma refuſes to fly.

Montezuma hearing that the *Spaniards* were advancing towards him, with the *Tlaſcallans* in his company, reſolv'd to make a Vertue of Neceſſity, and go forth to meet them; for he deſpis'd the mean and cowardly Advice of ſome of his Sages, to go hide himſelf, and lie ſecure out of the reach of his Enemies; on the other hand, he counſell'd his People to uſe all methods for their own ſafety, but for his own part, he determin'd to meet his fate with a greatneſs of Mind worthy of himſelf.

He goes to meet *Cortes*.

In purſuance of this Deſign, he was carried upon the ſhoulders of his Noblemen in a rich Chair of State, three or four Leagues out of *Mexico*, where he met with *Cortes*. At that Interview this great Prince alighted from his Chair, (the firſt time he ever did ſo to any Mortal) and ſaluted *Cortes* very civilly. The *Spaniard*, after thoſe Salutations were over, told him he ſhould baniſh all manner of fear and care, for he had no Deſign upon his Country, nor at all to leſſen any thing of his Authority; ſo they march'd all away to *Mexico* together, where *Cortes* and his Companions were Lodg'd in the Royal Palace, *Montezuma* himſelf retiring into another.

The next day, *Cortes* made the Emperor and all the Nobility aſſemble together in the great Hall of the Palace, where he let them know, that he was ſent by a Mighty Prince into thoſe Parts of the World, not to make Conqueſts, but to do Offices of Kindneſs and Friendſhip; and therefore ſince the *Mexicans* and *Tlaſcallans* were ſo much at odds with one another, he wou'd interpoſe his Mediation to make them Friends again; but in the mean time, he and his Company wou'd ſtay there in the Country, without injuring or encroaching upon either Party, or carrying on any other Deſign than that of promoting the Common Peace and Tranquility of the Empire. This wheedling Declaration wonderfully pleas'd all them that heard it, and both *Montezuma* and his Lords expreſs'd a great deal of Satisfaction and Eaſineſs upon it. The *Spaniards* were careſs'd with all the Delights and Entertainments that that pompous Court cou'd afford, and the Emperor was not ſparing of his Preſents to *Cortes* and his Officers.

Spaniards and Mexicans quarrel.

However this calm laſted not long, and the *Mexicans* cou'd not be ſo blind, but they muſt needs ſee through theſe pretences; ſo that Jealouſies and Diſtruſts grew of both ſides, and both *Spaniards* and *Mexicans* were uneaſie.

The Emperor made a Priſoner.

Cortes finding theſe Diſorders to increaſe daily, thought to make one ſure ſtroke to keep the *Mexicans* in awe, and prevent their taking Arms in their own Defence, and that by ſeizing *Montezuma* himſelf, whoſe Preſence might encourage them to it. This was put in practice, and that great Prince made a cloſe Priſoner, and put under a *Spaniſh* Guard; tho' the ſucceſs was not at all anſwerable to the deſign, and the *Mexicans* were but the more incens'd for ſuch an Outrage as this upon the Perſon of their Emperor.

In the midſt of theſe troubles, *Cortes* was forc'd to go away from *Mexico*, and that upon the account of ſome Diſorders in the Country, occaſion'd by the arrival of another *Spaniſh* Commander *Pamphilio Narvaes*, who, probably, unwilling that *Cortes* ſhou'd have all the Glory and Profit of ſuch a Conqueſt, was come to put in for a ſhare; and 'tis a ſign he was an Adverſary not to be neglected or deſpis'd, becauſe *Cortes*, to quiet him, went away and left his Affairs at *Mexico* in ſo ill a poſture.

Mexican Nobles murder'd.

When he was gone, his Lieutenant manag'd things with ſo much Imprudence and Violence, that he quickly brought all to Extremities: He made his Soldiers fall upon the Nobility at their Publick Ball in the Palace, Maſſacring a great number of them, which barbarous Action incens'd the *Mexicans* to the higheſt degree and made them run to Arms with a fury which nothing but the Blood of the *Spaniards* could quench the fire of.

Spaniards beſieg'd in the Palace.

The *Spaniards* were now cloſely beſieg'd in the Palace, and all their great Guns could not terrify the *Mexicans* from making Approaches to aſſault them. They did all they could to cut off Supplies of Proviſion from coming to them; and, in ſhort, preſs'd them ſo cloſe every way, that the *Spaniards* were fain one day, in the midſt of a furious Battel, to expoſe *Montezuma* to their view, ſetting him upon the Battelments of the Palace, that they might ſee he was alive, and be ſomething pacify'd thereby. The *Mexicans*, as ſoon as ever they ſaw their Lord, were transform'd in that moment from raging Lions to meek and gentle Lambs; they laid down their Arms, and kept a profound ſilence while he ſpoke to them.

Montezuma revil'd by his own People.

Montezuma, for his part, adviſ'd them to be quiet, and not fight with the *Spaniards*, ſince all their ſtirs cou'd do him little ſervice, being a cloſe Priſoner in their hands; but he cou'd not carry on his Speech far for the Reproaches of his People. One particularly (a bold young Man nam'd *Quicuxtemoc*, and whom they afterwards made Emperor) gave him the foul Names of Coward and Traitor to his Country; revil'd him for his baſe and tame ſubmiſſion to the *Spaniards*, and told him, That ſince he had betray'd himſelf ſo weakly, the *Mexicans* were no longer bound to obey him. With that he began to draw his Bow to ſhoot at him, and ſeveral of them follow'd his Example, and pelted the miſerable Prince with ſtones; however, they were ſo far from taking his Counſel, that they fell in upon the *Spaniards* again with more fury than before. And now the beſieged were ſo diſtreſs'd, that they were forc'd to ſend privately away to *Cortes* to come with all ſpeed to their Relief.

Cortes's Return.

Cortes having by this time quieted the tumults raiſ'd by *Narvaes*, and ſetled the Peace of that part of the Country, came to *Mexico* with as good a force of Men as he cou'd make; and taking the opportunity of the *Mexicans* Reſting-day, (for 'tis their Cuſtom in War to lie ſtill every fourth day) he broke through, and got with his Supplies into the Palace.

The *Spaniards* fly.

Notwithſtanding this addition to their Strength, and the Preſence of their General, the fury and reſolution of the *Mexicans* ſtill increas'd, which *Cortes* finding, and concluding 'twou'd be impoſſible to hold out long in that place, he reſolv'd to give them the ſlip, and march off his Men in the dead time of the Night. In order to this, he was forc'd to lay a couple of Bridges over two very dangerous Paſſes, and the *Spaniards* had march'd over the firſt of them, and were upon the ſecond, when an *Indian* VVoman ſpied them, and gave the Alarm to

Mexicans purſue them.

the City. Upon this all was preſently in an uproar, and the *Mexicans* fell with ſo hearty and well govern'd a rage upon the *Spaniards*, that above 300 of their ſmall Army were loſt before they cou'd get over that ſecond Bridge. Many of them too, ſtaying to ſecure their Gold and Jewels, were taken by the *Mexicans*, and Sacrific'd with all the cruelty imaginable to their Idols. The *Mexicans* purſued them for two or three days, and diſtreſs'd them at that rate with continual Aſſaults and Alarms, that they were almoſt quite ſpent and tired out, as well for want of Reſt as of Proviſion. However, at laſt, they got into the Territories of the *Tlaſcallans*, their Friends and Allies, where they made Proviſion in good earneſt for the Conqueſt of *Mexico*.

Montezuma's Death.

How the great *Montezuma* died is uncertain; the *Spaniards* tell one Story, and the *Mexicans* another. Some ſay that he died of a wound he receiv'd with a Stone or a Dart, in that tumult when his own Subjects fell upon him. *Cortes* himſelf tells the Emperor *Charles* V. that the *Mexicans* Sacrific'd him, together with one of his Sons, that Night the *Spaniards* fled away. On the other hand, the *Mexicans* ſay they found *Montezuma* dead, and cover'd with wounds given by *Spaniſh* Ponyards. Which way ſoever 'twas, 'tis certain that unfortunate Prince met with his fate at that time, and was one of the greateſt inſtances of the changeableneſs and uncertainty of all worldly Greatneſs and Felicity.

The Conqueſt of *Mexico*.

The new made Prince taken.

After his death, the *Mexicans* ſubſtituted *Quicuxtemoc* in his room, who did not ſit eaſie in his Throne perhaps at all, and not quiet but a very little while. *Cortes* having made great Preparations for the War, both in Land Forces, and Boats and Brigantines, to fight in the Lake, being join'd alſo by the *Tlaſcallan* Army, return'd to *Mexico*, which after above 60 dangerous Battels, with much ado he conquer'd at laſt. *Quicuxtemoc* having reſolutely maintain'd the laſt fight a great while, was taken Priſoner and led to *Cortes*, together with ſeveral others of the *Mexican* Nobles; when he came into the *Spaniard's* Preſence he drew his Dagger, and advancing towards him, *Until this Day* (ſays he) *have I done my beſt Endeavour for the Defence of my People, and now I have no more to do, but to give thee this Dagger to kill me with.* *Cortes* told him he had no deſign upon his Life, and gave Orders that he ſhou'd be treated and attended in ſome meaſure ſutable to his Dignity. Thus came that mighty Empire into the hands of the *Spaniards*, and the Glory of the *Mexican* Princes, that had ſhin'd ſo long and ſo bright, to be quite extinct.

From the Hiſtory of *Mexico* we go on to that of *Peru*, wherein, beſides the other Authors which we have had occaſion to conſult, (who yet were moſt of them ſuch as had been upon the ſpot, and ſeen thoſe Countries themſelves) we ſhall here make uſe of a Native of the Country, one of the Family of the *Incas*, and who may reaſonably be preſum'd to be perfectly well acquainted with the Cuſtoms and Policies of his own Nation.

His Name was *Garcilaſſo di Vega.*

The Author we now ſpeak of was born at *Cuſco*, the Capital City of *Peru*, his Father was a *Spaniard*, and his Mother related to the *Incas*; and he declares that what he relates of his Country, was from his own Knowledge and Experience, and the Traditions of his Family. He tells us, that while his Mother reſided at *Cuſco*, thoſe of her Relations that had eſcap'd the cruel hands of the Emperor *Atabalipa*, us'd to come thither every Week to viſit her, and their Diſcourſe was always of the Original, Cuſtoms and Laws of their Empire, which they were mighty careful of conveying an exact account of to all the younger ones about them, that they might preſerve the memory of them to Poſterity.

Peruvians Opinion of God.

The Notions of the *Peruvians* about one Supreme Being, the firſt Cauſe of all things, ſeem to have been much more clear and diſtinct than thoſe of the *Mexicans*. 'Tis certain alſo, that they had a proper Name in their Tongue to expreſs the Deity by, which was the word *Pachacamac*; the meaning of which is as much as the Quickner of the Univerſe, or as others wou'd call it, the great Soul of the World. This Name was ſo very Sacred and Venerable amongſt them, that they never mention'd it but upon extreme neceſſity, and then not without all the ſigns of Devotion imaginable, as bowing the Body and Head, lifting up the Eyes to Heaven, and ſpreading out the Hands. They call'd him the Inviſible and Unknown Being, and for that reaſon offer'd no Sacrifices to him, nor built him ordinarily no Temples, but paid him only an internal Worſhip and Reverence in their Minds; yet in a certain Valley in *Peru*, there was a Temple dedicated to him, and call'd by his Name. The Sun is generally eſteem'd to have been the great Deity of the *Peruvians*, as having both Temples and Sacrifices in abundance, and the *Incas* making this the main point of the Glory of their Original, that they were the Offſpring of the Sun, and conſequently (in their Notion) of a Divine Race. Beſides this, ſeveral other Deities have been brought in for a ſhare of their Worſhip too, by *Acoſta* and the *Spaniſh* Writers; the Moon and the Stars have been mention'd, the Earth, the Sea, the Meteors of the airy Region, the Springs and Rivers, and other meaner Objects upon the ſurface. But our *Inca* denies all this, and imputes it to their ignorance partly of the *Peruvian* Rites and Ceremonies, and partly of the Language, which agrees with the *Chineſe* in this reſpect, that one and the ſame word having a multitude of ſignifications, is to be determin'd to this or that particular ſignification by the tone and accent.

Temple dedicated to him.

An inſtance of this he gives in the word *Huaca*, the various Sences and Pronunciations of which being not underſtood by the *Spaniards*, was the occaſion of their making many and groſs miſtakes in theſe Matters. The laſt Syllable of this word pronounc'd high in the roof of the mouth, determines it to ſignify an Idol for the moſt part, tho' 'tis alſo frequently us'd to ſignify Conſecrated things in general, as Altars, Temples, Offerings, and the like. It alſo denoted all things that were rare and extraordinary in their kind, or that were out of the common courſe, and any way prodigious; thus the monſtrous Snakes, that were 25 or 30 foot long, were call'd *Huaca*, and the Sheep that bore Twins had the ſame Name, thoſe Creatures for the moſt part bringing but one.

A pleaſant Relation of one of the Emperors.

The ſame word *Huaca* pronounc'd with the laſt Syllable in the inner part of the Throat, had alſo different and peculiar ſignifications; and thus 'twas in abundance of other words in the ſame Language. The *Spaniards* therefore might eaſily miſtake, and make the *Peruvians* ſeem to be guilty of fouler and groſſer Idolatries than really they were. And that they acknowledg'd a Being ſuperiour in Power and Majeſty to the Sun (to which the moſt of their Temples were erected) is clear from the account the laſt Emperor *Atabalipa* gave of his Faith to the Friar *Vincent de Valle Viridi*, who came to Catechize him: *I hold* (ſays the Prince) *the Sun for God, the Earth for Mother, and* Pachacamac *for Creator of all.* But there was a paſſage of one of his Predeceſſors (the Inca *Huyana Capac*) to this purpoſe, which ought not to be forgotten. This Prince one day looking up to the Sun, (which they held to be unlawful to do) the High Prieſt, who was by him, reprov'd him for't; but he ſtill perſiſting in his view, and the Prieſt in his reproof of him, at laſt he turn'd to the Prieſt with this Queſtion, *Which of you all* (ſays he) *dares bid me, who am your Sovereign Lord, riſe up and go a long Journey?* The Prieſt reply'd, *None wou'd be ſo mad as to do ſo. But* (continues he) *if I command the greateſt of my Princes to go from hence to* Chili, *will he not do it?* To this the other return'd, *That none durſt Diſobey him. Why then, I conclude* (ſays the *Inca*) *that our Father the Sun muſt needs have a mightier Lord than himſelf, that commands him every Day to take ſuch a long Journey; for if he were a Supreme Lord, he wou'd certainly ſome time or other lie ſtill and reſt himſelf.* The Emperor ſpoke incomparably well; tho' had *Nicolas Copernicus* been in his Court, he wou'd have told him his Argument for a Power Superiour to the Sun was of no force nor efficacy, ſince he never makes any Journeys at all, and does nothing elſe but take his Reſt.

Belief of a future State.

The *Peruvians* divided the Univerſe into two Worlds more beſides this; the high World, whither they ſaid good Men went after Death to be rewarded for their Vertues, and the Center of the Earth, or the Houſe of the Devil, where thoſe that were Lewd and Vicious had a juſt Recompence for their Enormities. This Earth they call'd the World below, and ſaid it participated of the other two; of the Reſt and Satisfaction of the one, and the Sorrows and Diſcontents of the other.

Superſtitious keeping their Hair.

They had a Notion of their returning to live here in this World again after a long ſpace of time: For which reaſon (ſince they cou'd preſerve nothing elſe of themſelves) they were very curious in preſerving their Hair againſt that time; and this, that when their Souls came to ſet all things together again that belong'd to them, they might not be troubled to look and ſearch about for their Hair, but have it ready at hand, for the quicker diſpatch, eſpecially ſince (as the *Inca* ſays they believe) there will be ſuch hurly-burlies and confuſions at that time. Upon this account, whenever they Poll'd or did but Comb their Heads, they laid up their Hair like a Jewel. If they were abroad and did it, they wou'd thruſt it into a Tree, or the hole of a Wall; and if another ſaw it fall out of its place at any time, he wou'd take it up, and very carefully lay it in again.

Their

Supplying the Dead with Proviſions.

Men kill'd at Funerals.

Their Notions of a Future State were ſuch, that they believ'd thoſe that were gone from this World, had yet need of the Comforts and Conveniences of it; therefore, ſome ſay, they us'd to Cloath the dead Bodies with new Apparel, and to ſtuff their Hands and Mouths with Gold and Silver. 'Twas not uncommon neither for them to lay in good ſtores of Proviſion, both Meat and Drink, into the Graves, that they may ſatisfy thoſe Appetites when they pleaſe. Eſpecially, they concluded that all great Men wou'd have occaſion for their Trains and Retinues of Servants in the other World, and therefore they took care to ſend them after them in great numbers; that is, they were Sacrific'd at their Maſters Funerals. Thus when the Emperor *Guanalapa*, the Father of *Atabalipa*, died, there were above 1000, and thoſe of all Ages and Conditions, that went away to accompany him.

The pleaſant fancy of a *Portugueze* to ſave his Life.

We can't in this place omit taking notice of the ingenious thought of a certain *Portugueze*, to ſave his Life upon ſuch an Occaſion. This Man having been taken Priſoner, and made the Servant of ſome Nobleman or other, when his Lord died they fix'd upon him for one of the number that ſhou'd go to attend him in the other World; but he having been in the Wars, and loſt one of his Eyes, told them 'twou'd be a diſgrace to his Maſter in that World to have a one-ey'd Servant in his Retinue, and that therefore to avoid doing him that diſkindneſs, they had better by half ſend another in his room that had both Eyes. The Relations of the Deceas'd conſider'd what the *Portugueze* had ſaid, and finding ſome Reaſon in't, and loth alſo to diſcredit their Kinſman there, they excus'd him, and ſubſtituted another in his place.

Arts of Preſerving Dead Bodies.

Figures of the *Incas*.

They are mighty curious in their Arts of Preſerving Dead Bodies, without any thing of ill ſcent or putrefaction, for a great number of Years; and in this manner they ſerv'd the Bodies of all their Emperors and Noblemen. There were ſome of the old *Incas* which were remov'd from their Dormitories in *Cuſco*, and brought to *Lima* by the *Spaniards*, which having lain there for ſo many years, made every body admire to ſee the Bodies ſo fair and ſound. But beſides this, to Preſerve the remembrance of them more perfectly, they made the Figure or Image of every *Inca* in his Life-time; and tho' *Acoſta*, with ſome of his Tribe, ſay that the *Peruvians* perform'd an Idolatrous ſort of Worſhip, both to the Embalm'd Bodies of their *Incas*, and theſe Images too, yet our *Peruvian* Author acknowledges nothing of this nature, and he does not ſeem to be at all partial to, or criminally fond of his Country.

Peruvian Sacrifices.

As for the Sacrifices us'd to be made in this Country, the *Spaniards* tell us of Men, Women and Children, beſides all other ſorts of Animals; and particularly, as to Children, that no Nation under Heaven ſhed ſuch vaſt quantities of that innocent Blood as the *Peruvians* did. Our Hiſtorian *Inca* agrees to this Account thus far, that in ſeveral Provinces which the Emperors of *Peru* ſubdued by their Arms, (and ſo fell within the Limits of their Empire) they did offer Humane Sacrifices, and that plentifully too, to their Idols; but that the *Peruvians* themſelves, the genuine Subjects of the *Incas*, did ſo, he utterly denies. And as there were no Sacrifices offer'd to any Being except the Sun alone, (for the Inviſible *Pachacamac* was honour'd with another ſort of Devotion) ſo thoſe that were offer'd were only common Animals, as Ewes, Rams, Lambs, Coneys, and all Birds that were fit for Mankind to eat of. Sometimes alſo fine Garments were burnt upon the ſame ſcore; Corn, Fruits, and ſtrong Liquors, were not uncommon Offerings neither.

Way of offering Liquors.

As to the buſineſs of Liquors, the ceremony was firſt of all to dip their finger into one of the Veſſels, and then looking up to Heaven, with a drop of the Liquor hanging thereat, they by that action ſignify they offer it to the Sun; after which, having made ſome motions with their Lips a little, they drink it off without any more ado.

Our *Peruvian* Author does not ſcruple at all to charge his Countrymen with a great deal of Idolatry in their Rites and Ceremonies; nay, he goes farther, and tells us of Sorcerers and Witches amongſt them, and of their Converſations with the Unclean Spirit. The like alſo does *Acoſta*; according to whom, thoſe ſorts of People are very numerous all over the *Weſt-Indies*, but ſince neither the one nor the other gives us any particular Relations of this matter, which they can pretend to offer as infallible Truths, we ſhall not trouble the Reader with bare Surmiſes or Traditions.

No Image but that of the Sun.

Cuſco it ſelf an Idol.

The *Peruvians* had no Idols in any of their Temples, but only the Image of the Sun; one may ſay indeed (as the *Inca* himſelf does) that the City of *Cuſco* was an Idol and a grand one too, being reſpected as Sacred and Divine, in that 'twas founded by the Great *Manco Capac*, who was the immediate Off-ſpring of the Sun according to their Tradition, and has all along been the Reſidence of the *Incas* his Deſcendants. Upon this ſcore, any thing that came from *Cuſco* was valued at a higher rate than a thing of the ſame kind and of equal goodneſs any where elſe; yea, a Man that came from *Cuſco* had a reſpect paid him by others upon the Road that were in Quality as good as himſelf, much more if he were a Native or a Citizen of that place.

Glorious Temple of the Sun.

The great and ſplendid Temple of the Sun in this City deſerves a particular remark: The moſt glorious part of it was the Chapel or Shrine of the Sun, which was wrought of poliſh'd Stone, and in figure four ſquare. Every Wall was cover'd from top to bottom with Plates of Maſſie Gold, and upon the Eaſtern-ſide ſtood the Image of the Sun made with a Humane face, and rays darting out of every ſide. The rarity of it was, that 'twas made out of one entire Plate of Gold, and yet it tock up all that end from one VVall to the other.

Image of the Sun.

Bodies of the *Incas*.

Large Cloiſter, with other Chapels and Shrines.

At the Rifling of this rich City and Temple by the *Spaniards*, the Image of the Sun fell by Lott to one particular Officers ſhare, and that extravagant Man hazarded it at a certain Game, and loſt it all in one Night; from whence it came to be a Proverb there of a prodigal Gameſter, *He has plaid away the Sun before his Riſing*. On the one and the other ſide of the Image of the Sun, were the Bodies of the Deceaſed Emperors plac'd according to their Antiquity, and ſo finely preſerv'd, that they look'd as if they were alive: They were ſet on Seats of Gold rais'd on Supporters of the ſame Metal, with their faces towards the People that entred; only *Huyana Capac* was ſet with his face towards the Sun, as being in their Opinions the Favourite Son of the Heavenly Luminary. All the Doors of this moſt magnificent Temple was cover'd with golden Plates, and in the outſide upon the top of the Walls, which girt it round, there ran along a chamfred work of Gold in the form of a Crown which was above a yard broad. The People hid moſt part of theſe Royal Bodies, with a prodigious quantity of the Treaſures, ſo that the *Spaniards* cou'd never be Maſters of them; tho' what they had was ſurprizing, and ſome of the Corps were found, *viz.* three of the Emperors, and two of the Empreſſes, and brought to *Lima*, as was before hinted. Beyond the Temple was a Cloiſter conſiſting of four large Squares, round about the tops of which were Crowns of chamfred Gold after the manner of the Temple; and to theſe Squares were adjoining ſeveral delicate Chapels. The firſt of theſe was dedicated to the Moon, in which was her Image made of a vaſt Plate of Silver, and all the Doors were cover'd with Plates of the ſame Metal. Hither they came to recommend themſelves to her good Influences, as being the Wife and Siſter of the Sun, and Mother of the *Incas*, but they offer'd no Sacrifices to her as they did to the golden Luminary. On each ſide of the Moons Image were rank'd the Bodies of the deceas'd Empreſſes according to the order of their time, and juſt before it, face to face, ſtood the Mother of *Huyana Capac*, who had that Dignity conferr'd on her for bringing ſuch a Son into the World. The next was dedicated to *Venus*, and the Planets in general; all of which they held to be the Servants of the Moon, and therefore plac'd near at hand by their Sovereign Miſtreſs. That which ſucceeded to this was the Chapel of the fix'd Stars, the Roof of which was adorn'd with Stars ſmall and great, and had the reſemblance of a Firmament. This and the former were both cover'd with Silver Plates like that of the Moon, to repreſent the paler light and fainter luſtre of the Bodies they were conſecrated to. After theſe came the Chapels of the Thunder and Lightning, and of the Rainbow, which were both garniſh'd with Gold; and upon the golden Walls of the latter was drawn a large Rainbow. Laſt of all was a ſtately Manſion for the Prieſts, which was alſo cover'd with Gold from top to bottom. In this great Cloiſter before-mention'd there were various other Apartments, Shrines and Tabernacles, which were comparable to any of the former for extravagant Pomp and Riches. Beſides Gold and Silver, every place ſhone with Jewels too, ſuch as the Country afforded; theſe are principally *Turquoiſes* and *Emeraulds*, for Diamonds and Rubies they have none. Upon the whole, no Princes in the whole World have ever adorn'd their Temples and Places of VVorſhip ſo as the *Incas* of *Peru* have done. For ſeveral ſorts of Sacrifices they had ſeveral Rooms ſet apart, ſome for one, and others for another ſort; but one wou'd hardly at ſight have imagin'd, that a Houſe ſo glorious as this ſhou'd have been

Chapel of the Moon, &c.

Riches of the Shrines.

Several Rooms for ſeveral Sacrifices.

Glorious Garden.

Utenſils of the Temple.

Temple of *Titicaca*.

devoted to Butchery and ſhedding of Blood. If there were ſome Pillars of Stone, there were others of Gold and Silver, not maſſie, but hollow; and the very Pipes of the Fountains, that brought water to ſerve the Occaſions of the Prieſts, were of no baſer Metal. But it almoſt goes beyond all belief what is reported of the Garden of the Temple, that there were the reſemblances of a vaſt number of Animals and Vegetables wrought in pure Gold and Silver; *Quadrupeds*, Birds and Reptiles, Flowers, Herbs, Trees with the Fruit on them, all done to the Life, and diſpos'd up and down in moſt natural Order. Beſides theſe, they had Humane Bodies in Effigie, both Men and Women; and, in ſhort, hardly any thing of this nature wanting, that exquiſite Art cou'd contrive and make, and ſtately Power (like that of the *Incas* of *Peru*) command to be done. As for the Veſſels and Utenſils belonging to the Temple Service, they were none of them beneath the Metals before-mention'd; and 'twas the ſame as to the Inſtruments that related to the Garden, even the very Spades and Pick-axes were of the ſame valuable Materials. And 'twas not the Temple of *Cuſco* alone that was thus Divinely embelliſh'd and ſet forth, there were ſeveral others in the Empire that were not much inferiour to it, but that which came neareſt, and, as ſome ſay, might pretend to rival, if not outdo it, was the Temple of *Titicaca*, which ſtands in an Iſland in the midſt of a Lake that bears the ſame Name. That which occaſion'd ſuch a prodigious Maſs of Treaſure to be brought hither, was a fond conceit of the *Peruvians*, that after the Deluge the Sun ſhined upon this ſpot before any other upon the Globe; and therefore, to acknowledge this benefit of their Father the Sun, they built him here a Temple, and all the Provinces of the Empire did make their Annual Offerings of Gold, Silver, and precious Stones. The *Peruvians* themſelves have ſaid, that there was Gold enough in that Iſland (beſides what was wrought into fine Shapes and Figures) to have built another Temple from the foundation, but all went into the Lake when the *Spaniards* came into the Country, and ſo did a good part of the Treaſure of *Cuſco* go into the ſame ſure Repoſitory under water.

Quality of the Prieſts.

The Prieſts of the Shrine of the Sun at *Cuſco* were all of them of the Blood Royal of the *Incas*, and had conſequently the Title of *Incas* themſelves; as for the other Services of the Temple, there were *Incas* not by Birth, but ſuch as were ſaid to be ſo by Privilege. The High-Prieſt was commonly either Unkle or Brother to the Emperor, he muſt at leaſt be Legitimate of the Blood, or he was utterly uncapable of Diſcharging that Function. In the other Provinces, the Inferiour Prieſts were the Kindred of the Noblemen of thoſe Countries, and the chief Prieſt alone an *Inca*, for that Dignity muſt be at the head of all the greateſt Offices, both Sacred, Civil and Military. The Prieſts (which is much) had no peculiar Veſtments; they ſerv'd their Courſes in the Temple by Weeks, in which time they did not ſtir out of it Day nor Night.

Religious Women.

But beſides theſe Religious, the *Peruvians* had alſo ſome of the other Sex, Women incloſ'd in certain Houſes, and living there the Lives of Nuns under the Government of their Superiours; theſe were to be all of them of the Royal Blood, without mixture on either ſide. They liv'd in perpetual retirement to their dying day, neither might they ſee or ſpeak with any Perſon but thoſe that belong'd to their own Houſe. 'Twas Death for any Man to enter the ſecond Gate of their Houſe, as no Woman might enter that of the Prieſts; only the Empreſs her ſelf, and her Daughter, had the liberty of going in and conferring with them.

Their Works.

Others in the Provinces.

Concubines for the *Inca*.

They had multitudes of noble Attendants of their own Sex to do all inferiour Works and Offices for them; as for their own parts, they did only exerciſe themſelves in the fine works of Spinning, Weaving and Sewing, and making the ſplendid Robes that the Emperor or Empreſs did wear, as well as thoſe which were offer'd to the Sun. They made alſo the Bread for the Sacrifices to the Sun at the great Feaſts, and the Drink which *Inca* drank at that time. All the Utenſils of their Houſes were as rich as thoſe of the Prieſts in the Houſe of the Sun, and they had a Garden alſo adorn'd with the ſame golden varieties. Their Manſions were not in the Temple of the Sun, but diſtant from it by a whole Street. Like this at *Cuſco* were ſeveral others in other Parts of the Empire, in which the ſame abatements were made as to the condition and quality of the Perſons admitted into them, as was obſerv'd concerning the Prieſts; for here, tho' the Governeſs muſt be of the Blood Royal, yet that of the Nobility, by ſpecial favour, was admitted to the Honour of growing old and cold in this retired Service. Their Employments were ſuch as thoſe at *Cuſco*, and their Maintenance like them from the *Inca*, and the Furniture of their Houſes no leſs rich and noble than the former, at leaſt as to the quality of the Materials, for the *Peruvians* ſcorn'd to uſe any thing below Gold and Silver (where it might be us'd) in the buſineſs of their Religion. But there was a Privilege which belong'd to theſe Country Nunneries which that in *Cuſco* never taſted of, and that was, that ſome of the Members of them might be diſcharged from their Priſon upon the *Incas* peculiar fancy and liking to be his Bedfellows. After that piece of Honour done them, they never return'd to their former ſecluded Lives in the Nunneries again, but either went into the Service of the Empreſs, or into their own Countries, where they paſs'd under no little Character. Thoſe that were grown old in the Service too, might have the ſame liberty of retiring to their reſpective Homes; but as there was no great danger of theſe for becoming Wives afterwards, ſo thoſe that were young, and had been called out for the *Incas* Pleaſure, might never afterwards beſtow themſelves upon other Men, for 'twas reckon'd a ſort of putrefaction of the Character. Yea, the Women themſelves commonly were too proud on't to loſe it in any haſte, ſince to be Miſtreſs to the *Inca* was a greater Glory than to be Wife to the greateſt Lord in the Empire.

Other Nuns.

Puniſhment of thoſe that violated the Chaſtity.

There was another ſort of theſe Religious Women which liv'd retired only in their own Houſes, and took the liberty of going abroad upon very urgent and preſſing Occaſions. Their greateſt mortification was a Vow of perpetual Virginity, which they commonly kept inviolable. The penalty inflicted upon any Man that was guilty of ſo flaming a crime, as to offer violence to any of all theſe conſecrated Virgins, was Death in the crueleſt manner, and 'twas not only his own fate to die, but his Wife, Children, and all his Kindred, were involv'd in the ſame puniſhment; this was the Law, but 'twas ſeldom or never executed, there being hardly any ſuch thing as an Offence of this nature known to be perpetrated. If the VVomen themſelves loſt their own Chaſtity, they were either bury'd quick, burn'd, or thrown to the Lions.

Feaſt of the Sun.

The moſt Solemn of all the Feaſts celebrated in this vaſt Empire was that of the *Raymi*, or rather of the Sun, and it was to acknowledge the Suns Deity, and to commemorate the happy Deſcent of their firſt *Inca* from him. All great Men in all Poſts whatſoever were obliged to be at it; but if Age, Sickneſs, or the *Incas* buſineſs detain'd them, they ſent their Repreſentatives, either their Sons or Brethren. And at this time, all endeavour'd to make the brighteſt Figure poſſible, and to ſhew the utmoſt of their Pomp, and that in Perſonal Ornaments, as well as Equipages and Retinues. The People of every Province came with the ſeveral ſorts of Arms they us'd in fight, and bore along with them their ſeveral Devices and the Pictures of their warlike Exploits.

Faſt.

Adoration of the Riſing Sun.

Their march to the Temple.

This great Solemnity is introduc'd by a rigorous Faſt of three Days, all which time they eat nothing but a little raw Maize, or a few Herbs; they kindle no fire in all the City of *Cuſco*, nor keep company with their VVives during this preparation. The Night before they make great quantities of Dough of their Maize, which is to ſerve at the Feaſt; and they never do make that Grain into Dough but at this Feaſt, and one more. Early in the Morning the *Inca* himſelf attended, with all the reſt of the *Incas*, (or Princes of the Blood) goes barefoot into the principal Street of the City, and there wait for the Riſing Sun. As ſoon as they ſee him peep forth, they fall into a poſture of Adoration, and cover their Faces with their Hands; the Nobles are all this while in a Street adjoining, performing the ſame VVorſhip that the *Inca* and his Family does here. Neither is this Cuſtom peculiar to the *Peruvians*, all the People of the VVorld worſhip the Riſing Sun as well as they, tho' the ceremony of doing it be ſomething different. This Devotion over the *Inca* riſes up, and takes two great Veſſels of Gold full of Liquor, one in each Hand; that in his Right Hand he pours into a Golden Pipe, by which it is convey'd to the Temple of the Sun, and is as it were a Draught conſecrated to that Luminary. Then he drinks a part of that in his Left Hand, and ſo gives it to the reſt of the *Incas*, who all this while continue in that humble poſture they at firſt put themſelves into; the Nobility in the next Street perform the ſame ceremony of drinking that the Royal Family does. After this the whole Train join'd, and went away in great order towards the Temple of the Sun. The Nobility ſtopt ſhort at a conſiderable diſtance from the great Gate, and only the *Inca*'s themſelves went on and enter'd that Sacred Place, where they fell proſtrate before the great Golden

Image

Offerings.

The Sacrifices.

Image of the Sun, and then made every one his Offering of golden Veſſels; the Supreme, or as they call him the *Capa Inca*, with his own hands offer'd thoſe to the Sun that he drank to him in before, but all the reſt gave theirs to the Prieſts to offer for them, that is, thoſe of them that were not Inveſted in the Prieſtly Office, for if they were they might perform this ceremony, otherwiſe no degree of Dignity cou'd make it lawful. The Prieſts having diſpos'd of theſe Offerings of the *Inca's*, went out to receive thoſe of the petty Princes or *Caracas*, (as they call them) who preſented them in order according to their Antiquity, and the time they had been ſubject to the Empire. The ceremony of the Offerings being finiſh'd, they return'd in the ſame order to the Streets again, where they had plac'd themſelves before, and the next performance that came on was that of the Sacrifices, the principal of all which was a black Lamb.

Prognoſtications from the Sacrifices.

And here they had a world of Auguries and Preſages; the beſt ſign was, if the Lungs diſcover'd any motion after they were taken out of the Body, and the worſt if the Animal, while 'twas opening, happen'd to get looſe from them that held it, and ſtood upright on its Legs. If one prov'd unlucky, they laid that aſide and tried another; and if all were ſo they gave over the Feaſt, ſaying the Sun was angry for ſome crime or other, and expected nothing but Wars, Famine, Peſtilence, and all manner of Calamities.

No Culinary Fire.

The fire they us'd upon theſe Occaſions was Sacred and Cœleſtial too, fetch'd down from their Father the Sun by the help of a Burning-glaſs (or a Jewel) which the High-Prieſt us'd for that purpoſe; with this they did the Service of the Day, and kept fire in the Temple all the Year round. If the Sun did not ſhine they ſtruck fire, for they muſt have it *de novo* for this extraordinary Uſe; but then this refuſal of the Sun to afford his Beams, was look'd upon as a thing of very ill ſignification.

Sacrifices waſted and eat in the Street.

Ceremony of drinking to the Nobles.

The Sacrifices were all Roaſted, and eaten openly in the afore-mention'd Streets; and 'twas ſolemn at their Drinkings here, for the *Inca* to drink to ſome of the principal Grandees and Men of War, and ſend the Cup about to them by ſome one or other of his Kindred. The *Inca* which brought the Liquor us'd this form, *The* Capa Inca *ſends thee this Banqueting Cup, and I am come to drink to thee in his Name*; and 'twas receiv'd with Eyes lifted up to the Sun, and devout thanks for the favour, and even the Cups were eſteem'd as Sacred things, ſince the *Inca*'s Lips had touch'd them. As for the reſt, who were not thus honour'd, the *Inca*'s of the Blood drank to them in their own Names, and not in the Emperors.

Magnificence of the *Inca's*.

From what has been repreſented hitherto of the Riches and Splendor of this Empire, 'tis not hard to gueſs how the Princes liv'd, and in what manner they were ſerv'd. Their Palaces were built of Stone finely wrought and carv'd, but 'tis in vain to pretend to tell how much Silver and Gold went to the adorning of them; 'tis enough to ſay, that all things that cou'd be of thoſe Metals were ſo; and cou'd golden Servants have attended them and done their Work, no doubt they had had their Domeſticks and Retinue of the ſame. Yet had they in their Palaces and Gardens an Epitome of the Creation in Gold and Silver, having Men and Women in Effigie, all the Animals and Vegetables of the Country in their exact Shapes and Proportions. 'Tis needleſs after this to ſay of what Materials the Veſſels and Utenſils of common Service about their Houſes were.

The *Inca* never wore any Garment (tho' the richeſt) twice, but gave them to his Kindred; and we may ſuppoſe he had leſs need of this ſort of change than that of the Furniture of whole Palaces, which, as our Author aſſures, was never remov'd from one Palace to another, but was new and freſh in every one throughout all the Provinces.

Officers and Servants.

As for all ſorts of Domeſtick Servants and Officers, they were not a few particular Perſons taken in uncertainly to ſuch or ſuch a Place or Office, but there were whole Towns aſſign'd and laid out for thoſe purpoſes; and 'twas their buſineſs to furniſh out Men of ability and fitneſs for thoſe Truſts, and after they had ſerv'd their appointed Times and Courſes, to ſend others in their room.

Huntings.

The *Inca's* had at certain times of the Year their Set Huntings, but they always went with a ſweeping Train; ſeldom leſs than 30000 Men attended them upon theſe Occaſions, half of which went upon one hand, and the other upon the other, compaſſing in 20 or 30 Leagues, and ſo taking all ſorts of wild Beaſts in great numbers, of which, when they had kill'd what they wou'd, they diſmiſs'd the reſt.

For quick Diſpatch and Advertiſement of all manner of Occurrences, they had their Poſts planted up and down at 4 Leagues diſtance throughout all the Parts of the Empire likely to afford any News; neither was there any thing remarkable that paſs'd, but what was preſently brought to the *Inca*'s ear at *Cuſco*.

Inca's marry their Kindred.

The *Inca's*, as they perform'd the Office of Chief Prieſts at the Feaſt of the Sun, (they being the firſt Solemnizers and Beginners of the Ceremony) ſo did they do the Work of common Prieſts in the buſineſs of Marriage to all of their own Lineage, and that once every Year or two.

Inca to marry his Kindred.

The *Inca* himſelf having aſſembled them before him, did call out the Couples, and join their hands; after which he deliver'd them to their Parents, who ſolemniz'd the Wedding with a Feaſt of four, five or ſix Days.

The *Curacas* do the like.

The *Curacas*, in the Provinces, did the like Offices for the young Men and Maidens within their reſpective Juriſdictions, as the *Inca's* did at *Cuſco* to thoſe of their own Blood. Every Man was free to make his own Choice, how and where he pleas'd, but having done ſo, the Woman he had choſen cou'd not be his lawful Wife till the Civil Power (not the Eccleſiaſtical) had by that Ceremony made her ſo. When the buſineſs was to be done, the way was for the Bridegroom to go to the Bride's Houſe, and having put a Shoe on upon her foot, to lead her away to the place where either the *Inca* or the *Curaca* of the Province perform'd the Ceremony of Marriage.

Concubines.

Beſides this Wife, the Law and Cuſtom of the Country allow'd a variety of other Women, who were taken without any thing of the formality and publick notice; neither did the Magiſtrate at all concern himſelf in thoſe Matters.

Puniſhment of Adultery.

If the Lawful Wife diſhonour'd her Husband's Bed, by admitting any other into it than himſelf, both ſhe and the Cuckold-maker were puniſh'd with Death; that is, in caſe the Husband obſtinately inſiſted upon having Juſtice done him, and wou'd not give his Pardon. On the other hand, ſuppoſing he was kind and compaſſionate, and by his forgiveneſs ſav'd their Lives, yet the Law wou'd not let them go without ſome marks of its Severity, and therefore they were ſure to be puniſh'd, tho' by the Indulgence and Goodneſs of the injur'd Man they ſcap'd the fatal ſtroke. The Concubines were not liable to theſe rigours of the Law, they might uſe the liberty of converſing with other Men without being thought guilty of any great crime.

Marriages with near Kindred.

The *Peruvians* allow'd no Marriages with thoſe that were near in Blood; and even the *Inca's* themſelves did not venture upon it till towards the latter end of that Monarchy, as *Acoſta* ſays. The Cuſtom of marrying Siſters was firſt brought in, according to that Author, by the *Inca Tupangui*, the Grandfather of *Atabalipa*, who authoriz'd it both by Precept and his own Practiſe. He married his Siſter by the Fathers ſide, and decreed it lawful for the *Inca's* his Succeſſors ſo to do; nay, at his Death, he commanded his Children to follow his Example, and the Emperor *Atabalipa* was the fruit of one of theſe Inceſtuous conjunctions. On the other hand, *Garcilaſſo Divego* ſays, without reſtriction of time, or any other circumſtance, that the *Inca's* had the Privilege of marrying their Siſters, and did often do ſo; and the truth on't is, it ſeems probable enough that the Cuſtom was much ancienter than *Acoſta* will have it to be, and perhaps as old as the Empire it ſelf. For according to the *Peruvian* Antiquities (as we ſhall ſee in its place) the firſt *Inca*, *Manco Capac*, and his *Coya* or Empreſs, were Brother and Siſter, being, as they feign'd, the Children of the Sun, which Example in the Founder of the Empire, and the moſt immediate Off-ſpring of their Deity, was ſufficient to introduce the like practiſe amongſt his Succeſſors. In common Marriages, thoſe of one Province might not marry with them of another, but all within and amongſt themſelves. Neither might they go to live out of the Provinces and Towns where their Habitations were at firſt ſetled; and if any did ſo, 'twas by ſtealth or particular favour.

Laws of Marriage obſerv'd.

The nature of the Government.

The *Peruvian* Monarchy was from the firſt Eſtabliſhment of it Hereditary; neither was there ever any ſuch thing known as an *Inca* choſen amongſt them. And the reaſon of this Conſtitution is clear enough, for the firſt *Inca* (as we ſhall ſee afterwards in the account of their Pedigrees and Succeſſions) giving himſelf out for the Son of the Sun, his Off-ſpring were accordingly in the Opinion of the People of the ſame Divine Race; ſo that this high Deſcent, this Relation to the Sun, (of all viſible Beings the moſt ador'd amongſt them) muſt of neceſſity keep the Imperial Crown upon the Head of that Family.

The *Inca's*, beſides their multitudes of VVomen, had one which bore the Character of Wife and *Coya*, that is, The Succeſſion.

Sovereign Queen or Empreſs, and in caſe of defect of Children by her, the Succeſſion was devolv'd to the next of the Legitimate Blood, the Baſtards being totally excluded from all intereſt or concern in it. The mark of Inveſtiture in the Supreme Power, was a Roul of fire red Wooll hanging upon the Forehead. This Enſign was peculiar to the *Incalapa*, and as much his ſpecial Ornament as a Crown of Gold is that of other Princes; the Princes of the Blood might wear it indeed on one ſide, near the Ear, but the *Inca* only upon the Forehead. At this Ceremony there were great numbers of Sacrifices offer'd, and rich Oblations made, and an infinite throng of People from all Parts of the Empire. *Acoſta* ſpeaks of a ſolemn Invocation of the Deity by the Chief Prieſt, and a ſort of Prayer made in the Publick Aſſembly for the new *Inca* and the Empire in general; but we don't find *Divega* takes any notice of it, who, 'tis probable, wou'd not have omitted ſuch a thing had it been ſo.

The Laws.

All their Laws, both Civil and Sacred, were attributed to *Manco Capa* the firſt *Inca*, who receiv'd them from his Father the Sun; thus he gave out to the People, according to the Policy us'd by *Numa*, and ſeveral other Heathen Lawgivers in the World. And notwithſtanding that ſeveral of the *Inca's* made a great many excellent Laws themſelves, yet all went by the Name of *Manco Capa's* Laws, to give the more force and authority to them.

Policies of the Governors.

The Policies of the *Inca's* in their Government, were ſuch as no Nation in the World need deſpiſe, and a great many perhaps may imitate.

Officers to provide for the Welfare of the Subjects.

Their Duty and Buſineſs.

They always plac'd an *Inca* of their Blood as Supreme Governor in every Province, to whom all Cauſes there were ultimately referr'd, and who had a Yearly Account from all the Inferiour Governors of all that paſs'd, of all that were Born or Dead, of the ſtate of all the Troops of that Province; of the Corn, and other profitable Commodities. Whenever a new Province was conquer'd, the Inhabitants were reduc'd into certain Bands and Commonalties, and committed to the charge and care of Officers who had the inſpection, ſome of 10, others of 100, others of 1000; and ſome, (which was the higheſt Charge of all) of 10000. This according to *Acoſta's* account, tho' our *Peruvian* Author tells us that they went no higher than 1000. Theſe Perſons were to provide them with Corn, Wooll, and other neceſſaries of Life, to give an account to the Superiour Governors or Judges of their way and manner of Living, that 'twas regular, and according to the *Inca's* Laws; to ſee that there were no idle Vagabond Perſons amongſt them, and eſpecially to take care about the Education of their Children. If theſe Inſpectors neglected their Duty, the faults that were committed were their own, and they puniſh'd accordingly.

The Judges and Subordination of Courts.

Every Town in the Empire had a Judge appointed to determine all ſorts of Cauſes and Debates that were of leſs moment, and theſe conſtantly ſent in their Sentences and Determinations to the Superiour Judges in the Capital City of the Province every Month. Neither did the Matter reſt there, but went on from theſe to the more Superiour ones at Court, and if there was any thing of Injuſtice or Partiality found in any of their Sentences, they were ſure to be ſeverely puniſh'd.

Four great Vice-Roys.

As the Empire was divided into four General Parts, (which they vain-glorioully call'd the four Quarters of the World, and were reckon'd E. W. N. & S. as they lay from *Cuſco*, which was the Centre of all) ſo the Vice-Roys or Preſidents of theſe Quarters, were the Supreme Miniſters in the Government, and had the laſt Determination of Matters, the next remove being to the *Inca Capa* himſelf. If any Provincial Controverſie cou'd not be decided either by the ordinary Miniſters there, or by any Deputation from Court for that purpoſe, 'twas ſuſpended till the *Inca* viſited thoſe Parts in his Progreſs, and was to be brought to an iſſue by a Sentence from his own Mouth.

Council of State.

The four great Vice-Roys before-mention'd, and they alone, compos'd the Grand Council of State; with theſe the *Inca* adviſ'd about his Affairs, and they made Reports of all Matters to him.

Way of making Reports to the Court.

The way of ſending theſe Reports out of the Provinces (ſince they had not the uſe of Letters) was by Lines that had ſeveral knots made in them: Thoſe knots were of various colours, and ſhew'd what crime or treſpaſs was intended; and then certain threads of ſeveral colours too, faſtned to the Lines, declar'd what puniſhments were due according to the Law. The ſame Order and Subordination of Courts and Officers were eſtabliſh'd for Military Affairs; as for Civil, the ſame variety, and the ſame ſtrictneſs of Diſcipline, every where obſerv'd. Another piece of Policy practis'd by the *Inca's*, was always when a Province was conquer'd, to diſpoſe of the greateſt part of the Inhabitants into other Provinces up and down, thereby taking away from them all manner of opportunities and advantages for Revolts or Conſpiracies. Then no Towns that were taken by force at any time, were ever Sack'd or Plunder'd, or any ſort of violence offer'd to the Inhabitants, but on the contrary, they had all manner of good treatment, and by eaſie and gentle methods they were brought to ſubmit quietly and peaceably to the *Inca's* Government. And becauſe they held it for a ſure Maxim, that 'twas the beſt and ſafeſt courſe to keep their Subjects always in action, and well employ'd, therefore they put them upon works of long time and great labour; part of which were the large Cawſeys made up and down in ſeveral parts of the Country, beſides ſome other more ſtupendious ones, which we ſhall afterwards give the Reader an account of.

Gentleneſs to the conquer'd.

Officers to provide for the People.

Farther, when a Country was reduc'd to the Obedience of the *Inca*, Officers were preſently ſent to ſurvey the Lands, and mark out what was fit for the production of Maize, or other uſeful Grain; to improve and cultivate what was barren, and to order the conveyance of water to places which wanted. When the Land was thus ſurvey'd and made improveable, they divided it, allotting to each Town its proper ſhare, that is, ſo much for the Uſe and Service of the Inhabitants; beſides which, there were two ſhares more, one for the Revenues of the Sun, and another for the *Inca* himſelf, and each of theſe equal to that which was allow'd to the People.

Diviſion of Lands.

But proviſion was always made, that the Inhabitants ſhou'd not be ſtraitned, and therefore if their numbers encreas'd very faſt, there was ſome taken out of the ſhares of the *Inca* and the Sun, to make up the deficiencies of the other; in ſhort, every Man had a portion aſſign'd him according to the greatneſs of his Family, if he were a poor Man, or his Occaſions and Expences, if he were a *Curaca* or ſome Officer of the State. The Order obſerv'd in the Tillage and Husbandry of theſe Lands was this; in the firſt place they did thoſe that belong'd to the Sun, this was a piece of Religious reſpect, and they concluded they ought to ſerve their Deity before themſelves.

Care for Widows and Orphans.

Next to theſe they took care of the Lands of Widows and Orphans, of old and ſick People, and of all the Poor in general; of them that were in the Wars, whoſe Wives they look'd upon at that time as Widows, and particularly of thoſe that were really ſo, and had actually loſt their Husbands in the *Inca's* Service. Of all theſe there was ſpecial care taken, and they were farther allow'd (if at any time they wanted Corn or Seed) to have it out of the Publick Store-houſes. There were particular Officers appointed for managing the Lands of all theſe ſorts of People, and they were oblig'd to ſerve them firſt, before they did any thing for themſelves. In the time of the *Inca Huyana*, there was one of the Officers hang'd for Tilling the Land of a certain *Curaca* his Kinſman, before he had done that of the Widows and Orphans; and to make it the more exemplary, the Gallows were ſet up, and the Execution done, upon that Noblemans Land where the Law had been tranſgreſs'd. Laſt of all the *Inca's* Lands were look'd after, thoſe Princes building their own Proſperity upon that of their People, and endeavouring in the firſt place to render them eaſie and happy. When the Lands of the Sun and the *Inca* were Tilled, there was a great deal of pomp and ſolemnity in the buſineſs, they appear'd in their beſt Accoutrements, and broke up the ground with Songs of Joy and Triumph.

Ceremony at Tilling the Lands of the *Inca*.

Nay, the firſt piece of ground that was dedicated to the Sun near *Cuſco* was turn'd up by *Inca's* and *Pallas* (the Princes and Princeſſes of the Blood Royal) in all their beſt Robes and Jewels. The Spades they us'd were of Wood, and about a Yard long, plain before and pointed, but round behind, and near four fingers thick; about half a Yard from the point was faſtned a contrivance of wood like a Stirrop, for them to ſet their feet upon while they thruſt them into the ground. They had their Attendants by them to eaſe them of a part of the burden, and lift up the Turfs of Earth for them; and to refreſh them alſo with chearful Songs, while they were engag'd in this hard work.

The Tributes.

The Government of the *Inca's* was very mild and eaſie too, in reſpect of the Tributes demanded of their Subjects. 'Tis true, their Power was Abſolute and Uncontroulable, and had no manner of Bounds but what were preſcrib'd and ſet by their own Wills, ſo that all the Fortunes of the Subject were entirely in their hands, and at their diſpoſal. Notwithſtanding this, they did not impoſe any heavy pinching Yokes upon them, nor

by

Every *Inca* raiſes his own Treaſure.

Several kinds of Tributes.

by cruel and rigid Exactions, empty their Subiects Coffers to fill their own. This perhaps might have been expected in a Country where ſuch a Cuſtom was obſerv'd, for every Prince, as he came to the Throne, to furniſh his own Palace with ſuch prodigious Treaſures of Gold and Silver as the *Inca's* of *Peru* always had in theirs. And this is ſaid to have been their way; no *Inca* inherited the Domeſtick Riches of his Predeceſſor, but gather'd his own Treaſure himſelf, that of the Deceas'd being the moſt part beſtow'd amongſt his Family, and part laid out upon his Chapel or Shrine, and other ſuch Occaſions, after his Death. And this was one reaſon of the heaping up ſuch extravagant Treaſures amongſt thoſe Princes, for there being an inexhauſtible Fund of Gold and Silver in the Country, every one made it his buſineſs to outdo his Predeceſſor in the Glory and Riches of his Palace. Now this ſuppos'd, it was poſſible that the *Inca's* might have had occaſion to drain their Subjects, and lay very heavy Taxes and Tributes upon them, that all theſe vaſt quantities of Treaſure might be ſupplied. But they have ever gone another way to work, for they always kept the Mines in their own hands, and tho' they paid them very well that did and took care of the work, yet they kept an exact account of all the Profits that were made of them, and the Gold and Silver ſtopt no where after 'twas out of the Mine, till it came into the Imperial Treaſuries at *Cuſco*. As for Tribute, it was paid chiefly in Work and Labour, in Dreſſing and Tilling the *Inca's* Lands, and thoſe of the Sun, in making Arms and Clothes, for which they had Wooll and Cotton allow'd out of the ſame Revenues.

Poor Peoples Tribute.

In general, had the *Inca* a mind to the Products of any particular Province they ſent it him for Tribute, what and in what quantity he demanded it; but no Man ever paid any thing out of his own private ſhare of Land. Sometimes perhaps a Sett of fine Dancers, or Muſicians, paſs'd for Tribute, or ſome choice Virgins for the *Inca's* own Entertainment. And if we may credit the *Inca* our Hiſtorian, all the poor People paid a Tribute, which 'twas more advantage by far to them to be rid of, than to the Emperor or any of his Miniſters to receive, and that was ſuch a quantity of Lice. The chief deſign of this was to lay them under a neceſſity of keeping themſelves clean and wholſome, and at the ſame time by bringing ſomething, tho' 'twas but a Louſe, to acknowledge their ſubjection. Certainly no Prince was ever ſo kind to his Subjects as theſe *Inca's* were to theirs, for this was a ſort of Tribute which (being in Nature a very multiplying thing) the Poor perhaps were always in a condition of paying, and 'twas no hard matter for them to ſcrape together their ſeveral Quota's, every Man out of his abundance helping his Neighbour that might have occaſion to borrow.

Inca's care of their poor Subjects.

But the *Inca's* were kind to their poor Subjects, not only by taking away theſe Cattel from them, but alſo giving thoſe of another ſort to them out of his own Herds, when their neceſſities required ſuch a Supply; and then when the Seaſons prov'd unkindly, and Corn and Grain were ſcarce, there was a liberal Diſtribution made of thoſe things to them out of his Granaries and Storehouſes, of which there were many in every Province.

Perſons free from Tribute.

As for all thoſe of the Royal Blood, all Prieſts, Judges, *Curaca's*, Captains as far as Centurions, they were Tribute-free. So were all Soldiers in time of War, young Men under 25, and old Men above 50; and in general all Females, whether married Women or Virgins, had the ſame exemption.

Time of bringing it in.

At the Celebration of the principal Feaſts (eſpecially that of the Sun) all the *Curaca's* and Governors came to *Cuſco* with the Tribute of the whole Empire; beſides which, they always brought their Preſents for the *Inca* along with them, which were any Rarities or Curioſities whatſoever, or any thing that might be uſeful and ſerviceable to him in his Buildings, or other ſtately Works.

The Government of the *Inca's* was not only very indulgent and favourable to the Subjects, but had alſo a great regard to all Strangers and Travellers that came within the Verge of it: All ſuch Perſons were treated with the greateſt humanity and kindneſs, and allow'd all the decent liberties imaginable.

Inns and Hoſpitals.

There were Publick Houſes built on purpoſe for their Reception and Entertainment, and they had all neceſſaries at free-coſt upon the Road, being furniſh'd at the *Inca's* own Expence. Likewiſe, if any fell ſick, they were not left expos'd without Care and Attendance to all Hazards and Uncertainties, but taken into convenient Lodgings, where they were furniſh'd with all thoſe things their condition requir'd.

Puniſhments only Corporal.

The Laws of this Country denounc'd Corporal puniſhments for all Offences whatſoever; there was no ſuch thing as a Mulct, ſince a Confiſcation of Eſtate or Goods, for the *Peruvians* were of this Opinion, That all puniſhments that tended to impoveriſh the Criminal, and ruine his Fortunes in the World, did but make him ſo much the worſe, and incline him to be more deſperate in doing evil. Neither did the puniſhment of Treaſon and Rebellion extend any farther than the Perſons of thoſe that committed them; their Children and Families did not ſuffer any ways for their Crimes, but enjoy'd all their Privileges and Liberties as before.

Severity againſt Lying.

Way of managing Witneſſes.

Reaſon of Submiſſion to the Laws.

But there was hardly any Crime more ſharply puniſh'd than that of Lying; and if 'twere in a matter of importance, it proceeded to the loſs of Life it ſelf. As for Perjury, there was no ſuch thing amongſt them, for there was no Swearing or taking of an Oath; all they did to come by the Truth in weighty Caſes, was for the Judge, by a ſolemn Demand, to put the Witneſſes upon ſpeaking their Conſciences, *Doeſt thou promiſe in this Matter to tell the Truth to the* Inca? And woe be to them if they were found not to do ſo, for according to the Notions of the Country, they did not Lye to the Judge but to the *Inca*, who, like the Heavenly Sun his Father, had a ſort of Univerſal Preſence through the Empire. And in abundance of other Caſes relating to Points of Common Juſtice and Honeſty, the Tranſgreſſors were call'd to a ſevere account; the Innocent and Oppreſſed were reliev'd, and Juſtice, when demanded, ſpeedily done. Now tho' the Laws were ſtrict, and even a ſmall Offence was often puniſh'd with Death, yet all this Rigour was temper'd with ſo much Mercy and Gentleneſs, that the whole Empire (extending near 1400 Leagues, and conſiſting of ſo many different ſorts of People) was govern'd by one Law with as much eaſe as if they had been all but one Houſe. But it muſt be confeſs'd, the Opinion of the Sacred and Divine Original of thoſe Laws, contributed not a little to this Univerſal Reverence and Submiſſion; they believ'd they all came from the Sun, and were his Ordinances, by the *Inca's*, and therefore the fear of breaking them was ſo much the greater, in that they thought their Deity, as well as their Prince, concern'd in the puniſhment of Offenders.

Titles of Honour.

Knighthood.

The Titles of Honour us'd in this Country, may deſerve to be a little explain'd, tho' many of them have been Occaſionally mention'd up and down already. That of *Inca* was peculiar to the Royal Families, and becauſe all of the Blood by the Male Line had the Title of *Inca* as well as the Sovereign himſelf, therefore by way of Eminence and Diſtinction he was call'd *Inca Capa*, that is, the only Lord or Sovereign. The young Princes of the Blood were call'd *Yntip Churin*, that is, Children of the Sun, till they came to be married, and then they had the Title of *Inca's*. The Sovereign's principal Wiſe was termed *Coya*, and all her Daughters had the ſame Title; other Wives and Concubines of the Blood were called *Palla*. Concubines not of the *Inca's* Family were called *Mamacuna*, that is Mother, by which they were diſtinguiſh'd from the *Coya*, who was ſometimes call'd *Mamanchic*, that is, our Mother. The Royal Daughters were alſo call'd *Nuſta*, that is Nymph; and if not born of Royal Mothers, for diſtinctions ſake was added the Name of ſome particular Province for a Title, as *Colla Nuſta*, *Quitu Nuſta*. This general Title of *Nuſta* continued till they were married, and then they exchang'd it for that of *Palla*. *Curaca* was a term of Honour belonging to the Noble or Princely Subjects not of the Blood, as Vice-Roys, Vaſſal Princes, and the like; but the moſt conſiderable degree of Honour, upon many accounts, was that of their Knighthood. For this, none but young Men of the *Inca's* Blood cou'd ſtand Candidates, or pretend to put into the Election. The deſign of it was, that there ſhould be a Sett of Princes fit and able to bear the weight of ſo great a Monarchy, and to do Actions worthy of their high Original; that they ſhou'd be accompliſh'd and qualify'd with all thoſe Excellencies which Princes appear Great and Heroical in their Countries. In order to this, they had the beſt Maſters that cou'd be found to inſtruct them, and every Year or two they paſs'd a ſtrict Examination by them.

Exerciſes and Trials preparatory.

They generally began to try their Conſtancy in the point of Abſtinence and Faſting, making them for ſeven days together keep to an Allowance of raw Corn and Water, and that a very ſmall quantity of both too. Thoſe that cou'd not hold out in this were quite laid aſide, as unfit for any farther Experiments to be made upon them. When they had gone through this Courſe of Mortification, they heartned them up with rich Food again, to render them fit for ſucceeding trials of Strength and Activity. Being divided into two Bodies, one of them was to keep and defend a Fort, while the other beſieg'd and aſſaulted it; and this they did with ſo much eagerneſs, that forgetting they were in jeſt they ſtirr'd one anothers Blood and came to earneſt, and the ludicrous War ſometimes coſt ſome of them their lives. Then follow'd Wreſtling, Leaping, Vaulting, throwing and flinging great Stones, caſting Darts and Lances. They tried how they could do the Duties of Centinels, and put them upon the Watch for ſeveral Nights together; and if they were ſurpriz'd Napping, they were puniſh'd with ſhame and reproaches. And to ſee whether they cou'd endure Pain as well as Hunger and Watching, they laſh'd them over the Arms and Legs with wands; and if they made any ſigns that they were not able to bear it, the queſtion was preſently put to them, If you can't bear this, how will you endure the weapons of your Enemies? In a word, they were oblig'd to be above ſence and feeling, or elſe they cou'd be no Knights; and how many wou'd curſe that Knighthood that muſt be had upon ſuch conditions? But the moſt unreaſonable trial of all, was for theſe young Candidates (for Knighthood) to be expos'd to all the tricks and poſtures of Fencers. Here they muſt ſtand, while thoſe Fellows pretended to make their thruſts at them, feigning a puſh here and there, and ſometimes of a ſudden making as if they wou'd ſtrike them a blow, and if they offer'd in the leaſt to ſtart or flinch, or by any little motion of their Bodies ſeem'd as if they wou'd avoid a ſtroke or a thruſt, then they had not courage and reſolution enough, and conſequently were not fit for this Honour. Neither did they leave them here, but tried alſo if they had Art and Ingenuity enough to make their own Shoes and Arms; not that they were always to be put upon this, but they thought it requiſite for ſuch Men to be able to know how to ſerve themſelves of every thing they needed. When they had gone through all theſe trials, the Maſters inſtructed them in the points of their Deſcent and Pedigree, and related to them the noble Acts of their Anceſtors, to raiſe in them the ſame paſſion for Glory, and ſpur them on to follow their Examples. They taught them alſo the Duties of Morality, and put them upon the practiſe of Juſtice, Truth, Clemency and Mildneſs, to all Men. During the whole time that theſe Exerciſes laſted, which was a Month, they laid aſide all their Princely Attire, and went in a vile and ſordid Habit, to learn Humility, and how to pity the Poor and Miſerable, that were forc'd to go ſo meanly Cloath'd. Even the Heir Apparent of the Empire ſubmitted to this, and all the reſt, to the utmoſt rigour; one only excepted, which was the Exerciſe of running for a Banner. Afterwards, when their Maſters gave an account to the *Inca Capa*, he attended in Perſon, and made a Speech to them; and then each of the Candidates, on his knees, receiv'd the firſt mark of the Honour, which was to have a hole bor'd in his Ear. The new Knight then kiſs'd the *Inca*'s Hand, and the Perſon that ſtood next him pull'd off his Shoes, and put him on another ſort made of Wooll, which he was not till then allow'd to wear. After this he is led to another place, where the other *Inca's* put him on Breeches, (a piece of Apparel prohibited before) and adorn'd his Head with a Coronet of Flowers. The Princes Royal had the ſame Enſigns, only for a mark of diſtinction; after his firſt trial he was allow'd to wear a Fringe of yellow Wooll, and to carry an Ax, and a Javelin, which weapon, when put into his Hand, they call'd a weapon for Tyrants and Traytors. After this Ceremony of Knighthood, all the reſt of the Royal Blood ador'd him as their Prince.

The Inſtalment.

Trade by way of Barter.

Coca uſed inſtead of Money.

The *Peruvians* had no ſuch thing amongſt them as Trade and Commerce with Foreign Countries, having all things within themſelves, and no occaſion to ſeek the acquaintance of other People upon that ſcore. Neither, tho' they were Maſters of ſo much Gold or Silver, had they any thing of Coin or Money, for thoſe Metals ſerv'd entirely for Pomp and Ornament, and they had no notion of any ſuch Uſes of them as the *Europeans* put them to. Their way of Dealing was to Truck and Barter one thing for another, which they did in all their greateſt Fairs and Marts, for every Man knew very well what Commodities he ſhould have in exchange for thoſe he brought. Indeed they had a thing amongſt them which was valued at a high rate, and with which they cou'd purchaſe any thing as we do with Money, it was only the Leaf *Coca*; which the *Peruvians* ſet as much by as the *Mexicans* did by their *Cacaos*, a little Fruit priz'd at the ſame rate, and us'd for the ſame purpoſes by their People; but the *Spaniards*, who brought the love of Money along with them, have ſince brought the uſe of it alſo into both theſe Countries.

The Language. Accents.

The *Peruvian* Language has peculiar difficulties in it, upon the account of the various ways of pronouncing one and the ſame word, each of which changes the ſignification; for they lay the ſtreſs of the pronunciation either upon the Lips, the Palate, or the Throat. The accent is moſt commonly in the laſt Syllable but one, ſeldom in the Syllable before that, and never in the laſt of all. The *Cuſco* Dialect wants the following Letters of the Alphabet, *viz.* *b*, *d*, *f*, *g*, *i* conſonant, the ſingle *l*, *x*. Inſtead of the ſingle *l* they always uſe the double, and on the other ſide they never pronounce the double *r*; for which reaſon there are abundance of words in the *Spaniſh* Tongue that they cou'd never be brought to pronounce well. This variety of pronunciation will eaſily be allow'd to involve and render the Language difficult, and together with the heedleſneſs and blunders of the *Spaniards*, has contributed to the falſe naming of abundance of things. They ſeldom minded any more than the noiſe and ſound a word made in their Ears, and took up with the firſt they heard, without taking pains to enquire into it afterwards. Thus the Country is corruptly call'd *Peru*, and it owes that Name to the *Spaniards*, who Chriſten'd it ſo by miſtake. As for the Natives, there's no ſuch word among them, and out of very diſdain they wou'd never ſo much as ſpeak it, even when they were talking to the *Spaniards* themſelves. They had no proper Name for the Empire taken in general, but call'd it only *Tauantinſuyu*, that is, the fourth part of the World.

Miſtakes of the *Spaniards*.

How the Country came by the Name.

But the buſineſs was thus: The firſt *Spaniards* that came upon the Coaſt ſurpriz'd an *Indian* Fiſherman, who having ſpied their Ship, was fallen into a deep wonder what ſort of thing it wou'd prove to be at laſt, and in the midſt of his muſings upon the matter, he was ſnapt by them and brought aboard. When the *Indian* had recover'd, and was able to ſpeak again, they ask'd him by ſigns and words too what the Name of the Country was, but he not knowing what they meant replied *Beru Pelu*, that is, his Name was *Beru*, and if they wou'd know from whence he came, it was out of the River, *Pelu* being a common Name for a River in that Language. From hence it was ſpread abroad, that the Name of the Country was *Peru*, they concluding the *Indian* had underſtood them, which he muſt have been a Witch if he had done. The like careleſs miſtake procur'd that Country (they now call *Yucatan*) its Name; the firſt Diſcoverers ask'd an *Indian* what the Country was call'd, and he (knowing as little *Spaniſh* as a Man may be ſuppos'd to do that never heard of ſuch a Language or People) anſwer'd *Tectetan*, *Tectetan*; that is, I don't underſtand you. But they, it ſeems, were as well ſatisfy'd with the *Indian*'s anſwer as if they had underſtood it, and ſo turning this *Tectetan* into *Yucatan* (by the figure call'd Metamorphoſis) they paſs'd that about for the true Name of the Country.

No Letters.

Their way of Accounts.

By Knots.

But to return from this digreſſion; the *Peruvians*, as Polite as they were in other reſpects, had no Letters at all, nay, not Symbols and Characters as their Neighbours the *Mexicans* had, by which they ſerv'd themſelves (in the want of Letters) with admirable Art and Ingenuity. Yet the contrivance of the *Peruvians* to ſupply this defect was very fine and pretty, and ſuppoſing the abſence of Letters, Symbols, and the like, perhaps not eaſily to be mended. We did before give a hint of this matter, when we ſhew'd how the Reports of the Courts of Judicature, in the Provinces, were convey'd to *Cuſco*. In ſhort, all their Regiſters, Memorials, and Accounts, were made up of theſe ſtrings and knots; in theſe were contain'd their Hiſtories, Ceremonies, Laws, and the whole Syſtem of their Affairs. They call'd theſe contrivances *Quippos*, every one of which was a complex of ſo many knots and ſtrings of ſeveral colours, and as we derive an infinite number of words from the various combinations of the 24 Letters, ſo did they draw a compleat Story or an Account from thoſe varieties of knots and colours. And they manage this ſort of computation with ſo much exactneſs, that they are no more to be cheated and impos'd upon in it, than we are in an Arithmetick.

Acoſta ſays he knew a Woman that had a General Confeſſion of all her Life done in knots and threads, and he declares 'twas ſo nice, that it cou'd not have been better if written or printed upon paper.

By Stones and grains of Maize.

The ſame Author ſays (and herein the *Inca* agrees with him too) that they computed ſometimes by ſmall Stones and grains of Maize, which were rang'd and diſpos'd upon Wheels in ſuch an order, that they wou'd thereby calculate or expreſs any thing with the greateſt readineſs imaginable.. Upon theſe the Chriſtian Converts drew out the *Creed*, the *Pater Noſter*, the *Ave Maria*, and cou'd repeat them as perfectly from thence, as the *Spaniards* cou'd from their Books.

Computation of the Year.

In their Computations of Time, they were ſhort of the *Mexicans* in ſome reſpects, and ſuperiour to them in others. They had not ſuch particular forms and diviſions of Time as the *Mexicans* had, but what they did was more exact and agreeable to the Courſes and Motions of the Heavenly Bodies. Their Year conſiſted of the ſame number of Days that ours does, and 'twas divided into as many Months. But for want of other Methods of Obſervation, they made uſe of one ſomething rude and imperfect to determine the ſeveral parts of the Year, and that was by the Sun's coming to certain Pillars at the time of his Riſing and Setting. Theſe Pillars were twelve in number, and they ſtood in order upon the Mountains about *Cuſco*, and 'twas by the means of theſe that they diſtinguiſh'd the Months.

Notions of Eclipſes.

They had no knowledge at all in Aſtronomy, and attributed the Eclipſes of the Moon to her ſickneſs, believing that ſometime or other, when ſhe was very ill in thoſe Fits, ſhe would die and fall from Heaven, and kill all here below; and the truth on't is, when the Moon tumbles, woe be to them that ſtand in the way. But the Sun (to whom they durſt not attribute any ſickneſs or infirmity) was eclips'd becauſe he was angry, and that hiding of his face at that time was the effect of his reſentment of their Offences. When the Moon was in that ſtate of illneſs, and look'd with ſo dark a face upon them, they were all in a horrible concern till ſhe got well again, and recover'd her former luſtre. They ſounded all ſorts of Muſical Inſtruments, and ſet their Dogs a howling, believing thoſe noiſes would help to recover her if any thing wou'd; for as 'twas ſaid before, they thought ſome ſuch bout or other wou'd make an end of her at ſome time, and they did not know but every Eclipſe that happen'd might be the fatal one. And therefore, when the ſad time is over, (during which the Men and Women howl too as well as the Dogs) they give thanks to the Inviſible *Pachacamac*, that he has cur'd and brought her out of thoſe Diſorders, and thereby continued the happineſs and comfort of the World. Actions ſo fooliſh and ridiculous as theſe, one would wonder at in a People every other way ſo ſenſible; but their Neighbours the *Mexicans* can't hit them in the teeth of it, being themſelves not much wiſer in a certain Cuſtom which they repeated at the end of every Age.

Odd Cuſtom of the *Mexicans*.

That very Night when the Age was expired, they put out all their fire, extinguiſh'd the Lights every where, and broke all the Veſſels about their Houſes; and for what reaſon was all this havock made? Why, the World muſt certainly come to an end ſome time or other, and 'twas their opinion, that that general fate wou'd be at the end of one of their Ages, and they did not know but it might come on with the concluſion of that very Age; and if the World ſhould end that Night, what need ſhou'd they have of Fire or Houſhold-ſtuff next Morning? There wou'd be no dreſſing of Victuals, and therefore no farther uſe of Pots and Pans, and Spits, and ſo they had e'en as good break them all beforehand. But cou'd not the Fools have had a little patience, and ſtaid till next Morning came? What need they have been ſo haſty, and brought the World to an end within doors, before they ſaw 'twas ſo without? For the ſame reaſon they ought to have ſet all their Houſes and Towns a fire at the end of every Age, for when the World was diſſolv'd they wou'd have no more occaſion for them than the Furniture of them. However, they watch'd very diligently all that Night, and when they ſaw Day-light appear next Morning, they bid it welcome with Muſick, Shouting, Drumming; and, in a word, with inexpreſſible Joy, and gave thanks for it in their Temples accordingly. The *Peruvians* diſtreſs about the Moon in an Eclipſe, and the *Mexicans* about the end of the World, are equally pleaſant and comical.

Geography and other Sciences.

Theſe People had a little more Skill in Geography than they had in Aſtronomy, for they made a ſort of Maps and Plats of the Provinces of the Empire. Their Geometry conſiſted only in that practiſe which anſwers to the Etimology of the World, they parted and meaſur'd their Grounds by it, and never troubled themſelves with any Speculations. Muſick they had alſo reduc'd to ſome Rules, and divers ſorts of Inſtruments; and 'twas common amongſt them to have Conſorts of theſe and good Voices join'd together.

Poetry and Plays.

Their Poetry was only Dramatick, and extended no farther than the compoſing ſome Tragedies and Comedies. The ſubject Matter of the former was ſomething or other Great and Memorable done by their Royal Anceſtors, and the Actors were no mean inferiour Perſons, but ſome of the *Inca's* themſelves, and the beſt of the Nobility. In their Verſes they obſerved exact meaſure, but never made them Rhiming; they were always very clean and free from ſmut, neither did their Poets ever ſo much as touch or glance at any thing immodeſt or indecent even in their moſt light and airy Compoſures.

Mechanick Arts.

For Mechanick Arts, they were not very well furniſh'd; they had no ſuch things as Anvils, Files, Chizels nor Bellows, no Saw, no Augre, no Plainer, nor Nails. Inſtead of Anvils they us'd certain great hard Stones, which they made very ſmooth by rubbing one againſt another; and for Hammers, they had a Maſs of Copper in form of a Die, without any Handle, which they graſp'd in their hands to ſtrike with as one wou'd with a Stone. To ſupply the want of Nails, they faſten'd every thing that was to be faſten'd with Lines and Cords. But for all this defect as to the point of Tools, what wonderful Monuments of Art have they left for the World to admire? What ſtately Buildings both in Wood and Stone, and yet Carpenters and Maſons ſo poorly furniſh'd? The Fortreſs of *Cuſco*, in its priſtine Grandeur, wou'd have ſurpriz'd a Man that had look'd o'r all the Wonders of the World. The *Egyptian* Pyramids or *Pharaoh's*, the Walls of *Babylon*, or the Temple of *Diane*, were all wonderful to the laſt degree, but then 'twas eaſie to account for their making, for they were built by People that had not only the beſt Art and Skill, but all manner of Tools alſo fit to do ſuch Works withal. But how the Fortreſs of *Cuſco* came together into that form, 'twou'd puzzle any Man to imagine; and to uſe our *Inca's* own expreſſion, it may ſeem rather a Work of Devils than Men. The Stones, or rather the Rocks of which it conſiſts, being ſo great, and the *Indians* having neither Iron nor Steel to cut and work them, nor no Carts or other Carriages to draw them along, but all done by meer force of Men pulling with great Ropes, and that through rough uneven mountainous Ways, for 10, 12, and 15 Leagues together, 'tis aſtoniſhing to conceive ſuch difficulties as theſe conquer'd by Humane force. There was one Stone particularly which the *Indians* call'd *Saycuſca*, (which ſignifies wearineſs) for the infinite Labour and Toil it coſt them to bring it along. There were 20000 Men employ'd about it, drawing with great Cables, and in one rugged place it kill'd near 4000 Men. 'Twas full 15 Leagues that this huge Mountain of Stone, this Rock, was brought; but which was ſtranger ſtill, in the way they were oblig'd to croſs a certain River not much leſs than the *Guadalquivir* in *Spain*, and what ſort of contrivance they had to waft it over this River one wou'd be glad to know, the Stone to be ſure did not ſwim over of it ſelf, and what Veſſel cou'd be form'd to do it is unconceiveable. But then the ſetting of all the parts of the Building together is not a much leſs Wonder than any of the former, for they had no Rule nor Square, nor no Cranes or Engines to lift up the Stones; inſtead of Mortar they us'd a ſort of Clay, and by the means of this cement alone they made all ſo cloſe and compact, that the Junctures cou'd hardly be diſcerned. A certain Prieſt who went to take a nice ſurvey of this Prodigy of a Building, told the *Inca Garcilaſſo di Vega*, that his Opinion was, the Devil was the principal Architect, and he cou'd not ſee how all the Art and Force of Man cou'd ever lay ſuch unweildy things together in that poſture that they lay; and tho' we are not of his Opinion, yet we can't but admire the mighty Patience, Labour and Induſtry of the *Indians*, to go through with difficulties that appear ſo Invincible to all thoſe that conſider them.

No Tools for Work.

Admirable Fortreſs of *Cuſco*.

Strange Carriage of Stones.

The Stone *Saycuſca*.

Situation and Parts of the Fortreſs.

This Edifice ſtood upon a Hill on the North-ſide of the City, and a Hill ſo ſteep, that there was no poſſible aſſaulting it that way, and therefore there 'twas defended with one Wall only about 200 Fathoms long. On the other part of it there were three Walls, on incloſing the other, each in the form of a Creſcent, and of greater length than the former. The ſpace betwixt them was about 30 foot, and every Wall had in the midſt of it a Gate, which had one Stone elevated the full breadth and height of it. Within theſe Walls were three Forts, the middle-moſt round, and the other two ſquare; all which had Vaults and Subterranean Paſſages from one to the other, perfect Labyrinths they were, with ſo many turnings and windings, that there was no getting out but by the direction of a Clue. In the round Fort was a Conduit of excellent Water brought a vaſt way under ground, but where or from whence was a Secret, and known only to the *Inca Capa*, and ſome of his chief Miniſters. 'Twas here alſo that the *Inca's* took up their Quarters when they came to viſit the Fortreſs, and 'twas adorn'd accordingly with all the Beauties of Gold and Silver, the Effigies of Plants and Animals in thoſe Metals being enchas'd therein. The Governor of the Fortreſs was always to be of the Royal Blood legitimate, and 'twas not lawful for any but *Inca's* to come into it; for this was

Vaults and Labyrinths.

Government of it.

the Houſe of the Sun for War, as the Temple was for Devotion.

Baſe action of the *Spaniards*.

The *Spaniards*, inſtead of repairing this auguſt Building, pull it down as faſt as they can, to build their own private Houſes; and they have made ſuch uſe of it for that purpoſe, that moſt of the Houſes of *Cuſco* have ſome Ornament or other belonging to the Fortreſs in them. By doing thus, they have defac'd the greateſt piece of Majeſty in the Univerſe, and a thing that any Prince upon Earth wou'd have been proud of the pooreſt Ruines of. The beſt of the three Walls were ſtanding in our *Inca*'s time, but the reaſon was becauſe they were too ſtout and ſtrong to be pull'd down; yet he ſays they had begun to make ſome impreſſion upon them, and that for the lucre of a great Gold Chain, which the *Inca Huyana Capac* caus'd to be made, and being hidden ſomewhere, they hop'd to find it here. Here the old Proverb ſays that Hunger will break through Stone Walls, and it ſeems that Covetouſneſs will do the ſame too; and the truth on't is, the Walls of the Fortreſs of *Cuſco* were capable of making a ſtubborn oppoſition to either of thoſe greedy Appetites. But theſe ſorts of Buildings, as Palaces, Caſtles and Fortreſſes, were the chief of what they had; they had none of thoſe other varieties which the *European* World cou'd have ſhewn, even many Ages before the foundation of their Empire.

Ignorance of other Buildings.

Bridges, Arſenals, Towers, Columns, Arches, were things unknown amongſt them; and as to the latter, they took the doing of it to be the effect of a Power and Wiſdom above that of common Men. When they ſaw Arches of Wood rais'd over the River *Xaura*, they were downright aſtoniſh'd, but when the Bridge was finiſh'd, and all the Wood-work taken away, they all began to run for't, expecting that the Bridge it ſelf wou'd fall down into the River; but ſeeing it ſtand firm, and, as they thought, ſupported (by ſome extraordinary Power) in the Air, they then concluded 'twas very reaſonable they ſhou'd be Servants to the *Spaniards*, for without all doubt (ſaid they) theſe Men muſt needs be the Children of the Sun. But it may be they had Reaſons enough afterwards, to alter that Opinion of the Divine Original and Extraction of their Conquerors, and think it Honour enough to allow them to be Men.

We may now take a ſhort view of the Hiſtory of this Empire, the Origine, Succeſſion and Conqueſts of the *Inca's*, and the various ſteps they made towards that heighth of Power and Command they were riſen to when the *Spaniards* came amongſt them.

Original of the *Inca's*.

The *Inca's* (as has been often hinted already) derived their Pedigree from the Sun, which pretenſion of theirs was of the greateſt uſe and ſervice to them in the Eſtabliſhment of their Monarchy. This made the People honour them almoſt like Deities, and yield a blind and undiſputed Obedience to all their Laws and Impoſitions.

Manco Capac's Politick fiction.

They gave out, that their Father the Sun taking pity of the miſerable barbarous Inhabitants of the Country, and willing to reform them to a more Civil and Polite way of living, ſent down a Son and a Daughter of his own to be their Inſtructors, and gave them a Pattern of moſt excellent Laws to govern all thoſe Nations by. And having withal given them a moſt abſolute Sovereign Authority over all they cou'd tame and civilize, but a Sovereignty to be mix'd with ſo much Mercy, Juſtice and Beneficence, as, like the heavenly Sun their Father, to refreſh and do good to all about them; together with this, he Ordain'd the Founding of an Imperial City, where the Majeſty of the *Inca's* (his Race) ſhou'd ſhine forth with the pureſt luſtre. This firſt Pair were the *Inca's Manco Capac*, and the *Coya Mama Oclo Huaco*, Brother and Siſter, and Children of the Sun. Some of the common People of *Peru* bring in the Story of the Deluge here, and make the *Inca* and the *Coya* a Couple ſent by ſome Deity to people and reſtore this part of the World again after that general Deſolation. So that here they were like *Deucalion* and *Pyrrha* in the Poet, and *Manco Capac* might ſay as well as the other, *O ſoror & conjux, O Femina ſola ſuperſtes.* But the Inca *Garcilaſſo* mentions nothing of a Flood, and he declares he tells the Story as it was generally receiv'd and believ'd amongſt the *Inca's*, and as thoſe grave Perſons did uſe to relate it at his Mothers Houſe. To proceed therefore with his account, they pretended they were firſt plac'd or ſet down upon this World about the Lake *Titicaca*, which is near eighty Leagues from *Cuſco*, where they were directed to ſettle and lay the Foundations of the Imperial City. And the mark they had to find out this place by, was a Bar of Gold they receiv'd from the Sun, which ſhou'd melt with one ſtroke upon the ground when they were come where the Seat of the Empire was intended to be. And they travelling, according to his directions, Northward from the Lake, had that ſign come to paſs (as they afterwards told the People) in the great Valley where *Cuſco* now ſtands.

Cuſco the moſt ancient City.

However, leaving the *Peruvians* to believe (as now they do) this Hiſtory of the Origine of their Princes and Empire, 'tis certain that the Politick *Manco Capac* (who found this the beſt courſe to ſeat himſelf in a Throne) ſucceeded very well in his Device. He endeavour'd in his Dreſs and Ornaments, as well as by his Words and Pretenſions, to appear to be ſomething extraordinary; and the Savage People, who found him very different from themſelves, believ'd him indeed to be the Off-ſpring of their Deity the Sun. When this Opinion was once fix'd, they were his Subjects and he their Sovereign; they gave him extravagant Honours, and wou'd even have gone through fire and water at his command.

Peoples Credulity.

And the firſt People that thus acknowledg'd him, ſet it about amongſt all their Neighbours, that the Son of the Sun was come to Reign over them, and had brought good and wholſome Laws that wou'd make all Mankind happy that ſubmitted to them. By this means his Fame and Intereſt grew apace together; and having got a conſiderable number of People about him, he ſet them at work upon building Houſes, which he gave them directions how to do, and ſo the firſt rough Lines of *Cuſco* began to be drawn. This was near 400 Years before the *Spaniards* conquer'd the Country, as appears by all their Memorials and Records.

His civilizing them.

All theſe rude People he endeavour'd to Civilize and Inſtruct in his Laws; he taught them the profitable Arts of Life, to Cultivate and Sow their Land, to make Inſtruments for that purpoſe, to Dreſs their Victuals, and eat it after a more Humane manner, and to obſerve ſomething of Order and Policy in their Battels. The *Coya* alſo undertook to perform the ſame part amongſt the Women that the *Inca* did amongſt the Men; ſhe taught them to work in Wooll and Cotton, and make Garments for themſelves and Families, and other Houſhold Offices ſutable to their Sex. Thus, in the ſpace of 6 or 7 Years, the *Inca* ſaw himſelf at the Head of a Nation, and was in a condition to extend the narrow Bounds of his Territories by force, and plant the Sun's Laws by the Sword where they did not meet with a due Reſpect and Submiſſion. But there was little need of force to conquer them that believ'd him to be the Son of ſuch a Father; beſides the allurements of his Government, and the uſeful Arts he inſtructed his People in, were ſufficient to make him new Conqueſts without methods of violence.

His Conqueſts.

In a word, *Manco Capac* reduc'd all the Eaſt Country to the River *Paucartapu*, and Weſtward 8 Leagues to the great River *Apurimac*, and Southward 9 Leagues to *Quequeſana*; and in this whole Region he Peopled, and brought into regular form, better than 100 Towns. Governors were plac'd over every ſeveral Nation that was brought in, and the Religion of the Sun eſtabliſh'd, Temples being built, and Sacrifices appointed to be offer'd to him. This *Inca* likewiſe made ſevere Laws againſt Murther, Adultery and Robbery; he regulated the point of Marriage too, forbidding any thing of that nature till the Parties were come to Years of Diſcretion, and enjoyning that none ſhou'd marry out of their own Tribe or Kindred.

Cuſtoms introduc'd by him.

He introduc'd the Cuſtoms of wearing the Hair Poll'd, of boring the Ears, and (as a ſort of Diadem) wreathing a Riband of many colours, and almoſt a finger thick, 4 or 5 times about the Head. This parti-colour'd Riband was an Ornament peculiar to the *Inca* himſelf, but *Manco Capac* always indulged this to his Vaſſals, as their firſt Privilege, to bind a Riband of one colour about their Heads likewiſe. After ſome time, he allow'd the Polling too as a very great favour, but done in a way diſtinguiſhable enough from his. They had nothing elſe to take off their Hair with but a ſharp Flint, which was very troubleſome; inſomuch, that when the *Spaniards* afterwards brought in Scizzars amongſt them, they were ſo taken with the Invention, that they us'd to ſay, if the *Spaniards* had only come to bring them Scizzars, Combs and Looking-glaſſes, they wou'd have given them all the Gold in the Country.

New *Inca's* made.

When this *Inca* came to die, he dignify'd all the chief of his Vaſſals (whom he aſſembled at *Cuſco*) with the Title of *Inca*, leaving it as his Ordinance, that they and their Deſcendants ſhou'd be *Inca's* without difference, and their Wives ſhou'd be all of them *Pallas*; as if all theſe had been of the Royal Blood, and become *Inca's* and *Pallas*, not by Favour and Privilege, but by Birth and Relation; but the Royal Family then was but ſmall, and the *Inca* was willing to ſee a greater number of the Kindred of the Sun, for the ſupport of new riſen Monarchy, before he died. Beſides, by this Policy, he ſecur'd their Allegiance and Fidelity

His Politick diſpoſals at death.

to his Succeſſor, for having been adopted into the Famil of the Sun themſelves, they wou'd be ſure to expreſs all manner of Duty and Loyal regard to the direct and natural Deſcendant. The *Inca*, for his part, told them that he was returning back to the Regions of his Father the Sun again, where he intended to reſt for the future; but if they endeavour'd to augment the Glory of the Empire, and ſtrictly obſerv'd the Sacred Laws he had brought, he wou'd ſuccour them out of thoſe bright Manſions where he was now going to dwell. He gave both the Vaſſals (or new made *Inca's*) and his own Children, their ſeveral Inſtructions apart; and, in ſhort, having taken all the beſt Meaſures for carrying on the Building, of which he had ſo well laid the Foundations, and acted the ſame Politick part at laſt that he did at firſt, he died, and was ſucceeded by *Sinchi Roca* his eldeſt Son by his Wife and Siſter, the *Coya Mama Oclo Huaco*.

Second Inca *Sinchi Roca*.

He follow'd his Fathers example, and took his own Siſter Partner both of his Bed and Throne; and this they did to keep the high Blood of the *Inca* pure and entire by it ſelf, thinking 'twou'd be a diſparagement to mix it with the beſt Humane Blood in the World. He made great Conqueſts too towards the Southern Parts, and hedg'd in at leaſt 20 Leagues more within the Bounds of the Empire. The Name of *Sinchi* was given him upon the account of his Valour and Dexterity, for he exceeded all in his time at Running, Leaping, Wreſtling, and caſting Darts and great Stones. Beſides his Southern Conqueſts, he reduc'd ſeveral other Nations on each hand of him, and reign'd near as long as his Father, which was 30 Years.

Third Inca.

His Son *Lloque Yupanqui* fill'd the Throne next, who added not a little to the extent of his Territories, ſpreading the Knowledge of the Sun's Laws amongſt a great number of other Nations. He reduc'd a heap of Nations call'd by the general Name of *Pancarcolla* and *Hatuncolla*, which we mention for no other reaſon than that of their particular fancy in the chief Object of their Worſhip, which was a white Ram. They ſaid that the firſt Ram in the World above, had more kindneſs for their Nation than all the other *Indians* beſides, and had bleſs'd them exceedingly in multiplying their Cattel. They wou'd have done very well, if they had alſo told the World how that Ram came to have ſuch a particular kindneſs for them above their Neighbours, and how they came to know they were beholding to him for ſo many Bleſſings. But *Lloque Yupanqui* broke the Horns of this Ram, robb'd him of his Honour, and made his Devoto's turn about to the Sun.

Fourth Inca *Mayta Capac*.

His Succeſſor was *Mayta Capac*, but what Relation the *Inca* does not tell us. He led forth greater Armies than the Princes his Predeceſſors had done before him, and amongſt many Conqueſts, he brought the People *Tiabuanaca* to acknowledge his Supreme Authority. Theſe People deſerve a particular mention upon the ſcore of the famous Buildings that were amongſt them, ſuch that they ſay the wonderful Fortreſs of *Cuſco* was copied out from thence. There were Walls, Porches, Fronts, and other imperfect pieces of Building, made of Stones of ſo large a ſize, that 'twas ſtrange how they cou'd be manag'd and diſpos'd into that order; beſides, there were no Stone Quarries known in all the Country. Particularly in the ſame Region, faſt by the Lake *Chuquivitu*, there was a Houſe that open'd with a fair Court fifteen Yards ſquare, and encompaſs'd with a high Wall three quarters of a Yard thick; on one ſide whereof was a great Hall 45 Foot long, and 22 wide. But the rarity was, that the whole Building was all one entire Rock; the Hall, Court, Porches and Wall it ſelf, were all wrought out of one Stone. Beſides this, there were Sculptures of Men and Women in Stone, ſo natural that they appear'd as if alive; ſome had Cups in their hands, and ſeem'd to be drinking, ſome were ſitting, others ſtanding, and in moving poſtures, with a great many varieties more of this kind. In one Room there were two Giants, with long Garments trailing upon the ground, and their Heads cover'd; which is not the common Cuſtom of that Country. The People cou'd give no other account neither of the Buildings nor the Sculptures than only this, That according to their Traditions, all thoſe monſtrous Buildings were rais'd in one Night, and thoſe Effigies were real Men and Women once, but converted into Stone for their Impieties. The *Inca Garcilaſſo* had this Relation of the Wonders of this Place from one that was born and bred up together with him, and went thither on purpoſe to ſurvey them.

Prodigious Structures.

Fifth Inca *Capac Yupanqui*.

Capac Yupanqui, the Son of the laſt *Inca*, ſucceeded him in his Empire when he went to reſt with his Father the Sun. By the way we may note, that theſe Names *Capac* and *Yupanqui* are not proper ones, but terms of Honour and Dignity, and were given to the *Inca's* for the ſake of thoſe Vertues and illuſtrious Qualities they were endowed withal. 'Tis probable he had the two Names *Capac* and *Yupanqui* join'd together, (which none of his Predeceſſors had) from his extraordinary fortune in his Wars, and the Glory he purchas'd by them; for in his time the Empire ſtretch'd 180 Leagues from *Cuſco* Southward, and Weſtward to the Seawards, 60 Leagues one way and 80 another, to the Eaſtward 13 Leagues, and to the S. E. 40 Leagues, and all this before he had finiſh'd his Conqueſts, for after that 'twas grown to this bulk, he ſwell'd it into larger dimenſions by running it on to *Arequippa* 80 Leagues in length outright, and 14 in breadth. This Prince had occaſion in one of his Enterprizes to tranſport his Army over a great River, and having no Boats nor Bridges ready made, he was forc'd to make a Bridge, and he did it of Bull-ruſhes. They grew in great plenty thereabouts, and ſo they ſerv'd themſelves of them upon this occaſion after the following manner. They made a parcel of great Cables of theſe Bull-ruſhes as big as a Man's Leg, very firmly twiſted, and long enough to reach from one ſide of the River to the other. Some of theſe were extended croſs the River, and upon them were laid huge bundles of the ſame ſtuff tied very faſt together and to the Cables. Over theſe bundles they laid other Cables, and ſo *ſtratum ſuper ſtratum*, Bundles and Cables interwoven with one another, till at laſt they had made it into a firm Bridge. The dimenſions of it were 14 feet in breadth, and 150 paces in length, namely the breadth of the River at that place; and this Bridge of Bull-ruſhes was conſtantly repair'd every ſix Months. This Prince was remarkable for his pious Endeavours to propagate the high Race of the Sun, and ſtock his Family with *Inca's* and *Coya's*, for he left about 80 Children behind him. Yet our *Inca* ſays, that ſome others of them outdid him ſeveral Bars length, bleſſing the Empire with 100, others 200; nay, ſome above 300 of the Off-ſpring of the Sun.

Bridge of Bull-ruſhes.

Strange Deſcent.

This Prince dying made way for the *Inca Roca*, the ſecond of that Name. He added more than 50 Leagues ſquare to the Empire towards the Province *Charcas*, beſides his Northern Conqueſts in the Nation of the *Chanca*, a fierce and valiant People. Theſe *Indians* deriv'd their Deſcent from a Lion, and therefore worſhipp'd that Animal, and frequently cloath'd themſelves in Lions skins. All the Valleys where the celebrated Plant *Coca* grows were taken in too, and beyond them to *Cannachuay*, where there is a deſcent, as our Author ſays, of almoſt 5 Leagues perpendicular, the way all the while going with infinite turnings and windings. Here in theſe Provinces they worſhipp'd the Herb *Coca*, alſo Tygers and great Snakes, of which there are ſome reported to be 25 and 30 foot long, but of no poyſonous nor deſtructive nature at all. This *Inca* has the honour of being the firſt Founder of Schools in *Cuſco*. He us'd to ſay that *Pachacamac* muſt needs be a very great King, that had ſuch a glorious Houſe as the Heavens were to dwell in; and that if he were to worſhip any thing here below, it ſhou'd be a Wiſe and an Underſtanding Man. But he made this concluſion too, that that which begins, grows, and at laſt dies irrecoverably, ought not to be an object of Worſhip; a noble concluſion, for a Man that read no other Divinity than what was printed in the great Book of the World.

Schools founded in *Cuſco*.

Wiſe Saying.

Tahuar Huacac ſeventh Inca.

To this *Inca* ſucceeded *Tahuar Huacac* his Son, he had this Name becauſe 'tis reported of him that he wept Blood at his Birth; and as this was look'd upon to be a preſage of the moſt unlucky and croſs Events, ſo none of all the *Inca's* of *Peru* ever had that fate and thoſe calamities that he had. The beginning of his Reign was proſperous enough, and he carried on the deſign of his Predeceſſors, in extending the Bounds of their Dominions, with no little glory; but as he was forming yet greater projects, and laying out in his own mind other Nations and People to try his victorious Arms upon, his eldeſt Son at home became a plague to him; at leaſt he was jealous of him, and for that reaſon baniſh'd him from Court. And to make the ſurer of him, he confin'd him to the private and obſcure Life of a Shepherd; he made him enter into the Society of thoſe Men that kept the Sheep and Cattel of the Sun in *Chita*. This life he liv'd between 3 or 4 Years, but then (tho' directly contrary to his Fathers command) he came away to Court, pretending a Meſſage of very great importance to deliver to the *Inca*, neither wou'd he go till he had admiſſion. The buſineſs was, that he had a Viſion wherein he was inform'd of a dangerous Deſign againſt the State, that a Rebellion was hatching, and the Imperial City threatned with a ſurprize; and all this from the Mouth of an infallible Meſſenger, even *Viracocha*, the Brother of *Manco*

A Viſion pretended.

A great Rebellion.

Quieted by the Prince.

His Honours.

Old *Inca* retires, and the Prince ſucceeds.

Capac the firſt *Inca*, who came down from the Regions of Light on purpoſe to reveal it, and appear'd to him for that purpoſe as he was feeding his Sheep. The *Inca*, who wou'd not believe any thing of this Story, ſent him away with a good chiding to his Sheep again; however, three Months after the Rebellion broke out indeed, and a great many Provinces altogether threw off the *Inca*'s Yoke, and cut the Throats of the Governors. And as this was the firſt Revolt that ever happen'd in the Government, ſo 'tis very poſſible that the young Prince might foretel it without a Viſion from Heaven, eſpecially if he was any way concern'd in the procuring of it, which is as likely as that he ſhou'd live the Life of a Shepherd contentedly. The *Inca* being much ſurpriz'd, for his part fled away from *Cuſco*, with a deſign to ſecure himſelf in ſome of the remoter Provinces; and the Inhabitants were going to follow his example, but that they thought of the Prince, and ſent for him to come and ſtand by them. The Prince gather'd what Forces he cou'd, and in the firſt place went after his Father, and repreſented to him his Crime and Cowardice in leaving the Houſe and Holies of the Sun, with all the conſecrated Virgins, expos'd to the fury of the Enemies; and then bidding all thoſe follow him, who preferr'd an honourable Death before a Life of Ignominy and Shame, he carried off with him at leaſt 4000 of the Royal Stock, the reſt retiring with the *Inca*. After this, ſome other Forces join'd him out of the Provinces, ſo that a conſiderable Army was made up at laſt, with which he advanc'd towards the Enemy, met, gave them Battel, and after a tedious and bloody conflict entirely defeated them. Neither is this Battel any clear proof at all that the Prince was not concern'd in the Riſing, for People may be (by Orders) teaz'd and oppreſs'd into a Revolt, as well as ſolicited and allur'd to it by Gold; but whatſoever was the cauſe of it, 'tis certain that 'twas a good opportunity for an active Prince to recommend himſelf to the Peoples favour; and 'tis certain alſo, that whether there was deſign or no, it had this effect. For he dealt ſo mildly with the Rebels, and us'd ſo many ſoft Arts in treating them after he had beaten them, that he made them abſolutely his own. But the Body of the People, in whoſe Cauſe he fought, did even adore him; he was receiv'd into *Cuſco* with Triumphs hardly ever known, and as they had given him the Name of *Viracocha* before, upon the account of his Viſion, ſo that now ſeem'd almoſt too little for him. After all theſe Honours receiv'd, he went to viſit his Father in his retirement, who was now grown very melancholly, ſeeing how things were likely to go. In ſhort, the Father and Son conferr'd ſome time in private; the iſſue of which was, that the Prince came out and told the Nobility that the *Inca* wou'd return no more to *Cuſco*; and they taking it for granted that he ſpoke the truth, concluded that a Palace of Pleaſures ſhou'd be built for him in that place, to ſpend the reſt of his Days in.

Temple built by *Viracocha*.

Viracocha upon this return'd to *Cuſco*, and put on the Imperial Diadem himſelf, being receiv'd and acknowledg'd for *Inca Capa*, This was the end of the Viſion; in remembrance of which, (ſo lucky a one as 'twas) the new *Inca* built a ſtately Temple, but without a Roof or any Covering, becauſe the Viſion was ſeen in the open air, and he made it his buſineſs to imitate the place where it appear'd as much as was poſſible. This Building the *Spaniards* pull'd down (as they did abundance of other noble ones in ſeveral places) to ſearch for Treaſure under it; for Gold being ſo ſcarce in this poor Country, they were forc'd to demoliſh Temples and Palaces, or any thing to come at a little of it.

Boundaries of the Empire.

Great Water-Courſes cut through the Mountains.

This Prince began and continued to be a Conqueror all his time; he ſubjected the Nations Eaſtward to the *Sierre*, and Southward to the fartheſt Province of *Charcas*, 200 Leagues from *Cuſco*. So that the Sea and the Hills on each hand, and Southwards the Deſarts betwixt them and *Chili*, bounded the Empire; neither did he do all there, but turn'd and went Northward, where he impos'd his Laws upon a great many Nations more. But he did one thing which was of more fame than all his Wars, and that was the cutting great Water-channels, which might be rank'd amongſt the Wonders of the World, conſidering the Rocks and Cliffs they were forced to break through, and that without any Iron Tools. There was one that went betwixt *Parcu* and *Picuy* to *Ricanas*, which was 120 Leagues in length, and 12 Foot broad; and another was cut in the Weſtern Parts of the Empire, that run full 150 Leagues even from the high *Sierras* to the *Quechuas*. The *Spaniards* ſuffer'd all theſe uſeful and coſtly Works to run to ruine and decay, as they have alſo above one third part of them that were to water the Corn-grounds.

Bodies of the *Inca's* Embalm'd.

The *Inca Garcilaſſo Divega* ſays, that in *A. D.* 1560. he ſaw the Body of this *Viracocha* with that of *Tapac Yupanqui*, and *Huayna Capac*; alſo the Bodies of *Mama Runtu*, Wife to *Viracocha*, and *Mama Oclo*, Mother to *Huayna Capac*, at *Cuſco*, which had then the very hair of their Eye-lids and Eye-brows continuing entire and unblemiſh'd, and all their Robes and Diadems as while they liv'd. They were ſet with their hands a-croſs their Breaſts as the *Indians* uſe to do, their Eyes turn'd downwards, as if looking upon the ground; and their whole fleſh and dreſs appear'd ſo lively and fine, that they made a figure not at all like dead Corps, but rather like ſo many living Princes ſhining in their Royal Ornaments. The main difference (next to the want of ſpeech and motion) was the exceeding lightneſs of thoſe Bodies, which was tried by the weighing of them; but this ſecret of Embalming was a thing which the *Spaniards* cou'd never by any means whatſoever get out of the *Peruvians*. As they were carried along the Streets, the *Indians* were paſſionate to the laſt degree, they kneel'd down before them, and pour'd out ſighs and tears in abundance; in this manner reverencing their earthly Suns, tho' under the total Eclipſe of Death.

Pachacutec the 10th *Inca*.

Strong Towns in the Province *Sauſa*.

Publick Triumphs.

This *Inca* left his Throne to his Son *Pachacutec*, who, by ſome of the *Spaniſh* Authors, is confounded with his Father, and the Acts of both wrapt up confuſedly together, or that attributed to one which was paſt all doubt done by the other. This Prince enlarged the Empire 60 Leagues N. & S. in one Expedition, and reform'd the People to the Religion of the *Inca's*; particularly the Province of *Sauſa*, corruptly called by the *Spaniards Xauxa*, which was inhabited with a ſtout and valiant People that had their Towns more like Fortreſſes than any thing elſe, but they had fix'd upon a ſordid Creature a Dog for the chief Object of their Worſhip, and upon the ſame ſcore made Dogs-fleſh their chiefeſt dainty. But *Pachatutec* was no leſs intent upon the improving his Country, than the augmenting it by Conqueſts, and therefore buſied himſelf in making Laws, building Temples, Palaces, Store-houſes, and Fortreſſes to defend his Frontiers. After this manner he ſpent ſome Years doing good to his Subjects and Empire, and then ſpurr'd on with the inſatiable deſire of more Victories and Glory, he went out to the making of new Conqueſts, which he did with an Army larger than moſt that had been ſeen, and took in ſeveral Nations in that Expedition. The Victories gotten at this time were ſo great, that the Triumphs and Rejoycings in *Cuſco* upon that ſcore laſted a Month; and there were Solemnities, which till that time had hardly been known. There were of all the ſeveral conquer'd Nations there to grace the Ceremony, and bear a part in the Entertainment; they all appear'd in their ſeveral different Habits, and with the Martial Muſick us'd in their reſpective Countries; they were divided into ſo many diſtinct Bands and Troops, which march'd in order, after the Inca and the Generals, to the Temple of the Sun; all the reſt put off their Shoes when they came to the Boundaries of the Temple, only the Inca himſelf kept his on till he came to the very door, where he made his feet bare, and then went in and gave thanks for the mighty Victories he had gain'd. After this Religious Service, the whole Train return'd to the great Market-place, where they began the other Entertainments of Feaſting, Singing and Dancing, which held for that ſpace of time before-mention'd.

Valleys conquer'd.

And this Expedition was follow'd with another into the Valleys of *Piſco*; yea, and *Chincha*, which proved of as great conſequence for the Enlargement of his Territories. Theſe Countries, for the ſpace of 500 Leagues together, worſhipp'd the Sea, and particularly the Whale, the biggeſt Monſter of the ſame.

Other Valleys ſubdu'd.

Pachacamac worſhipp'd.

Rites different from the *Peruvian*.

After this he ſubdued the Valleys of *Runa*, *Huarcu*, *Malla* and *Chilca*, which were all ſubject to one Prince. From hence he paſs'd to the Valleys of *Pachacamac*, *Rimac*, *Cancay* and *Huaman*, at which time all the Country about *Lima* was taken in, which was alſo all of it under the Dominion of one King. *Rimac* the *Spaniards* now call *Lima*, very corruptly and abuſively, as they do a great many other places and things beſides; and they gave it the Name of the City of *Kings*, becauſe they founded it on the day of the *Epiphany*. In this Country the *Inca* found a Temple dedicated to the Inviſible *Pachacamac*, who was ſerv'd here with a Worſhip much more inhumane and cruel than any known and practis'd in all the Parts of *Peru*, for here were Men, Women and Children, offer'd in Sacrifice; and 'twas no uncommon thing to ſee that more valuable Blood mix'd with the Blood of Brute Animals at their Altars. But they differ'd from the Rites of the Religion of the *Inca* their Conqueror, not only in the point of Humane Sacrifices, (of which there were none publick at leaſt in his Dominions) but alſo in this, that they had an Image to repreſent *Pachacamac* to their Sences, which the others alſo proteſted againſt. This Image both the King and the Prieſt reverenc'd ſo highly, that when they enter'd the Temple they always went backwards, not daring to preſume to caſt an Eye upon him. Beſides this, they had alſo an Oracle (as they call'd it) from which they had (as they gave out) the Knowledge of things to come.

Treaty of that King and the *Inca*.

Now when the *Inca* brought his Army into this Country, he ſent to *Cuyſmancu*, the King of it, to demand Subjection in the Sun's Name, whoſe Kinſman and Deputy he was: But *Cuyſmancu* refus'd to yield upon theſe Summons, and ſent word that his *Pachacamac* was greater than the Sun, being the Maker of him and all other Beings, and that 'twas to this Deity that he paid all his Religious Devoirs. The *Inca* replied again, That he and his Country did worſhip *Pachacamac* as well as he, but they did it without Temple or Sacrifice, honouring him only with a Mental Service, becauſe they knew him not, nor what he wou'd be pleas'd with: And whereas they were afraid to look upon the Image of *Pachacamac*, he and his People dreaded even to pronounce his awful Name.

Conditions of Peace.

In ſhort, after many Parleys and Debates, Peace was concluded upon theſe terms, That they ſhou'd worſhip the Sun as the *Inca* did, and make him a ſeparate Temple like that of *Pachacamac*. That they ſhou'd take away all their Idols, and worſhip the Creator of the World without an Image or a Statue. That they ſhou'd leave off their ſhedding Humane Blood, and acknowledging the *Inca's* Sovereignty, ſhou'd obey his Laws. And thus *Cuyſmancu* was ſtill to remain in his Kingdom, only paying the impos'd Tribute, or doing the appointed Homage to his Sovereign.

But this reſtleſs Prince **Pachacutor** cou'd not ſit down quiet with all theſe great Conqueſts, but muſt ſtill go on to promote the Religion of the Sun amongſt his Neighbours: His next and laſt Expedition was to *Truxillo*, as 'tis now call'd, and the Valleys of *Parmunca*, *Hualmi*, *Huarapu*, and ſome others. But here he met with a certain ſtubborn Prince that wou'd not hear of any new Deity, nor be obliged to worſhip the Sun in Complement to the *Inca*, tho' he was not ſo fortunate as to maintain his Reſolutions handſomly by the Sword, but loſt both his Liberty, Country and Religion together, in one great Battel.

And now **Pachacutec** turn'd to Domeſtick Affairs again, founding Towns, Temples, Granaries, Schools, in greater numbers; enlarging the City of *Cuſco* it ſelf, and obliging all the *Curaca's* to learn the *Cuſco* Dialect. The whole that he added to the Empire was at leaſt 130 Leagues, N. & S. and in breadth from the Hills to the Sea about 60 or 70; but he ſat upon the Throne not a little while to do all this Work, not much leſs than 50 Years, which was alſo about as much as his Father before him had kept it.

Tupanqui the 10th *Inca*.

This Prince dying, his Son *Tupanqui* ſucceeded him, who having ſpent ſome time in Surveying his large Empire, and not finding it large enough to ſatisfie his Ambition, reſolv'd upon the deſign of making it yet greater. His firſt Army was employ'd to reduce the Country on the other ſide the ridge of Mountains that lie Eaſtward from *Cuſco*, and becauſe there was paſſage along thitherwards by certain Rivers that have their Riſe from thoſe Mountains, therefore he ſent his Men to cut a great deal of that ſtuff which the *Spaniards* call *Higuera*, to make Boats; in which Work they ſpent two Years, and then proceeded in the Expedition.

Boats made.

The River the Army enter'd by was call'd *Amammayu*, which is divided in thoſe high Mountains into 5 others; and the People they reduc'd at that time were the *Chauchu*, which liv'd on the Banks of the River, a painted feather'd ſort of *Barbarians*, and little acquainted with any of thoſe Laws or Cuſtoms that the *Inca* came to teach them. The Tribute impos'd upon them was ſo many Popenjays and Monkeys, ſo much Wax and Honey, which they continued faithfully to pay to the time of the Empires fate.

Tribute of Monkeys.

Country of *Muſu*.

They proceeded from hence till they came into the Country of *Muſu*, 200 Leagues from *Cuſco*. Theſe People had heard too much of the *Inca*'s Fame and Power to pretend to cope with him, and therefore were very willing to have his Friendſhip, but they did not care to acknowledge Subjection, and become his Vaſſals: However, the *Inca* admitted them upon theſe terms, and ſent a Colony of *Peruvians*, who planted amongſt them, as alſo the *Muſuans* ſent an Embaſſy to *Cuſco* to bring from thence the Rites and Ceremonies of the *Inca's* Religion.

Chiribuana an unprofitable Country.

The deſign upon the great Province *Chiribuana*, which is upon the Mountains Eaſtward from the Province of *Charcas*, had worſe Succeſs. The Country indeed was enough to diſcourage an Army, being all Marſhes, Lakes, Bogs, and wild mountainous Tracts, every where unfit for Husbandy and Cultivation; and the People were a ſort of Animals as rude and barbarous as one cou'd well ſuppoſe to be bred in ſuch horrid places. They eat the Fleſh, and drink the Blood of Humane Creatures with eager delight, and for this purpoſe often ravag'd the Neighbour Provinces, that they might have their fill; but their Cuſtom was, when they had eaten the Fleſh of any that died amongſt themſelves, (for they made no ſcruple of doing ſo likewiſe) to lay all the Bones together, and mourn over them awhile, and then bury them. They made no diſtinction in Womankind, but us'd all promiſcuouſly, lying with Mothers, Siſters or Daughters, according as the brutiſh Appetite hurry'd them. The *Inca* was the more deſirous to reduce this Country, becauſe the Inhabitants were ſuch arrant Beaſts as they were, and needed ſo much more than all the reſt of the Nations known in thoſe Parts to be Civiliz'd and brought into good Order: But however, the charitable Deſign did not proſper, and an Army of 10000 Men were fatigu'd there two whole Years to no purpoſe, being forc'd to return without making their Lord the *Inca* Maſter of the Country.

Inca's Forces repuls'd.

The *Spaniards* alſo afterwards, in *A. D.* 1572. made the like attempt with the like ſucceſs, and the Vice Roy was forc'd to return without any other Satisfaction than only that of having ſeen the *Chiribuanas*, who follow'd him, and threaten'd to eat him if they cou'd catch him.

Conqueſt of *Chili*.

This Project failing, the *Inca* reſolv'd to try at the Conqueſt of the noble Country of *Chili*, and ſent out Spies to diſcover it, and the difficulties of the ways. Theſe Men found 80 Leagues of Deſart from *Atacama* to *Copayapu*, which is a little Province well Peopled, and were forc'd as they went to make Marks by the way, that they might find it at their return; from *Copayapu* to *Coquimpu*, which is 80 Leagues more, they found it all deſtitute of Inhabitants. The *Inca*, having gotten ſome account of the Country, ſent out an Army of 10000 Men well furniſh'd, and quickly after them 10000 more; which ſudden pouring in of Forces ſo daunted the *Copayapuans*, that tho' they refus'd at firſt to obey the *Inca's* Summons, yet they afterwards bethought themſelves, and came to a Compoſition. This good Succeſs made the *Inca* ſend another 10000 Men to purſue the Conqueſt yet farther, and they march'd (tho' with infinite toil and difficulty) as far as the Province of *Coquimpu*, which they ſubdued alſo; and ſo all the Nations till you come to the Valley of *Chili*, from whence that Kingdom takes the Name.

River *Maulli*.

After this they went farther Southward ſtill, about 50 Leagues, and croſs'd the River of *Maulli* with 20000 Men; here they met with a moſt valiant and hardy ſort of Enemies, and ſuch as wou'd be by no means perſwaded to do as the reſt had done, that is, lay down their Arms, and declare themſelves Vaſſals to the *Inca*. In ſhort, they diſputed his Sovereignty with ſo much warmth and fierceneſs, that they kill'd above half his Army, and let him know by that, that the Conqueſt of their Country wou'd coſt him dear. The Battel was renew'd three days ſucceſſively, and the bigger part of both ſides being kill'd, they then ſat down to reſt, expecting what wou'd be attempted farther; but neither Party being much diſpos'd to a ſecond Action, they withdraw as it were by conſent, the *Peruvians* being ſatisfied to have gone thus far.

Valiant People.

Southern Boundary.

The Southern Boundary of the Empire now was the River *Maulli*, it being extended above 260 Leagues beyond *Atacama*, from whence the Spies firſt ſet out. All this Work was 6 Years in hand, and the *Inca* had upon this Occaſion an Army of above 50000 Men in *Chili*.

Beſides this Southern addition to his Territories, he enlarg'd them to the Northward in all at leaſt 1000 Leagues in extent. He alſo took a great deal of care to adorn and improve his Country; and beſides many other publick Edifices, ſome for Pomp and Majeſty, and others for Religious and Civil Uſes, he carry'd on the Building of the wonderful Fortreſs of *Cuſco*, for which his Father had laid in a great ſtock of Materials.

Fortreſs of *Cuſco*.

Tupac Tupanqui the 11th *Inca*.

To him ſucceeded the Prince *Tupac Tupanqui* his Son, who having beſtow'd himſelf ſome time at home, prepar'd to follow the Example of his Forefathers. For 'tis to be noted, that the *Inca's* being mounted the Throne, did always firſt ſolemnize their Predeceſſors Obſequies, next to that their own Coronation; and then before they went upon any Foreign Enterprizes, ſpent ſome time, Slingers.

Worſhippers of Snakes.

more or leſs in viſiting their own Country. Being at leiſure for War, he firſt conquer'd the *Chacapuyans*, a fierce and valiant People, their Arms moſtly Slings, and their Deity a Snake, and the Bird call'd *Cuntur*; this Province lies Eaſtward from *Caſſamarca*. Next to theſe he pierc'd into the Country of the *Huacrachucu*, a People as untoward and crabbed as their Name is: Theſe worſhipp'd Snakes as well as the former, and kept them always pictur'd in their Temples and Houſes; on their Heads they wore a roul of black Wooll, and inſtead of a Feather, the Spike of a Deers Horn. The *Inca* loſt a great many Men by medling with theſe untractable Fellows, and tho' by Policy and Perſwaſion he did reduce them at laſt, yet it coſt him time and pains, for he was forc'd to ſend for another Army out of *Peru*, as well to keep them in awe, as to work at draining their Lands for them, that they might be fit for Plowing and Sowing.

Pretexts of the *Inca's*.

Theſe Princes, we may note by the way, when they enter'd a Country that they intended ſhou'd be their own, always began firſt to try gentle Methods; they inſinuated that they did not come to take away their Country from them, and make themſelves Maſters of their Wealth and Poſſeſſions, but to civilize them, and do them good, to teach them the Laws of the Sun, and aboliſh all their barbarous Rites and Cuſtoms. With ſuch pretences as theſe did they palliate their greedy Ambition and Deſires of Sovereignty, which is no new Story in the World; and it has been often enough ſeen, that Religion has been made uſe of as an Engine to move and turn about a Secular Intereſt.

Chachapuya.

The next Province the *Inca* attempted, notwithſtanding all his fine words and pretenſions, gave him a very rough reception; and were ſo far from hearkning to a Propoſal of being civiliz'd, that they exerted the laſt degree of their barbarity and fierceneſs to entertain him that made it. This Country was call'd *Chachapuya*, and was at leaſt 50 Leagues long, and 20 broad; the Hills were ſteep and craggy, the Ways very bad, and in many places unpaſſable, and the *Inca* loſt abundance of his Men. But at laſt he brought all into ſubjection, and whether they wou'd or no Eſtabliſhed his Laws amongſt them.

Huancapampa.

Wide Religion.

From hence he march'd to *Huancapampa*, a great Country, but conſiſting of ſeveral Nations divided, and at Wars amongſt themſelves; whom therefore he had a very fair opportunity of conquering all together. Theſe People were the moſt licentious in their Religion and Worſhip of any in that part of the World; for whereas moſt others had ſome particular Object that they paid more religious Honour and Reverence to than the reſt, theſe worſhipp'd every Man what he lik'd beſt, one a Beaſt, and another a Bird, and a third Man a Plant; ſo that their Deities, in ſhort, were whatſoever the Earth, or any Animals upon it, produc'd.

War for Women.

And then as to their Wars, they fought one with another not for Wealth nor Glory, nor greatneſs of Command, but for Women; upon whoſe account, a great many other Men in the World go together by the Ears as well as they. The *Inca* having ſubdu'd them, gave them Inſtructors to teach them the Arts of Husbandry, building Houſes, and making Clothes; he eſtabliſh'd Houſes of Prieſts and Religious Virgins amongſt them, and made that Province in a little time one of the beſt and moſt flouriſhing in his Empire.

Huanucu.

After he had well ſecur'd this, he went and reduc'd three Provinces more, but ſuch as put him to no manner of trouble about the civilizing and regulating of them, the Inhabitants being a People of excellent Policy and Government, and living in as good Order as the Subjects of the *Inca* themſelves cou'd pretend to: Theſe were the Provinces of *Caſſa*, *Ayahuaca*, and *Callua*, which deſerve particular mention for a Politeneſs they had in the midſt of all the brutiſh and barbarous Nations round about them. The Province of *Huanucu*, that lies Northward from *Cuſco*, was the next that follow'd the fate of the former; 'twas a rich and fertile Country, and the *Inca* endeavour'd to render it a very Religious one, building therein a Temple for the Sun, and a Houſe for the Sacred Virgins, with at leaſt 20000 *Indians* to perform the Offices of both thoſe Manſions.

Cannari.

The like he did alſo in *Cannari*, a neighbouring Province; the Inhabitants of which, before the *Inca* came amongſt them, worſhipp'd the Moon, but were then oblig'd to quit her Service for that of the Sun, and adore what their Maſter the *Inca* did.

Quillacu.

Lowſe Tribute.

The People of *Quillacu*, who were the next that put on the *Inca's* Yoke, were abſolutely the moſt miſerable and ſordid in the whole Empire; it was a piece of charity and kindneſs to conquer them, that they might be brought to ſomething of Humanity in their Manners and Converſation. Beſides the natural Poverty and Barenneſs of their Country, they had nothing of Art or Induſtry, or ſo much as diſpoſition towards any thing that might improve and render them happy. They were ſlothful and naſty to ſuch a degree, that the *Inca* impos'd a Tribute of Lice upon them, that they might be under a ſort of neceſſity of keeping themſelves clean. In a word, there was nothing to be found that cou'd tempt a Prince to come and make a Conqueſt of this Country, having neither Water, Air nor Land, that was any way good or agreeable.

Other Provinces were capable of ſome Improvement, and the *Inca* adorn'd them with noble Buildings, as he did in the neighbouring one of *Cannari* lately mention'd, where the Temple of the Sun, and his own Royal Houſe, had all the extravagancy of Riches in the make of them that cou'd well be imagin'd almoſt; but as for *Quillacu*, the *Inca* did not think it worth while to do any thing of that nature there. 'Tis to be ſuppos'd he taught the ſtupid Inhabitants as much of his Religion as they cou'd learn, but ſeeing them fit for little elſe, he ſet them to catch Lice, and ſo pay Tribute that way, they being ſo poor in every thing beſides, that no other was to be expected of them.

Conqueſt of the Kingdom of *Quito*.

People of *Quillacena*.

The *Inca's* next Expedition was an Introductory ſtep to his Conqueſt of the rich and pleaſant Kingdom of *Quito*, for he took in ſeveral Provinces that lay upon the Borders of that Country: And having thus open'd his way pretty well, he began the attempt upon *Quito* it ſelf, with an Army of 40000 Men, and ſpent two Years there without making any great progreſs in his Deſign. Upon this account, becauſe he ſaw the War wou'd be long and tedious, and his preſence was neceſſary at home, he therefore went back to *Cuſco*, and left his Son the Prince *Huayna Capac* to compleat the Reduction of the Country. And this, according to the *Inca's* preſage, prov'd to be a tedious Work, for the Prince ſpent three more before he cou'd do it; but then the King of *Quito* dying, the People were the more eaſily perſwaded to ſubmit themſelves to a new Sovereign. And thus was that noble Country, at leaſt 70 Leagues long, and 30 broad, made a Province of the mighty Empire of the *Inca's*. But the young Prince puſh'd on his fortune farther ſtill, and made the Country of *Quillacana*, with ſeveral other barbarous Nations, ſtoop to his Fathers Yoke at that time. All which Conqueſts made, he return'd to *Cuſco* with a great deal of Triumph, taking care at the ſame time about the refining theſe barbarous People a little from their dregs. And the truth of it is, they were ſome of them almoſt as great Objects of compaſſion as thoſe of *Quillacu*. The People of *Quillacena* were as near akin to them in their naſty Qualities as they were in their Names, they devour'd any thing that came to hand, the worſt of Carrion was eaten by them, and they themſelves eaten up by Lice; the Province had the Name of *Quillacena*, that is, *Iron-noſe Province*, from a cuſtom theſe Barbarians had of boring their Noſtrils, and wearing Iron, or any thing they fancied there.

The *Inca Yupanqui* having ſerv'd himſelf to this good purpoſe by his Wars, now gave himſelf up, for the remainder of his Days, to all the ſweets and pleaſures of Peace. He mightily enrich'd and improv'd his Country, and particularly carry'd on the building of the Fortreſs of *Cuſco* with a great deal of vigour, employing conſtantly 20000 Men at the common work of it, beſides what were taken up upon extraordinary Services.

The *Inca's* Cuſtom of making Speeches when they die.

This Prince, at his Death, kept up the Cuſtom of his Predeceſſors, which was to call all their Children and Nobles about them, and make a ſolemn Diſcourſe to them, which was in the nature of a Laſt Will and Teſtament; eſpecially not forgetting to intimate, that they are call'd away from this World by their Father the Sun, to reſt in his bright Region above, and that from thence their Succeſſors are to expect an aſſiſtance ſutable to their neceſſities. By theſe ways the *Inca's* kept up the Opinion of their Divine Extraction in the Minds of all about them, and conſequently confirm'd their Families in that Sovereignty and Power which this Opinion at firſt gave them.

Huayna Capac the 12th *Inca*.

Huayna Capac, the eldeſt Son of this Monarch, ſucceeded after his Death; and now the Empire being at its full heighth of Glory and Greatneſs under this Prince, his Life and Actions will require ſomething more of a particular account. This Prince was married to his eldeſt Siſter in his Fathers life-time, but having no Children by her, he was married afterwards to his ſecond Siſter, the former being yet alive; and 'twas eſtabliſh'd by a particular Decree of the *Inca* and his Council, that both the Siſters ſhou'd be lawful Wives and

Coya's,

Strange Chain of Gold.

Coya's, and not reputed as Concubines. But 'twas not only in this point, but almoſt every reſpect, that *Huyana Capac* appear'd to be, and to do ſomething extraordinary above his Predeceſſors: At the birth of his firſt Son, beſides all the extravagancies of Feaſting, and thoſe things which are uſual upon ſuch Occaſions, he ſet himſelf to accompliſh ſome very great Projects, ſuch as the whole World, that heard of them, ſhould wonder at. One of them, particularly, was the making of that famous Golden Chain, which our Author *Garcilaſſo Dilavega* ſays, an old *Inca* (one of his Mothers Brothers) affirm'd was the length of the great Street of *Cuſco*, which is 700 foot, and every link was as big as a Man's Wriſt. Another Author (*Auguſtine de Zarate*) gives it the Name of *Maroma*, that is, a great Cable, and from the report of ſome *Indians* living at that time, ſays that 'twas as much as 200 Men cou'd well lift from the ground. The *Spaniards* made old ſearching and enquiring after this Chain, but were never ſo happy as to find it, being laid up ſafe in ſome dark Repoſitory or other, amongſt thoſe other rarities which the *Peruvians* were reſolv'd ſhou'd never fall into the hands of the *Spaniards*. This Chain was made for the ſolemn Dance in the Ring, in which they held hand by hand, and ſo danc'd round a matter of 300 together; and the deſign of it was, that all holding by this Chain might dance in the Ring, according to the Cuſtom, without joining hands. The young Prince that was born was call'd *Huaſca*, in Memory of this great Chain made to honour his birth; for the word *Huaſca* ſignifying a Rope, and they having no diſtinct word for a Chain in their Language, his Father thought fit to give him that Name. Yet it muſt be confeſs'd, that 'twas a very ſcurvy one, and of as bad a ſound as any in the World; and one can't avoid concluding it very odd for a Man to have ſuch a Name, that he can never hear it mention'd at any time but it muſt lead him to think of ſo ugly a thing as the Gallows. However the Prince was call'd *Huaſca* for two Years, and then to avoid that ill ſound of the Rope, his Father order'd an *r* to be added to it, and made *Huaſcar* of it; ſo that both the ends were obtain'd, the Chain preſerv'd, and the Rope loſt.

Odd Name for a Prince.

Way of breeding the Inca's Children.

The *Inca Huayna Capac* made as mighty doings at the Feaſt of his Sons weaning and polling as he did at his birth; for 'tis to be noted, that when the young Princes were two Years old, they were taken from the Breaſt, (and not till then) and their hair was cut off with a ſharp flint Razor, the *Inca* himſelf beginning that Ceremony. At the ſame time alſo their Names were finally determin'd, and then it was that the young *Inca* had that decent alteration made in his Name.

The Nobility and the Commonalty follow'd the ſame method in treating their Children, believing the example of the *Inca* to be moſt perfect, and every way worthy of Imitation; neither did this paſs for preſumption, or ſaucy aſpiring in them, but was look'd upon as a piece of reſpect, and an honouring of their Prince. And upon the whole, the *Inca*'s examples in thoſe matters did deſerve Imitation, for the Royal Babes were nurs'd and brought up (tho' not without a ſtate and pomp ſutable to their Dignity) yet without any thing of that over-niceneſs and delicacy which only tends to render them ſoft and effeminate, and very often vitiates a good Conſtitution, or hinders it from exerting it ſelf as otherwiſe it wou'd.

The Commons care in breeding their Children.

The Nobles and the People took the ſame courſe in the Education of their Children likewiſe; as ſoon as they were born they waſh'd them all over in cold Water, and then wrapt them in Blankets. They gave them Suck but three times a day, let them cry as long or as much as they wou'd; for to do more than this, they ſaid would be to breed them up to Gluttony.

But to return to the *Inca*: When the Ceremony of weaning his Son was perform'd, he march'd away with an Army of 40000 Men into the Kingdom of *Quito* to look after his new Conqueſts there, and in this Expedition he took for a Concubine the Daughter of the laſt King of that Country, by whom he had (amongſt ſeveral other Children) *Atabalipa*, who afterwards got into the Imperial Throne, and ſat there when the *Spaniards* enter'd the Country. He carried his Arms at this time much farther too, conquering the Valleys of *Cacma*, *Cintu*, *Tucmi*, and ſeveral others; together with the Country of *Tumpiz*, where the People worſhipp'd Lions and Tigers, and offer'd the Hearts and Blood of Men in Sacrifice to them. Theſe People were very vicious many ways, and particularly horribly addicted to Sodomy; for the preventing of which, the *Inca* took ſome precautions, and eſtabliſh'd the Rites of his own Religion amongſt them.

Pulling out of Teeth.

From theſe he paſs'd to the Province *Huancavilca*, where there had been a ſort of a mutinous Riſing, and all the Teachers and Inſtructors that the old Inca *Iupanqui* had ſent to bring them to the practiſe of his Laws, and of good Manners, had been Sacrific'd in that popular ferment. And when the Criminal *Curaca's* and Governors, that ſhou'd have hinder'd or puniſh'd that Outrage, appear'd before him, and expected every Man to hear the Sentence of Death, the Inca choſe rather to ſurprize them with an unexpected act of Mercy and Clemency, giving all the reſt their Pardons, and adjudging one only, and that by Lott too, for the Honour of Juſtice, to be made an Example in that caſe. But tho' he did not take the Lives of theſe Men, he thought fit to mark them, as Perſons that had been guilty of very great Treachery and breach of Faith, and for that purpoſe he made every Man of them loſe four of his Teeth, two out of the upper, and as many out of the under Jaw; and this puniſhment he decreed ſhou'd not be Perſonal only, but deſcend to their Poſterity after them. This gentleneſs (where all look'd for the ſevereſt torments imaginable) affected the whole Country in ſuch a manner, that the common People wou'd needs bear a part in the puniſhment inflicted upon the Grandees; the Inca did not require it of them, but they wou'd thruſt themſelves upon it, and ſo all, both Men and Women, loſt four of their Teeth apiece, and made their Sons and Daughters ſubmit to the ſame too. This paſſage the Inca *Garcilaſſo* tells us he had from one of the Natives of that Country, who had loſt ſome Teeth upon that ſcore.

Puna Iſland conquer'd.

Policy of the Rebels.

The Inca after this began to make his Conqueſts upon the Sea as well as the Land, and took in the Iſland of *Puna*, which is 12 Leagues in compaſs; which he had not done long, but a Rebellion amongſt the *Chacapuya's* call'd him into thoſe Parts. When he came with a ſtrong formidable Army, the hearts of the Rebels began to faint, and they who before inſulted and abus'd his Meſſengers, now ſhook for fear as his revenging power approach'd them. And the Inca indeed had form'd a Deſign of exterminating and rooting them all out, but they diverted that Storm by a clever policy of their own, and pacified the Inca before he was aware, and contrary to his intentions. This Prince had the Character of a Man of extraordinary good Nature, very Merciful, and gentle and eaſie of Acceſs. Particularly, he was infinitely Complaiſant and Civil to all the fair Sex, gave them always, when he ſpoke to them, the familiar and gentle compellations of Mother, Siſter, or Daughter, according to their Ages; and which was ſtill greater than all, he never denied a Woman any Sute or Requeſt that ſhe made him.

Women plead the Rebels Pardon.

The ground enclos'd where the Inca forgave the Rebels.

This Character of the Inca's good Temper being (as it may well be ſudpos'd to be) pretty generally known, and the Rebels believing a Female Advocate wou'd plead their Cauſe for them if it were not impoſſible to be had, they accordingly reſolv'd to try if by this Method they cou'd not appeaſe the high Indignation of their Prince, the effects of which wou'd otherwiſe very quickly lie heavy upon them. And the Perſon they made choice of for this purpoſe was a Lady that had been Miſtreſs to the Inca's Father, one well skill'd in the Arts of Inſinuation and Addreſs, and that knew how to ſooth up a Prince, and work him into good humour. But becauſe the Oratory of a ſingle Perſon might poſſibly fail, and a whole Chorus of Women, acting their ſeveral Parts of the Paſſion, might do that which one alone cou'd not, therefore ſhe went forth attended with a great number of Female Supplicants, and preſented her ſelf with her Train before the Inca. Neither cou'd that Prince withſtand the Aſſault they made upon him, but found himſelf quickly charm'd out of all his angry and revengeful thoughts, into an indulgent, merciful, forgiving humour. For whilſt the Speaker, at the Head of this fair Troop, was making an eloquent and moving Speech on the behalf of the poor Rebels, the others broke out into varieties of paſſionate actions and geſtures; they fell into the moſt humble poſtures imaginable, ſent forth the moſt melting affecting cries, they wept and ſigh'd, till the Inca was no longer able to contain himſelf, but came off from his Seat, and took up the charming Oratreſs that lay at his Feet, and granted her all the Favours ſhe deſired. This was ſo welcom a grace to the *Chacapuyans*, that they immediately conſecrated the Place where the Inca granted their Pardon, and made holy Ground of it. And that no foot of Man or Beaſt might tread there for the future, to pollute and profane it, they encloſ'd it with three Walls, the innermoſt of which was of poliſh'd Stone; but the *Spaniards*, when they came, believing there was ſome Treaſure hid in this place, entirely deſtroy'd theſe Walls, and laid open the hallow'd Ground again.

Vaſtly great Emerauld.

The Inca having ſet things in good order in this Province, went into the Country of *Manta*, in which it is that the Port call'd by the *Spaniards Puerto Vicio* ſtands. The People here worſhipp'd the Sea and Fiſhes, Lions, Tigers, and great Snakes, but more particularly a certain precious Stone, an Emerauld it was, and reported to be little leſs than an Oſtriches Egg. This Jewel was always ſhewn publickly at their Solemn Feaſts, and the *Indians* came from all Parts about to ſee and adore it, and make Offerings of other Emeraulds to it; for this the Prieſts told them was the moſt acceptable of all they could make. But the *Indians* were not alone in this their Devotion to the Emerauld, for upon the Conqueſt of *Peru*, the *Spaniards* hearing of the Fame of this Goddeſs, came to worſhip her alſo. But, alas! ſhe had left her Temple, and was gone before they came; and tho' they made a violent ſearch after her, yet ſhe cover'd up her Divinity ſo cloſe that they cou'd never find her. Perhaps ſhe was gone along with the great Gold Chain which *Huyana Capac* made, which ſlipp'd away after a very ſtrange manner too, and lay for ever inviſible, as was ſaid before.

Barbarous Cuſtoms.

The *Mantans* had ſeveral very odd Cuſtoms amongſt them, which the Inca (now become their Lord) obliged them to leave off, and take up others more humane and civil in the room of them. They flea'd all the Captives they took in War, and filling the Skins of them with Aſhes, they hung them up at their Temple-gates, and in all their Feaſting and Dancing-places. In their Marriages the Bridegrooms Kinſmen ~~and Friends~~ had always the firſt handſel of the Bride; but beſides this, the Men burnt in lewd and moſt unnatural Fires towards one another.

Together with theſe, the Inca ſubdued the *Apichiqui*, and ſeveral other Nations that lay upon the Coaſt, which were in ſome reſpects more brutiſh and barbarous than the *Mantans*. From theſe Countries he paſs'd to *Saramiſſu* and *Paſſau* under the Equinoctial, where he found a ſort of People ſo very ſavage and rude, that he thought 'twou'd be a reflection upon his Dignity to be call'd the Lord of ſuch ſorry Wretches as they were. They had neither Houſe nor Town, nor Temple, no Law, nor no Religion; they liv'd like Owls in hollow Trees, went ſtark naked, and had all their Women in common. Their faces were painted with four ſeveral ſorts of Colours, one quarter with one, and another with another; and this, with their black buſhy hair, made them ſuch Figures, that the Inca *Garcilaſſo* (who had ſeen them himſelf) ſays nothing Humane ever look'd like them. The Inca therefore left them to be their own Maſters, and turn'd away to quiet an Inſurrection amongſt the *Caranques*; theſe he puniſh'd ſeverely, cutting off the Heads of 2 or 3000 of them, tho' very much againſt his humour, which was all for Goodneſs and Mercy.

Severe Juſtice.

Inca's love to be call'd *the Lovers of the Poor.*

The Inca's, amongſt their many Glorious Titles, took delight in none more than that of *Lovers of the Poor*, and *Fathers and Defenders of their Vaſſals*; and this, to be ſure, they did not fail to recommend to their Succeſſors at Death, always putting them in Mind that they ought to preſerve that Title, and by the Juſtice, Clemency, and Eaſineſs of their Government, to ſhew that they deſerv'd to wear it. And therefore they never proceeded to any rigorous treatment of their Subjects, but when the higheſt neceſſity compell'd them to it, chuſing rather to endear themſelves to them by Indulgence and eaſie Forgiveneſs of their Crimes, than by ſevere and cruel Puniſhments to make themſelves fear'd. This Example of the Inca *Huayna Capac*'s ſeverity, was perhaps the only one of any conſequence known ever ſince the Foundation of the Empire, and 'tis plain that there was good reaſon for't; and the Inca very well knew, that a Government without ſome Puniſhments is as likely to be deſpis'd by the Subjects, as one that is all Rigour and Unmercifulneſs is to be hated and not endur'd. This great Prince having thus far enlarged his Empire, now laid aſide all thoughts of making any more Conqueſts, and employ'd his time in the ſetling and well-governing of what he had got. Not to mention the Temples, the Palaces, and other Publick Edifices which he rais'd, he accompliſh'd two Works which were of as great difficulty as they were of no uſe and ſervice to his Country: Theſe were the making of two Highways, each at leaſt 500 Leagues in length, the one within Land, croſs the Mountains and ragged Cliffs, and the other along by the Sea-ſide; both theſe run from *Cuſco* to *Quito*, and were deſign'd for the opening a more free and eaſie Communication between thoſe two great Cities, the Metropolis's of the Empire, in their reſpective places. That which was cut through the Mountains was almoſt ſuch another piece of Work as the ſtupendous Fortreſs of *Cuſco*, conſidering the heighths that were to be levell'd, and the deep and hollow places to be fill'd up, ſometimes of 15 or 20 times a Mans heighth, (as the Inca ſays) and all to be made ſmooth and even, ſo that Carriages might paſs along upon them, as they did. The Road to the Sea-ſide was 40 foot broad, with a high Cawſey, and Walls of each ſide to hold in the Way, and all this both in the Valleys and the Sands; ſo that travelling, which before was unpleaſant in many places, and it may be impracticable or dangerous in others, was now rendred very ſafe and eaſie in all places. It was hinted before, that when *Huayna Capac* conquer'd the Kingdom of *Quito*, he took the King's Daughter for one of his Royal Concubines, by whom he had, amongſt other Children, the unfortunate *Atabalipa*, who ſwayed the Imperial Scepter when the *Spaniards* came in here. This young Prince, by his noble Qualities, ſtrongly engaged his Fathers love and eſteem; and therefore tho' the Prince *Huaſcar* was the Heir, and to wear the Title of *Inca Capac* after himſelf, yet ſuch was his fondneſs of *Atabalipa*, that he reſolv'd to make him no leſs than a Sovereign too, and therefore did in his Life-time fix him in the Throne of *Quito*, making that rich Kingdom his Portion and Poſſeſſion; and becauſe he wou'd be ſure to have him ſit faſt and firm there, he gave him ſome of his beſt Captains, and a part of his Army, with this farther conceſſion too, That all that he cou'd conquer anew ſhou'd be added to his Kingdom of *Quito*. And the old Inca did all this with the free Conſent of his Son the Prince *Huaſcar*, ſo that *Atabalipa* ſat very eaſie upon his new Throne as long as his Father liv'd, tho' Matters prov'd (as we ſhall ſee in the courſe of the Story) far otherwiſe afterwards. The whole Empire and Emperor too enjoy'd a profound Peace and Tranquility, and all things went as well as cou'd be, when all of a ſudden thoſe bright and ſerene days were gone, and every body apprehended a black Cloud gathering over the Country, that threatned ſome fatal Storm. That which ſtruck them with theſe fearful apprehenſions was the ſight of ſome Ships upon the Coaſt, which were the *Spaniards* ſent out by *Nunnez de Balboa*, for the diſcovery of the South-Sea. This was in *A.D.* 1515. and whether before or after *Atabalipa* was made King of *Quito* is not very clear, nor much material; however 'tis certain, the Inca *Huayna Capac* liv'd eight Years after this diſmal Alarm, but never pretended to offer at any farther Conqueſts; he had no ſtomach to that, having once heard ſuch News as this was. But that which made the impreſſion the deeper and ſtronger, was an old Propheſie which they pretended to have amongſt them, which foretold, That when 12 Inca's had fill'd the Throne, the Line of the Sun ſhou'd ſtop there, and a ſtrange Nation ſhou'd come in and ſubdue the Empire to themſelves. Beſides this, ſome time before the *Spaniards* Ships were ſeen upon the Coaſt, there were ſeveral prodigious Appearances in all the Elements, and odd Changes of the common Courſe of Nature, which their Superſtition turn'd into Omens and Prognoſticks of ſome great Alterations in their Nation and Government. One was, that the Moon in a very clear Night had three Circles about her, the outermoſt of a bloudy colour, the middlemoſt black, and the innermoſt like ſmoke. Now this *Phenomenon*, a certain Diviner amongſt them thus expounded the ſignification of to the Inca: The redneſs of the outer Circle (ſays he) ſignifies the War and Bloodſhed that ſhall be in thy Country after thou art gone to reſt with thy Father the Sun; the blackneſs of the middle one denotes the Deſtruction of our Religion and Empire, that they ſhall diſſolve and vaniſh away as ſmoke; which (adds he) is clearly foreſeen by the inmoſt Circle that had the ſmoky Appearance. And this Interpretation was not his own fancy neither, (he told the Inca) but came from the Moon, the Mother of the Imperial Family. The Inca made him no other reply than this, That he dreamt theſe Fooleries the Night before, and then came and told him his Mother the Moon had ſent him that Intelligence. However, tho' he ſeem'd to deſpiſe this Fellows predictions, he was deeply concern'd at what he had ſaid, and therefore made Applications by Sacrifices and Offerings to his Father the Sun, in hopes he wou'd be more favourable to him, and divert this Storm; that is, make his Mother the Moon a Liar and a falſe Propheteſs. This great Monarch *Huayna Capac* died at *Quito*, ordering his Heart and Entrails to be buried there, but his Body to be carried to *Cuſco*, and laid amongſt thoſe of his Anceſtors. In his Teſtamental Diſcourſe to his Children, (of which he had above 200 Sons and Daughters) he alſo recommended to them the love of their Brother *Atabalipa* his Darling Son, and to all the

The Circles about the Moon interpreted.

The Inca's fear and concern.

Officers and Curaca's he gave a ſtrict charge that they ſhou'd ſerve him with a perſevering Loyalty and Duty; and finally, to the Prince himſelf, to be mindful of his Illuſtrious Deſcent, and maintain the Title of the *Lover of the Poor*. He told them alſo of the approaching Diſſolution of the Government of the Inca's, and ſince the Strangers that were to come and poſſeſs the Country ſhou'd be a People ſo much every way their Superiors, he adviſ'd them to obey and ſerve them quietly, and rather patiently ſubmit to, than ſtrive againſt the common fate. And indeed, the *Peruvians* have pretended to give this Account of the reaſon why the Conqueſt of their Country was ſo very cheap and eaſie to the *Spaniards*; They alledged ſo many Propheſies and Prodigies had foretold the deſtruction of their Empire, that it appeared plainly to be their inevitable fate. Beſides, the Inca upon his Death-bed (and his Dying words they infinitely reſpected, and muſt obſerve to a tittle) commanded them to receive the Foreigners when they came, as their Lords, and yield to them as a People whoſe Excellencies entitled them to reign over them; 'twas this, (ſay they) and not the Arms of the *Spaniards*, that made us reſign our Empire upon ſuch eaſie terms. Tho' by the way, Mankind will not eaſily be perſwaded that their Obedience to a dead Prince cou'd ever carry them ſo far, and that if they cou'd have defended themſelves againſt the *Spaniards*, they wou'd not have done it, in complement to any Oracle, Propheſie, or Death-bed Speech whatſoever.

Friendſhip between the two Brothers at firſt.

Huaſcar's firſt Propoſal which broke the Peace.

Atabalipa's Diſſimulation.

Huaſcar preſſes *Atabalipa* farther.

But to return to the courſe of our Story: *Huayna Capac* being dead, *Huaſcar* was now *Inca Capa*, all the Empire acknowledging him as ſuch, the Kingdom of *Quito*, and Dominions thereto annex'd, only excepted, which paid Homage to *Atabalipa*. Theſe two Brothers liv'd in Peace and good Underſtanding of one another, for the ſpace of four or five Years after the old Inca's Death; but then *Huaſcar* began to think with himſelf, that he had acted very imprudently in conſenting to place his Brother upon the Royal Throne of *Quito*. And beſides other damages done to himſelf by this Conſent, he was quite lock'd up from making any farther Conqueſts, by the Sea on one ſide, the Mountains on the other, and his Brother's Dominions on the other, which was to the part of *Chili*; ſo that *Atabalipa*, (whoſe Arms were at more liberty than his) by adding new Countries ſtill to thoſe of which he was already in Poſſeſſion, might in time make himſelf as great a Prince, and his Empire as large as his. Theſe thoughts growing very troubleſome to him, he ſent to his Brother to let him underſtand, That by the ancient Conſtitutions of the Inca's, the Kingdom of *Quito* ought not to be ſeparated from the main Body of the Empire, and that his Father had wrong'd the Imperial Crown of *Cuſco* in making ſuch a Diviſion as that was; and therefore, tho' his Conſent to that buſineſs had been extorted by the Authority and Command of a King and a Father, yet he ſhou'd not ſtand to the Bargain but upon theſe two Conditions: Firſt, That *Atabalipa* ſhou'd not extend the Bounds of his Territories, nor add the leaſt Spot of Ground to what the Inca had allotted him. Secondly, That he ſhou'd acknowledge himſelf his Vaſſal, and do him Homage accordingly. This Meſſage, as diſpleaſing as it was to *Atabalipa*, was yet receiv'd by him with a great deal of ſeeming Humility and Compliance with his Brothers Will; and therefore he return'd Anſwer to this purpoſe, That what was now requir'd of him, was not much more than he had done already, for in his Heart he had always been his Brothers Vaſſal, and now, ſince he demanded it, ſhou'd not refuſe to be ſo in outward Sign and Action. The Inca *Huaſcar* was ſo pleas'd with this ready Submiſſion of *Atabalipa*, (when there was reaſon to have expected he wou'd not ſo eaſily have parted with his Sovereignty) that he preſently ſent again to confirm him in the poſſeſſion of his Royalty at *Quito*; but at the ſame time to let him know, that he come and do the Duty of a Vaſſal at *Cuſco* by ſuch a limited time.

Atabalipa's Plot.

He raiſes an Army.

Inca ignorant of his deſign.

Notice ſent to the Inca.

Army for defence of the Empire.

Thus far did the *Huaſcar's* imprudent heat, or ill counſel, carry him; prompting him to urge his Brother on to ſuch extremities, that he muſt of neceſſity either reſign his Power and Sovereignty, or elſe lay Plot for Plot, and endeavour to take his that demanded it of him. But *Atabalipa* was not behind-hand with him in this Matter, he had Policy enough to form a good Plot, and Diſſimulation enough to cover it handſomly, and manage it with an air of Seriouſneſs and Humility when he had done. In ſhort, he reply'd to the Inca's laſt Meſſage, That he wou'd conform himſelf to his Will, and come to *Cuſco* at the time appointed: but for the greater ſolemnity of the buſineſs, (becauſe he intended a Work of Piety and Devotion, as well as Loyalty and Duty, to his Prince) he crav'd Leave of the Inca that he might bring all the States of the Provinces of his Empire along with him, for he had a deſire to celebrate his Fathers Obſequies in *Cuſco* according to the Rites of his own Country; and this Ceremony perform'd, he and all his wou'd do their Homage. All this *Huaſcar* eaſily granted, and *Atabalipa* had it proclaim'd through all his Provinces, that all Men of Service ſhou'd be ready at ſuch a time (and with their beſt Equipages) to attend him to *Cuſco*. But this was only to amuſe the People, for at the ſame time he gave private Orders to all his Captains to raiſe an Army of the very beſt Soldiers he had; to make them carry their Arms ſo cloſely that they ſhou'd not be diſcover'd, and to match them 5 or 600 together, each Company 2 or 3 Leagues behind the other, and then all to join in one Body when they were come within ten or twelve days Journey of *Cuſco*.

Thus was an Army of above 30000 Men got together, conſiſting moſtly of thoſe old Weather-beaten Soldiers that had ſerv'd his Father *Huayna Capac* in his Wars; Men that had gotten a habit of conquering, and now conducted by thoſe Experienc'd Captains that had led them on to Victory ſo many times before. *Huaſcar* was ſo far from apprehending any treacherous Deſign in his Brothers head, that he order'd his Army to be ſupplied with all neceſſaries as they march'd through his Territories: But ſome of his old Governors and Officers, who made a nicer Obſervation of them as they paſs'd along, did not like the aſpect of them, and ſent the Inca word, with all ſpeed, that they ſuſpected ſome Treaſon going on, and therefore deſired him to raiſe what Forces he cou'd with all the haſte imaginable. But alas! ſome of the Provinces were a great way off, others were indiſpos'd to War, by the long enjoyment of an idle and peaceable Life, and thoſe Parts where the beſt Soldiers were lay in the way of *Atabalipa's* Army; yet however, the Inca and Empire being in ſo apparent a danger, they made a ſhift to form an Army of 30000 Men, which was all that cou'd be got together upon ſo ſhort a warning. *Atabalipa's* Men paſs'd the River *Apurimac* without oppoſition, and march'd on in 3 great Squadrons to *Villacuna*, which is within 6 Leagues of *Cuſco*; as for himſelf, he ſtaid upon the Confines of his Country, to ſee what wou'd be the iſſue of this Undertaking, being in a poſture ready to move towards *Cuſco* if it prov'd well, or towards *Quito* if the contrary.

Atabalipa's Army marches towards *Cuſco*.

The Battel and Victory.

Huaſcar made Priſoner.

Atabalipa's treachery.

He cruelly murders all the Royal Stock.

Tho' the Enemy was thus near the Imperial City, yet was there none that appear'd yet to diſpute their nearer approach to it, ſo that they continued their march till they came within 2 or 3 Leagues of it, and there they found the Inca's Forces ready to give them battel. Here then was the great Controverſie decided, which of the two Brothers ſhou'd remain final Poſſeſſor and Maſter of the Empire of the Sun. In ſhort, the Lott fell to *Atabalipa* to be ſo, for his old hardy Soldiers quickly cruſh'd the more ſoft and undiſciplin'd ones of the Inca, and (which is more, and the crowning part of all their Succeſs) they took him Priſoner too. This was the miſerable fate of *Huaſcar* to fall into his Brothers hands, and now to have his Life at his diſpoſal, of whom but a little before he had demanded Homage. This News was preſently ſent to *Atabalipa*, and proclaim'd alſo through the whole Empire, to diſcourage all the *Curaca's* from attempting to raiſe Forces for his Relief. *Atabalipa* (who was ſecond to none in the Arts of feigning and diſguiſe) made the moſt politick uſe of his Victory that cou'd be: He pretended that his Deſign was to ſet *Huaſcar* upon the Throne again, but ſince the Chance of War had given him this advantage over him, he wou'd make uſe of it ſo far, as to ſtand upon ſome better terms with him for the future, as to the point of his Sovereignty in *Quito*. For this end he wou'd go to *Cuſco*, where he demanded all the Inca's in the Empire to meet him, together with all the Curaca's and Governors, to be Witneſſes to the Solemn League and Contract between *Huaſcar* and himſelf. But what was the iſſue of this Convention? the barbarous Prince Sacrific'd every one of the Inca's that came thither, and all did come at the time appointed, that Age, Sickneſs, or remoteneſs did not hinder. In a word, he ſtuck neither at Age nor Sex, at half or whole Blood, but deſtroy'd all that fell into his hands, Baſtards or Legitimate, Uncles and Couſins, Brethren and Siſters, to the number of 200, the undoubted Offſpring of the great *Huayna Capac*. And he did not ſatisfie himſelf barely with their Deaths neither, but executed them with cruelty, and that ſeveral ſorts of ways; but the heighth of his barbarity, was to bring forth his miſerable Brother the Inca *Huaſcar*, and force him to be an Eye-witneſs to all theſe diſmal Executions, that he might

die

Uſage of *Huaſcar*.

Murder of the Nobles.

The Inca's that eſcap'd.

Their Names and Pedigree.

The hatred born to *Atabalipa*.

A Story of it.

die in the Death of every one of his Kinſmen. Yea, he made him paſs in Mourning Weeds, and with a Rope about his Neck, through a whole Lane of his Nobles and Officers that were fallen into the ſame woful Bondage with himſelf; and then thoſe unhappy Men ſeeing their Sovereign Lord the Inca in that forlorn condition, burſt out into paſſionate cries, bewailing his lamentable fate; and fell down adoring him as they us'd to do, the cruel *Atabalipa* made them all to be chopp'd in pieces with Hatchets, or knock'd in the Head with Clubs before that wretched Prince's face. After this he turn'd his fury upon the Women and Children of the Royal Blood, ſhewing as little mildneſs and compaſſion to that tender Sex and Age, as he had before ſhew'd to the other; and this his cruelty he renew'd every Quarter of the Moon, till he had made away with all that came within his reach. Notwithſtanding this raging Perſecution of the Blood and Progeny of the Inca, and the diligent ſearch made to find out all, yet ſome there were that eſcap'd it, and liv'd to tell the Story to the next Generation. Amongſt theſe were two young Boys, Sons of *Huayna Capac*, and ſome remoter Kindred; in the number of which were the Mother and Brother of the Inca *Garcilaſſo de Lavega*. But including theſe, of the whole Race of the Inca's in general there remain'd 567, in *A. D.* 1603. according to our Author's computation, and theſe all of the Male Line of every Inca, for they made no account of thoſe of the Female Line till after the Conqueſt. They reckon'd the Sons of *Spaniards*, by Women of the Royal Stock, for Inca's alſo, becauſe they thought the *Spaniards* to be a People ſomething akin to their Father the Sun; and they had good reaſon to believe ſo, becauſe the *Spaniards* were ſo very kind to them. Now the exact account of the number of the Inca's, was ſent to our Inca Don *Garcilaſſo*, and another to the Grandſon of *Huayna Capac*, in that foremention'd Year, in order to be ſent to the King of *Spain*, together with a Petition for their exemption from thoſe heavy Impoſitions of Taxes and Tribute which they lay under. There was the whole Stock, the Royal Tree with all its Branches, from *Manco Capac* to the Poſterity of *Huayna Capac*; it was drawn upon white Taffety, with the Names, proper Habits, and Pictures of all the 12 Inca's, and under each Inca all thoſe of his Poſterity. The deſtruction that *Atabalipa* made amongſt the Progeny of the Inca's, rendred him ſo odious to all the Survivors, that his very Name was an abomination to them, and they never gave him any other Title than that of Infamous Tyrant and Traytor. The ſame rancour too they expreſs'd againſt all his Race, tho' they were no way guilty of his Crimes; and therefore when a Grandſon of *Atabalipa*'s (the Son of his Daughter by the Marqueſs *Pizarro*) was dead, and our Inca's old Uncle came to his Mothers Houſe in *Cuſco*, rejoycing that he had lived to ſee the confuſion of that Family, he demanding of his Uncle why he ſhou'd be ſo glad of the death of a Kinſman, and one of their own Blood; The old Inca, biting his Mantle, (which is with them a token of the higheſt Indignation) 'And what, ſays he, woud'ſt thou be the 'Kinſman of a Traytor? the Son of him that kill'd our 'Inca, deſtroy'd our Empire, and conſum'd the Sacred 'Stock? I cou'd eat him raw without Sawce now he is 'dead; his Father, the Traytor *Atabalipa*, cou'd never 'have the noble Blood of *Huayna Capac* in him, for if he 'had, he cou'd not poſſibly have committed ſuch Bar'barities; ſay not therefore that he is our Kinſman, for 'thou doeſt Injury to thy Houſe, to make ſo vile and 'cruel a Perſon a Member of it. Yea, this hatred went ſo far, that they were beyond meaſure pleas'd with the *Spaniards* (tho' the Ravagers of their Empire) for the Execution they did upon *Atabalipa*, and for this reaſon particularly they eſteem'd them as Men ſent from their Deity the Sun, becauſe they took ſo ſevere a Vengeance upon the Grand Enemy and Deſtroyer of the Cœleſtial Race.

Cauſe of *Atabalipa's* Cruelty.

The Principle that carried *Atabalipa* to all this Murder and Deſtruction, was that of State-intereſt and Policy, for he knew that he was not of the Legitimate Blood of the Inca; that is, tho' the Inca *Capa* were his Father, yet the *Coya* or Siſter of the Inca was not his Mother, as it muſt have been to render him capable of ſitting in the Imperial Throne of *Cuſco*; while ſo many others liv'd therefore, that had more right than he, he knew himſelf not to be ſafe, and ſo took this courſe to free himſelf from the trouble and danger of potent Rivals.

A Brother of *Huaſcar* left.

But this he cou'd not do compleatly neither, for as there were ſeveral of the Royal Blood ſurviving, ſo particularly there was the Inca *Manco*, Brother of *Huaſcar*, and Son of *Huayna Capac*, who deeply reſenting the Cruelties committed by *Atabalipa*, took up Arms to revenge his Family, and do right to himſelf in getting poſſeſſion of the Throne which the other uſurp'd. As for *Huaſcar* himſelf he was yet alive, but kept under cloſe Confinement; and whether *Manco* believ'd him to be dead, or thought the contrary, 'tis certain that he aſſerted his own pretenſions to the Crown, and endeavour'd by force to pull it off from the Head of his Brother *Atabalipa*.

Wars between *Huaſcar* and *Atabalipa*.

And the buſineſs ſtood between theſe two Pretenders in this manner, That *Manco* fortified himſelf in the Mountainous parts of the Country, and ſat as Lord there, while *Atabalipa* kept all the Lower parts, and thoſe that lay to the Sea, which was the richeſt and pleaſanteſt part of the Empire. Neither cou'd either of them obtain his deſire in the compleat Expulſion of the other, tho' they endeavour'd it vehemently, and the War grew hot betwixt them. But while they were thus contending, there came one to do the Office of an Umpire in deciding their Quarrel, which was *Francis Pizarro* with an Army of *Spaniards*, who brought the buſineſs to the ſame iſſue that the Kite did in the Battel betwixt the Frog and the Mouſe; but 'tis neceſſary, before we come to treat of thoſe Matters, to diſcourſe a little of the firſt entrance of the *Spaniards* into this Country, and how they came about to find their way hither.

Account of the *Spaniards* firſt coming to *Peru*.

Perſons that firſt undertook the Voyage.

Firſt Attempt.

Second Attempt.

Third Attempt.

Pizarro's Diſtreſs.

The *Spaniards* had been a conſiderable time upon the Continent before they knew any thing of *Peru*; they had built the Towns of *Nombre de Dios* and *Panama*, diſcover'd the Coaſt along *New Spain*, and traded quite croſs the Country, but from *Panama* to the Parts of *Peru*, they cou'd not accompliſh a Trade by Sea, becauſe the Southerly Winds blowing along the Coaſt almoſt all the Year long, Sailing was very difficult and toilſome, and by Land the paſſage was impoſſible, in regard of the Mountains and Rivers. Yea, 'twas 15 Years before they got beyond the Iſland of *Pearls*, which is but twenty Leagues from *Panama*. However there were ſome Perſons that liv'd in *Panama*, whoſe Minds giving them that theſe difficulties might be conquer'd, and having a great deſire to ſee what the Country (that lay along the Coaſt) wou'd prove, they made preparations for the Diſcovery on't: Theſe were *Diego Almagro*, *Franciſco Pizarro*, and *Fernando Luques* a Prieſt, the Men that ſet up for the Triumvirate of the Southern Diſcoveries, and enter'd into an agreement to ſhare equally both the Loſſes and the Gains, the Care and the Trouble of it. There are ſome that ſay *Pizarro* was a very poor Man, and cou'd contribute nothing towards this Deſign but his Labour and Pains, and there are others that ſay the contrary; but it matters not much whether he was poor or rich, and we ſhall in this part of the Story principally follow * *Jerome Benzo*'s Account, who may be preſum'd to have been acquainted with theſe Matters very intimately, being engag'd in the *Spaniſh Weſt-Indian* Service for fourteen Years together. According to this Author, 'twas in the Year 1526. that *Pizarro* and *Almagro* made their firſt Attempt; they both ſet out that Year one after another upon the ſame Deſign; and as for the Prieſt, 'tis to be ſuppos'd he ſtaid at home to pray for a Bleſſing upon their Endeavours. *Pizarro* had at this time no very good luck, for after having ſail'd about 100 Leagues he landed, and was repuls'd by the *Indians* with ſo much reſolution and vigour, that abundance of his Men were ſlain, and himſelf wounded; and with this baulk he was fain to come back to *Panama* again. As for *Almagro*, he went up a River in another part of the Counrry, where he met with People of a milder Diſpoſition, and (which very highly recommended them to his liking too) they had Gold in plenty amongſt them, of which he got at that ſhort viſit to the value of 3000 Ducats. But in his way home, having a mind to put in at the place where *Pizarro* had met with ſuch rough Entertainment, he found the *Indians* ready to give him the like; and when he landed they fought with him, kill'd him a good many Men, and in the Battel beat out one of his Eyes. But *Almagro* had yet heart enough to reſolve to find his way to ſome of the golden Countries once more, this in this ſecond Attempt they ſucceeded worſe than in the former; for then they were beaten, but yet got ſome Gold, whereas now they got Blows and Wounds, and miſs'd the Gold too. But the covetous Appetite being not half ſtarv'd with this diſappointment of its Food, renew'd its urgent cravings again, and hurried them out upon a third trial. Here we are to obſerve, they did not come back again to *Panama* (both of them) after their ſecond repulſe, but put in at the Iſland *Gorgon*, a ſmall Deſart that lies about 6 Leagues from the Continent, where *Pizarro*, and a part of the Men, were ſet aſhore, whilſt *Almagro* and the reſt went home to *Panama* to fetch Supplies. 'Twas a miſerable Life that

* He writ a Hiſtory of the *Indies* in 3 Books.

Pizarro and his Company led here in the mean time; and *Almagro*, when he return'd, found them almoſt ſtarv'd. However, being refreſh'd, they ſet ſail once more, and attempting to Land, were beat off with conſiderable loſs again, and now were forc'd to go ſeek out another Iſland for a Refuge to lie cloſe in, till they had put themſelves in a capacity for farther action. And here was the ſame Scene almoſt over again that was before; *Pizarro* was ſet aſhore upon the barren Iſland, and *Almagro* with the Ships went away for *Panama*.

Spaniards weary of the Voyage.

But his Men were in general ſo tired, that they wou'd e'en have gone home too, and left the Diſcoveries to them that were more fortunate, but that *Almagro* forc'd them to ſtay, and for fear they ſhou'd do miſchief by writing, wou'd not ſo much as let them ſend Letters to their Friends at *Panama*, now the Ships were going thither. However, there were ſome of them too cunning for him, and ſent ſuch Accounts of the Country where they had been, of their Captains, and their confounded covetous Humour and Deſigns, that the Governor of *Panama* preſently ſent Orders to *Pizarro* (to *Cock-Iſland* where they ſtaid) to detain none of thoſe Men there with him by forcible methods, but let them uſe their liberty whether they wou'd go or ſtay; and truly, they did uſe their liberty to pretty good purpoſe, for they all went away except 14. Neither cou'd *Almagro* add to their number when he came again, for there had gone about ſuch ugly Reports, that every body was afraid of the Service, and he cou'd get no Recruits.

Fourth Attempt.

With an Army therefore of 14 Men, half for Land-Service, and half for the Sea, they ſail'd towards the New World they intended to conquer; but now they took a wiſer courſe than before, for they reſolv'd to ſail along the ſhore, and ſee if any rich proſpects preſented themſelves, and not run headlong, Landing their Men at all Adventures, whether there were Gold to pay them for their hazards and loſs of Blood or no; the Army was now reduc'd to a Bakers-dozen, and ſuch a one that 'twas very tenderly to be manag'd. Thus then they ſail'd 500 Miles along the Coaſt, and came to *Chira* a Province of *Peru*, where ſome of them going aſhore (what number is uncertain, but however to be ſure leſs than 40) they got ſome Cattel, and a few *Indians*, to whom by degrees they taught a little *Spaniſh*, and of them reciprocally learnt as much of their Tongue, as wou'd ſerve them to have a little conference with the *Indians* where they came.

They learn the Language.

Having got this neceſſary aſſiſtance of the Language they ſail'd back to *Tumbez*, which ('tis to be ſuppos'd) was the place where they had been ſo often beat off from the Coaſt before, or ſomewhere thereabout.

Come to *Tumbez*.

When they came hither, all the *Spaniards* being afraid to venture, a certain *Greek*, a Native of *Candie*, undertook to go aſhore, which he did with a broad two-handed Sword mounted upon his ſhoulder. The *Greek*, with his great Beard and Muſtachoes, was no little wonder to the Natives, who flock'd about him, ſtaring upon him with an eagerneſs, which well diſcover'd their ſurprize at the ſight of ſuch a Creature. The *Indian* Governor us'd him very kindly, and led him to the Fortreſs, in which was a Temple dedicated to the Sun full of Riches, which were as great a wonder to the *Greek*, as he was to the Natives.

Policy of the Spy.

At his departure the Governor wou'd have given him ſome pieces of Gold, but he ſeem'd utterly to deſpiſe ſuch trifles as thoſe, and made Gold a very ſorry baſe ſort of a thing, that the *Indians* might not think that was the bait that drew them thither, nor treat them like hungry covetous wretches as they were. But, in ſhort, he told ſuch a ſtory of the Riches of the Country when he came aboard again, that the hearts of all of them were reviv'd with the News; and *Almagro*, with his one Eye, cou'd very clearly ſee that this was the place they muſt come to look for the ſatisfaction of their Deſires in.

Go back to *Panama*.

One may eaſily imagine with what joy they return'd to *Panama*, and related their Succeſs to the Prieſt their Copartner in the great Affair in hand; there's no doubt but they bleſs'd the Saints all round, and pour'd out rapturous Prayers to Heaven, under the hopes and proſpect of ſuch Treaſures on Earth as were now coming into their Coffers.

Pizarro goes to *Spain* and tricks his Partners.

But ſince there was nothing to be done ſecurely without the King of *Spain*'s Licence, (and 'twas *Charles* the Fifth that was ſo at that time) they agreed that *Pizarro* ſhou'd make a Voyage into *Europe* to obtain it; which he did, but plaid the Knave ſo far, that he got the King's Commiſſion only for himſelf, making Sute only in his own Name for the Conqueſt of the Country. Upon this, at his return into *America*, there grew a mighty quarrel between him and his Partners, they upbraided him with his perfidiouſneſs, and unfaithful management of an Affair wherein they were equally concern'd with himſelf. However, the matter was made up between *Pizarro* and *Almagro*, and they ſwore and took the Sacrament upon't, that they wou'd ſtick by each other, and have one common Intereſt. But the poor Prieſt was quite excluded, and trick'd out of all concern and ſhare in the buſineſs, which was one ſign that he was not a Man of this World, otherwiſe he had never been impos'd upon in theſe Matters, and by the Laity too. Perhaps he was the only Man of his Coat that had been ſo ſerv'd for a long while; but 'tis but juſt and reaſonable that the Laity ſhou'd take their turn too, and as the Clergy had put a thouſand tricks upon them, they ſhou'd alſo put one trick upon the Clergy. But whereas *Pizarro* and *Almagro* bound their Bargain with the Sacrament, 'tis a queſtion whether they took it at the hands of that Prieſt they had made ſuch a Fool of; for ſince the efficacy and virtue of it (according to them) depends upon the deſign and intention of the Prieſt, he had lain under a ſhrewd temptation to make Fools of them, and deſign nothing at all to their advantage. But they were Soldiers, and cou'd (probably) take the Sacrament in the ſence that the old Pagan *Rome* adminiſtred it, without any great regard to the Inſtitutions of the Popiſh *Rome*. Having thus ſetled the point, *Pizarro* ſet out of *Panama* with three Ships, in which were about 180 Foot and 40 Horſe, leaving *Almagro* to come after. In 13 days he arriv'd at the Port of St. *Matthew*, (which was as much as he cou'd do before in two Years) and here he found all the Country up in Arms.

Coacli.

Notwithſtanding this, he march'd on to *Colonchia* or *Coache*, a great Town, which he aſſaulted of a ſudden and took, and got a large Booty of Gold, Silver and Emeraulds. From hence ſending back to *Panama* for more Soldiers and Horſes, he proceeded with what he had to the Iſland of *Puna*, where he was kindly entertain'd, till the Rapes and Robberies committed by the *Spaniards* made the Natives take Arms in their own Defence; but they ſtirr'd to their own prejudice, and the diſciplin'd Forces of the *Spaniards* eaſily put thoſe rude and untaught ones to the Rout.

Iſland *Puna*.

From hence *Pizarro* went over to *Tumbez* upon the Continent, about 50 Miles diſtant from *Puna*, where the People refus'd his Friendſhip, and endeavour'd to oppoſe his paſſage; but he enter'd the River by Night, and having good Guides ſurpriz'd the City, plunder'd it, and the Temple of the Sun, a Repoſitory of Treaſures not eaſily computed.

Tumbez ſpoil'd.

And now he advanc'd farther and farther apace into *Atabalipa*'s Dominions, being in moſt places very well receiv'd, tho' the *Peruvians* look'd upon him and his Men as a very ſtrange ſort of People..

Pizarro's Manifeſto.

As he march'd along, he publiſh'd to the Country that he came to teach them the Holy Catholick Faith, and to bring them to the knowledge of moſt excellent Laws and Cuſtoms; and the truth on't is, whatever the *Spaniards* did as to the Inſtruction of the *Indians* in the Faith, they did bring them to the knowledge of ſeveral very excellent Cuſtoms, particularly thoſe of Swearing, Blaſpheming, Perjury, Gaming, and a great many others as good as them, which were never ſo much as known in the Country before. The *Indians* did not believe theſe things of the *Spaniards* at their firſt arrival, if they had they wou'd have given them a leſs innocent Name.

Name given to the *Spaniards*.

When they ſaw them firſt come upon the Coaſt, they call'd them (in a Fit of Wonder) *Viracha's*, that is, the fome or froth of the Sea; but afterwards they believ'd them to be bad enough to deſerve the Name of the froth or ſpawn of a worſe Element than that, and they left off the Name of *Viracha's*, as containing too much of complement in it for ſuch People as they.

Caciques ſubmit.

But there were ſeveral of the *Caciques*, or *Curaca's*, that ſubmitted themſelves to this Catholick Faith, upon *Pizarro*'s aſſurance that 'twas ſo excellent a one; and were willing to acknowledge themſelves alſo the Subjects of the Emperor *Charles* V. whoſe Power and Sovereignty *Pizarro* preach'd along with that of Jeſus Chriſt. He continued his march to *Chira*, a conſiderable City, and the firſt place where he (as the Emperor's Miniſter forſooth) pretended to exerciſe Authority over the Lives and Fortunes of the People he was come amongſt.

Pizarro's ſeverity.

The *Cacique* of this City and of another, had conſpired to kill ſome of the *Spaniards*, which 'tis not unlikely they had very well deſerv'd, for ſome Villany or other; and for this, *Pizarro* condemn'd them both to be burnt alive, and ſeveral of their principal Men to keep them company in the ſame puniſhment. Only, out of his great Grace, he was pleas'd to ſpare the *Cacique* of *Chira*, as being the leſs guilty of the two; and not only ſo, but to give him the government of the other alſo. At this place (to encourage his Men in the Enterprize he was leading them on to) he divided the Gold amongſt them which the *Caciques*, and the People of *Tumbez*, had brought him; and now he march'd directly towards

His ſmall Army.

Preſents from the Inca to *Pizarro*.

Caxamalca, where he had Intelligence *Atabalipa* was at that time. 'Tis a ſign how much the *Spaniards* deſpis'd the Forces of the Inca, when they enter'd his Country with ſo very ſmall an Army. *Pizarro* did not bring above 220 Men along with him, and out of this number he drew a detachment of 55 for a Colony which he planted by the way, (which was at St. *Michaels*, a Port they gave that Name to, about 6 Leagues from the Sea, in the Country of *Tumbez*) and with the little remainder he adventur'd to go and meet *Atabalipa*. This Prince had had notice of *Pizarro*'s entrance into his Country, and had ſent him Preſents by the way as he march'd, and withal deſired to know what buſineſs he had in his Territories, or what he look'd for. 'Twas more than once that he was viſited by theſe Meſſengers of the Inca, by whom ſometimes he ſent very ſoft and kind Meſſages back again; but as he drew nearer, he diſcover'd himſelf more plainly, and chang'd his Stile.

Pizarro's Meſſage to *Atabalipa*.

Atabalipa having one time ſent him a Preſent, he order'd them that brought it to tell their Lord, That he was the Servant of a very mighty Prince, (whom he did not ſcruple to call Lord of the whole World) and was ſent to bring this Country to the Knowledge of the true God, and to the Obedience of his Emperor; that with as ſmall an Army as he had now with him, he had conquer'd Princes that were Superiour to *Atabalipa*, who now was at full liberty to make his choice. If he wou'd accept of Peace upon the Terms propos'd, he wou'd help him in his Wars, and leave him in the free poſſeſſion of his Empire, but if he choſe War, he would give him enough of it, and ſerve him as he had ſerv'd the *Caciques* of *Puna* and *Tumbez*.

'Tis probable that *Atabalipa* was not much frightned at this hectoring Meſſage, in that he ſent *Pizarro* word he wou'd be glad to ſee him, and would ſtay for him at *Caxamalca*: But yet 'tis pretty clear, that all together ſtirr'd his Indignation not a little, for as no Meſſenger that *Pizarro* ſent cou'd ever be admitted to ſee his face, but always was referr'd to his Uncle, ſo he was once or twice about to take off the Heads of them, and had done it, but that he was reſtrain'd by the fear that his own Meſſengers wou'd be ſerv'd the ſame ſawce.

He ſtays for *Pizarro* at *Caxamalca*.

Before we draw the Scene for the *Spaniards* at *Caxamalca*, it will not be amiſs to digreſs a little into ſome particulars of the Journey and the Way, and eſpecially to touch upon the deſcription of the City of *Caxamalca* it ſelf.

Valley from St. *Michael* to *Chincha*.

Spaniſh Forgeries.

All the way from the River of St. *Michael* to the City of *Chincha*, is a delightful Valley, very well Peopled, beat through with a fine High-way made with no little coſt and labour, and ſhaded on both ſides with Trees. The People of this Valley were ſaid by the *Spaniards* to offer Humane Blood to their Idols, yea, the Blood of their own Children, to ſprinkle it upon their Tombs and Sepulchres, and to daub the faces of their Idols with it; and the *Spaniſh* Writers do generally tell the ſame ſtory after the Soldiers. But the Inca *Garcilaſſo Divega* utterly denies all this, and declares no ſuch Cuſtoms as theſe were practis'd under the Government of the Inca's; but on the other hand, that the *Spaniards* invented theſe ſcandalous Stories of the *Indians*, that they Sacrific'd their Children, were guilty of Sodomy, Buggery, and the like, to give the more plauſible colour to their own cruel treatment of them, and to leſſen the heinouſneſs of the injuries they did them, when it ſhou'd be told to the World they were worſe than Brute Beaſts that were ſerv'd in that manner. And Don *Bartholomeo de Caſas*, the Biſhop of *Chiappa*, who convers'd no little while with theſe People, is entirely of the ſame Opinion, as he has publickly told us in his Book of the *Spaniſh* Cruelties in the *Weſt-Indies*. Now both theſe Teſtimonies are the more remarkable and convincing, in that they are the Teſtimonies of *Spaniards* againſt *Spaniards*, the one a zealous *Dominican* Friar, a Native of *Spain*, tho' a Biſhop in *America*; and the other a *Spaniard* by his Fathers ſide, tho' a *Peruvian* by his Mothers, eſpecially ſince the Inca *Garcilaſſo*'s Hiſtory of his own Country was examin'd and licens'd for the Preſs by the Friars, who to be ſure wou'd not have fail'd correcting what made ſo much againſt their Countrymen, had it not been too true to be denied.

Difficult paſſage up the Mountains.

Cold Region.

Strong Fort.

The *Spaniſh* Troops turn'd out of this pleaſant Road to *Chincha* to go into that of *Caxamalca*, and here they met with Rocks and Mountains; they went up Stairs as it were, and were forc'd to lead their Horſes in their hands. As they aſcended theſe elevated places they found the air exceeding cold; the Waters on the top were cold to that extremity, that they cou'd not drink them without warming, neither cou'd they hold out themſelves againſt the violence of it, when they ſet up their Tents to reſt, without the help of good Fires. Upon theſe places they found a mighty Fortreſs, that might deſervedly be call'd a huge Maſs of Stone, for 'twas built of Stone founded upon the Rocks, and wall'd in with the ſame; and if *Atabalipa* had thought fit to put himſelf in here, the queſtion is what *Pizarro* or *Almagro*, or any *Spaniard* of them all, cou'd have fetch'd him out.

Deſcription of *Caxamalca*.

Inca's Palace.

Rare Fountains.

It was in *November*, *A. D.* 1532. that the *Spaniards* finiſh'd this tedious march, and came to the City of *Caxamalca*. This City was ſeated 30 Leagues from the Sea, it was four Miles in Circuit, and to be enter'd but by two Gates. The Walls were of very ſtrong Stone, and at leaſt three fathom high, and the Streets as ſtrait and even as a Line. There were abundance of delicate Fountains up and down in the Streets, and all the Houſes in general very neat, but ſome appear'd extremely fine and beautiful. Through the middle of the City ran a Street larger than any in *Spain*, and inclos'd on both ſides with a particular Wall. Before it ſtood a ſtrong Fortreſs of Stone, up to which they aſcended by ſteps from the Street; and on one ſide was the ſtately Palace of *Atabalipa*, with varieties of Lodgings and Gardens belonging to it. All the Apartments of this Palace were painted with ſeveral colours in the outſide, but all that gaudineſs was nothing in compariſon with the ſubſtantial beauties and riches of the inſide, which may be partly imagin'd, conſidering how extravagant the Inca's generally were in adorning their publick Buildings with all the embelliſhments that Gold and Silver cou'd put upon them. In one Room particularly were two large Fountains adorn'd with Plates of Maſſic Gold; one of which run with water ſo hot, that a Man cou'd not endure his hand in it, and the other with that which was as intolerably cold. And, no doubt, but the Magnificence and Curioſities of the other Apartments were proportionable to this; and therefore, *ex ungue Leonem*, by this part we muſt gueſs the reſt. Upon one ſide of the City was a ſtately Temple walled about, with a great Court before it planted with Trees; this was dedicated to the Sun, who was worſhipp'd here with the ſame Solemnities and profound Devotion, that he was in the Imperial City of *Cuſco*. Hither then it was that *Pizarro* came to find *Atabalipa*, who waited for his coming, having a great deſire to ſee thoſe ſtrange Men, of whom he had heard ſo many ſtrange reports, tho' he had no little reaſon to look with indignation upon them, having receiv'd ſo many injuries from them. The Inca was not in the City it ſelf, but in his Camp, a little diſtance from it, where he lay with an Army of 30000 Men; as for *Pizarro* and his Men, they went into the City, and took up their Quarters there. As ſoon as he was come, *Atabalipa* ſent Meſſengers to him, with Preſents, to bid him welcome; to return which civility, *Pizarro* ſent his own Brother, with another *Spaniſh* Captain, that ſame Evening to the Camp. Theſe two were admitted into the Inca's Preſence, and deliver'd their Meſſage to him, but he ſat upon his Throne with an unconcernedneſs that beſpoke him to imagine there was no body there; he did not vouchſafe once to caſt his eyes upon them, nor by any word or motion diſcover any regard to them, but when they had ſaid what they had to ſay, one of the Princes that ſtood by made a reply for his Sovereign. But the *Spaniſh* Captain having ſignified that his Companion was the Brother of *Pizarro*, this coming to *Atabalipa*'s ear he then lifted up his eyes upon him, and in a few words let him know, That his Brothers boldneſs in pretending to puniſh his Subjects was very diſpleaſing to him; however (he added) that for his part, he wou'd be a Friend to the *Spaniards*, and not deal with them as they had (without any juſt cauſe) dealt with his People. *Fernando Pizarro* then told him, That his Brother was willing to aſſiſt him in his Wars with the Forces he had brought: To which the Inca replied, That he wou'd employ them againſt a certain *Cacique* in his Country, who had taken up Rebellious Arms againſt him, and diſturb'd the Peace of his Empire. 'Twas his Brother *Manco* that he meant, and thus in ſcorn call'd a *Cacique*, as if he had been one of his ordinary Vaſſal Princes, and his Riſing no other than a Rebellion.

Pizarro come to *Caxamalca*.

Meſſengers ſent to the *Inca*

His ſcorn of the *Spaniards*.

Pizarro offers to help the Inca.

Proud boaſt.

Pizarro gave him to underſtand, that if the *Spaniſh* Forces were employ'd in his Service, he wou'd ſoon ſee an end of all his Enemies; and (according to the modeſty of that Nation) told him, that ten Horſemen of their Troops wou'd be ſufficient to do the whole buſineſs, without any aſſiſtance from his Army at all. *Atabalipa* at this fell a laughing, and ſaid no more upon that point, but bid the two *Spaniards* drink, which when they wou'd have excus'd, he preſs'd them ſo earneſtly that they cou'd not defend themſelves any longer; ſo the Women

brought

Spaniards entertain'd and ſent away.

brought Liquor of Maize in large Veſſels of Gold, which was as great a Cordial to the *Spaniards* as the Wine it ſelf they drank. *Atabalipa* bid *Pizarro* tell his Brother he wou'd ſee him the next day; and ſo diſmiſs'd them.

Some of the *Spaniſh* Writers (*Benzos* particularly) make matters to have been manag'd quite otherwiſe on the part of *Atabalipa*; that he was all along more ſtern and rough in his Meſſages to *Pizarro*; that he ſcoffed at the Forces of the *Spaniards*, derided their ſmall Numbers, and ſent them word, if they lov'd their Lives they ſhou'd be gone out of his Territories. On the other hand, they own nothing of *Pizarro*'s threatning Meſſages to the Inca, but only make him preſs pretty earneſtly to come to an Interview with him, treating him otherwiſe in all reſpects very civilly.

Pizarro prepares for *Atabalipa*'s coming.

But we chuſe in this Matter rather to ſtick to the Account of *Franciſco de Xeres* (which was that we gave before) than to *Benzo*'s, for tho' the latter Perſon was concerned in the *Spaniſh* Service, yet the former was Secretary to *Pizarro* himſelf, and ſo may reaſonably be allowed to underſtand more of the truth of the Affair. The next Morning being come, a Meſſenger came from *Atabalipa*, to tell *Pizarro* that he wou'd come and ſee him and his Soldiers in their Arms that Day, which the other deſired him to do, and immediately went to the diſpoſing and placing his Forces up and down in the great Street of *Caxamalca*, giving them Orders not to ſtir till the Signal was given, and the great Guns were diſcharg'd. And now *Pizarro* having all things ready, and fitted up a Trap for *Atabalipa*, was ſo impatient till he had got him in it, that he ſent a Meſſenger for him to haſten his coming. But for all this, the Inca made it almoſt Sunſet before he mov'd out of his Camp, but then he came on with all the pomp and jollity in the World. His Army appear'd more like a Company of Stage-players than Men of War; they came ſinging and dancing along, and ſhone glorioſly, what with their Ornaments of Feathers, and the Gold and Silver that was about them. *Pizarro* did not move a ſtep forwards to meet him, but kept his Station in the great Street, expecting him to paſs through that. Accordingly *Atabalipa* came thither, and made a ſtand in the middle of the Street; he was carry'd upon Mens ſhoulders in a moſt Majeſtick Seat of Gold, and having not a little degree of Majeſty and Comelineſs in his own Perſon, that and his Ornaments together made him appear like the Prince he was.

Inca's march to *Caxamalca*.

Friar's Speech to *Atabalipa*.

As ſoon as the Inca ſtopt, (which 'tis to be ſuppos'd was to ſee and ſpeak with *Pizarro*) there marches up to him the Friar *Vincent*, with a Croſs in one Hand, and a Breviary in the other, and according to his Inſtructions (by the help of an Interpreter) made a Speech to him to this purpoſe: 'That he was a Servant of God, and 'twas his 'buſineſs to teach the Chriſtians things Divine, and that 'he came to inform him in ſuch Matters as wou'd be to 'his Advantage every way if he wou'd attend to them. Then he began with the old ſtuff, 'That the Biſhop of '*Rome*, according to the Power Heaven had intruſted 'him with, had given to their Sovereign Lord the Emperor all theſe Lands and Countries which were before 'unknown; and that for this end and purpoſe, that he 'might ſend Godly Men thither to preach the moſt Holy 'Goſpel, and turn the Infidels from their Errors and 'Idolatrous Worſhip. And that the Prince might underſtand his terms, and know what Goſpel, Pope, and Idolatry meant, the Friar converted his Oration into a Sermon, and run over all the Fundamentals of Religion. But if the Doctrine was fine, the Uſe and Application was coarſe, and cou'd not avoid making a very ugly jangle in the Ears of a Sovereign Prince, and one ſo great as *Atabalipa* was too. This, as the Inca Don *Garcilaſſo Divega* relates it, ran in this Stile —— 'For 'which reaſon his Imperial Majeſty has ſent this Captain, that your Realms might receive this benefit, and 'that he might begin the Alliance and Confederacy be'twixt the Majeſties of the Emperor and the Inca. But 'this is to be done in ſuch ſort, that your whole Em'pire become Tributary, and you your ſelf a Subject, 'renouncing the Sovereign Adminiſtration of all your 'Countries, as divers other Kings and Lords have done. 'And that after ſuch ſubjection to the ſublime Majeſty 'of the Emperor, you yield Obedience to the Pope, and 'receive the Faith of Chriſt, utterly abandoning your 'Idols, and all your Superſtitions, which were inven'ted by the * Devil. Theſe things, O King, thou art 'well to conſider, as being very profitable to thee and 'thine; but if thou refuſeſt, thou ſhalt be compell'd 'by War, Fire and Bloodſhed, and all thine Idols ſhall 'be thrown to the ground. We will conſtrain thee 'with the Sword, to leave thy falſe Religion whether 'thou wilt or no, and to embrace our Catholick Faith, 'and pay Tribute to the Emperor. Thou may'ſt do this 'freely and of thy own choice; but if thou doeſt per'ſiſt in thy obſtinacy, know for a certainty, that as of 'Old, *Pharaoh* * and all his Army periſh'd in the Red 'Sea, ſo God will ſuffer that thou, and all thy *Indians*, 'be deſtroy'd by our Arms. A very pretty Speech of a Friar to an Emperor! This Father *Vincent* was ſome modeſt, baſhful, ſhamefac'd Fellow or other, that had not courage to look a Prince in the face, and ſpeak to him roundly; 'tis a wonder *Pizarro* pick'd him out for this Office, for he talk'd as if he were moſt ſadly out of countenance all the while. As for *Atabalipa*, he had patience enough to hear the Man out, and then made a Reply as full of modeſt Wit and Ingenuity, as the others was of blunt Impudence and Sawcineſs. He ſigh'd at the words *Deſtruction* and *Confuſion*, and beginning with *Atac, Atac*, (which is an Interjection that expreſſes the higheſt ſorrow) he told the Friar, 'That this Meſſage was very 'different from what *Pizarro* had formerly ſent him. 'That it appear'd very ſtrange to him that the Empe'ror ſhould be Lord of the World, and yet the Pope 'have Power to beſtow new Kingdoms upon him. 'That he was not unwilling to accept the Friendſhip of 'ſo great a Monarch, but he ſaw no reaſon why he 'ſhould pay Tribute to him; for a free Prince to do 'Homage to another whom he had never any concerns 'with, was a piece of Injuſtice; and if the Emperor 'cou'd pretend any Right or Title upon him, he ought 'to have ſignified as much, before he had gone to 'threatning Fire and Deſtruction, and to ſeize his Coun'try by force. Beſides he cou'd not ſee (if he muſt pay 'Tribute at all) why he ſhou'd not pay it to *Pachacamac*, 'who was the Creator of all things, and had the beſt 'Title to ſuch an acknowledgment; or if it muſt be to 'any other beſides him, why it ſhou'd not be to Jeſus 'Chriſt, who was the beſt Man, or to the Pope *, who 'was a greater Man than the Emperor by his own 'confeſſion? And as to the Concerns of Religion, he told the Friar, 'The Pope might be as wiſe and good a 'Man as he repreſented him, however it appear'd to him 'that he was a Fool, and a Man of no modeſty, to of'fer to give away that to another that was none of his 'own. Neither ſhou'd he change the Faith of his Coun'try for that new one which he propos'd, and the Chri'ſtians were at liberty to believe in Chriſt which (they 'own'd) died upon a Croſs, whilſt he believ'd in the 'Sun that never died at all. Laſtly, As for themſelves 'and the Prince that ſent them, whatever pretences of 'Right and Juſtice they made, they ſeem'd to be Men 'of Uſurping and Tyrannical Principles, in going about 'to diſtreſs other Nations, and rob and plunder thoſe 'that had done them no wrong. But if they were the 'Servants of *Pachacamac*, and the offended Deity had 'ſent them to puniſh his Country for its Offences, he 'and his were ready to ſubmit themſelves to what they 'ſhou'd think fit to impoſe upon them, but not at all for 'fear of their Threatnings, or their Arms, but to fulfil 'the dying Command of his Father *Huayna Capac*, who 'enjoin'd them to ſerve the bearded Nation that was 'more valiant than themſelves, and ſhou'd bring them 'new Laws and Cuſtoms.

* Who was the Superſtition invented by?

Precious preaching of the Goſpel.

* If the Inca were Pharaoh, the Spaniards were not the Children of Iſrael, that's certain.

Atabalipa's Reply.

* The Pope certainly had more Title than the Emperor; becauſe being Chriſt's Steward, he ought to receive his Rents here below.

Various Reports of the aſſault the *Spaniards* made on *Atabalipa*.

What follow'd immediately upon the concluſion of this Speech of *Atabalipa*'s, is differently related by the Authors that write of this Matter. The Inca *Garcilaſſo* ſays, that the *Spaniards* impatient of ſo tedious a Conference between the Inca and the Friar, fell to rifling the *Indians*, and to plundering the Temple of the Sun; that ſome of them drew themſelves out into Battalia to charge upon *Atabalipa*'s Men, whilſt the Inca himſelf, with a loud voice, commanded all of them to lay down their Arms, and make no reſiſtance; for this they were going to do, and in order to it had turn'd upon their Enemies with a great ſhout, according to their Cuſtom. Alſo that the Friar *Vincent* made a favourable Speech to the *Spaniards* on the behalf of the *Indians*, and was ſo far from inſtigating them to fight, that he endeavour'd to cool their heat, and perſwade them from it. But the *Spaniſh* Writers tell the Story ſomething differently, and relate ſome circumſtances which the Inca *Garcilaſſo* is imagin'd to have forborn mentioning out of reſpect to the Friars, becauſe they ſeem to caſt an Odium upon their Order.

The Inca's queſtion to the Friar.

They ſay that *Atabalipa* demanding of the Friar how he came to know ſome of thoſe points of Religion which he had pretended to teach them; and the other replying, that his Book (the Law of God which he held in his hand) told him ſo, the Inca aſk'd to ſee his Book, which the Friar gave him into his hand, but had not the Senſe or the Manners to open firſt, but offer'd it ſhut. *Atabalipa*

Throws the Book to the ground.

Friar provokes the *Spaniards* to Revenge.

Atabalipa's Army confounded by the *Spaniards* Guns and Horſes.

And himſelf made a Priſoner.

A great Miracle.

lipa trying a while, and not being able to open it, the Friar reach'd out his Hand to do it for him, but the other diſdaining his help, hit him a ſound blow on the Arm, and at laſt open'd it himſelf. They ſay he look'd upon the Paper and Letters without any thing of that wonder that the *Indians* ordinarily expreſs'd at things they had never ſeen before; but having look'd a little while, he threw it away from him with a great deal of indignation, and told the Friar, that it ſaid not a word of thoſe things that he ſpoke of to him. And now the Friar was all in a flame at this horrid contempt of the Goſpel, he ran away with open mouth to the *Spaniards*, proclaiming the heinouſneſs of the Fact, and calling for Vengeance upon the profane Prince. *Come forth, come forth Chriſtians* (ſays he) *and ſet upon theſe Enemies; Dogs which will not accept the things of God; the Goſpels are derided, their Prince has thrown the Sacred Book on the ground; come forth and make them ſmart for ſo wick'd a Deed..* The Friar having thus Authoriz'd all the Murder, Bloodſhed, Rapine and Raviſhments, the *Spaniards* had a mind to commit, the Drums preſently beat, and the Trumpets ſounded; the great Guns were diſcharg'd upon the *Indians*, and the *Spaniards*, both Horſe and Foot, fell on with an incredible fury. 'Tis eaſie to imagine that the Troops of *Atabalipa* (tho' much ſuperiour in number) were not able to ſtand this ſhock; the *Spaniards* made what havock they wou'd amongſt them, and kill'd 5000, ſome ſay half as many more, without the loſs of any one Man. And no wonder neither, for the *Spaniards* themſelves confeſs, that not an *Indian* lifted up his hand againſt them, their Prince's command to the contrary having tied them all faſt. *Pizarro* himſelf preſs'd up to *Atabalipa*'s Litter, and ſeiz'd him by the arm, making him a Priſoner; in which action he got a wound, and that from one of his own Men, who were hacking and hewing the poor *Indians* that carried their Emperor upon their ſhoulders. In a word, the Army was all diſpers'd, and the Inca left in the hands of his Enemies; and this whole action was done in ſo little time, that tho' the Sun was ſetting when it began, he had not been down more than half an hour before 'twas ended. An inglorious Action, without doubt all Poſterity will call it, if at leaſt it be ſo, for Men to cut the Throats of ſo many thouſands that ſtood ſtill and made no reſiſtance. After all was over, *Pizarro* finding he had obtain'd ſo cheap a Victory, cry'd out a Miracle, gave God thanks for it, and had Maſs ſaid, as if 'twas a work of ſpecial and extraordinary Providence for God to preſerve the lives of the *Spaniards*, when the *Indians* never ſtruck a ſtroke in order to the taking of them away. 'Twou'd be much ſuch another Miracle, for a Man to fall into a dry Ditch and ſcape drowning; and as reaſonable a Devotion as *Pizarro*'s, for him to give God thanks for't when he came out again.

Atabalipa promiſes a vaſt Treaſure for his Ranſom.

Spaniards ſent to *Cuſco*.

Plenty of Gold.

Atabalipa being now a Priſoner, was (as may eaſily be imagin'd) very much afflicted at his hard fate, under which however *Pizarro* endeavour'd to comfort him, and gave him reaſon to hope at leaſt for very good and honourable treatment at his hands. The Prince promis'd extravagant Ranſoms and Rewards in caſe he wou'd ſet him at liberty again; that he wou'd fill a Room half again as high as a Man, 22 foot long, and 17 wide, up to half the heighth of it with Veſſels of Gold, and the whole content twice over with Silver, and all this in the ſpace of two Months. And it ſeems to be paſt all doubt, that *Pizarro* upon this condition promis'd to ſet him free; but yet ſo much as what was promis'd, not coming in within the limited time, the *Spaniards* began to grumble at *Atabalipa*, and (as ſome ſay) then took up the reſolution of diſpatching him out of the way. He excus'd the Matter by alledging the great length of the way to *Cuſco*, and told them, that if they wou'd ſend ſome of their company thither, they wou'd ſee enough to convince them that he had promis'd no more than was in his power to perform. Accordingly ſome were ſent to *Cuſco*, not to look about them, and make Obſervations upon the place, but with directions to take poſſeſſion both of the City and Treaſures. And they quickly began to ſearch into thoſe Treaſures when they came thither, and to Anatomize the Royal Houſes and Temples, and diſcover the rich Parts of them. In ſhort, ſo many Burthens of Gold and Silver came from thence to *Caxamalca*, that beſides the Emperor's fifths, every Horſeman had to his ſhare 8880 Caſtilians in Gold, and 362 Marks in Silver, each Mark being 8 Ounces; the Footmen had half ſo much, or more or leſs according to their Merits.

Huaſcar offers more to be freed.

Atabalipa's Treachery.

Huaſcar killed.

Atabalipa's Generals.

Rich Booty brought from *Cuſco*.

In this plenty of Gold in the *Spaniſh* Camp, one may imagine the Rioting, the Gaming and Prodigality that was there. They paid their Debts by the lump, not ſtanding to tell Money, but giving the Creditor a good wedge of Gold or Silver, and if 'twant twice as much as the Debt came to they did not care. Nothing was ſo cheap, ſo common, ſo eaſie to be got as Gold and Silver, and therefore the Prices of all things were according. A Horſe went at 1500 Caſtilians of Gold, a Quart of Wine for 10, a pair of Shoes for 40, a Sheet of Paper for 10; and ſo of other things proportionably. The State of the World otherwhere was here inverted, Money wanted Commodities, not Commodities Money. The Officers that were ſent to *Cuſco*, had a ſight of *Huaſcar* at *Sauſa*, in their way thither. That miſerable Prince had lain under a woful Confinement ever ſince his Brother *Atabalipa* had deprived him of his Crown; and now when the *Spaniards* came to viſit him, he tamper'd with them for his Releaſe and Reſtoration. He promis'd three times as much Treaſure as *Atabalipa* had done, and told them he was better able to perform it than the other was, becauſe he knew all the Repoſitories of the Riches of his Anceſtors, and where their vaſt hoards were to be found, which the other was wholly ignorant of. But they cou'd give him no other anſwer but this, that they muſt firſt go to *Cuſco*, whether they were ſent, and then conſider of his Affairs afterwards. In the mean time *Atabalipa* had intelligence of theſe Propoſals of *Huaſcar*, and therefore ſaw now that he muſt e'en make ſure work with him; and therefore to ſound the *Spaniards*, and ſee how they wou'd take *Huaſcar*'s death, he pretended that one of his Captains had kill'd him, and he was in a mighty deal of affliction upon that account. *Pizarro*, that knew nothing of the trick, comforted him under his loſs, and promis'd him to ſee the actors of that Murder ſeverely puniſh'd. This was juſt what *Atabalipa* wanted; and ſeeing the *Spaniards* took his Brothers death ſo quietly, he diſpatch'd a Poſt with all ſpeed and privacy in the World to deſtroy him, ſo that the *Spaniards* ſhou'd not know but 'twas really done before. And this was executed accordingly, and that formidable Rival remov'd out of the way. Tho' *Atabalipa* was a Priſoner himſelf in the hands of the *Spaniards*, yet he had a couple of Generals that were free, and lay abroad in the Country, one in one Part, and the other in another; and tho' they had Forces at their command, yet they attempted nothing againſt the Invaders of their Country. The Names of theſe two great Captains were *Chilicuchima* and *Quizquiz*, the former of which the *Spaniards* (that were ſent to *Cuſco*) met at *Xauxa*, where *Huaſcar* was confin'd, and the latter they found at *Cuſco* with an Army of 30000 Men. And 'tis a ſurprizing conſideration, that three *Spaniards* (for no more were employ'd upon that firſt Errand to *Cuſco*) ſhou'd plunder a rich and glorious City that had ſuch a power of Men to guard it. That they ſhou'd rifle the Temple of the Sun, take down the Maſſie Plates of Gold from the Walls, and bring at leaſt 200 Mens load of Gold away, while no body offer'd in the leaſt to hinder them, or ſo much as to ask them what they did. The Pots, the Tankards, and all ſorts of Veſſels of Gold and Silver, were ſo numerous, that the *Spaniards* were ſtruck with the deepeſt aſtoniſhment when they ſaw thoſe Treaſures; there were ſome golden Veſſels ſo big, that 12 Men had much ado to bring one of them; and one of the Inca's Thrones of Maſſie Gold, and a Receiver for a Fountain of the ſame Metal likewiſe, were to be ſure no light and eaſie Carriage. But the Generals were ſo far from endeavouring to ſecure theſe Treaſures, that they willingly reſign'd them to the *Spaniards*; and tho' 'tis certain, that the reaſon of it was becauſe they knew the Inca's Ranſom was to be paid with it, yet 'tis much that all ſhou'd keep ſo quiet, and none ſhou'd be apt to think the *Spaniards* had gone beyond their Bounds, when the Sacred Houſes themſelves were not ſpared by them, tho' there was no need of emptying them for the payment of what was promis'd.

Atabalipa reverenc'd by his Officers.

The *Spaniards* returning from this firſt Ranſack of *Cuſco*, brought the General *Chilicuchima*, and ſeveral other great Men, along with them, to ſee their Lord *Atabalipa* in his Captive ſtate. Theſe Men cover'd their Bodies with very coarſe Cloth before they went into his preſence, and as ſoon as they ſaw him, lift up their Eyes and Hands to the Sun, giving thanks that they had ſeen their Inca again; then they approach'd him by little and little, and kiſs'd his Hands and Feet, and, in a word, did him all the Honours that cou'd be expected in the heighth of his Glory and Proſperity. He alſo kept his Majeſty as much as ever, and as he was prouder than any of the Inca's before him, ſo alſo now he wou'd not ſo much as vouchſafe to look upon any of theſe his faithful Servants. But the Tragical end of this unfortunate Prince now haſten'd apace, and he that had ſhed ſo much of the Blood of his own Family, was to have his

Full payment of the Ranſom.

Charges brought in againſt *Atabalipa.*

His Condemnation.

The Generals death.

own ſhed by Foreigners for the expiation of thoſe Crimes. 'Tis true he had paid his Ranſom to the full, and *Pizarro* ſolemnly and publickly acquitted him in *Caxamalca* of having ſo done, and order'd it to be ſignified by ſound of Trumpet, and by an act in writing drawn up by the Notary: But notwithſtanding this he was not to be diſcharg'd yet; *Pizarro* told him he muſt be detain'd a while under a Guard, till more Forces of the *Spaniards* were come up to him for his Security from all attempts, for he had been inform'd that *Atabalipa* had given Orders for the levying an Army to aſſault the *Spaniards*, and drive them out of the Country, and this he thought to prevent (at leaſt the miſchievous conſequences of it) by keeping him and his General cloſe Priſoners. Whether this were true or no, ſome of his own People (the *Spaniards* ſay) affirm'd it; they reveal'd the whole Plot to *Pizarro*, who perhaps was not unwilling to believe it, nor backward to lay hold of any fair Occaſion for the making away with his Priſoner. Matters in ſhort run to that extremity, that *Atabalipa* was openly accus'd of this Fact, and tho' we hear nothing of his Defence, yet we do of his Condemnation and Sentence; which was to be burnt alive. But becauſe they had made a ſort of a Chriſtian of him, that is, had baptiz'd him, in conſideration of that the Sentence was ſomething ſoftned, and he had the favour of being ſtrangled. When *Atabalipa* heard his Doom, he exclaim'd moſt bitterly againſt *Pizarro*, for the breach of his ſolemn Oath and Promiſe to ſet him at liberty; and not only ſo, but to depart peaceably out of his Country upon the payment of his Ranſom. Then turning about with his Devotions to the Sun, he renew'd his exclamations, calling as it were his Deity to witneſs of the Infidelity and Treachery of the *Spaniards*. But *Pizarro*, who matter'd none of thoſe things, (tho' he was preſent all the while) commanded his Negroes to ſtop his mouth, which they did by wringing a Cord with a Stick about his Neck, and ſo diſpatch'd him. The good Friar *Vincent* conſented to this Murder alſo, and voted for the old Catholick way of Execution by the Fire. This Chriſtian Mufti knew very well the Mind and Deſigns of his Grand Seignior *Pizarro*, and no doubt having ſounded his Inclinations to deſtroy *Atabalipa*, eaſily proved it lawful by the Goſpel, and found out that God would have it ſo. The Sentence thus executed, his Corps were Interr'd, as ſome ſay, in the Church at *Caxamalca*, or as others, in a Royal Tomb amongſt the Kings of *Quito*, in that City. His General *Chilicuchima* was more ſeverely handled, being tied to a Stake, and tormented with flaming Brands thruſt to his Body, to extort a confeſſion from him of all the Treaſures that were yet undiſcover'd. He endured theſe pains a long time, and at laſt told them, That *Quizquiz*, the other General, had all *Huayna*'s Treaſures in his keeping. But beſides theſe, he diſcover'd where another Maſs lay, which *Pizarro* afterwards ſeiz'd upon. His death was ſome time after his Maſters; but 'twas no little eaſe to *Pizarro* to have him out of the way too, for he was a Man of great Valour and Courage, and equal Truth and Fidelity to his Maſter. The Inca *Garcilaſſo* ſays, that *Chilicuchima* was murder'd by one of *Atabalipa*'s Captains, together with the own Brother, and all the Sons and Daughters of that miſerable Prince, that were then at *Quito*; and this at the Solemnization of his Obſequies, when the Corps was brought to be buried there. That this ſame Captain had an ambition to ſet himſelf up in the Kingdom of *Quito*, and in order to that (imitating his Maſters example) took an opportunity to cut off all thoſe that might prove hinderances to him in that deſign. 'Tis to be noted, the *Spaniards* in their Arraignment of *Atabalipa* accus'd him of Treaſon; which was, if well conſider'd, a very pretty ſort of a Charge, and had as much ſence in it as all their proceedings had, of Juſtice and Reaſon, and common Honeſty. For what was his Treaſon? were his Endeavours, to free himſelf and his Country from a parcel of Men that came to rob him, to be call'd ſo? And who was he a Traytor to? was it to *Pizarro*, or to the Emperor? If the Emperor was never his Rightful Sovereign, he cou'd be no Traytor to him; and that he was never ſo is as infallibly true, as that the Pope never had any power to give to him, or any body elſe, the Lands and Dominions of other Princes. In ſhort, *Pizarro*'s Deſigns (of ſitting as Monarch himſelf in that glorious Country) made it neceſſary for all the old Inca's Race to be remov'd, and conſequently for *Atabalipa* to die. And this *Herera*, the *Spaniſh* Hiſtorian, and others of the ſame Nation, don't ſcruple plainly to ſpeak out; ſaying alſo, that *Pizarro* pretended a fear of Mutinies and Troubles where there was little occaſion for't, and that *Atabalipa* endeavour'd to anſwer all thoſe Objections, and wou'd have clear'd himſelf, but that the *Spaniards* had no mind to be perſwaded of his innocency.

How things proſper'd with them afterwards, we ſhall ſee in its due place; but we muſt proceed in order with the Events that happen'd upon *Atabalipa*'s death.

The new Inca.

Quarrels between *Cuſco* and *Quito.*

Atabalipa the Second dies.

Pizarro marches for *Cuſco.*

Mountainous Stairs.

Snowy Mountain.

Deſcription of *Cuſco.*

Pizarro, to oblige the Country the more, gave them a new Inca after he had taken away the old one. This was alſo a Son of *Huayna Capac*, and they gave him the Name of *Atabalipa*; but he was a meer Tool of the *Spaniards*, and entirely at their diſpoſe. He (having faſted three days for his Predeceſſor according to Cuſtom) publickly acknowledged the Sovereignty of the Emperor, and perform'd the Rites of Vaſſalage to *Pizarro* as his Repreſentative. The principal Ceremony was the Offering of a white feather, which he did, as alſo all his Caciques did to him; they afterwards own'd the Emperor for their Supreme Lord, (and next under him the new *Atabalipa*) by the Ceremony of holding up the Royal Standard, which every Man did in his turn. Now tho' this Action of *Pizarro*'s was pleaſing enough to the one part of the Empire, that is, to the *Cuſcoans*, yet 'twas very ungrateful and diſpleaſing to the *Quitonians*, and all thoſe of the firſt *Atabalipa*'s Faction; for as that Prince was of the Royal Line of *Quito*, ſo his Generals *Chilicuchima* and *Quizquiz* were for advancing that Houſe, and fixing the Imperial Crown there. Upon this Occaſion therefore, there grew very great Jealouſies and Diſcontents between them; yea, *Quizquiz* openly declar'd himſelf, and took Arms to Aſſert the Rights of the *Quitonian* Houſe; and *Chilicuchima*, tho' he did not appear bare-fac'd, yet was as deep in the Deſign, and gave private Encouragements to thoſe Troubles. But *Atabalipa* the Second did not long enjoy his new Dignity, for he died before *Pizarro* got to *Cuſco*; and the common Report was, that he was poyſon'd by *Chilicuchima*, which together, with other more important Reaſons, drew on the fate of that General we mention'd but now. He had (before he died) propos'd a Son of the firſt *Atabalipa* to ſucceed the Second of that Name, but *Pizarro*, and the *Spaniards* in general, rather enclin'd to *Manco*, the Son of the Inca *Huama Capac*, who was contending for the Empire with his Brother *Atabalipa* when the *Spaniards* firſt invaded the Country. But the buſineſs not being yet determin'd, *Pizarro* continued his march to *Cuſco*, and in the way thither he was met by *Quizquiz*, who commanded a good Army, and gave him Battel; but his Forces cou'd not withſtand the fury of the *Spaniſh* Horſe, nor abide the terror of the great Guns; ſo that being entirely routed, in him the Family of *Atabalipa* loſt their laſt great Champion and Defender. So that the *Spaniards* were forc'd as it were to cut their way into *Cuſco*; and the truth on't is, 'tis no ſmall wonder that they were able to accompliſh it; they themſelves were not a little ſurpriz'd to find themſelves Maſters of that place. Had it not been for the Emulations and Quarrels between the two Imperial Cities of *Cuſco* and *Quito*, in all likelihood it had been impoſſible for them to have done it; and thoſe Powers firmly united together, wou'd have been an invincible Bar in their way. But they ruin'd the Common Intereſt by their Inteſtine Diviſions; and 'twas *Spaniſh* Policy perhaps, to throw that Bone of Contention betwixt them, at leaſt not to take it away from them. Beſides, the difficulties of the Way were ſuch, that they might have been fatigu'd to death in their march thither; for the mountainous Paſſes are ſo ſtrait and narrow, that 10 Men may defend them againſt 10000. In ſome places they were wrought like Stairs out of the ſolid Cliffs, and in others Stone-work added by Art, to render them capable of being paſs'd over. But the *Spaniards* having none to oppoſe them, made a ſhift to climb thoſe precipices, tho' abundance of their Horſes broke their Necks; and 'tis a wonder all the Men had not done ſo too. The ridge of Mountains continues from *Tumbez* to *Xauxa*, and from thence to *Cuſco*; and from *Caxamalca* to *Xauxa*, runs a vaſt mountainous Tract cover'd with Snow, which lies there all the Year round. When *Pizarro* came to *Cuſco*, he had the proſpect of a City much finer, and more magnificent, than any he expected to find in that part of the World. The principal part of it ſtands on the top of a Hill, tho' it ſpreads all along the Declivities, and runs down into the adjacent Plain. The Streets were ſtrait and even, tho' narrow, but the beauty of the Buildings made amends for that defect, there being few Houſes but what were made of Stone. The Palaces of the Caciques and Noblemen (of which there were a multitude) made a noble appearance, and eſpecially in that part which lay down in the Valley; the Houſes of Pleaſure of thoſe great Men, the Publick Store-houſes, Magazines, and Repoſitories of the Tributes, were diſcover'd above all

the

Spaniards plunder the City.

the reſt. In the middle was a fair Market-place, ſquare and pav'd with Stone; on the 4 ſides of which ſtood Palaces rais'd by ſome of the Inca's, all of Stone-work, but painted and carv'd after a very agreeable manner. The ſtatelieſt of all theſe was that built by *Huayna Capac*, and in which he himſelf commonly reſided; the Gates of this Edifice were of Marble of ſeveral colours, and the Terraſſes ſutable to all the reſt of the work. Through the middle of the City ran a ſtream of water encloſ'd in a Stone Canal, on each ſide of which a Horſeman might very eaſily paſs; but their main Fund of water were two Rivers which took their courſe along by the City, and over which they had laid Bridges, ſuch as their Skill in that ſort of Building (which was but little) cou'd raiſe. But that which produc'd a real aſtoniſhment in the *Spaniards* was the Fortreſs, that Incomprehenſible Building, ſo Incomprehenſibly built and laid together; in which they found ſo many appearances of extraordinary Art, and yet were puzzled to imagine what the Art muſt be, and who the Artiſt. Having ſurvey'd this Structure, they eaſily concluded that it went beyond all the Buildings of the *Greeks* and *Romans*, and many that had ſeen the moſt remarkable Antiquities that ſeveral Nations had to ſhew, confeſs'd there was nothing like this. But then the inſide Furniture was extraordinary likewiſe, for being the grand Magazine of the Inca's, the general Store-houſe for their Warlike Proviſions, which were gather'd here from all Parts of the Empire, there were ſuch Piles of Clubs, Lances, Bows, Arrows, Axes, Targets, Shields, with other requiſites for Soldiers, that had there been but Soldiers to have us'd them, the *Spaniards* muſt have taken leave of *Cuſco* in a little time. In ſhort, the Towers, Terraſſes, Walls, Battelments, Rooms, Apartments, Furniture and Contents of this Fortreſs, were all admirable to them, and the Proſpect and Scituation no leſs pleaſing. What Treaſures the *Spaniards* found in the City and Caſtle of *Cuſco* they themſelves know beſt, only Writers ſay they were ſo great, that what they had before (all thoſe loads of Gold and Silver Plate) hardly bore any proportion to them; but if we remember the general Account of the Riches of the Palaces and Temples of the Inca's, one may gueſs at what they got by coming hither. *Benzos* ſays, that they treated the People of *Cuſco* with the utmoſt barbarity to make them confeſs their Treaſures; that in the midſt of that prodigious Plenty (which might rather have cloy'd a Man, and given him almoſt a ſurfeit of Gold) they rav'd ſo with the hunger of it, that they did any thing to come at their deſired Satisfaction. And whatever might be extorted out of ſome of them by the pulls of a Rack, or the torments of Fire, yet 'tis paſt all doubt that ſome of the moſt glorious Treaſures of the Empire eſcap'd their hands.

Manco comes to *Cuſco*.

He is made Inca.

We muſt now bring the Inca *Manco* (of whom we ſpoke before) upon the Stage again. This Prince hearing *Pizarro* was at *Cuſco* came thither to him, and his Errand was to demand his Right, which was the poſſeſſion of the Imperial Throne. And to encourage the *Spaniards* to yield to him in this matter, he promis'd to promote their Affairs and Religion too, as the Inca *Garcilaſſo* tells us. *Pizarro*, who had ſome inclination to him before, (that is, preferr'd him to any other) accordingly declar'd him *Inca Capa*, and he perform'd the Rights of Vaſſalage as his Predeceſſors had done. But when all was done, he was no more than a meer Titular Prince; he had the Title of Inca, but *Pizarro* was ſo in effect, the *Spaniards* gave Orders, Rul'd, and did what they pleas'd, while he ſtood ſtill, and was bound to ſay as they ſaid, and to like all they did. In ſhort, he was a meer Monarch in Effigie, a State-Pageant dreſs'd up only to be look'd upon.

While Matters ſtood thus at *Cuſco*, the Affairs in other Parts of the Empire grew troubleſome and perplex'd; for *Quizquiz*, who was once routed by *Pizarro*, gather'd more Forces, and made head again. Beſides, *Pizarro* and *Almagro* began to Rival one another, and thoſe Jealouſies and Suſpicions were ſprung upon both ſides, that afterwards heightned into a Bloody War, which prov'd the confuſion of them all, as we ſhall ſee by and by.

Pizarro goes to *Lima*.

Manco Impriſon'd.

His Policy.

Gets his liberty.

He riſes againſt the *Spaniards*.

Cuſco taken from the *Spaniards*.

And retaken.

Spaniards defeated by *Manco*.

Pizarro beats *Manco*.

He retires to the Mountains.

The new Inca *Manco* ſeeing that the *Spaniards* made a meer Cypher of him, and perform'd none of the Articles that related to his real Reſtoration, complain'd of it to *Pizarro*, and demanded that he might have the full Power of an Emperor, as well as the Title and the Honour. But he excus'd himſelf from granting that as yet, as well upon the account of the broils and ſtirs that were in the Country, as alſo that he expected the Orders of the Emperor, to whom he had ſent about that Affair. This Order his Brother *Fernando* was to bring in a little time; however, in the mean while, he himſelf march'd away from *Cuſco* towards *Lima*, (which City was then about being Peopled) and left the Inca *Manco* to the keeping of two other of his Brothers, *John* and *Gonſalvo Pizarro*. Theſe Men held the Inca a cloſe Priſoner; ſome ſay they laid him in Chains, tho' 'tis certain that they ſecur'd him in the Fortreſs of *Cuſco*, as a place where they were ſure to hold him faſt. The Inca was a Prince of a very haughty Mind, of great Courage and Reſolution, and they had reaſon to fear all things from him if he were Maſter of himſelf; but he compos'd himſelf under this injurious treatment to a wonful patience and eaſineſs, or at leaſt he diſſembled his reſentments, and forbore all manner of harſh reflections upon the *Spaniards*. When his own Subjects bewail'd his Misfortune, and exclaim'd againſt the Injuſtice and Treachery of his Impriſonment, he wou'd ſpeak ſoft and comfortable words to them, and tell them his Father *Huayna Capac* had commanded, in his Laſt Teſtament, that they ſhou'd ſubmit to the *Spaniards*; and in the mean time, under all theſe Oppreſſions, they ſhou'd be quiet till they ſaw the iſſue of all. However, he did his endeavours not to have occaſion to obey his Fathers Laſt Will and Teſtament very long, for he flatter'd and careſs'd the *Spaniards*, ſweetned them with Preſents, ſpoke honourably of them, and never made any complaints of his Sufferings; ſo that they thought him to be a very eaſie and well-contented Priſoner. In ſhort, he dealt ſo with *Pizarro*'s two Brothers, his Jailors, that he obtain'd a degree of Liberty, for they gave him leave to go to *Yucay*, which was the Royal Garden of the Inca's, to ſpend ſome time for his refreſhment and pleaſure. When he was got there, he ſummon'd his Officers and Grandees privately about him, and aggravating all the foul and baſe treatment he had had from the *Spaniards* to the laſt degree, and ſince he cou'd no longer rely upon their Promiſes, and plainly ſaw that they intended to ſhare the Empire amongſt themſelves, inſtead of reſtoring it to him, he told them he intended to take up Arms to recover his Right by Force, and wou'd truſt *Pachacamac*, and his Father the Sun, with the Succeſs. All his Captains were very glad to hear him make ſo bold and brave a Reſolution, and accordingly promis'd to maintain his Rights to the utmoſt of their power, againſt all the Pretenſions and Encroachments of the *Spaniards*. And now preparations were made for a War, which coſt a vaſt deal of *Indian* Blood, and not a little *Spaniſh*. *Manco* made his firſt Attack upon *Cuſco*, with an Army of 200000 Men, and ſhooting fire along with their Arrows in upon the *Spaniards*, had like to have burnt down the City about their Ears. In this Siege *John Pizarro* was ſlain, and the Defendants every way ſo hardly preſs'd, that the City was taken, and *Manco* now become Lord of *Cuſco* without the *Spaniards* leave. After this the *Spaniards* recruiting their Forces, paid the Inca in the ſame Coin, beſieg'd *Cuſco*, and took it from him; but they had not been Maſters of it very long, before he came with another potent Army, which drove them out, and ſeated him there again. Matters being come to this paſs, *Pizarro* was forc'd to ſend another of his Brothers with freſh Forces againſt the Inca, but he and his Troop were entertain'd after ſuch a rude manner by the *Peruvians*, that not a Man was left to carry News of their ill Succeſs. After this he diſpatch'd 4 or 5 Commanders more, one after another, who had all of them the ſame fate of being routed, and moſt of them of being kill'd. It was therefore high time for *Pizarro* to come himſelf in Perſon, and humble the growing Power of this Enemy; which he did, and what with the terror of his Guns, and arm'd Horſes, the firſt Battel he fought he overthrew the Army of *Manco*. Then to compleat the Work, he ſent about to all the *Spaniſh* Colonies upon the Continent for Supplies of Men and Ammunition, and having made himſelf conſiderably ſtrong, he fought one or two Battels more, by which *Manco*'s fate was entirely decided, for his mighty Army was too far ſhatter'd and broken to be mended up again for another Action. The poor Prince was now driven to his ſhifts, and obliged to retire to ſome cloſe and ſecure Refuges in the Mountains; and 'twas upon the Mountains of *Villaca Campa* that he choſe to ſettle his Abode, whether he made his retreat with 20000 Men, the remainders of his routed Army. *Benzos* makes as if his retreat was not ſo much the effect of his weakneſs as his prudence, and that 'twas to avoid being hemm'd in of all ſides by the *Spaniards*, for the report now went that *Almagro* was coming out of *Chili* with his Forces, who was more likely to join with his Enemies then him. But having brought him to this ſhelter, we muſt leave him here for awhile to take his repoſe, while we look into the Affairs of *Pizarro* and his Companions, and ſee their Fates. We muſt know, that after the taking of *Cuſco*, when *Lima* (the *City of Kings* as it is call'd by the *Spaniards*) was rais'd and peopled, *Pizarro* made his Friend and Partner *Almagro* Governor of that Province. But alſo becauſe he had been an active Man in the *Peruvian* Conqueſt, (and one of the firſt Diſcoverers too) in conſideration of his Services, the Emperor made him Marſhal of *Peru*, and gave him Authority to conquer 300 Miles for himſelf, beginning where *Pizarro*'s Conqueſts ended. As for *Pizarro* himſelf, the greater actions he had perform'd made him *Almagro*'s Superiour; but he alſo now growing great, the other was conſequently jealous of him, as all ambitious aſpiring Men uſe to be of one another. And many Diſputes and Quarrels paſs'd between them, when at laſt *Pizarro*, to rid his hands of ſuch a dangerous Rival in a fair and an honourable way, ſent him into *Chili* to conquer, or to govern, or ſomething of that nature, as the pretence was; but the true deſign was, that he might be knock'd o'th' head there. However, *Almagro* made no ſcruple of going, and in that Country he ſtaid till the time that the Inca *Manco* was finally routed, and forc'd up into the Mountains. But then he had enough of *Chili*, and finding it did not anſwer his expectations, he march'd back into *Peru*, and came directly to *Cuſco*. This place he pretended a Right to the Government of, and wou'd accordingly have enter'd as ſuch, but was oppos'd by *Fernando Pizarro*, who was plac'd in that Station by his Brother, and wou'd not reſign it without Orders from him. But *Almagro* found a way to get into the City in the Night time, and ſurprizing the two *Pizarro*'s that were there, he clapt them both up in Priſon, and the next Day made himſelf be proclaim'd Governor, according to the Imperial Commiſſion. By as good a trick he alſo ſeiz'd *Alvarado*, another *Spaniſh* Commander, who was coming towards him with ſome Forces, and that for no good as he reaſonably imagin'd; and now he Lorded it in *Cuſco* at a violent rate, and threatned *Pizarro*'s Party moſt bitterly. But *Alvarado*, and one of the *Pizarro*'s, that lay there in Priſon, by making uſe of a golden Key, (which will open moſt Locks in the World) got out, and came to the General *Pizarro*, and acquainted him with all *Almagro*'s proceedings. At this he gather'd a conſiderable Body of Men, deſigning to march and drive him out of *Cuſco*, but by the Mediation of ſome, the Matter was ſo far compromiz'd, that both Parties agreed to meet and ſettle the Points in diſpute between them, in a fair and amicable Conference. Notwithſtanding this Contract, *Pizarro* diſpos'd a Company of Men, in a convenient place by the way, to murder *Almagro* as he paſs'd along, but he having timely notice of it avoided the danger. *Pizarro* and he having met together, the iſſue of it was that they were reconcil'd, and Promiſes and Oaths paſs'd on both ſides to bind the Bargain that was made. But which of the two was perjur'd firſt, is as uncertain as 'tis certain that one of them was ſo, for 'twas not long before all theſe Sacred Ties were broken, and the Reconciliation degenerated into the fierceſt Enmity, and the enmity iſſued in a Bloody War, which confounded all the Affairs of the Country. 'Twas *Almagro*'s hard fate to be taken Priſoner in this War, and *Pizarro* no ſooner had him in his Clutches, but he Sentenced him to Death; and that Sentence, no Interceſſion, no Pleading nor Appeal, was able to Reverſe. So he was Strangled, and *Fernando Pizarro* ſent over into *Spain* with the Proceſs. But tho' *Almagro* himſelf was dead, yet he had a Son that ſtill liv'd to be a plague to the Family of the *Pizarro's*. This Young Man, and ſome of his Friends, quickly went to Plotting againſt *Pizarro*, but he looking upon his own Power and Greatneſs, deſpis'd ſuch trifling Enemies as he thought them to be, and that neglect of them coſt him his Life, for they murder'd him in his own Houſe, together with his half Brother *Martin de Alcantara*; how his four own Brothers were diſpos'd of, we ſhall hear by and by. *Pizarro* being dead, the young *Almagro* invaded the Government, making all Swear to him, and acting all the Arbitrary Tyrannical Parts that Power and Revenge join'd together are wont to do. But theſe bonny Days did not laſt long with him, and as the reſt of the Men of Uſurping and Ambitious Principles had ſome or other to pull them down, ſo was he ſhortly after humbled by *Vacca di Caſtro*, whom the Emperor ſent from *Spain* to put an end to thoſe Broils. *Almagro* 'tis true fought one Battel for his Life, but he had better have died bravely in the Field, for making his eſcape to *Cuſco*, he was there betray'd by a Friend, and ſent to *Caſtro*, who cut off his Head. And now the Emperor thought fit to prevent all future Pretenſions of any Pretenders, and to put an end to all Broils and Differences, by ſending over a Vice-Roy into the Country; and at the ſame time a Publick Decree, that all the *Indians* ſhou'd have their liberty, and be no longer treated as Dogs and Slaves by the *Spaniards*. The Vice-Roy was *Blaſcus Nunnez Vela*, who managed things with ſuch a ſeverity, that he put the Country into a ferment; and the *Spaniards*, who had been ſo long us'd to all ſorts of Licentiouſneſs, and to Tyrannize over the *Indians* as they pleas'd, cou'd not endure the ſtrait Reins of his Government, but took up Arms, and broke out into a Rebellion. They choſe *Gonſalo Pizarro* their Captain, and nominated him Procurator-General of the *Peruvian* Provinces, having none but him now to truſt to for the Head of a mutinous Faction; for beſides that *Vacca di Caſtro* ſeem'd to be a Man of more Loyal Principles, he was out of a Capacity of acting at that time, being made a cloſe Priſoner by the rigorous Vice-Roy *Blaſcus Nunnez Vela*. The Animoſities againſt the Vice-Roy encreaſing, he was ſeiz'd and put under Confinement, but had the good fortune to meet with one Friend (amongſt ſo many Enemies) who reſtor'd him to his liberty. After this he gather'd an Army, and tried for the Government of the *Indies* with *Gonſalo Pizarro*, but he was worſted, and taken Priſoner, and kill'd by an Officer of *Pizarro*'s, in revenge of his Brothers death, whoſe Executioner he had been.

Almagro ſeizes *Cuſco*.

Civil Wars.

Almagro Executed.

Pizarro killed.

Young *Almagro* killed.

Nunnez's ſeverity cauſes a Rebellion.

Gonſalo Pizarro routed and kill'd.

To compoſe theſe troubleſome Affairs, the Emperor ſent over *Gaſca*, an Officer of great Policy and Experience, who overcame *Pizarro* in a ſet Battel, took his Head, and the Heads of his chief Adherents, and brought the Country into better order; he eas'd the *Indians* of a part of their heavy Burdens of Tribute, and gave them ſome reſt from the Cruelties of the *Spaniards*, who before hunted them like Dogs.

Gaſca moderates the Tributes.

And thus we ſee the end of all the firſt Diſcoverers and Conquerors of this Country, *Almagro*, *Pizarro* and his Brethren; they all came to violent Deaths, and there was not a Man of that company whom Juſtice did not find out in ſome receſs or other, and by puniſhing ſet a mark upon. And if Matters be well conſider'd, 'twill appear that this recompence was not undeſerv'd as to every one of them; and ſo much Murder and Blood, Perjury and Treachery, Injuſtice and Violence as they were guilty of, was but juſtly revenged in the breaking of them and their Families.

We muſt return now to the Inca *Manco*, whom we left in a ſecure Place upon the Mountains, where he liv'd during theſe Confuſions, much more quietly and happily than he cou'd have done in his Imperial City of *Cuſco*. In the mean time that that ſtern Vice Roy *Nunnez* manag'd things in the Country with ſo much ſeverity, there were ſome of the *Spaniards*, that to avoid falling into his hands, fled to the Inca in the Mountains, who took them into his Protection, and dealt kindly with them. Amongſt others there was one *Gomez Perez*, whom we will name for the extraordinarineſs of his Inſolence and Ingratitude to his Benefactor. This Man the Inca treated very familiarly, and us'd to play at Bowls with him; but one Day, as they were at that ſport, *Gomez* (who was a cholerick haughty Fellow) in the heat of his play was ſo far tranſported about the little niceties and punctilio's of it, that he forgot all good Manners and Reſpect, and talk'd to the Prince as if he had been a Slave, or ſome very baſe and vulgar Perſon. At which the Inca (whoſe ſpirit was not ſunk with his Fortune, nor his Majeſty grown ſo little as not to reſent an Affront) with his fiſt gave him a good ſound blow on the breaſt, but the enrag'd *Spaniard* repaid it again with a mournful Intereſt, for taking up one of the Bowls, he flung it at the Inca, and ſtriking him upon the Head, kill'd him dead upon the ſpot. The *Peruvian* Nobles, and the Guard that were by, preſently ſet upon *Gomez* and the *Spaniards*, who retired into the Houſe to defend themſelves there, but they fired them out, and being all like ſo many Furies, in ſpite of all Arms and Oppoſition they beat and cut them to pieces. Their rage ran ſo high, that they deſign'd at firſt to eat the raw fleſh of the *Spaniards*, to ſhew how much they reſented the horrible Fact, but (whether they were afraid of being infected by it or no, or whatever was the cauſe) they did not do ſo, but expos'd it for Food to ravenous Birds and Beaſts: The Inca *Manco* left two Sons, one the Inca *Sayri Tupac*, which continued in the Mountains too, till the Vice-Roy *Mendoza* perſwaded him to come in and ſurrender himſelf; this he was brought to by the Policies of ſome that were about him, and whether he died by any *Spaniſh* treachery or no we can't ſay. Only this is clear of him, that he liv'd at *Cuſco* ſome time, and was baptiz'd there, and from thence he went to the Valley of *Tucay*, where he continued three Years, and then died. The

other Son of *Manco* was the Inca *Tupac Amaru*, who choſe to ſettle in the ſame mountainous Places that his Father and Brother had done. The next Vice-Roy, *Franciſco de Toledo*, had a very great deſire to bring this Prince down from the Mountains, and to get him into his Power, for he was the next direct and legitimate Heir of the Empire, and the *Spaniards* did not care to have any Perſon (that cou'd write himſelf ſo) left in Being. For this end they told the Vice-Roy a great many Stories of him, that his Men robb'd the Merchants, and liv'd by Violence and Depredations, and wou'd ruine the Country thereabouts; all which was to inſtigate the Vice-Roy to fetch him down by force, and to ſerve him as they had ſerv'd his Uncle *Atabalipa*. The Prince had already withſtood all the fair and gentle methods of Perſwaſion and Promiſe, he wou'd not be coax'd and flatter'd into Snares, nor reſign himſelf into the hands of Men, who had forfeited their Truth ſo often already in their Dealings with thoſe of his Family. And in this Reſolution he imitated the Examples of his Father *Manco*, who wou'd never be enticed by the *Spaniards*, tho' his Brother (as was ſaid before) did do it; but he was very young, and his Years excus'd his weakneſs. So that the Vice-Roy, who determin'd to have him whatever it coſt, ſent out 250 Men under the Command of *Martin Garcia Loyola*, to beat about thoſe Mountains, and ſearch out the Inca. And they had much eaſier work of it now than they wou'd have had in the Inca *Sayri Tupac*'s time, for the rough Ways were plain'd, and the narrow Paſſes open'd in many places, by which means the *Spaniards* had no great difficulty to find out their Game. The Inca, who cou'd not defend himſelf long from them (they purſued him ſo cloſely) and knowing himſelf guilty of no crime, yielded to them, with his Wife, Daughter and two Sons, expecting that the Vice-Roy wou'd have dealt no worſe with him (at leaſt) than he had done with his Brother. But the poor Prince was moſt miſerably deceiv'd, a Proceſs was form'd againſt him, and he condemn'd to loſe his Head, as a Traytor againſt the Majeſty of *Philip* the Second, King of *Spain*, and Emperor of the New World. In this manner was his Crime proclaim'd, and the Charge manag'd againſt him, which had been much truer if it had been inverted. The Inca hearing his Sentence ſeem'd not much concern'd; he ſaid the Vice-Roy might have ſent him into *Spain* to the King, which wou'd have been as good a Security to him as his Death; but that there was no great need for the *Spaniards* to be afraid of his Arms, for his Father *Manco*, with 200000 Men, cou'd hardly beat 200 *Spaniards* out of *Cuſce*, and they were leſs able to do it now than they were then. The Prieſts and Friars were ſent to prepare him; that is, to Inſtruct him for Baptiſm, which he was not unwilling to receive, becauſe he remember'd (he ſaid) the words of his Grandfather *Huayna Capac*, that the Chriſtians ſhou'd bring a Law better than theirs. This Sentence was ſo contrary to all Humanity and Juſtice, and ſo horrible a reflection upon the King of *Spain*, that the *Spaniards* themſelves did not think 'twou'd have been executed, but only imagin'd the Vice-Roy intended, by ſuch a formality, to terrify the Inca, or had ſome other ſuch deſign. However, to the amazement of all People, preparations were made for his Execution, and a Scaffold erected in the great Street of *Cuſco*, to which the unfortunate Prince was brought in the moſt ignominious faſhion in the World. He was ſet upon a Mule, with a Rope about his Neck, and his Hands tied; in the mean while a Man went before him, proclaiming him Traytor and Rebel. He not underſtanding *Spaniſh*, ask'd the Friars that were with him, what that Man that went before him ſaid? And they told him that he proclaim'd him an *Auca*, that is, a Traytor. With that he call'd the Fellow to him, and ſpoke to this purpoſe, 'Say not 'ſo, ſays he, for thou knoweſt it is a Lye, and I never 'thought or practis'd Treaſon in my Life, but ſay that I 'die for the Vice-Roys Satiſfaction, and becauſe 'tis his 'Pleaſure I ſhould do ſo; not for any faults committed 'againſt him or the King, and I appeal to *Pachacamac* 'that what I ſay is true. The multitude follow'd him to the Scaffold with bitter cries and lamentations, and there being no leſs (by moderate eſtimation) than 300000 People gather'd together; they were afraid of ſome Tumult, and ſo made all the haſte they cou'd to mount the unhappy Prince upon the Tragical Stage. When he was there, the Prieſts pray'd him to ſilence the clamours and outcries of the People, which he did with a very well compos'd and majeſtick grace; he ſtretch'd out his Arm, with his Hand open, and laid it on his Ear, and from thence by degrees let it fall to his Thigh, upon which immediately follow'd ſo profound a Silence, that that great Multitude ſtood there like ſo many Statues, and not the leaſt noiſe or ſtir was heard amongſt them. In a word, he died with all the compoſedneſs and greatneſs of Mind that cou'd well be imagin'd, and left the *Spaniards* in as much wonder at his courage, as his own People were in ſorrow for the loſs of him. But the bloody Vice-Roy did not ſtop here, but perſecuted all the remainders of the Family; he tortur'd them in hopes to rack ſome Confeſſions out of them, from which he might have a fair pretence for their Execution. Nay, he did dot ſpare the *Meſtizo's*, (as they call them) that is, the Inca's of the half Blood, the Sons of *Spaniards* by *Peruvian* Women of the Royal Houſe, but doom'd them to the ſame puniſhments with the reſt. Only he was ſtopt as to the point of Execution, by the outragious Exclamations of their Mothers, who made ſuch a terrible noiſe, (and mingled it with threatnings too) that the Vice-Roy was afraid to ſhed their Blood. However, he baniſh'd as many as he cou'd light of, ſome to *Chili*, ſome to *Mexico*, others to the Iſlands; and, in ſhort, ſent them all to ſpend the remainders of an unfortunate Life, in Parts far enough from their Native Country. As for thoſe of the Blood Royal, (the pure unmix'd Race of the Inca's) he confin'd 36 of them to the *City of Kings*, to live in a ſort of miſerable Exile there; and together with them, the Son and two Daughters of the murder'd Inca *Tupac Amaru*, the eldeſt of which was not ten Years old. The Archbiſhop of that Place, out of pity, took the Daughter to breed her up, tho' one wou'd have thought (if his Grace had taken but one) it ſhou'd have been more decent for him to have choſen one of the Sons; but God Almighty took care of them, and 33 more of thoſe Royal Exiles, within two Years time, for they all died, coming out of a cold hilly Country into the hot Plains by the Sea. Now there were but three remaining of the Houſe of the Inca's, and theſe were remov'd from *Lima* and ſent home to their own Houſes, where they liv'd but a little while, being quite overwhelm'd with their own miſeries, and thoſe of their Family. Thus they alſo went away after the reſt, out of the reach of the perſecuting *Spaniards*. One of theſe three laſt was the Grandſon of the great *Huayna Capac*, and he left a Son behind him, the one and only remaining branch of the Imperial Stock, and the undoubted Heir of the Crown. This Prince they were jealous of while he ſtaid in the *Indies*, and therefore he was order'd to remove into *Spain*, where a Princely Equipage and Allowance was promis'd him. So he quitted his private Lands and Inheritance in *Peru*, to come and live upon the King's Bounty in *Spain*, where, in ſhort, his Palace was a Monaſtery, and his Courtiers and Attendants a parcel of Piebald Monks and Friars, and his Revenues a ſorry pittance granted out of the Contractation-Houſe at *Sevil*. This baſe dealing broke the poor Prince's heart, and he died at *Alcala de Henares*, where he was ſhut up; he had a Son which died in his Infancy, and ſo the poor Revenue went back again to the Crown, and the Race of the Inca's was quite extinct. But we are not to forget the Vice-Roy, the Author of all this miſchief and confuſion. This Man having ſcrap'd together a prodigious heap of Treaſure, went back into *Spain*; recall'd, 'tis probable, for his vile Managements of Affairs. When he came home, he went to Court to kiſs the King's hand, but the King refus'd him that honour, and bid him get home to his Houſe, telling him he did not ſend him into *Peru* to murder Kings, but to ſerve Kings. And as great Courtiers, when once they begin to tumble, do fall apace, ſo this Diſgrace was preſently followed with another, for the Grand Council of the *Indies* having receiv'd Informations againſt him, they order'd all his Treaſures to be Arreſted. This broke the wretches Heart, and in two days time ſent him away to anſwer for all the innocent Blood he had ſhed. And *Loyola*, the Tool he had made uſe of to drive *Tupac Amaru* out of the Mountains, the Dog that hunted that Innocent Prince into the fatal Snare, (tho' for an aggravation of the crime, he had married that Prince's Brothers Daughter) he came to an end ſomething worſe than his Maſter. He was ſent General into *Chili*, where the bold and brave *Araucans* having ſet their Spies upon him, took an opportunity to fall upon him, which they did with ſuch ſucceſs, that he and all his *Spaniards* were Sacrific'd to their fury.

And now it falls in courſe for us to look a little into the Affairs of the *Spaniards* in that Country; with which, and ſome few Remarks, we ſhall conclude the Hiſtory of this once moſt flouriſhing Empire.

Firſt entrance into *Chili* by the *Spaniards*.

The firſt *Spaniard* that look'd into this Country, in order to a Diſcovery, was *Almagro*, whoſe Army was moſt miſerably harraſs'd in his march hither; for the

Indian Guides that led him along brought him croſs the Snowy Mountains, where they were all like to be ſtarv'd with cold. He went no farther than the Province of *Copiapo*, which is the firſt plain Land in *Chili*, and from hence he return'd again into *Peru*, being weary both of his Journey and his Entertainment too; and he went in good time, for the reſolute *Chilois* were up in Arms, and endeavouring to cloſe the *Spaniards* round, ſo they marched off to ſave their Heads.

Second attempt by *Baldivia.*

The next that went upon this Deſign was *Pedro de Baldivia*, who effected that which *Almagro* durſt not ſtand to attempt; yet 'twas no more than half the Country that he conquer'd, and that part too which had acknowledged the Sovereignty of the Inca's of *Peru* before. As for the nobleſt and richeſt part, inhabited by the *Araucans*, he cou'd do little there; thoſe People, together with the moſt Gold, had alſo the moſt Courage and Valour to defend it.

Baldivia plants the *Spaniards* in *Chili.*

The Inca's of *Peru* cou'd never tell how to manage them, tho' they often tried to do it; yea, by all accounts, they have always held it out againſt all their Neighbours, and never knew what 'twas to be compleatly conquer'd. When the *Spaniards* came firſt upon the borders of this Country, (for they did not dare to enter in) they ſent the Natives word, 'That they were the Children of God, 'and if they would not yield themſelves to be Inſtructed, and Govern'd by them, they wou'd ſhoot fire amongſt them and devour them. As for the *Araucans*, they neither believ'd they were the Children of God, nor that they cou'd ſhoot fire amongſt them, but yet they reſolv'd to try whether they cou'd or no, and therefore met them in the Field, and fought a moſt cruel Battel, in which they found the *Spaniards* were as good as their words, and cou'd ſhoot fire. And by this means *Baldivia* got ſome ground in the Country, for the *Indians*, as valiant as they were, cou'd not tell what to make of, or how to ſtand before thoſe flaming Meſſengers of Death; and they began to think the *Spaniards* were ſomething more than common Men at leaſt, that cou'd ſtrike their Enemies dead without coming near them.

The *Spaniards*, whoſe great Deſign in coming hither was to ſearch out the Gold Mines, quickly began to try what they wou'd yield, and they found them ſo very rich and luxuriant, that he that had leaſt in the company had the value of 20000 Pezo's *per Annum*; and as for *Baldivia* himſelf, he rais'd his Profits to 100000, ſome ſay 300000 Pezo's yearly Income.

Stratagem of the *Araucans.*

Battel with the *Araucans*

Spaniards beat.

Baldivia's death.

The fame of theſe prodigious Riches brought the People flocking over from *Spain*, ſo that now here was a conſiderable Settlement, and the *Spaniards* took up ſix Towns, *viz.* *Villa Nueva*, *St. Jago*, *La Conception*, *La Imperial*, *Baldivia*, and *La Villa Rica*. The General *Baldivia* built alſo a Fort in the midſt of all theſe Plantations, which he furniſh'd with Soldiers and Ordnance; ſo that now they ſeem'd very ſecure, and to have made a good ſtep towards the entire Conqueſt of the Country. But the *Araucans* having convers'd with the *Spaniards* ſome little time, found by many good proofs that they were Mortal Men as well as others, ('tis probable they had knock'd ſome of them o'th' Head to make the Experiment) and therefore reſolv'd amongſt themſelves that they wou'd deliver their Country from them, and drive them all out; for theſe People, it ſeems, were determin'd never to ſubmit to any thing that wore Fleſh and Blood. Having got an Army ready, and poſted with great privacy not far from the Fort, there went 50 of them up to the Fort with Graſs and Straw for the *Spaniards* Horſes, which they were permitted to bring in, and that without the leaſt ſuſpicion, but the ſubtle *Araucans* had wrapt up their Weapons in this Horſe-meat, Clubs, Halberds, Bows and Arrows. As ſoon as they were in they ſeiz'd the Gate, and gave the Signal to their Companions, who marching up preſently, they fell upon the *Spaniards*, kill'd them all, and got entire poſſeſſion of the Fort. The News of this attempt coming to *Baldivia* at the Town of *Conception*, he ſet out preſently with 200 or 300 Horſe, to chaſtize theſe bold and daring *Araucans*. But they did not put him to the trouble of looking after them long, for they were upon the march to look him; and 'twas his unhappy fate to meet them upon a large open Plain, where they had advantages to ſurround him. There's no need to ſay that they fought; both Parties came with a full deſign to do it, and they did it with a vengeance. The reſult was, that the *Araucans* had a compleat demonſtration of the Mortality of the *Spaniards*, for the greateſt part of them were kill'd upon the ſpot, and the reſt ow'd their Lives to the goodneſs of their Horſes, that carried them apace out of the Bloody Field, and the reach of the revengeful *Araucans*. But *Baldivia* was the moſt unhappy of all the Army, for he had his Horſe kill'd under him, and fell into their hands alive. Theſe *Araucans* eaſily knew their good Friend *Baldivia*; he that had Invaded their Country, and endeavour'd to make Slaves and Vaſſals of them. They bid him not be afraid, but pluck up his Spirits and be merry, for they only intended to give him his fill of Gold. So they made a great Banquet for him, and whatever Liquor he had at his Meat, the laſt Cup at the concluſion of all was a Cup of Liquid Gold, becauſe the General was ſuch a lover of that ſame; and whatever ſcruples he made at drinking it off, in ſhort the *Araucans* forc'd it all down, and bid him now glut himſelf with Gold. Here was the Story of *Creſſus*, (as it were repeated again) and that amongſt a People no leſs bold and valiant than the *Parthians* were.

Villa Grande's defeat.

The next that ſucceeded in the Office of General in *Chili*, was *Pedro de Villa Grande*, who quickly rais'd a good Force 10 revenge this Diſgrace of his Friend and Predeceſſor *Baldivia*, but his Army was entirely defeated, and all his Artillery taken; and this defeat was ſo much the worſe, in that the whole ſtrength of the *Spaniards*, then in the Country, was put together to make up this Army.

Vice-Roy's Son quiets them for a time.

Araucans take the City of *Baldivia.*

After this the *Araucans* were never quiet, and tho' ſeveral conſiderable *Spaniſh* Commanders came to reduce them, yet they cou'd never compleatly do it, but they riſe up again as faſt as they were knock'd down. Particularly the Vice-Roy of *Peru*, *Mendoza*, ſent his Son with a ſtrong Army to tame theſe fierce People if poſſible, and tho' in divers Battels he kill'd 40000 or 50000 of them, repairing the Towns and Forts they had demoliſh'd, yet before he was quite got out of the Country they were all up in Arms again, beſieging and burning of Towns, and falling upon the *Spaniards* whereever they cou'd light of them. 'Twas in *A. D.* 1599. that they ſurpriz'd the City of *Valdivia* with a wonderful boldneſs. There came down in the Morning betimes about 5000 of them, of which 3000 were Horſe, 2 or 300 being arm'd in Coats of Mail, and ſome of them with Harquebuſſes; all which were *Spaniſh* Plunder, and the Spoils of the Field. The *Spaniards* having a little before this had ſome conſiderable Succeſſes againſt them, were quite intoxicated with their good fortune, and grown ſo careleſs and negligent upon't, that 'twas pity almoſt but they ſhou'd be ſurpriz'd; they had but four Men in their *Corps du Guard* to walk the Rounds, and the whole City was aſleep. The *Araucans*, who by their Spies had intelligence of this general ſupineneſs and neglect, came up to the Town without raiſing any Alarm, ſeiz'd and ſecur'd the Gates, and ſo march'd into the Place in a full Body. They preſently began to ſet the Houſes a-fire, and to cut the Throats of the *Spaniards*; and within the ſpace of two hours had entirely conſum'd the Town, maſſacred all the Inhabitants, won and burnt the Fort, and left all in Ruines. They carried off to the value off 3 or 400000 Pezo's, beſides all the Artillery of the Fort; and they had likewiſe burnt all the Ships in the Road, if notice had not been given them to be upon their guard.

The Town of *Imperial* ſtarv'd.

From hence they march'd away to *Imperial* and *Villarica*, the former of which places was ſo ſtraitly beſieg'd by them, that all the Inhabitants, except 20, were famiſh'd to death, and thoſe 20 had as hard a fate, being forc'd to yield to the Mercy of the *Araucans*, who wou'd be ſure to have no more Mercy on them than Death and Famine had on their Countrymen. And they went on at ſuch a rate, that the Affairs of the *Spaniards* quickly began to grow deſperate, at leaſt they look'd with a very bad aſpect in the Years 1603 and 1604; for about this time they had Sack'd and Burnt 6 of the 13 Cities which the *Spaniards* had in *Chili*. And by this time alſo they were ſo improv'd in the Art of War, and grown ſo very politick by long Practiſe and Experience, that they were a very formidable Enemy, conſidering how much Valour and Courage they had to mix with that Policy and Skill. Many detachments were made out of the Army in *Peru* for this *Chili* Affair, but thoſe that once came here, ſeldom went back again to *Peru*. All the *Spaniards* look'd upon it as deſperate Service, and reckon'd themſelves as a ſort of Forlorn Hope mark'd out for Deſtruction.

Oſorno and *Villarica* taken by the *Araucans.*

The laſt places we have Accounts of their taking, were the Cities of *Oſorno* and *Villarica*, which they did with a horrible ſlaughter of the *Spaniards*, breaking of Images, and firing of Churches and Houſes, putting even all the Friars and Religious Men to the Sword as well as the Soldiers, and leading the Nuns and other Women away into Captivity. In a word, they became ſo good Soldiers, lov'd their own Liberties (and hated the *Spaniſh* Yoke) ſo heartily, that the *Spaniards* cou'd never be free from moleſtations by them. And but that Gold is a very tempting thing, and People love to be in the way where 'tis to be had, and to have it run through their hands, (tho' they don't hold much on't faſt) or elſe 'twas not worth the *Spaniards* while to keep any Fort or Town at all in this Country; for all the Profits were ſwallowed up by the War, and the Gold that was got was no more than enough to pay the Army that muſt conſtantly be maintain'd there.

The abominable Cruelties of the *Spaniards*.

The Opinion the *Indians* had of them.

A Story to that purpoſe.

Very good Maſters and Teachers of Chriſtianity.

Their own Writers prove all this.

And thus much for the Hiſtory of theſe Countries, and the Entrance, Conqueſts, and Settlement of the *Spaniards* here. How they behaved themſelves amongſt the *Indians*, and what ſort of Examples of Juſtice, Goodneſs and Humanity they ſet, to recommend the Chriſtian Religion which they brought over along with them to theſe People, is another, but a long and a mournful Story. As it was not to promote Religion and Piety, but to ſatisfie their Covetouſneſs and Ambition that they firſt came thither, ſo 'twas not by the Laws of the former, but of the latter, that they liv'd here, exceeding the moſt barbarous *Americans* themſelves in their Savage fierceneſs towards their Fellow Creatures, proud Tyrannick Government, and open violation of all the Rights and Privileges of Mankind. As they lov'd nothing but Gold, did nothing but hunt and ſeek for Gold; ſo they ſtuck at nothing that tended to put them in poſſeſſion of their ſo much deſired prey; not at Treachery and Ingratitude, not at Lying and Perjury, not at Swearing and Blaſphemy, not at Robbing the Orphans and Widows, nor murdering the moſt Innocent in cold Blood. They laid waſte and deſolate ſome of the moſt thriving and flouriſhing Kingdoms in the World; they emptied the Towns of their Inhabitants, whom they either ſlaughter'd without diſtinction of Age and Sex, or forc'd out into the Mountains and wild Places, to be hunted and torn to pieces with Dogs. The *Indians* were always a People of a moſt kind and obliging Diſpoſition, ſo meek and mild, and diſcovering ſo much of a charming Innocence and Sincerity in all their Dealings, that Men that had not wholly diveſted themſelves of all the Vertues of Humane Nature, cou'd not but have been tender and loving to them. They never did any thing to make the *Spaniards* uneaſie, never Plotted nor Conſpired to do them miſchief, till the laſt degrees of cruel uſage had compell'd them to it; nay, ſo far from that, that they ſtudied to pleaſe them, and were glad upon any ſcore to purchaſe a little favour at their hands. But all that they cou'd do, cou'd never ſoften the obdurate tempers of thoſe Men; Humility and Submiſſion cou'd never make them relent, nor ſtrike a damp to the fire of that rage that tranſported them. Nor cou'd all the Riches and Wealth of the Country which the *Spaniards* ſwallow'd every where, procure the miſerable Natives ſo much as a little compaſſion, or a ſmall degree of merciful treatment. No, but their Blood and their Treaſures were both pour'd out together, and the Country fill'd with the mangled Limbs and Carkaſſes of thoſe poor People; ſo that wherever a Man went, he had the proſpect of a Shambles before his Eyes, and found a Field of Blood to travel through. Neither were the beſt and greateſt Men, the Princes and Caciques, excus'd from theſe Barbarities; they ſaw their Palaces rifled, their Wives and Daughters raviſh'd and murder'd before their Faces, and had their own Carkaſſes thrown at length perhaps amongſt the heaps of their Maſſacred Subjects, to feed the Ravens and Vultures. But bare Executions for the moſt part did not ſerve the turn, and the *Spaniards* were not content to put theſe People to death, but they did it with all the circumſtances of Cruelty imaginable; they invented the moſt exquiſite torments for them, and made them die in pains and agonies that wou'd have ſhock'd Humane Nature to have ſeen even the brute Beaſts themſelves ſtruggling under. And where they did not thus diſpatch outright, they drove them away from their Houſes and Habitations, to pine away their lives in Slavery and horrid Bondage in Foreign Countries, or elſe to work and drudge in the Mines; to avoid which miſeries, many thouſands laid violent hands on themſelves and either by Hanging, Stabbing or Drowning, or ſome other wretched Death, put themſelves and their Children out of all their pain at once. As for Baniſhment, the Baſe and the Noble equally ſhar'd that fate, the Mothers and their young Children together; they Tranſported great numbers of Families at a time, to places where they were to be ſold like Beaſts at a Market. In a word, they took away the Lives of ſeveral Millions of People, and all within the compaſs of a few Years; they ruin'd a moſt rich and fertile Country, depopulated Cities and Towns without number, committed all manner of Impiety to the higheſt degree of Licentiouſneſs imaginable, and yet at the ſame time call'd themſelves *the People of God*, and pretended to be ſent to teach the *Indians* thoſe Sacred Laws and Doctrines that wou'd conduce to their everlaſting Happineſs. But was the Majeſty of Heaven ever ſo Blaſphem'd by *Pagans*? Did the fooliſh Rites of Idolatry and Superſtitious Worſhip ever expoſe him ſo much to the contempt of the World, as the mixture of all this flaming Wickedneſs with the Pretenſions to his Service, and a Commiſſion from him? The *Spaniards* reſolving to be ſuch as they were, ſhou'd at their firſt coming over have renounc'd both Chriſtianity and Humanity together; told the *Indians* plainly they came from Hell, were only Devils in Humane Shape, and appear'd on purpoſe to torment them, for a great deal of this had been true, and the Honour of the Chriſtian Religion preſerv'd into the bargain, but the other was an impious Affront to Heaven, as well as a filthy piece of Cheat and Hipocriſie, with reſpect to the People they had to do with. And the Notions the *Indians* had of them and their Religion, were ſuch as were to be expected from ſuch Practiſes. They look'd upon them as a ſort of People entirely eaten up of baſe and covetous deſires, and that wou'd do any thing for ſordid Gain; and therefore they have held up pieces of Gold to them in Mockery. 'Ho Chriſtian, (ſays they) 'here's Gold, here's Gold; intimating, there was the thing they admir'd and ador'd. They knew very well it was the governing Idol of their Souls, and that whatever reſpect they pretended to God Almighty, 'twas this only that they worſhipp'd in their Hearts; and therefore the *Spaniards* have heard them ſay, 'Look 'upon this Gold and behold your God; 'tis for this 'that you have ſubdued us, and done ſo many miſ'chiefs; 'tis for this that you Game, Blaſpheme, Curſe, 'Quarrel, Steal, commit Rapes, and practiſe all man'ner of Luſt and Villany. And 'twas a ſevere and cloſe, tho' juſt reflection, made by one of the Caciques, upon a *Spaniſh* Commander that came to extort his Wealth from him, and us'd ſeveral foul unjuſt practiſes in order thereto: If thy God (ſays he) bids thee Rob, Kill, 'Burn, and do all manner of Miſchief, we can neither 'believe him nor his Law. What miſchief their lewd and wicked Examples did, may be gueſs'd by this Inſtance farther, which was a very remarkable one. There was a Son of one of the Caciques, which, when he was a Boy, was in great towardlineſs and hope, and promiſed very conſiderable things; but having the misfortune to have his Education not amongſt his own Pagan Countrymen, that cou'd have taught him better, but amongſt the *Spaniards* that came to Convert the Country, he grew intolerably Looſe and Debauch'd, and was as good as any of them all at any kind of Villany. Some of his Friends that perceiv'd this change in him, and were ſorry for't, ask'd him one time how he came to grow ſo bad? 'Oh! (ſays he) ſince I have been a Chri'ſtian, and convers'd amongſt the *Spaniards*, I have 'learn'd to Swear by the Name of God, by the Croſs, 'and by the words of the Holy Goſpel; I have learnt to 'Game, and Lye and Diſſemble as they do; I have 'put on a Sword by my Side too, to fight with in my 'Quarrels; and now I want nothing to be compleatly 'like them in my Converſation but a Concubine, and 'her I intend to bring home very ſhortly. A very fine Story to be told by a Heathen of his Chriſtian Maſters! but from this one may imagine what was done in other caſes, and what a monſtrous Offence and Stumbling-block they have been in the way of the Infidels. Theſe, and ſuch like, are the Miracles they have done in the Country, whatever others they pretend to; one may hear them talk of healing the Sick, and doing extraordinary things with their Unctions and Chriſmes, and conſecrated Wafers, but they have gone beyond all that in other Performances, and have done things that the World will for ever wonder at them for. Neither are theſe things to be look'd upon as the bare Surmiſes or Imaginations of other People, or as the Fictions and Stories of thoſe that are Enemies to the *Spaniards*, and are angry with them for ſwallowing up the Riches of ſo large and glorious a part of the World: Let their own Writers, their own Countrymen, be produc'd as Witneſſes in the caſe; let them ſpeak that were there upon the ſpot, that were acquainted with the Country, and ſaw their Management there. Particularly, let the Reader (that is deſirous of the moſt ample Satisfaction) conſult the Writings of *Jerom de Benzos*, and of Don *Bartholomeo de las Caſas* the Biſhop of *Chiappa*, and a zealous *Dominican* Friar. This latter we eſpecially recommend, as a Perſon who ſeems to write with an air of great honeſty and integrity; does not diſcover any thing of Partiality, Prejudice or Deſign, or that he was

An Account of the Controverſie about the *Indians.*

any way biaſs'd in his Writing, but ſeems to be animated all along with a true Religious Zeal, and a compaſſionate Regard to the welfare of the poor *Indians*. He had ſeen a world of theſe Tragedies acted in the *Indies*, where he was Biſhop, and being deeply afflicted at them, and as deſirous to prevent ſuch miſchiefs for the time to come, made a Journey over into *Spain*, to move the Court for that purpoſe. Before he came, there had been a certain Book written by one Dr. *Sepulveda* the Emperor's Hiſtorian, the deſign of which was to Excuſe and Defend the proceedings of the *Spaniards* in the *Weſt-Indies*; and this he was put upon by ſome of them that had their hands in the Slaughters and Devaſtations there, who ſeeing no way to conceal their Villanies, reſolved to make them appear juſt and reaſonable to the World. *Sepulveda* was a fit Tool for ſuch Work, both as he was a Man of barbarous Principles, and as one, who by his Elegancy and flouriſhing Language, cou'd befriend the worſt Cauſe imaginable, and give Vice and Knavery the Dreſs of Honeſty and good Manners. The ſubſtance of his Book conſiſted mainly in the proof of theſe two Concluſions: *Firſt*, That the Wars of the *Spaniards* againſt the *Indians* were Juſt and Equitable. *Secondly*, That the *Indians* were bound to yield and ſubmit to them, as the Fooliſh are to the Wiſe, as the Baſe and Inferiour to the more Noble and Excellent; and that if they did not do ſo, the *Spaniards* might execute their Pleaſure upon them. But the Book did not meet with any Countenance, and the *Spaniards* themſelves reckon'd it ſo Scandalous, that they wou'd not let it be printed. The Royal Council of the *Indies* refus'd to Licence it; and for all the fulſome flattery of it, in pretending to Aſſert the Right of the *Spaniſh* Monarchs to an Univerſal Sovereignty, they judg'd it unfit to ſee the light. Being repuls'd ſeveral times here, he made his Application to the Emperor by ſome Friends at Court, and got an Order to go to the Royal Council of *Caſtile* for their Approbation of his Book; and 'twas while he was Soliciting here, that the Biſhop of *Chiappa* came upon a very contrary deſign. That Prelate having notice of the Book, and the Contents of it, oppos'd the printing of it with all the vehemence in the World, and repreſented the dangerous conſequences of it ſo effectually to that Council, that they wou'd not venture to determine the Matter themſelves, but referr'd it to the Univerſities of *Salamanca* and *Alcala*, who were deſired to Examine Dr. *Sepulveda*'s Book very nicely. In a word, the Divines of thoſe Academies (after a great many Diſputations) concluded that it was full of pernicious Doctrines, and ought not to be made publick; ſo that the printing of it in *Spain* was abſolutely forbidden. However, the Doctor (who was reſolved to do his utmoſt towards the propagation of Principles of Tyranny and Arbitrary Power) ſcorning, and railing at the Deciſion of the Academies, ſent his Book to *Rome*, the likelieſt place to give a Birth to any thing that was deſign'd to do miſchief. And here it got into the Preſs, tho' the Emperor preſently iſſued out Orders for the ſuppreſſing of it in all his Dominions, and made all the Copies of the Abſtract of it, which were done in the Vulgar *Spaniſh*, (to ſpread the Notions amongſt the People more generally) be gather'd up. In a word, the Biſhop of *Chiappa* now ſet himſelf to write, for an Antidote againſt this Poyſon ſo ſpreading and ſo pleaſing to the *Spaniards* too; in which he ruin'd all *Sepulveda*'s Foundations, and ſhew'd how weak and precarious, as well as contrary to the Doctrines of the Chriſtian Religion, all that he had advanc'd there was. But whether that Piece was then printed or no, 'tis certain that (beſides the Council of the *Indies*) the Emperor ſummon'd an Aſſembly of Divines and Lawyers to *Valladolid*, in *A.D.* 1550. where the Biſhop, and Dr. *Sepulveda*, both appear'd, and had all the liberty and ſcope that cou'd be deſired allow'd them, to maintain each the Cauſe he had undertaken. A full account of which Diſputation, with the Biſhop's Advantages, his cloſe and ſerious Applications to the Emperor, on the behalf of the *Indians*, (with other Matters to the ſame purpoſe) may be ſeen in his Hiſtory of the *Spaniſh* Cruelties in the *Weſt-Indies*.

CHAP. XV.

An Account of the Voyage to Florida, *made by the Fleet under the Command of* Pamphilo Narvaez: *Written by* Alvaro Nunnez, *an Officer in the ſame.*

Fleet for the *Florida* Diſcovery. *June, A. D.* 1527.

THE Fleet conſiſted of five Ships well furniſh'd, wherein were 600 Men, beſides Friars and Spiritual People: The principal Officers were *Alvaro Nunnez*, Treaſurer; *Agozino*, Provoſt-Martial; *Alonzo Euriquez*, Auditor; *Alonzo de Solis*, Factor and Overſeer for his Majeſty of *Spain*; and *Narvaez* Governor. They ſet Sail from the Haven of St. *Lucar* of *Barrameda*, with full Power to conquer all the Country from the River of *Palmes* to the Cape of *Florida*. Staying at the Iſland of *Cuba* ſome time for a Recruit of their Proviſions, they met with a Tempeſt there that extremely damag'd their Fleet, and ſunk two of the Ships. The Wind at that time was outragious and violent to the laſt degree, and did no leſs miſchief at Land than it did at Sea. It blew down Houſes and Churches; and unleſs 7 or 8 Men went together, holding faſt by one another, there was no ſtanding againſt the ſtrength of it, a ſingle Man cou'd not keep upon his Legs. Thoſe that left their Houſes for fear of being buried in the Ruines of them, were in as much danger in the Woods with the continual cracking and falling of the Trees. The loſſes they ſuſtain'd by this Tempeſt, together with the toil and fatigue it put them to, obliged them to continue here and refreſh themſelves for the ſpace of ſome Months; after which they proceeded in their Voyage towards *Florida*, with four Ships and one Brigantine, in which were about 400 Men and 80 Horſes. In this Courſe they met with dangers not much inferiour to the former, being like once to periſh all together by running on the Sands, and at another time by a raging Tempeſt; tho' at laſt, without any farther loſſes, they came up with the Coaſt of *Florida*, and anchor'd in the mouth of a fair open Road. The Governor *Narvaez*, with ſome others, went aſhore to the *Indian* Town that was near, and took poſſeſſion of the ſame in the King of *Spain*'s Name; which they might very well do, without any manner of oppoſition or diſturbance, for the *Indians* were all gone out in their Canoes the Night before. They coaſted about the Gulph ſome 4 Leagues, and then found ſome *Indians* who brought them to their Village, which was at the head of the Gulph; and here they found Pieces of Cloth, ſuch as comes from *Hiſpaniola*, great *Spaniſh* Cheſts, in every one of which was the Body of a dead Man cover'd with Deers-ſkins, together with ſome fragments of Gold. The *Spaniards* were moſt inquiſitive about the latter of theſe things, how, and where they got it; and the *Indians* gave them to underſtand, by ſigns and words, that it came from a far diſtant Province call'd *Apalachen*, where they might find great quantities of the ſame. And 'twas not long after that *Narvaez* began to ſet out with his Company for the ſearch of this golden Country. They travell'd 15 days without the ſight of Man, Beaſt, or Houſe, meeting in all that Way with no ſort of Proviſion neither but a few Dates. At laſt a Party of 200 *Indians* preſented themſelves to their view, but made ſigns to them that they ſhou'd join their Company to theirs, and go with them to their Villages; and the *Spaniards*, who wanted refreſhment, were willing enough to agree to.

Province of *Apalachen*.

After a little inquiry into the Country that lay to the Sea, they continued their march towards *Apalachen*, and in their Journey a certain Cacique came to pay them a Viſit in his beſt attire, (as 'tis to be ſuppos'd) which was a Deer-ſkin painted, and attended with a great many of

Terrible Lightning.

Town of *Apalachen.*

Spaniards aſſaulted.

Products of the Country.

his People. As they paſs'd through his Country they were kindly us'd, and had Maize, and other things the Soil afforded, freely brought by the Natives. In many Parts of the Country up and down they found Maize, Cedars, Sanine Trees, Holmes, Oaks, and low Palmes like thoſe of *Caſtile.* The Lakes and Pools alſo lie very thick, ſome of which are very difficult to be paſs'd, as alſo ſome of the Rivers, which are ſwift and rapid, and give a great deal of trouble to them that are to paſs them. The Mountains in many places, beſides their own vaſtneſs, were cover'd with huge tall Trees, abundance of which were thrown down with Tempeſts, and the Way quite ſtopt up, ſo that there was no paſſing without fetching a great compaſs; and they obſerv'd that the greateſt part of theſe Trees were cleft from one end to the other, the certain and undoubted effect of the terrible Lightnings to which thoſe Parts are very obnoxious. Having march'd through many of theſe difficulties, they came at laſt to the ſo much deſired *Apalachen.* The Town of that Name they had eaſie acceſs and entrance into, for there were none but Women and Children there, all the Men being gone abroad either for Sport and Paſtime, or out of Policy and Deſign. However, they very quickly after came out in open view, and aſſaulted the *Spaniards* with their Bows and Arrows, but the fight was quickly over, and the *Indians* running away left them ſtill in poſſeſſion of their Town. Theſe People had poor little Houſes, but built very cloſe and ſnug, in Delves and Valleys, for fear of the direful Tempeſts that happen there. Their main Furniture was Skins of wild Beaſts, and little Mills to grind their Maize; they had alſo ſome Garments made of Thread, which were us'd only by the Women, but very mean and ſorry like all the reſt. The Province abounded with Maize, but we hear of no other ſort of Grain, nor not a word of the Gold which the *Indians* promis'd. The Beaſts they ſaw here were chiefly Conies, Hares, Bears, Lions, and one that carried all her Young in a great Bag or Pouch, which Nature had provided for that purpoſe, till they were able to ſtand upon their own Legs, and ſhift for themſelves. The Fowl were Geeſe, Ducks, Herons, Faulcons, Sparrow-hawks, Black-birds, and ſome others; but of neither ſort of Animals any great rarities. The Country was capable of maintaining Flocks and Herds, there being a great deal of good Paſturage in many places. The *Indians* that had quitted the Town, and left their Wives and Children in their poſſeſſion, came again to demand them of them, and the *Spaniards* deliver'd them all; only they detain'd a certain Cacique, which offended the Natives ſo, that the next day they return'd and aſſaulted them with a great fury, and ſet fire to the Houſes where they were. But they did not care to ſtand to the trial of a Battel when the *Spaniards* came out to fight them, but retired into their ſhelters, and offer'd no more ſuch diſturbances. Another ſort of *Indians* came alſo to make the like experiment upon them, but they cou'd do no good, and were forc'd to fly as the others had done.

Spaniards go to *Aute.*

The *Spaniards* now began to be weary of ſtaying here, for the Country ſeem'd to be poor and meanly Peopled, and travelling very difficult by reaſon of the many Lakes and Mountains. Beſides, by the account of their *Indian* Guides, the Province of *Apalachen* was the beſt of all thereabouts, and farther they wou'd meet with Lakes and Mountains that were more unpaſſable, and a Country worſe Peopled by far than that where they were. As for the Country that lay towards the South, they were inform'd it yielded Maize and Pulſe, and ſome Fiſh, but they cou'd hear no tidings, much leſs ſee any ſigns of Gold all this while. However they reſolv'd to ſee this Country which the *Indians* (that brought them hither, and ſtill went along with them) call'd the Country of *Aute.* As they march'd thither, the *Indians* perplex'd them moſt grievouſly in their paſſage over one of the Lakes, taking that opportunity to aſſault them; for the *Spaniards* were forc'd to wade through the water, and were very near Breaſt high, and when they were all in, the *Indians* that lay cloſe amongſt the Trees that were tumbled down into and about the Lake, ſent a ſhower of Arrows upon them, and wounded a great many, both Men and Horſes. After this they paſs'd the other Lakes quietly enough, for their Enemies had ſpent the greateſt part of their Ammunition upon them; but when they came out upon the Plains, they follow'd them ſtill at a diſtance, and made their march as troubleſome and fatiguing as they cou'd. Theſe People were very tall and ſtrong of Body, and wonderful dextrous Archers; their Bows were as thick as a Man's Arm, and 11 or 12 Span long, and their Arrows fitted to do the worſt of Executions. They wou'd ſhoot at the diſtance of 200 Paces, and ſo very exact and level, as never to miſs the Mark they aim'd at. And with what a ſpring their Bows deliver an Arrow may be gueſs'd from hence, that ſome of the *Spaniards* ſaw an Arrow ſticking in a great Elm-Tree that pierc'd above a handful into the body of it; and another of them in the fight was ſtruck with an Arrow in the Head, that (notwithſtanding his Head-piece) almoſt made its way through from one ſide to the other.

Aute. People gone.

Sorry Boats.

Dangerous Voyage.

Miſerable caſe of the *Spaniards.*

The Cacique kind to them.

When they came to *Aute,* they found no People nor Houſes neither, for the former were fled, and the latter burnt, only ſome Stock of Maize, Gourds and Pulſe was left, which the *Indians* ('twas to be ſuppos'd) cou'd not carry away with them. 'Twas to no purpoſe for them to ſtay in ſuch a Country, where the People treated them like Enemies, and no Proviſion hardly to be had neither; having therefore made ſome Obſervations of the Sea-Coaſts that lay near, they reſolv'd, if poſſible, to deliver themſelves out of ſo barbarous a place, and do their endeavours to find the way homeward. But how or which way was this to be put in practiſe? There was no going back again by Land the ſame way they came, for this wou'd be to run into the ſame dangers and difficulties, which with ſo much loſs and trouble they had juſt ſurmounted; beſides their Horſes were moſt of them dead, and the reſt ſo feeble as not to be able to ſtand upon their own legs, much leſs to carry them that cou'd not travel afoot. And as for their Ships, they were diſcharged long before, and Boats they had none, nor knew not where to provide themſelves with any; but the caſe was deſperate, and ſo muſt have a deſperate remedy, and they muſt run any hazard rather than ſtay there and ſtarve, or be deſtroy'd by the *Indians.* They ſet therefore to making of Boats, but having no Nails nor Tools, they us'd the old Iron of Croſs-bows, Stirrops and Spurs, inſtead of them; their Cordage and Tackling was Horſe-hair twiſted, and the Rinds of Trees, their Sails old Shirts, and in the rooms of Pitch and Tar they daub'd their Boats with the Gum of Pine-Trees; as for Oars, there was Wood enough to make them, as alſo the bodies of the Boats themſelves. But they were worſt of all put to it for Veſſels to carry their freſh Water in, to ſupply which defect they flead ſome of their dead Horſes, and ſow'd their Skins together into convenient forms, and ſo us'd them inſtead of better things for that purpoſe. There were five of theſe ſorry Boats made in all, which were ſufficient to contain their whole Company, that was now conſiderably leſſen'd, partly by Sickneſs and Famine, and partly by the *Indian* Arrows; there was no more than half the number that firſt landed in the Country. They committed themſelves to Divine Providence, and undertook one of the moſt hazardous Voyages that ever was undertaken by Men; but neceſſity (which obliged them to it) has no Law. After 7 days Sailing (with no little danger by reaſon of the many Gulphs) they arriv'd at an Iſland that lies near the Land, where ſome of the company landed, and got ſome little Recruits at the Houſes of the *Indians* upon the ſame; they ſaw ſome of thoſe People too in their Canoes, but they wou'd not ſtay till the *Spaniards* came up to them, but made off, and left the Canoes at their diſpoſe. They Sail'd along the Coaſt for above 30 days, being ſtill in the ſame Labyrinth that they were at firſt ſetting out, as to the knowledge of the Country, and their right way home. Hunger and thirſt prevail'd grievouſly amongſt them all this while, and they had no ſight of any People but ſometimes a few *Indian* Fiſhers, a poor and miſerable ſort of wretches that were not able to relieve them, nor wou'd not come near them. Some of their Men died with drinking large draughts of Salt Water, which they cou'd not forbear, the thirſt that poſſeſſed them was ſo great. In this diſtreſs, and when they were almoſt at the point of giving up all for loſt, they Weather'd a point of the Land where there appear'd to be ſafe and eaſie going aſhore, and ſeveral Canoes of *Indians* came out to ſee them. But the Barbarians having juſt look'd upon them, went away again; however the *Spaniards* follow'd them aſhore to their Houſes, before the entrance of which they found great quantities of Fiſh, and Pots of freſh Water. The Cacique, a Prince of theſe People, had more civility than his Subjects, and offer'd all this Fiſh and Water to *Narvaez* and his Company; and more than that, invited them to his Houſe. The *Spaniards* were not ungrateful to theſe People for their hoſpitable treatment of them, but entertain'd them with the Bread of Maize, and ſome Trifles which they had brought. The Cacique's Houſe was neatly made of Mats, and he was cover'd with a Mantle made of the Martinets Sable, which ſmelt like Musk, or rather like Ambergreeſe; ſome others had Furr Mantles too, but none like that.

Indians aſſault them.

While the *Spaniards* that came aſhore were enjoying themſelves here, the barbarous *Indians* got together and aſſaulted the Houſe, took away the Cacique, wounded *Narvaez*, purſued them to their Boats, and attack'd the Troop (that ſtaid aſhore to favour the retreat of the reſt into their Boats, and to protect them there) with ſo much fury in the Night time, that there was not one of them that eſcap'd wounding. 'Twas but a poor refreſhment they got here, yet ſuch as 'twas they were forced to be contented with it, and go to ſeek their Fortunes ſomewhere elſe.

After a few days Sailing they met with more *Indians* in their Canoes, who promis'd to give them freſh Water enough if they wou'd furniſh them with Veſſels to bring it in; ſo they left two *Indians* for Hoſtages, and two of *Narvaez*'s company went aſhore along with them to fetch the Water.

Perfidious People.

At Night theſe perfidious Wretches brought back the Veſſels, but not a drop of Water in them; neither did they bring the Men with them according to promiſe, nor wou'd they give any account what was become of them. But inſtead of that, the next day came a conſiderable number of them in their Canoes, together with 5 or 6 of their Caciques, dreſs'd in their Mantles of Martinet Furr, and they were ſo impudent as to demand their two Men left for Pledges, tho' thoſe of the other ſide were ſtill detain'd (perhaps Sacrific'd) by them. Theſe Caciques wou'd fain have had the *Spaniards* gone aſhore with them, but they ſaw too much of their treachery already to venture themſelves any farther amongſt them; beſides the Canoes ſtill coming in thick and threefold upon them, they had reaſon to ſuſpect ſome Villanous Deſign was then in hand. When the *Indians* ſaw they cou'd do no good, and that the *Spaniards* peremptorily refus'd to reſtore their two Men, they threw off the Mask, and appear'd with the bare face of Enmity; they began to fling great Stones at them, and wou'd have done more miſchief, but that a freſh gale of Wind blowing at that time made them keep off, and invited the others to go on with their Voyage.

Extreme hunger.

Their want of Proviſions upon theſe Inhoſpitable Coaſts continued very ſharp and preſſing, and they were now come to the poor Allowance of half a handful of raw Maize a Day.

Tempeſt ſcatters all their Boats.

But they had not ſail'd many days in this diſtreſs before a Tempeſt riſe upon them, that ſcatter'd that ſorry Fleet of Boats from one another, driving them they knew not where themſelves; but however, they had no reaſon to expect ever to ſee each other again.

Alvaro caſt upon an Iſland.

The Boat in which *Alvaro* (our Author) ſailed, happily recover'd ſhelter in a certain Iſland whether it was driven, but it was after they had endured the laſt extremities by hunger, cold, and the violent toſſings of a rough and raging Sea. The violence of hunger made them ſearch for Food in the Cottages of the *Indians* that were near, as ſoon as ever they came aſhore; and happening to find all clear and open, (for the *Indians* were abroad in the Field) they took ſome few Neceſſaries and return'd to their Boat. But in a very little time the *Indians* had got the ſcent of them, and came with a matter of 100 Archers upon them; they were very large ſtout Men, and the weak and weather-beaten *Spaniards* looking upon them with the Eyes of fear, imagin'd them to be Giants. However, they did not offer to let fly any of their Arrows at them; ſo that *Alvaro* ſeeing them appear ſomething mild and gentle came up to them, and with a few Toys won their Friendſhip ſo effectually, that every one of them gave him an Arrow in token of it, and told him by ſigns that they wou'd return in the Morning, and bring ſome Proviſions with them.

Indians entertain him and his company.

And they were as good as their word, coming at the time appointed with Fiſh and Roots; and they repeated their Viſits thus conſtantly for two or three days, the *Spaniards* ſtill requiting their kindneſs with ſome odd things or other, which were not a little pleaſing to them. When they thought they were pretty well provided with Neceſſaries, they reſolved to go on with their Voyage, and for that end went into their Boat, but one boiſterous wave overturn'd the Boat, drown'd three of them, and beat all the reſt back again upon the ſhore.

Beat back to the ſhore again.

They were now in a miſerable condition, whatever they had being loſt, and themſelves quite naked, for they had ſtript off their Cloaths before to launch the Boat into the water; beſides twas the Winter Seaſon, and the Weather extremely cold, and a long courſe of hard living had taken away all the covering of fleſh from their Bones, ſo that they appear'd like ſo many frightful Images of Death. But 'twas their good luck by ſearching about, to find ſome of the Brands which they had juſt made a fire with before they embark'd, and as Providence wou'd have it, thoſe Brands not quite extinguiſh'd neither; ſo that here they quickly blew up a fire, which in ſome meaſure comforted them under the piercing blaſts of the North wind.

Indians frighted at them.

They were in this forlorn ſtate not expecting to live, when the *Indians* (who knew nothing of their misfortune) came as they were wont, to bring them more Supplies; but when they ſaw a parcel of naked Skeletons ſtanding about a fire, believing them to be ſome very horrible things, they took up their heels and run away as faſt as they cou'd. But *Alvaro* made after them, and ſtopt them at laſt, with many fair words and perſwaſions, and told them the Story of their ſad Adventure, which they believ'd when they came back and ſaw one or two of the dead Bodies upon the ſhore. At the hearing of this they fell a weeping and lamenting after their manner, bewailing the *Spaniards* in very moving terms upon the ſcore of their misfortunes, and expreſs'd a great deal of tenderneſs and humanity.

Indians take them to their Houſes.

This encouraged *Alvaro* to deſire them to take them into their Houſes for ſhelter, which they readily conſented to; and becauſe their Habitations were a good way off, they made ſeveral great fires by the way, at which they ſtopt to rub and chafe the benummed Limbs of theſe poor Men, and carried them all the way upon their backs, not ſuffering any one of them to touch the ground with his feet. They alſo made good fires for them when they brought them home, gave them Food and a warm Lodging, and Sung and Danced all Night for their arrival.

Deſcription of the People.

Theſe People (like moſt of the reſt they had hitherto ſeen) were of ſtrong well compacted Bodies, and of good courage. The Men had one of their Paps pierc'd from one ſide to the other, and in the hole a little Cane was thruſt acroſs, about two or three ſpan long, and two fingers thick; ſome had both their Paps ſerv'd thus. The like they did to the under-lip, in which they carried a piece of Cane about half a finger thick.

Way of living.

They make this Iſland their habitation from *October* to the end of *February*, feeding moſtly all that time upon Fiſh, and a ſort of Root which they dig out from under the water with much labour and trouble. When that time is expired, they remove into the Continent to ſeek other Food, for thoſe Roots do then but begin to grow, and are not in their perfection till *November* and *December*. Their Houſes are made of Mats, and they have the Hides of Beaſts for Beds and Couches to ſleep upon; their Weapons are only Bows and Arrows.

Love to their Children.

They are the fondeſt lovers of their Children in the World, and uſe them with as much tenderneſs; if one dies, not only the Family and Kindred, but the whole Village laments the loſs; and they keep up their Mourning for a whole Year, performing the Ceremony of Lamentation three times a day, before Sun-riſing, at Noon, and at Sun ſet; firſt the Parents, and then all the reſt of the People. When the Year is up, and the laſt Funeral Rites accompliſh'd, they waſh themſelves, and ſhift all their Mourning Apparel, and appear in their wonted Guarb.

Diſreſpect of Old Age.

Old Age they never bewail in this manner, for they don't pay any great reverence to it, as many, yea, moſt other *Indians* do. They ſay the old ones are good for nothing but to conſume the Maintenance that the Children ſhou'd have; and that ſince they have lived their time, 'tis fit they ſhou'd die to make room.

Honour to Phyſicians.

They bury all the other Dead except their Phyſicians, whom they burn, and turn their bones into a Powder, which (at the Years end, when the Funeral Rites are conſummated) they give to their Kindred to drink up in a draught of Water; the deſign of this, 'tis to be ſuppos'd, is to turn them into Doctors too, for a ſupply of the others Mortality. Theſe Phyſicians have wonderful Privileges above all other People, for they may marry two or three Wives, whereas all the reſt are allowed but one. They have farther this advantage, that thoſe whom they cure do eſteem them ſo much, as many times to give them all they are worth in the World, and to procure their Friends to make them Preſents beſides.

Practiſe of Phyſick.

Their methods of practiſe are only to cut and gaſh the Part affected, let it ail what it will, and then to apply their Mouths and ſuck out the diſtemper; then inſtead of a Plaiſter, they Sear it with a hot Iron; and for the concluſion of all, blow upon the place, to blow away all the remainders of the grief that wou'd not come out by Suction. And they are ſo much for propagating the Faculty of Phyſick, that they wou'd needs have the *Spaniards* their Gueſts turn Doctors too, and pretend to cure by blowing and ſucking as they did. Neither wou'd they admit of their Excuſe, that they had no ſuch Skill or Vertue to carry off a diſtemper after that unaccountable manner:

Good Argument.

For (ſay they) all manner of Stones, and Plants that grow in the Field, have a vertue and a goodneſs in them that is profitable for ſome diſtemper or other, and is not Man a more excellent Creature than a Stone, or a Plant, and ſo has more healing and reſtoring Vertues in him than they? However, Cures wrought with Spiritual Phyſick.

ever, *Alvaro* ſays they did not go that way to work that the *Indian* Doctors did, but rather by Spiritual Methods of Prayer and Invocation to recover the Sick that way; their Plaiſters and Cordials were *Pater Noſters* and *Ave Maries*, Benedictions and Doxologies, which he reports did wonderful Cures, and gain'd them a mighty reputation in the Country. Yet he confeſſes they were forced to comply with the *Indian* practiſe ſo far, as to blow over the Patient like them; but whether the blaſt was upwards or downwards he does not tell us, but 'tis no great matter, ſince both are of the ſame vertue.

Malhado Iſland.

While they made their abode with the *Indians* of this Iſland, (which they call'd the Iſland of *Malhado*) fortune brought ſome more of their Companions to them, who had been caſt here likewiſe as they were: And being all together, they determin'd to trim up a Boat, and as many of them as were ſtrong and well to go in it, and endeavour to find ſome way to come where Chriſtians liv'd, and the reſt ſhou'd ſtay there till they were recover'd, and their Friends cou'd order Matters ſo as to remove them alſo. But juſt as they were putting this Project in execution, their Boat fail'd and diſappointed them; it was no ſooner Launched but it ſunk to the bottom, and ſo fruſtrated their deſign of eſcaping for that time. However, four of them that were the beſt Swimmers undertook to paſs over to the Main Land, and ſo travel till they came to ſome Town inhabited by *Spaniards*, to give them notice of the diſtreſs their poor Countrymen were in here. After theſe Meſſengers were diſpatch'd, *Alvarado* and his company ſuffer'd very great hardſhips and miſeries upon the Iſland.

Spaniards die.

The Weather prov'd bad and unſeaſonable, and they were ready to ſtarve for want of Proviſions; there was a ſad Mortality amongſt them too, and of 80 Men which there were in all, there were no more left remaining but 15.

Indians alter their Opinion of them.

And which was worſe ſtill, a Sickneſs happening amongſt the *Indians*, which ſwept away great numbers of them, their Superſtitious fancy perſwaded them the *Spaniards* were the cauſe of that Mortality; and now, inſtead of Phyſicians, they made Negromancers and Murderers of them. In ſhort, this fancy prevail'd ſo far, that they began to conſult about the Sacrificing of them, and this they had certainly done, had not one wiſer than the reſt argued his Companions into a belief of the Innocency of the *Spaniards* from this conſideration, That if they had a power to take away Men's lives, they might be as reaſonably ſuppos'd to have a power to preſerve them, which if they had had, to be ſure they wou'd not have ſuffer'd ſo many of their own Men to die as had done before their faces. This Reaſon ſav'd their lives, but they liv'd an uneaſie life here afterwards; both the *Indians* and they too ſuffer'd great extremities for want of Proviſions, and made a very hard ſhift to avoid ſtarving. Upon this, ſome of the *Indians* remov'd over to the Main Land, where they cou'd have a better Subſiſtance, and carried ſome of the *Spaniards* along with them; and having liv'd there ſome time, they return'd to another Iſland about two Leagues from the *Terra Firma*, for the convenience of the freſh Water that was there. *Alvaro* was alſo tranſported over to the *Terra Firma* by ſome other of the *Indians*, who went, 'tis to be ſuppos'd, upon the ſame account of ſupplying themſelves with the Neceſſaries of Life. And thus all were releas'd from the Priſon of *Malhado Iſland*, but ſtill 'twas but a remove from one Priſon to another, and they were as far as ever, in their own Opinions, from getting away from thoſe Heatheniſh People.

Alvaro and ſome of his company meet.

Whilſt *Alvaro* was here, his Companions, at the Iſland lately mention'd, had notice of the place of his Abode, and got an opportunity to come over to him; the number that came was 12, and two were left ſick behind in the Iſland. Theſe Men reſolv'd to travel along the Coaſt homewards, but *Alvaro* being weak, cou'd not pretend to bear them company in ſuch a Journey; ſo they went on and he ſtaid.

Alvaro flies

After they were gone, he obſerv'd his time when the *Indians* were out of the way, and got over to the Iſland where his two Countrymen were left, and ſtaid there a Year at leaſt, till he recover'd his health a little better. But then he reſolv'd to bid farewel to them too, for they us'd him ill, and put him to the painful drudgery of digging under Water for the Roots they liv'd upon. This deſign he executed, and convey'd himſelf over to the Main Land again amongſt the *Indians* of *Carruco*.

Lives with other *Indians* as a Merchant.

Here he had a much eaſier Life in all reſpects, for he pretended himſelf a Merchant, which was a ſort of Vocation very grateful to them, and procur'd him both good uſage and liberty too. For now his buſineſs was to travel up and down from one place to another with Wares; he went where he pleas'd, and return'd when he wou'd, and the People every where made much of him, and deſired his company. The Merchandize he carried was Shells, Hides, red Oker, Canes to make the bodies of Arrows, and Flints to make heads, and ſuch like trifles. But that which was the greateſt advantage to him by this courſe of life was, that by this means he had an opportunity of viewing the Country, and contriving his eſcape, for he travell'd at leaſt 40 or 50 leagues along the Coaſt.

After this manner he ſpent 6 Years amongſt theſe *Indians* of *Carruco*, and went naked all the while as they go; but the 7th and laſt Year of his Apprenticeſhip coming on, he found a way to give his *Indian* Maſters the ſlip, and came to another People upon that ſame Coaſt.

Spaniards meet again.

While he was here, by a ſtrange turn of Fortune he met with two of his Countrymen again, ſome of them that had been with him before at the Iſland of *Malhado*, and that had parted from him at the other Iſland, 12 of them in company, to make their way homeward. But 'twas their hap to fall into the hands of ſome of the *Indians*, who kept them with them; and as 'tis the cuſtom of thoſe People to rove from one place to another for Suſtenance, and to go and eat the Fruit or the Grain that ſuch or ſuch a place affords, at the time when 'tis in ſeaſon, ſo it ſeems thoſe *Indians*, who had theſe Men in keeping, came upon the ſame account to the place where *Alvaro* was, and ſo gave him and his Countrymen an opportunity of meeting together.

All the Fleet ruin'd.

Here *Alvaro* had a full account of the ruine of their Fleet of Boats, when the violent Storm ſeparated them from one another; how *Narvaez* himſelf, and all the reſt were loſt, ſome drown'd, ſome ſtarv'd aſhore, and reduc'd to the miſerable neceſſity of eating one another; others murder'd by the barbarous *Indians*, who found them ſtraggling up and down in their Country. Theſe few that were now left being thus happily met together, made it their buſineſs to conſult about ways and means how to get out of the clutches of theſe *Indians*; and they concluded, that the only way wou'd be to ſtay till they went to eat *Tune* in a neighbouring Country, as their conſtant cuſtom was, tho' it were 6 Months to that time.

The Fruit *Tune*.

This *Tune* is a Fruit of the bigneſs of an Egg, 'tis red and black, and of a very good taſte; the *Indians* eat them three Months in the Year, and live entirely upon them in the Seaſon, eating nothing elſe.

The *Indians* in this part of the Country (particularly the Nations of the *Marians* and *Jagavans*, amongſt whom the *Spaniards* convers'd) were a People of a ſordid Life, and brutiſh and barbarous Cuſtoms. Their Paps and Lips were pierc'd like thoſe at the Iſland of *Malhado*, their Food Roots, and any ſort of Animal almoſt that they can catch; Frogs, Worms, Lizards, Serpents, go down like good ſavoury Victuals with them, nay Earth, Wood and Beaſts dung (when they can get nothing elſe) will ſerve the turn.

Barbarity towards Children.

They neither reverence Old Age, nor love their Children as the other *Indians* do, but will kill them with their own hands many times, becauſe they ſhall not (as they impertinently alledge) be ever ſerviceable to their Enemies.

But one Wife.

They don't take any Wives amongſt themſelves, nor any Husbands for their Daughters neither, for they ſay they are all Kindred, and 'tis a ſhame for them to marry their own Relations. So that what Women they have in that way, are either taken from their Enemies in War, or bought of ſome of the neighbouring People;

Price of a Woman.

and the price they generally give for a Woman, is either a good Bow and a couple of Arrows, or elſe a large Net. They put all the old People to carry burdens, and do ſuch other Drudgery as their feeble Age is capable of.

Induſtrious Women.

The Men don't much trouble themſelves about any Work or Labour, but throw moſt of it upon the Women, who are generally ſtout and ſtrong, and both fit for it, and us'd to it. They are ſo buſie about their Houſhold concerns, that they allow not above 6 hours of the 24 for reſt; they ſpend the greateſt part of the Night in heating their Ovens, and drying the Roots they eat; and then as ſoon as the Day begins to appear, they go to drawing of Water, and fetching of Wood into their Houſes. Their Houſes are made of Mats, and ſtand upon four Arches, and are contriv'd ſo, that they can take them up and remove them into any place where the conveniency of Food calls them.

Ill qualities.

As to their Temper and Moral qualities, the *Spaniards* give but an ill account of them; they ſay they practiſe unnatural Luſts one with another, are very Sottiſh, will Lye and Diſſemble monſtrouſly, Thieve and Steal, not only from Neighbours, but even Fathers and Children from one another. They neither Till the Land, nor Sow any ſort of Seed, but leave all to the care and bounty of Nature; yet, notwithſtanding their Poverty and uncertainty of Food, they live merry and jocund, and never ceaſe their Sports and Dancings.

Great Runners.

They are ſo very ſwift of foot, and every way ſo well made for running, Veniſon and Beef.

The Flyes.

Their eſcape.

Sad Life.

running, that they'll follow a Deer from Morning to Evening till they have quite run him down, and made him ſo weary as to be taken alive. The beſt of all their living is when they go to eat *Tune*, for then they do nothing but eat almoſt all Day and Night too, and ſpend their time in Dancing and Revelling while that Fruit laſts. When they have done eating the *Tunes* in the Country where they grow, they take ſome and open and dry them, to eat by the way as they return home. In ſhort, this *Tune* time is a Feſtival of the ſame quality and great expectation amongſt them that *Chriſtmas* it ſelf is amongſt the *Europeans*. As for fleſh, the moſt they have of that is Veniſon and Beef; ſome Deer there are about the Country, and even too in ſome places. Theſe Cattel are of the bigneſs of the *Spaniſh* Oxen, have little Horns like thoſe of *Barbary*, and very long hair, and thicker than uſually in other Parts. Of the Hides they make Garments to defend them from the cold of their Climate, Shoes alſo, and Targets for the War. The greateſt plague in this Country is the multitude of Flyes that breed here; and to defend themſelves from which, the Natives very frequently go with a flaming Brand in their hands, and ſometimes burn down the Trees where they are, that the Flyes being depriv'd of their ſhelter may be forc'd to go away. And indeed, *Alvaro* ſays that they are ſo miſerably vex'd and tormented with them, that it may be compar'd with the moſt troubleſome thing in the World. The Country contains a great deal of excellent Paſture-Land, which wou'd maintain mighty Herds and Flocks of Cattel; and wou'd certainly be a very fruitful and profitable one, if the People had but ſence enough to manage it as it ſhou'd be. There's hardly any Mountain to be ſeen in all that Part where the *Spaniards* were, but all plain and open. There are Rivers of good clear wholſome water too, but the Natives having no certain ſetled place of Abode, depend more upon the Rain water for their conſtant Drink than that of the Rivers. When the time was come for the *Indians* to go and eat *Tune*, the *Spaniards*, who had laid their Plot for an eſcape, were unhappily prevented in the execution of it; for the *Indians* happening to fall out amongſt themſelves, and they being diſpers'd in ſeveral Houſes, one with one *Indian*, and another with another, they were by this means parted from one another, and cou'd not put their deſign in practiſe. And ſo once or twice after this the *Indians* hinder'd their running away, but whether by chance or contrivance, ſuſpecting their purpoſe, is uncertain. However, theſe diſappointments forc'd them to ſpend at leaſt a Year more amongſt thoſe wretched People, to their no little ſorrow and vexation; as for *Alvaro*, he declares he liv'd ſuch a curſed Life amongſt them, and they us'd him ſo ill, that he was neceſſitated to change his Maſters by running away three or four times, and narrowly eſcap'd with his Life, they purſuing him with a deſign to Sacrifice him if they cou'd have found him. But as they were ſeparated from one another by the Diviſions and Quarrels of the *Indians*, ſo they were brought to each other again, by the Reconciliation and new Friendſhip of the ſame Parties. So that now they had an opportunity of executing that deſign which had been form'd ſo long, and baulk'd ſo often. They order'd matters ſo as to give the *Indians* the ſlip all together, and begin their Journey out of that Savage Country where they had liv'd more like Beaſts than Men for ſo long time. The *Indians* either did not purſue them, or at leaſt did not take the right way, for they went on without diſturbance, and came to ſome other *Indians* call'd *Ananares*, whoſe Language they underſtood, having traded with them before, and were very kindly receiv'd by them. They liv'd amongſt theſe People about 8 Months, feeding upon ſuch wild Fruits and Roots as they did, and (which is no little wonder in Men that had been us'd not only to a warmer Climate, but to wearing of Cloaths too) going naked for the moſt part like them, except at any time they cou'd procure a few Skins to cover themſelves withal. Here they pretend too, that they did a great many miraculous Cures upon ſeveral ſorts of Sick, and that the *Indians* flock'd into them upon that ſcore from the neighbouring Parts; but when all's done, the greateſt Miracle is their own living in a cold bleak Country, where they went as naked as ever they were born, their keeping ſo many long Faſts, and going for Months together without eating any thing elſe than a little Fruit, and all this join'd with hard Labour and Travel, and yet coming off with life and health at laſt. *Alvaro* ſays farther, that they chang'd their Skins twice a Year as the Snakes do, that their Bodies peel'd all over from head to foot; and what with the impreſſion of the Weather, with carrying heavy Burdens, with travelling through Woods and Thickets, where the Thorns and Briers tore their fleſh, they were in a very miſerable condition, and their Carkaſſes ſo mortified, that 'twas the greateſt wonder Men, who had been us'd to another way of living, cou'd ever go through with it. From theſe People they remov'd to the *Maticones*, and the *Arbadoes*, with whom they liv'd ſome time after the ſame poor and hard rate that they had with the former. When theſe People firſt ſaw them before their Houſes they withdrew, and reaſon'd a while amongſt themſelves, ('tis to be ſuppos'd about their reception) which conſult being over, they came in a very friendly manner, taking them by the hands, and leading them into their Houſes. The next People they came to ſeem'd to be ſtruck with a mighty fear and aſtoniſhment at the firſt approach of theſe ſtrange Men. 'Twas a good while before they wou'd venture to come near them, and when they did, they came and laid their hands upon the Faces and Bodies of the *Spaniards*, and afterwards upon their own, bidding them welcome by that kind of action.

An account of the People in general.

Marriages and Divorces

Composing quarrels and differences.

Effeminate Men.

Of theſe People (as of all the reſt in general, from the Iſland of *Malbado* hither) they obſerv'd that they give their Children Suck till they are 10 or 12 Years old, and this becauſe of the great ſcarcity of Victuals in their Country; for Nature having made a proviſion for them in the Mothers Milk, they rather chuſe to let them depend upon that for a Maintenance, than upon the uncertain Products of the Earth, or their uncertain getting of them. They part from their Wives whenever (quarrels and differences ariſing between them) they can no longer enjoy Domeſtick peace and quietneſs; this is very common among the younger ſort, but 'tis not cuſtomary for thoſe that have had many Children to turn off the Mothers of them, and abandon them totally. When any Couple is thus divorc'd from each other, they both uſe their liberty to marry when or whom they pleaſe. When a quarrel happens between two Families, you ſhall have them ſeparate from the reſt of the Community, and withdraw with their Women, and whatever belongs to them, into ſome place in the Fields by themſelves; and here they ſtay till either the Neighbours make peace, or they have mutually digeſted the Matter on both ſides, and are diſpos'd to a Reconciliation. If a difference amongſt them ever proceeds ſo far as to come to blows, they take care never to uſe any dangerous Weapons. They commonly take pretty handſome Cudgels and thraſh one another with them, till they have ſufficiently vented their Choler on both ſides; but as for their Bows and Arrows, they reſerve them for their Enemies, and no paſſion ever makes them turn upon each other with thoſe Weapons, or any other that may prove fatal. They are Soldiers good enough, hardy, us'd to Labour, and able to endure it; cunning, and preſently perceiving the fear or cowardice of their Enemies, and taking all the advantage by it imaginable. In ſhort, an Enemy muſt uſe them the worſt that can be, and fear them without any diſcovery of it. Amongſt ſome of them *Alvaro* ſays, there are a ſort of impotent effeminate Men, of much larger and greater Limbs than ordinary, who go in Womens dreſs, and are devoted to Womens work; they carry no Bows nor Arrows, but inſtead of them Burdens of Wood and Water, and within Doors other Domeſtick Offices; and of theſe he declares he ſaw ſeveral.

Strange Cuſtom in drinking.

They have a ſort of Drink made of the Leaves of a Tree like the Mulberry Tree, which they boil very well, and work it up into a froth, and ſo drink it as hot as ever they can ſuffer it to come into their Mouths. All the while this is over the fire the Veſſel muſt be cloſe ſhut; and if by chance it ſhou'd be uncover'd, and a Woman ſhou'd come by in the mean time, they wou'd drink none of it, but fling all away. Likewiſe, while they ſtand cooling and pouring it out to drink, a Woman muſt not ſtir nor move, for they wou'd throw it all to the ground, or ſpue it up again, if they had drunk any; and ſhe her ſelf wou'd incur the Baſtinado. All this time they continue bauling out aloud who will drink? And when the Women begin to hear theſe exclamations, then 'tis that they ſettle themſelves in their poſtures; and were they ſitting, or ſtanding, tho' it were a tiptoe, or one leg up and t'other down, they muſt continue ſo till the Men have cool'd their Liquor, and make it fit to drink. The reaſon of this is every whit as fooliſh and unreaſonable as the cuſtom it ſelf; for they ſay, ſhou'd not the Women ſtand ſtill when they hear their voice, ſome bad thing wou'd be convey'd into the Liquor, which they ſay wou'd make them die; and if ſuch a Generation of Aſſes were all poyſon'd, 'twere no great loſs to the World. Our *Spaniards* continued travelling on thro' this hungry barren Country; the next *Indians* they came to, entertain'd them with a ſort of Food which they had

Meal of the Fruit *Meſquiquez*.

Odd way of eating.

met with none of before; it was a kind of Meal made of a Fruit call'd *Meſquiquez*, which is like the *Carobe*, and *Alvaro* ſays of the ſame kind. As it hangs on the Tree it is very bitter, and as they prepare it one wou'd think it ſhou'd not be mended, tho' they are of another Opinion, and therefore proceed accordingly. They make a Trench in the ground of a conſiderable depth, and throw the Fruit into it, bruiſing and ſtirring it about with a great piece of Wood. When they have done this to the purpoſe, they take this Hodge-podge of Earth and Fruit and put it into a Veſſel, pouring as much Water upon it as will juſt cover it; then they taſte whether it be ſweet enough or no, if not, they take more Earth and mingle with it, till they have wrought it up to that degree of ſweetneſs that pleaſes their Palates beſt. When this is done, they all ſit round the Trench, and every Man thruſts in his hand and takes out a lump to eat; and ſo they eat on in this way of good Fellowſhip, till their Bellies ſometimes are ready to burſt. The Liquor they uſe to waſh down this dirty Meat, is made of the Seeds or Kernels of the Fruit and the husks together; for they take theſe and put them into a Veſſel of Water, and after they have lain ſteeping there a while, they come and ſqueeze them, and the Liquor that is thus preſs'd out, is without any farther preparation fit to be drunk by the beſt of them all.

Divers Languages.

Theſe Nations the *Spaniards* were now got amongſt were of a much more civil and hoſpitable temper than thoſe they paſs'd through at firſt; but there were ſuch varieties of them, that they don't pretend ſo much as to give us their Names, much leſs cou'd they learn the Language of every one of them. They were pretty well acquainted with ſix ſeveral Tongues, but before they came into thoſe Parts of the Continent where the *Spaniards* dwelt, they had met with above a thouſand ſorts of Languages; ſo that all along they expreſs'd their Minds to the *Indians* by ſigns and motions, which they found no great trouble to make them underſtand the ſence and meaning of.

Kindneſs of the *Indians*.

For the remaining part of their Journey they had (for the moſt part) better travelling in all reſpects: The *Indians*, with whom they Abode, wou'd at their departure accompany them to the next Nation, and ſee them well receiv'd; and *Alvaro* ſays, that ſometimes they had thouſands to attend them, neither was it an eaſie matter to get rid of ſome of them. Many times the People, whoſe Country they came into, wou'd march out in a full body to meet them, and bid them welcome; and according to their various Cuſtoms and Manners, ſuch was their Reception and manner of Entertainment amongſt them.

Rude ſort of Reception.

Silent entertainment.

One Nation particularly *Alvaro* makes mention of, where the People run out of their Houſes ſhouting and hollowing, and ſtriking their hands upon their Thighs at ſuch a rate, that they frightned them moſt bitterly; and then they throng'd and crouded about them with ſo much eagerneſs, every Man ſtriving to be foremoſt, and come as near them as poſſible, that he ſays they were like to be ſqueez'd to death. The Multitude wou'd not let them touch the ground with their feet, but got them up upon their ſhoulders, and carried them away to their Houſes. Others of them, as ſoon as they had brought the *Spaniards* into their Houſes, wou'd offer them all their Goods, and the very Houſes themſelves too; and tho' there were no great Treaſures there, yet they were not a little pleas'd to ſee the free and open humour of thoſe People. Some again wou'd not come out of their Houſes into the Fields and High-ways to meet them, but ſit at home, and ſtay till they came; and 'tis comical enough what *Alvaro* relates of theſe ſilent People, (who were yet as hearty and kind as the noiſy ones before mention'd) that when they came to their Houſes, they found them all ſitting with their faces turn'd towards the Wall, their heads hanging down, and their long hair dangling over their eyes, as if they had been aſleep, and afterwards were entertain'd by them in a very frank and hearty manner. They commend theſe for the moſt comely and ſenſible People of all that they ſaw; their Women, and all the old People in general, wear a Covering of Deers Skins, the reſt go naked, here and there a Man only excepted. Their Country abounds with Kine, and they have alſo ſome ſtore of Maize.

Indians ſerve them with Food.

Opinion the *Indians* had of them.

The *Indians* were generally very ſerviceable to the *Spaniards*, in getting them Proviſions as they travell'd along with them; and in Countries that yielded Deer, Hares and Fowl, (as ſeveral that they paſs'd did) they wou'd go out with their Bows and Arrows, and kill what was neceſſary for the company. And certainly, if we may give credit to their reports, never were any Men ſo much reverenc'd, (ador'd one may ſay) ſo obſequiouſly ſerv'd, ſo diligently attended and waited upon, as they were by the *Indians*. Thoſe poor People thought nothing too good for them; they believ'd they knew even the moſt ſecret things which they had a mind to conceal from them; that they cou'd heal all their Sick, and inflict diſtempers upon them that were well if they did provoke them, and therefore took care to pleaſe them in every thing, and to do what ever they commanded. And tho' we ſhall hardly take *Alvaro*'s word for the cures they did in the ſeveral Nations they paſs'd through, yet we may, when he tells us, that he and his company made very good uſe of this ſtrange Opinion the *Indians* had of them, and ſerv'd themſelves of it to many conſiderable purpoſes.

Metals in the Country.

In ſome places there were ſigns of Metals and Minerals to be found upon enquiry in that Country; thus they ſaw ſome appearances of Iron, and ſome of the Natives gave them pieces of Antimony, and ſmall Plates of Silver. In another place they found a great Copper Bell with a face engraven upon it; and the *Indians* told them, that where that thing was made a great number of Plates of the ſame Metal were hid under ground.

Fruitful Country.

Women made much of, and well habited

The *Spaniards* having travell'd a vaſt tract of Land, and ſeen great varieties of theſe Nations, (of which they tell us hardly any thing more conſiderable, than the kind reception and great reſpect they gave and paid to them) came at laſt to the South Sea. After they had the welcome ſight of this, they travell'd many days in great diſtreſs for want of Proviſion; ſometimes they fed upon the fat of Deer, (a thing which they had ſome quantities of by them) but the worſt of all was their being reduc'd to powder of Straw, which *Alvaro* ſays they did eat for ſeveral days, having nothing elſe that was eatable to pretend to, as neither had the *Indians* in whoſe Country then they were. But out of this miſerable place they came into a Land that might be call'd happy, beautiful and fruitful in compariſon; for here they had Maize, Pulſe, Gourds, and Veniſon for the Belly, Deer Skins alſo and Cotton Mantles for the Back. Going farther, they had not only the continuance of theſe Neceſſaries, but ſuperfluities too, the Natives gave them Turquoiſe Stones, ſome Emeraulds, and pieces of Coral, and told them they had the Emeraulds in exchange for Quills and Parrots feathers, from a certain People that dwelt in very high Mountains to the North. Theſe *Indians* were a polite People, in reſpect of a great many others they had met with; they had Houſes more large and handſomely built than was common, their Women were us'd with great reſpect and regard to their Sex, they wore Shifts of Bombazine Cotton which reach'd below the Knee, and a ſort of Sleeves made of Deer Skins which touch'd the ground, and were perſum'd very ſweet with certain Roots; and all in general, both Men and Women, were ſhod.

Poiſonous Trees.

From theſe they travell'd to others, who liv'd a much more poor and miſerable Life; and from theſe again through another large and populous Country, where the Natives ſow'd Maize and Pulſe three times a Year, and had alſo plenty of Deer. They found here a ſort of poyſonous Tree, which the Inhabitants make uſe of for poyſoning their Arrows, and that either with the Fruit or the milky Juice that drops from the boughs when they are broken off. There are ſeveral of theſe Trees that are ſo ſtrong a poyſon, that the leaves of them bruis'd, and caſt into any Pool or ſtanding Water, will certainly kill the Beaſts that drink of it, according to their report.

Theſe poor Travellers now at laſt came to have ſome notice of their Countrymen the *Spaniards*, and that by ſeeing amongſt the *Indians* the Buckle of a *Spaniſh* Girdle, which aſſur'd them they muſt have been in thoſe Parts. Upon examination, the *Indians* told them ſome Men with long Beards, like them, and with Horſes and Armour, had been there; but they ſaw ſad demonſtrations of it as they paſs'd farther into the Country, for the People had left their Towns and Villages, and hid themſelves in Woods and Mountains, the fruitful Lands lay neglected, and a whole rich and pleaſant Country appear'd to be ſpoil'd.

Cruel marks of the *Spaniards* Tyranny.

Some of the *Indians* that had ſuffer'd thus being at laſt got out of their holes and hidden places, told them that the *Spaniards* had been there, had deſtroy'd and burnt their Towns, laid the Lands waſte, and carried away vaſt numbers of the People for Slaves; yet were theſe a moſt innocent and courteous People, and made *Alvaro*, with his company, as welcome as poſſible, tho' they had reaſon to expect other treatment at their hands, their Beards diſcovering them plainly enough to be ſomething a kin to thoſe Men that had ſo grievouſly injur'd them. In ſhort, they went on with a great body of

Notion the *Indians* had of the other *Spaniards.*

Indians attending, till they came where the firſt *Spaniſh* Colony was, having all along trac'd the *Spaniards* in their marches, by thoſe marks and footſteps of their Cruelty, which were viſible every where. Here they diſmiſs'd their laſt *Indian* Guides, but thoſe honeſt People were not willing to go, till they had (as the cuſtom was) deliver'd them ſafe into the cuſtody of another *Indian* People. And as the *Spaniards* were very kind to them in propoſing to ſeize them all, and make Slaves of them, ſo they were as kind to the *Spaniards* in the Opinion they had of them, for they wou'd not be perſwaded by any means that they were the ſame ſort of Men with *Alvaro* and his company; for, ſaid they, theſe Men heal us, but the other kill us; theſe are bountiful and kind, the others rob and are covetous; the one go naked, and without Horſes, as we do, the others have Iron Coats and Lances, and ride on Horſeback. In ſhort, the former came from the Eaſt, and the others from the Weſt; for which reaſon alſo, as well as the reſt, they wou'd not believe they were the ſame People. However *Alvaro*, with much ado, perſwaded them to return to their Houſes, to Till their Land, and Inhabit their Towns as before, and endeavour to make all their Countrymen join together, to do their beſt to reſtore the Country to its former flouriſhing ſtate. *Alvaro* and his Friends travell'd on till they came where more of the *Spaniſh* Officers reſided; but the *Spaniards*, who were now their Guides, led them through barbarous deſolate Ways, and dealt very unkindly with them. They wanted Heathens to receive kindneſſes from, for Chriſtians, and their own Countrymen, had none to ſhew them. They us'd farther endeavours to reduce the *Indians* from the Mountains, and bring them down to Inhabit the plain Country again, promiſing them upon thoſe terms, and their embracing Chriſtianity, that they ſhou'd be free from all future moleſtations, and enjoy their Country in peace. The *Indians* agreed to do this, both to become Chriſtians, and to Till their Land; but how the *Spaniards* perform'd their part of the Covenant is uncertain. *Alvaro* and his Companions, after this, proceeded to *Compoſtella*, where the Governor receiv'd them kindly, and from thence to *Mexico*, where the Vice-Roy gave them a noble Entertainment, after their long, tedious and hazardous travel.

Alvaro comes to *Mexico.*

'Tis to be obſerv'd, that *Alvaro* in this march came quite croſs the Continent from the North to the South-Sea; and the diſtance between theſe two, according to the beſt of his obſervation, he judges to be at leaſt 200 Leagues. Farther 'tis remarkable what this Perſon ſays of himſelf, when he was come back amongſt the *Spaniards* again, that he cou'd not endure any Cloaths upon his back for a great while together; the reaſon of which was, partly the tenderneſs of his body by ſo much ill uſage of it, and partly perhaps his long cuſtom of going naked amongſt the *Indians*, which had now made it almoſt natural to him. It was in *A. D.* 1527. that this unfortunate Voyage commenc'd; and 'twas in *A. D.* 1536. that a period was ſet to the Travels of *Avaro* and his little company; little indeed, for tho' he went out of *Spain* with a great number, yet by that time he return'd thither again, he had no more than three Men left, and their Lives and his own were all ſo many Miracles.

CHAP. XVI.

A Voyage to Florida *by* Fernando de Soto, *with his Diſcovery of the Countries in that Part of the Continent; Written by a* Portugueſe *who went in the ſame Expedition.*

Soto one of the Captains in *Peru.*

THis Captain *Fernando de Soto*, was one of thoſe who had ſerv'd in the Wars of *Peru*: He had been at the taking of *Atabalipa*, and all the Sieges of *Cuſco*, and had a large ſhare of the Plunder of that rich City. He was alſo one of the number of thoſe that opreſs'd and pinch'd the *Indians* for their Gold; and as there were very few of them Men that came to a good end, ſo by tracing the courſe of his Fortunes too, we ſhall find they had not ſo happy an iſſue at laſt as perhaps he might expect.

The Fleet.

April, A. D. 1538.

They go aſhore.

This Perſon having the Emperor's Grant for the Conqueſt of *Florida*, furniſh'd a Fleet at his own charge, or rather at the charge of *Atabalipa*, for 'twas *Peruvian* Gold that paid for all, and bore him out in that vaſt expence. The Fleet conſiſted of five great Ships, 2 Carvels, and 2 Brigantines, and had aboard 600 Men, ſome ſay near 1000, but that's no great matter. They went firſt of all to the Iſland of *Cuba*, where they ſtaid ſo long, that the Year was come about before they ſet out from thence for the Coaſt of *Florida*. Being arrived ſafe there, they went aſhore about two Leagues from a Town which was the ordinary Reſidence of a certain Prince called *Ucita*. The *Indians*, for their parts, having diſcover'd them, gave notice to one another, by making great fires along the Coaſt, that an Enemy had invaded their Country; and ſo they kept out of the way, and left their Towns for the *Spaniards* to take poſſeſſion of.

Ucita's Town.

Ucita's Town ſtood juſt upon a Bay, ſo that the Ships might be brought quite up to it; the Cacique's Houſe ſtood upon a very high Mount hard by the ſhore, and at the other end was the Temple, on the top of which was fix'd the Image of a great Fowl carv'd in Wood, with gilded Eyes, the only appearance of Gold they ſaw as yet. The Houſes were all Timber, and neatly cover'd with Palm leaves. Here they found ſome ſmall quantities of Pearl, but thoſe of no great value; the *Indians* pierce them and ſtring them like Beads, to adorn their Necks, Hands and Legs, with them.

They find one of *Narvaez* Men.

History.

Kind Woman.

A good Caſt.

Ortiz ſaves his life by killing the Wolf.

As a Party of the *Spaniards* were one day beating about the Country to find ſome of the People, they happen'd to ſee 10 or 12 of them, and in their company a certain Man that plainly appear'd to be an *European*, but was running about wild and naked like them, and was ſcorch'd with the Sun, and had his Arms rac'd and pink'd after the manner of the *Indians*. The *Indians* no ſooner ſaw the *Spaniſh* Horſe but they run away towards the Woods, and the *Spaniards* purſuing overtook ſome of them, and were going to kill them, and amongſt the reſt this *European-Indian* was going to have a Lance thruſt into his Guts; but he cried out for Mercy for himſelf and them, telling the *Spaniards* he was a Chriſtian, and theſe *Indians* had ſav'd his life. Upon farther Examination, it appear'd that this Man was one of *Navarro*'s miſerable company, moſt of which had met with their fates upon this Continent. He had now liv'd 12 Years amongſt the *Indians*, and was at firſt taken Priſoner by ſome of *Ucita*'s Subjects, and brought before him, by whom he was condemn'd to be broil'd to death over a ſlow fire, but that his Daughter begg'd his life; and not only ſo, but brought him into ſome degree of favour too. He was then made Keeper of the Temple, and his principal Work was to watch at Night, that the Wolves did not come and ſteal away the dead Bodies. But in this Poſt *Ortiz* (for that was the *Spaniards* Name) was very like to loſe his life, for a Wolf one Night, in ſpite of all care, ſtole away the Corps of a Child of one of the principal *Indians*; and as there were ſeveral of thoſe ravenous creatures together, *Ortiz* threw a Dart amongſt them, and happen'd to ſtrike that very Wolf that had got the Child, which went a little way with his prey, and then fell down and died, without any defacing or tearing of it. But all this while it being dark, *Ortiz* knew nothing of his good luck in killing the Wolf; and ſo the next Morning, when the Corps was miſs'd, *Ucita* was ſo enrag'd that he reſolv'd to put him to death. But the Wolf being found dead, and the Body juſt by it whole and entire, *Ortiz* got not only his life, but more eſteem than ever he had before. After this a certain neighbouring Prince, call'd *Mococo*, came and fell upon *Ucita*, burning that Town where he then was, and forcing him to retire to another. This made the *Barbarian* have a mind to Sacrifice *Ortiz*, to appeaſe the anger of

He flies to *Mococo*.

his Deity, as they do very often (it ſeems) make ſuch Sacrifices both of Natives and Strangers too. But this danger the kind young Woman prevented, (ſhe that ſav'd him from the fire) by diſcovering her Fathers bloody deſign to *Ortiz*, and perſwading him to make his eſcape to *Mococo*, who was a generous Man, and wou'd uſe him very well. This ſeaſonable Advice he took, and becauſe he did not know the way, ſhe went out of Town with him a matter of half a League in the dark Night, and having ſet him in the right way, left him to the Influence of his good Stars for the reſt of his Journey. Such a compliment as this one ſhall ſeldom hear of, and *Ortiz*, whatever he thought of it himſelf, had no little obligation to this young Woman.

Mococo comes to ſee *Soto*.

Paracoſſi a great Cacique.

Province *Cale*.

Gold.

Soto comes to *Cale*.

Cale.

Plenty of Maize.

Being come to *Mococo*, he was receiv'd with a great deal of Joy, and that Cacique ſwore, according to his way, to treat him with all kindneſs, and give him his liberty to go away with any Chriſtians when they came into that Country; exacting of him at the ſame time an Oath after his own manner, that he ſhou'd never run away from him to any other Lord. And here he liv'd 9 Years more, with as much content as he cou'd expect amongſt a People no politer than they; and 'twas now that *Mococo* hearing of the *Spaniards* arrival, ſent *Ortiz* (according to his promiſe) accompanied with theſe *Indians* to their Camp, and was like to have been kill'd by his own Countrymen by the way (as was ſhown before.) *Mococo* himſelf came alſo to the Camp to ſee *Soto*, who eſteem'd him much for his kindneſs to *Ortiz*, and made him ſome Preſents. But *Ortiz*, who had liv'd ſo long in the Country, cou'd not give *Soto* any intelligence of what he chiefly wanted, which was rich Mines, only that about 30 Leagues from *Puerto de Sprito Santo*, (as they call'd the Port where they had taken up their abode, and which was *Ucita*'s Town) that there was a great Cacique nam'd *Paracoſſi*, to whom both *Mococo* and *Ucita*, and all the reſt upon that Coaſt paid Tribute, whoſe Country was much more fruitful than that which border'd upon the Sea, and might perhaps afford ſomething elſe, at leaſt the News of it. So a Party was ſent to *Paracoſſi*'s Country to ſee what was to be done there, and they diſpatch'd a Meſſage to *Soto* again with this News, That according to the report of *Paracoſſi*'s Subjects, there was a Province call'd *Cale*, lying towards the Weſt, from whence they might draw plenty of Gold; and that ſome People that had made War with thoſe of *Cale*, had declar'd that they came into the Field with Gold Head-pieces, or at leaſt ſome Defence for their Heads of the ſame nature. Upon this *Soto* left a certain number both of Horſe and Foot, for the keeping of *Puerto de Sprito Santo*, and march'd away with all the reſt of his Men into the Country of *Paracoſſi*. From thence he went on to *Cale*, the Town of which Name was quite emptied of all its Inhabitants by that time he came to it. His Men were fatigu'd with a miſerable march hither, through Woods and Bogs, and over Lakes and Rivers, pinch'd for want of Proviſions too, tho' they got a cure for that diſeaſe when they came to *Cale*, for they found a good ſtock of Maize ripe in the Field, which *Soto* ordered to be gather'd for the uſe of his Men. But we hear not a word of the Gold which thoſe *Indians* before ſpoke of, ſo that 'tis likely enough they told the *Spaniards* a fine golden Story of a Country a good way off, to carry them out of their own Country, where they might have been troubleſome Gueſts.

Spaniards afraid of the Journey.

Napetuca.

Indians run into the Lake.

They aſſault the *Spaniards*.

Ochus.

Tupacha a rich Country.

Indian Houſes.

Habits.

From *Cale*, *Soto* march'd towards *Apalache*, a very large and fruitful Province, as he was inform'd; but one part of his Army ſtaid at *Cale*, with Orders to continue there till they heard from him. Upon his way thither he heard that the Country he was going to was the ſame where *Narvaez* had been before, and the ſame where he made his Boats for that fatal Voyage, becauſe he cou'd go no farther by Land. This made all the company very melanchollly, and they begg'd the General not to proceed in that deſign, leaſt they all had the ſame fate that *Narvaez* and his Men had; but he was abſolutely ſet upon it, and wou'd have Ocular demonſtration of what was told him of the Country, and not rely altogether upon reports. The greateſt diſtreſs the *Indians* ever put him to in this Journey (indeed he had no direct oppoſition in the way of fighting but this) was that which happen'd at a certain Town call'd *Napetuca*, where the Inhabitants thought good to make head againſt them, and ſo ſome of them were kill'd, and the reſt took ſhelter in two Lakes that were there by. The *Spaniſh* Horſe encompaſs'd the Lakes to keep the *Indians* in, who alſo endeavour'd to creep out cunningly when the Day was ſhut in, but being diſcover'd they were forc'd to plunge into the Water again. However, at laſt they were perſwaded to yield to the *Spaniards*, and all came out of the Lake, 12 only of the nobleſt excepted, who choſe rather to die than to fall into their hands, and were forc'd to be drawn out by the hair of the Head by other *Indians*. But, in ſhort, this did not quell their courage, for tho' they were all made Slaves of, and were divided amongſt the *Spaniards*, yet they found ways to meet together to plot and conſpire a Riſing; neither did they fear to put it in execution, and that with a wonderful deal of fury and reſolution. *Soto* himſelf was the firſt Man that was aſſaulted by them; the *Indian* that was his Interpreter was appointed to begin with him, and while he was diſcourſing to catch him by the Throat and choak him. This he had well nigh accompliſh'd, and all the reſt fell upon their own Maſters with what Weapons came next to hand. In a word, there being above 200 of theſe Deſperadoes, and the *Spaniards* not aware of them, it coſt them ſome trouble (not much blood) to reduce them, but that was effectually done at laſt, and the greateſt part of them executed for what they had done. This ſlaughter at *Napetuca*, made the *Indians* more cautious of their coming within the reach of the *Spaniards*, and *Soto* found ſome conſiderable Towns empty of People upon that ſcore. But what *Indians* they took they us'd cruelly, that is, made them ſerve with intolerable rigour, and the *Indians* did not fail to requite them for't whenever they cou'd file off their Chains, or get their Keepers in the Woods alone. *Soto* had a Journey otherwiſe well enough to *Apalache*, being not ſo much ſtraitned as at ſometimes for Proviſions, but meeting good ſtore of Maize, French-beans and Pompions by the way. When he came to *Apalache*, he found likewiſe ſtore of theſe ſorts of Food in ſeveral Towns about, ſo that here was living good enough for his Army. And now he thought good to ſend for all the reſt of his Troops from *Port Spirito Santo*, to come to him to the Province of *Apalache*; which accordingly was done, moſt part of the Foot coming by Sea, and the reſt travelling along the Land. The *Indians* ſometimes ſallied out upon them by the way, but they cou'd not do them any great miſchief, much leſs hinder their march to *Apalache* to their General. *Soto* now reſolved to proſecute the diſcovery of the Country, ſent out one of his Captains to ſearch the Weſtern Coaſt, who brought him News of a Province call'd *Ochus*, that lay ſome 60 Leagues to the Weſtward from *Apalachen*, where was a Port capable of giving Ships a very good ſhelter and defence from the Weather, and ſome other things, which made *Soto* reſolve to go and find out that Country. And that he might be ſure of Supplies, he ſent away to the Iſland of *Cuba* for a Stock of Proviſions, and appointed thoſe that went with the Veſſels to come to him there, at that Port, in the Province of *Ochus* beforementioned. But the love of Gold made him change the project of a Weſtern Journey into an Eaſtern one; for a certain Slave, who was a Native of a certain Country lying to the Sun-riſing, told ſtrange Stories of the Riches of it, how great his Queen was, and how great her Capital City; all which enflamed *Soto* with ſuch a deſire of ſeeing this fine Queen and Country, that he reſolved immediately to march thither. The Name of this Country was *Tupacha*, and ſince 'twas a long march, they were oblig'd to carry a good ſtock of Proviſions, to ſerve in caſe of any uncertainty by the way. They found going this way *Indian* Towns much handſomer than they uſe to meet with, and which inſtead of Thatch Coverings, were done with Reeds ſo prettily, that they look'd almoſt as if they had been Til'd. They have their Summer and their Winter-Houſes; the latter of which are daub'd with Clay within and without, and made very warm; the former have Kitchins adjoining to them, where they make fires, and do their domeſtick Work. They have alſo their Barbacoas where they keep their Maize, which are little Houſes ſtanding upon Stakes, and floor'd with Cane Hurdles. The difference between the Houſes of the Lords and the vulgar People, lies not only in the largeneſs of them, but alſo the Ornaments of great Galleries in the fronts of them, and under them Benches made of Cane, and all round about them high Lofts, where they lay up what the *Indians* bring them for Tribute, which is Maize, Deer Skins, and Mantles made of the inner rind of the Barks of Trees, or of a ſort of Graſs like Nettles, which being beaten reſembles Flax. The Women wear two of theſe Mantles, one put about them from the Waſte downward, and another over their ſhoulder, with the Right Arm out, according to the ancient cuſtom. The Men have no more than one Mantle, which goes over their ſhoulder too, but they wear a Deer Skin to cover the Privy Parts. Theſe Skins are admirably well dreſs'd, and colour'd (red or black) to perfection, which colours they give their Mantles alſo; they make their Shoes of the ſame Leather. *Soto* paſs'd

through

The *Caciques* kind to *Soto.*

through the Countries of divers great Caciques, ſome of whom came to him, and brought him conſiderable Supplies of Proviſion, and all in general treated him very civilly; they alſo furniſh'd him with *Indians* to carry his Proviſions and Baggage for him. Theſe were the Caciques of *Acheſe*, *Ocute* and *Patofa*, of whoſe Countries, People and Government, we have no particulars, the *Spaniards* being upon a march, and not making many Obſervations by the way. Some parts of the Country were very fruitful, beautiful and pleaſant, as others (particularly out towards *Port Spirito Santo*) barren, full of Lakes, Thickets and Woods of wild Pine-Trees. But *Soto* having now travers'd a great deal of ground, was miſerably blunder'd to find out the golden Country, neither cou'd the *Indian* that firſt inform'd him, and now was his Guide, well tell how to extricate the *Spaniards* out of this Labyrinth. They paſs'd Rivers that were deep and dangerous, and cou'd hardly find any open Way; no Towns neither cou'd they ſee for ſeveral days together, and their Horſes grew weak for want of Fodder, only the Men had ſtill ſome Proviſions left for themſelves. At laſt, after much ſearching, they happen'd to find a Town, which tho' left by all the People almoſt, yet yielded them good ſtore of Maize, a thing they ſtood greatly in need of. Some ſeverities alſo made two or three ſtraggling *Indians* tell them of a great Province call'd *Cutifachiqui*, which lay but two days Journey off; ſo they continued their march thitherwards, and upon the Way met ſome *Indians*, who told them that the Queen of that Country had notice of their arrival, and ſtaid to ſee them in a certain Town of hers. However, as *Soto* march'd, ſhe came on to meet him, and brought him Preſents of what her Country afforded, which were fine Skins, Furrs and Mantles, not to mention Proviſions. She gave him alſo a rich Chain of Pearl, which ſhe took off from her own Neck and put about his. Her Country Soil was rich and fat, had a great deal of good Paſture-ground, fair Meadows, delicate Rivers, and Woods, not ſuch unpaſſable ones as they had met with in other Parts, but pleaſant and eaſie to be travell'd through, and full of Wall-nut and Mulberry Trees: The People were of a handſomer Make, and more civil Manners, than any they had yet ſeen in *Florida*, and all Shod and well Cloath'd too. There were ſeveral great Towns quite void of Inhabitants, and over-run with Graſs, which was occaſion'd (as the *Indians* ſaid) by a Plague that rag'd there, and forc'd them to remove to other Places.

Province of *Cutiſachiqui*

Queen comes to *Soto.*

Store of Pearl.

The Queen ſeeing the *Spaniards* were very fond of Pearl, directed them to ſearch ſome of the Graves of thoſe diſpeopled Towns, and here they found 392 pound weight of them. The Country being ſo good, and likely to afford ſuch plenty of Pearl, the *Spaniards* were willing to take up their Reſidence here, and perſwaded their General to yield to it; but he, who was for finding another Treaſure like that of *Atabalipa*'s, was bent not to make any thing of a Settlement here, till he was ſure he cou'd find no richer Country. The Sea was not above two days Journey from the Town where the *Spaniards* were quarter'd, and they found by ſeveral tokens that ſome Chriſtians had been here before them, which the *Indians* confirm'd as a truth. This was Don *Lucas Vaſquez de Allyon*, who came hither as Governor in *A. D.* 1525. and died here; and his company was entirely diſſolv'd, as well as the deſign fruſtrated, by their own private Quarrels and Diſſentions.

Tho' the Queen of *Cutifachiqui* had us'd the *Spaniards* ſo civilly, yet they cou'd not forbear wronging and oppreſſing her Subjects; which ſhe reſented ſo far, that ſhe reſolv'd to go away, and not furniſh the *Spaniards* with any Guides or Slaves to carry Burdens, as otherwiſe ſhe had deſign'd to do. For this reaſon *Soto* made a Priſoner of her; and going on upon his deſign of finding out Golden Countries, he carried her along with him, uſing her more like a Slave than a Princeſs. But upon the Road ſhe prov'd too cunning for him, and gave him the ſlip; for pretending to go aſide into a Wood to do her Occaſions, ſhe (in company of two or three of her Women) run quite away, never ſtanding to put the complement of a Farewel upon the General. And that which made it ſo much the worſe was, that ſhe took care to take with her a little Cheſt of Pearls, which *Soto* had intended to beg of her if ſhe had ſtaid a little longer, but now ſhe prevented his asking for them. They paſs'd through her Country for 100 Leagues together, through all which way, becauſe ſhe was a Priſoner, ſhe made her Subjects ſerve the *Spaniards*, tho' much againſt their inclinations, after the injuries they had done them; but the Queen was Abſolute, and all her Subjects paid her a moſt profound reſpect. *Soto* having loſt this Prize, proceeded in his march to find out the Province of *Coca*, which he had heard News of while he was in *Cutifachiqui.* And the Provinces he paſs'd in his way thitherward were thoſe of *Chalaque*, a poor and barren Country, the People of which fed upon Roots and Herbs: *Xualla*, one every whit as bad as the former: *Chiaba*, a very fruitful one, abounding with Maize, Mulberries, Nuts, Plumbs, Wall-nuts and Honey. The Cacique entertain'd him with all the freedom in the World, and offer'd himſelf, and his whole Country, to his Service. The Town of *Chiaba* ſtood in an Iſland between two arms of a River, and was ſeated very near to one of them. The River divides it ſelf into theſe two branches, two Croſsbow-ſhot above the Town, and they both join again about a League below the ſame. The Plain between both the branches, is in ſome places one, and in others two Croſsbow-ſhots over; the branches themſelves are broad, but both of them may be waded over. There were all along the ſides of them very good Meadows and Fields ſown with Maize; the Country being ſo fruitful, the *Spaniards* and their Horſes both recruited their ſtrength very well, and became fit for farther travel. The next Province was that of *Coſte*, the *Cacique* of which received the *Spaniards* civilly, but by their own rude Manners they had like here to have run themſelves into danger; for as *Soto*, with 7 or 8 of his Men only went up to the Town to ſee the *Cacique*, ſome other *Spaniards* from the Camp went to ſearching and ranſacking the Houſes, which the *Indians* took ſo ill, that they got good Cudgels and bang'd thoſe Fellows pretty handſomly.

Province of *Chalaque.*

Xualla.

Chiaba.

Coſte.

Spaniards thraſh'd by the *Indians.*

In ſhort, they were all in an uproar, and *Soto* having ſo few Men with him, thought the beſt way to quiet them wou'd be by uſing ſome piece of policy, and therefore he got a Cudgel too, and ſeeming to take the part of the *Indians*, he fell a beating his own Men; and this took ſo with them, that they laid down their Weapons and were quiet. In the mean time he ſent private Orders for ſome more of his Men to march that way, and ſo giving the *Cacique* good words, and holding him in diſcourſe, he drew him on till he had him out of the Town, and within the bounds of the Camp, and then made him and his attendants Priſoners; yet he releas'd them afterwards, without any farther damage, upon their furniſhing him with Guides and Burden-carriers. The next Province was that of *Coca*, the *Cacique* of which came out to meet him, ſitting upon a ſort of Throne carried upon the ſhoulders of ſome of his principal Men; he was cover'd with a Garment of *Marterns*, and had a Crown of Feathers upon his Head, ſeveral *Indians* went about him ſinging and playing upon Flutes. This Country was fat, and rich in Fruits and Corn; and beſides what they uſe to find in other places, here they met with Grapes very large and ſweet. Some of theſe Vines were tall, and run up the Trees abroad in the Fields; others very low, which bore the beſt Grapes, but they were all wild, and for want of digging and dreſſing the Grapes had large kernels in them, very different in that reſpect from what is commonly obſerv'd of that Fruit. *Soto* having ſtaid here ſome time, without finding any thing of what he came to look for, march'd on for the Province of *Taſcaluca*, and as 'twas his cuſtom (moſt commonly at leaſt) to carry the *Cacique* of one Province with him till he came to the next, that they might command their People by the way to come and ſerve the *Spaniards*, ſo he did now, carrying the *Cacique* of *Coca* along with him, and diſcharging him, as he did the reſt, when he had no farther occaſion for them, or reaſon to confine them any longer. The Provinces he paſs'd now were thoſe of *Ulibahali* and *Talliſe*, the principal Towns of which bearing the Names of their reſpective Provinces, were large and populous, and the former fortified with an odd ſort of a Wall which was made of great Poſts driven deep into the ground, and long Rails laid a-croſs them, and daub'd all over with Clay in the inſide and outſide; they ſaw many Towns wall'd after this manner afterwards. Both theſe Countries were fruitful, and the *Caciques* very friendly to the *Spaniards.*

Cacique ſeiz'd.

Soto's way of dealing with the Caciques.

Soto's Journey.

Now they enter'd into the Country of *Taſcaluca*, and march'd till they came within two Leagues of the Town of that Name, where the *Cacique* reſided. The courſe of *Soto*'s Travels thus far lay thus: From *Port Spirito Santo* to *Apalache* 100 Leagues E. & W. from *Apalache* to *Cutifachique* 430 Leagues S. W. & N. E. from *Cutifachiqui* to *Xualla* 250 Leagues N. & S. from *Xualla* to *Coca* 190 Leagues E. & W. from *Coca* to *Taſcaluca* 60 Leagues N. & S.

This Cacique of *Taſcaluca* was a great Prince, Lord of a very large County, and one that very well knew his own Power. *Soto* firſt of all ſent an Officer, with ſome few Horſe, to ſee him: The Cacique ſat in great State under a Canopy, upon an elevated place before his Houſe, and a Circle of his great Men encompaſs'd him round about. He was a Man of heighth and bigneſs more than ordinary, and in ſpite of all his barbarouſneſs diſcover'd a Majeſty that procur'd him reſpect. He ſeem'd not to take much notice of the *Spaniards*, and while they pranc'd their Horſes before him, he look'd upon them with a countenance that ſpoke Scorn and Diſdain. Afterwards, when *Soto* himſelf came to him, he never offer'd at all to ſtir from his Seat; but he made bold to take his Majeſty by the Hand, and ſo they both ſat down together upon a Seat that was under the Cloth of State. In ſhort, for all his Pride and Greatneſs, *Soto* made bold a little farther with him too, and that was to carry him along with him, as he had done others before.

Soto enters *Manilla.*

Spaniards aſſaulted.

Spaniards take the Town.

They were now travelling to *Manilla*, the Capital Town of a Province belonging to a Cacique ſubject to this great one of *Taſcaluca*. This ſubtle Prince pretended to *Soto*, that he wou'd ſend Advice to the Cacique of *Manilla*, that he might provide Victuals and Carriages againſt they came thither, but in reality he order'd him to aſſemble as many Soldiers as he cou'd to fight the *Spaniards* that held him thus a Priſoner. However, the Cacique of *Manilla* came out to meet *Soto*, with his Muſick, and receiv'd him with great ſhews of Joy and Friendſhip; and *Soto*, attended with 10 or 12 of his Men, ventur'd to go into the Town with the two Caciques. Here the Cacique of *Taſcaluca* deſired of *Soto* that he might ſtay in that Town, and not be obliged to go any farther; which he refuſing to grant, the Cacique, upon ſome pretended occaſion, went out of *Soto*'s preſence and got into a Houſe, where he ſtood upon his Guard, and told *Soto* poſitively that he wou'd not go any farther; and more than that, bid him be gone out of his Territories. But it ſeems there was one of the *Spaniards* Captains there by, who hearing the Cacique talk ſo boldly to his General, took hold of the Gown or Mantle he had on, but he ſlipt it over his Ears, and ſo got out of the *Spaniard*'s hands. With that the *Indians* began to ſtir, and the *Spaniard* ſeeing them do ſo, drew his Curtlaſs, and gave the Cacique ſuch a chop along the Back, that he had almoſt laid him open. This put all into an Uproar, and tranſported his Subjects into all the fury and greedy deſire of revenge imaginable. In ſhort, the *Indians* came out, and preſently began to pour ſuch plenty of Arrows upon the *Spaniards*, that *Soto*, with the reſt, were forc'd to endeavour with all ſpeed to make their way out of the Town as well as they cou'd; but ſome of them were kill'd, and all the reſt (even the General himſelf) grievouſly wounded. The *Indians* purſued them too, and light of their Baggage all in a lump, which they brought back into the Town; and here was all their Pearl, and all the fine things they had pick'd up throughout the whole Journey loſt at one ſtroke. To revenge this affront, *Soto* brought up all his Army, both Horſe and Foot, to aſſault the Town; and tho' the *Indians* defended it with as much Valour as the others did attack it with Fury, nay, ſeveral times drove the *Spaniards* out again after they had forc'd their way in, yet at laſt they were run down by the *Spaniſh* Horſe, and the Town fired about their Ears, the Sword and Flames together devouring at leaſt 2500 of them. Of the *Spaniards* there were 18 kill'd, (ſix of which were Men of account) and 150 wounded; but they loſt irrecoverably all their Baggage in the flames that conſumed the Town. All the Trumpery us'd in the Celebration of Maſs was burnt too, but they ſav'd a Prieſt and a Friar that had got into the Town when *Soto* went firſt thither, and cou'd not make their retreat back again to the Camp when he did; and here the *Indians* ſhut them up in the Houſe where they were, and wou'd certainly have practiſed a new ſort of Mortification upon their Carkaſſes, but that they cou'd not get into the Room where they were, for they had barricado'd up the Door, and the Prieſt and the Friar ſtood each with a good luſty Bar in their hands, one of one ſide the Door, and the other of the other, ready to knock down the firſt Man that entred; and the *Indians* that cou'd not come in there, were got to uncovering the Houſe to fall upon them that way, when the *Spaniſh* Troops (in very good time) came to their reſcue. As for the Cacique of *Taſcaluca*, the *Indians* had perſwaded him to retire out of danger, and ſo had conveyed him away before *Soto* came to take his revenge. The Country about *Manilla* is rich and well inhabited, and there are ſeveral great Wall'd Towns lying up and down in it. As ſoon as all the wounded Men were cur'd, *Soto* departed from *Manilla*, and paſs'd through the Province of *Paſallaya*. At ſome places in this, the *Indians* made a brisk oppoſition as they paſs'd the Rivers, and wou'd by no means accept of their Friendſhip, or have any thing to do with them. In the Province of *Chicaca*, to which they came next, they met with a far worſe Entertainment. The Cacique was to all appearance very kind and friendly to them, and ſo were a couple more which he brought to *Soto*, and preſented him with what their Country afforded; but in reality they were their inveterate Enemies, and waited only for an opportunity to fall upon them. But what theſe cou'd not do, their Friend the Cacique of *Chicaca* did for them; for the *Spaniards* lying at that Town, and (tho' they had juſt reaſons of ſuſpicion) neglecting their Watch, the *Indians* came in three or four great Squadrons privately in the Night time, and entring the Town, ſet it on fire in a moment almoſt, and put all into a moſt lamentable confuſion. The *Spaniards* run out without Cloaths or Weapons, their Horſes were ſome of them burnt in the Stables, and others broke their Halters and got looſe; they were ſtunn'd with the noiſe, and ſo blinded with the ſmoke, that they knew not which way to run or go, neither were they capable of obeying any Orders at that time. In a word, had the *Indians* purſued the buſineſs cloſe, and made the fighting part of the Attack anſwerable to the firing part, the *Spaniards* had been quite ruin'd; but they thought the *Spaniards* Horſes that run looſe about had had Men upon their backs, that were driving about to encompaſs them in, and ſo they run away as faſt as they cou'd, having done the firſt part of the miſchief. The *Spaniards* loſt 11 Men, 50 Horſes, and 400 Hogs, in this fire, beſides a great deal of their Cloaths and Warlike Furniture; but to repair the loſs of the latter, *Soto* ſet up a Forge, and made what was neceſſary in that reſpect. The *Indians* made another general Aſſault upon them ſome time after this, but then the *Spaniards* were well encamp'd in a Plain, and keeping a better Watch, they eaſily diſpers'd thoſe *Indian* Squadrons that came to diſturb them. From hence he went through the Province of *Quizquiz*, and came to the Banks of the noted River *Rio Grande*, where he encamp'd, and made Barges for the paſſing of that River; and here they had Maize in plenty. While they lay here, a certain great Cacique that liv'd on the other ſide of the River, came with 200 Canoes full of *Indians*, arm'd with Bows and Arrows, and Shields; their Bodies were painted, and they had Plumes of Feathers of ſeveral colours. This Fleet of Canoes came within a ſtones caſt of the ſhore, and there the Cacique and *Soto* enter'd into a Conference; and tho' the former ſaid he came to ſubmit himſelf, and to receive *Soto*'s Commands, with a great deal more to the ſame purpoſe, yet 'twas plain that he came to aſſault him cou'd he have found an opportunity. For he wou'd not be courted to come aſhore; and farther, when he ſaw *Soto* and his Men in ſo good order, and ready for an aſſault, he made all his Canoes give back of a ſudden, and retire from the ſhore, without any thing of compliment or farewel. But the *Spaniards* were civiller than they, for they took leave of them with their Croſsbows, and kill'd ſome of them. Their Canoes were furniſh'd with Tilts, Flags and Plumes, that made a very fine ſhew. *Soto* after this paſs'd over *Rio Grande*, and marching into the Country of this treacherous Cacique he found all the Towns empty of Inhabitants.

Province of *Chicaca*

A dreadful aſſault.

Another aſſault.

Treacherous Cacique.

Caſqui.

Pacaha.

The next Province he came into, which was called *Caſqui*, he met with much better treatment; the People attended his coming peaceably in their Towns, and freely gave him what Proviſions they had. The Country was full of great Towns, and they ſtood ſo cloſe together, that from one Town one had the proſpect of two or three more. 'Twas fruitful too, and yielded abundance of Wallnuts, Plumbs, (many ſorts of them better than thoſe in *Spain*) Mulberries, and Fiſh. The Cacique came forth to receive him with all his principal Men, and offer'd him a ſincere Service, which he did upon all Occaſions as ſincerely pay him. His *Indians* made a Bridge of Trees over a Lake that communicates with the *Rio Grande*, for *Soto* and his Army to paſs, without which they had been at a ſad loſs, becauſe of the depth and ſtrong current of the Water. By this means he was let into the Country of *Pacaha*, the Cacique of which wou'd not ſee nor come near them. Here were alſo abundance of great Towns, and thoſe defended with Walls; the chief Town had ſtrong Walls beſet with Towers, and Loopholes both in the one and the other; it was alſo encompaſs'd very near all round with a Ditch, that was ſupplied with Water from a great Lake adjoining. From this Lake the Cacique had cut a Gut that

opened

Coligoa. Cayas. Salt made.

opened into the *Rio Grande*, and brought the Fiſh from that River into the Lake, where the Cacique kept them for his Recreation; and there was both a vaſt number, and a great variety of Fiſh in it, moſt of which were different from the freſh water Fiſh in *Spain*. *Soto* travell'd from hence Southward, and entred the great and plentiful Country of *Quigante*. The Cacique ſent him Preſents, but wou'd not venture to ſee him; his chief Town was the greateſt they had yet ſeen in *Florida*. From hence he went to the Province of *Coligoa*, which lies to the North Weſt of the former, in the way to which he paſs'd Woods and Deſart places, in many of which there were Lakes and Pools infinitely repleniſh'd with Fiſh, which was the main of their Diet in this Journey. The People of the Country fled from the *Spaniards*; and the Cacique, who was making his eſcape with the reſt, happen'd to be taken by them, together with ſome of his Subjects, of whom *Soto* notwithſtanding demanded no more than Guides and Intelligence. Here was vaſt plenty of Maize, French-beans (better and larger than thoſe in *Spain*) and Pompions, which were alſo extraordinary good. Theſe People informing him of the fruitful Province of *Cayas* that lay to the South, *Soto* proceeded to find it out, and in the way paſs'd through that of *Paliſema*, which afforded him but little Entertainment; there was but very little Maize, neither was the Cacique, or hardly any of the People, to be come at. The Cacique (who run away not out of enmity but pure fear) left his Houſe hung with Deer-skins curiouſly colour'd and wrought, and the floor cover'd with the ſame, for *Soto* to lodge in; and this as a token that he deſired his friendſhip. When they came into the Province of *Cayas*, they found little of that plenty (that was ſpoken of) in any reſpect, except Maize, and that indeed was extraordinary. There was no appearance of ſuch numbers of People neither as the *Indians* of *Coligoa* had hinted. *Soto* found in the way parcels of Deer-skins laid up and down, which the Cacique had order'd to be left there as a ſign of Peace, according to the cuſtom of his Country; this Prince being catch'd by the *Spaniards*, gave a good account of the Province as to the well-peopling of it, but their Eyes did not tell them ſo, and they were forc'd to take the Caciques word for't. This Country yielded them one thing beſides Maize, which they had all along wanted, and that was Salt, which the Natives drew great quantities of from the water of a certain Lake that was warm, of a very brackiſh taſte, and plentifully impregnated with this Mineral; 'tis one of their beſt Commodities, and they exchange it with other People for Skins and Mantles.

Soto's Travels thus far are to be computed in this manner, beginning at the Province of *Teſcaluca*, where the laſt account of them ended. From *Taſcaluca* to *Rio Grande* 300 Leagues, a low Country, and full of Lakes. From the Province on the other ſide *Rio Grande* to *Pacaha* about 50 Leagues, and the Country more open, airy and champion, and the beſt Peopled in *Florida*. From *Pacaha* to *Quigante* 100 Leagues. From *Quigante* to *Coligoa* 40 Leagues. From *Coligoa* to *Cayas* as many; and in moſt of theſe places 'tis a plain Country, the Woods not thick and troubleſome, and the Fields fruitful and pleaſant.

A tiamque.

Soto having ſtaid ſome time at *Cayas*, went away to find out the Province of *Autiamque*; this lies to the South Eaſt of the former, and is a fruitful and plentiful Country, at leaſt in all thoſe reſpects that any Countries in *Florida* have had a character already. The *Indians* voided the Town of *Autiamque* before the *Spaniards* came into it, and the Cacique abſented himſelf and wou'd not appear. *Soto* found this ſo good a place, that he took up his Winter Quarters here, and fortify'd his Camp ſo as to lie ſecure from all attempts of the *Indians*. The great Game they had while they lay here was catching of Conies, of which there were a vaſt number, and one ſort particularly as large every way as the greateſt Hares, but of the ſame colour and make with the *Spaniſh* Conies. Here *Soto* had the misfortune to loſe *Ortiz* (of whom we ſpoke before) which was no ſmall loſs, becauſe having liv'd ſo long in *Florida*, he knew a great many of the Languages, and ſerv'd for an Interpreter wherever they came. Upon this account he was confin'd from travelling far into the Land for the time to come; his Troops alſo were ſadly ſhrunk, and all the Horſes almoſt dead, and thoſe that were alive but in ill caſe, having gone a Year unſhod for want of Iron.

Nilco. Ayas.

From *Autiamque* therefore he march'd towards the Country of *Nilco*, deſigning to come to the Sea as ſoon as poſſible, in order to the getting ſome Supplies of Men and Horſes from *Cuba*. He paſs'd through the Province of *Ayas*, where he had a bad Journey on't, partly by the great Snows that fell, and partly by the Lakes and Watery Roads and Ways through which he was obliged to go. In the Territories of *Nilco* they found ſeveral great Towns, and moſt of them well repleniſh'd with Maize, French-beans, Wall-nuts and Prunes. The *Indians* wou'd not come at them any where in the Country, nor ſerve them with any Proviſions; and in the chief Town where the Cacique us'd to reſide, they ſet his Houſe afire, becauſe the *Spaniards* ſhou'd not lodge in it, and ſo run away. As for the Cacique himſelf, he ſent *Soto* a Preſent of Pearl, and a Mantle of *Marterns* Skins, but did not think fit to come and bid him welcome into his Country.

Guachoya. Quigalta. Bold Anſwer of the Cacique. Soto's death.

Soto endeavouring now to find out the Sea, came next to the Province of *Guachoya*, and to that part of it that is waſh'd by the *Rio Grande*. The Cacique of this Country came to *Soto*, and brought Proviſions with him; but he of the neighbouring Territories of *Quigalta* was a Man of ſtiffer Humour and higher Mettle. *Soto* having a mind to make this Cacique pay him the ſame reſpect that the others generally had done, ſent to tell him that he was the Son of the heavenly Sun, and that all the Caciques as he came along ſerv'd and obey'd him; but he requeſted his Friendſhip, and therefore wou'd have him come and bring ſome of the good things of his Country with him for a token of that Friendſhip. The Cacique return'd for Anſwer by the ſame Meſſenger, That whereas *Soto* ſaid he was the Son of the Sun, if he wou'd command the great River to dry up he wou'd believe him; and as for all the reſt, for his part he did not uſe to make Viſits to any, but rather all thoſe that had any notice of him came to viſit him, and ſerv'd him too either willingly or by force. And therefore, if he had a mind to ſee him, he muſt come to that Town where he was, which if he did in a peaceable way, he ſhou'd be receiv'd in like manner; but if he came to fight, he wou'd attend him in his Town, being never us'd to ſhrink or turn his back for any Man whatſoever. Had *Soto* been in a good caſe, and wou'd the River have ſuffer'd him to paſs over, he wou'd have gone and tried to cool the courage of this bold Cacique, who ſpoke words to him that he had never heard from any *Indian* before. But Matters were otherwiſe, his Forces were ſadly diminiſh'd, he himſelf was now dangerouſly ill, and the River (in thoſe Parts) was near half a league broad, 16 fathom deep, and run with a very ſwift current. This fretted him extremely, and 'twas a great diſturbance to him that he cou'd no way find out a paſſage to the Sea, nor had no proſpect of coming well out of this Country again. In ſhort, with theſe diſtempers of his Mind, and that of his Body, (which to be ſure was not a little heightned by the other) *Soto* was quite overwheml'd, and died in this Province of *Guachoya*, nominating *Luys Moſcoſco de Alvarado* his Camp-Maſter General and Governour, in his ſtead. There was ſomething to do to conceal his Death from the *Indians*, becauſe 'twas probable they might take ſome advantage by it, for *Soto* had made them believe (at leaſt perſwaded them to it) that the Chriſtians were Immortal; the contrary of which, when they had found by experience, and that in the caſe of the greateſt Man of them all too, they would have been the more encourag'd to make ſome farther Experiments upon their Mortality. The account therefore they gave of the Matter to the *Indians* that enquired after him was this, That he was gone to Heaven, as he us'd to do ſometimes, and becauſe he was to ſtay there a few days about buſineſs, he had for that reaſon ſubſtituted another to govern during his abſence. But, in ſhort, they eaſily gueſs'd the truth, and diſcover'd that his Body was impriſon'd under ground, hard by one of their Town-Gates, inſtead of mounting above the Clouds, and flying up into Heaven; for they obſerv'd the Earth turn'd up there, and made ſigns to one another, intimating they knew who lay there. Upon this account *Moſcoſo* was fain to remove him, and inſtead of the Earth, to give him a burial in the Water; ſo his Body was thrown into the River, and that without any thing of the Ceremony due to ſo great and valiant a Commander.

Indians diſcover the death of Soto.

It ſeems 'tis the Cuſtom in this Country, (as well as in many others both in the Eaſtern and Weſtern Worlds) for the Deaths of Lords and Caciques, to be attended with thoſe of Slaves and inferiour Men; for the Cacique of *Guachoya* ſent two *Indians* to *Moſcoſo*, on purpoſe to be Sacrific'd upon the Occaſion of *Soto*'s Death, and to attend and wait upon him where he was now gone, but *Moſcoſo* did not ſend them upon that Errand. The *Spaniards* had now nothing elſe to do but to find their way out of the Country as faſt as they cou'd, ſince he that brought them hither, and kept them here, was gone. They reſolv'd to travel by Land, not putting themſelves to any farther trouble about looking after the Sea, eſpecially ſince they were ſo ill provided for a Voyage, as having neither Ships, Compaſs, Chart, nor Pilot. In purſuance of this reſolution, they march'd through the Provinces of *Aguacay*, *Amay*, *Nagateux*, *Niſſoon*, *Nondacao* and *Soacatina*, even as far as the River of *Daycao*; in which march they were exceedingly harraſs'd and fatigu'd, the *Indians* that they ſeiz'd for Guides leading them many times purpoſely out of the way. And here when they came to this River, they found a poor and a barren Country, cou'd get no Intelligence, nor had no proſpect of continuing their Journey with any manner of ſafety through the Land; ſo that now they were reduc'd to very great diſtreſſes, and cou'd not tell what courſe to take to deliver themſelves. The Journey they had made of it from *Cayas* (where the laſt computation broke off) hither was thus: From *Cayas* to *Autiamque* near 200 Leagues, hilly ground: From *Autiamque* to *Aguacay* 230 Leagues, plain even ground: From *Aguacay* to the River of *Daycao*, where they now were, 120 Leagues, all hilly Country. When they ſaw that there was no going on by Land, they determin'd even to go back again to the Province of *Guachoya* to the *Rio Grande*, (made remarkable by *Soto*'s Death and Burial in it) and there build them ſome Veſſels, ſuch as the Materials they cou'd get wou'd allow, and ſo venture at laſt to Sea. So they travell'd Eaſtward back again, from the River of *Dacayo* to the Country of *Guachoya*, where they had been before, a long and tedious march, eſpecially to be gone twice over to no purpoſe.

They come back to *Rio Grande*.

At a certain place upon this River call'd *Minoya*, they ſpent their Winter, and improv'd it in making ſeven Brigandines, which they had Timber enough for, but were forc'd to caulk with Hemp and Flax: However, as it happen'd, they had ſome good Workmen amongſt them, without which this Project alſo had been of an impoſſible execution, (they muſt have Winter'd in *Florida*) perhaps for ever.

Indian Plots.

While they ſtaid here, 18 or 20 of the Caciques about them form'd a Deſign of aſſaulting them, and had a great force of Men ready for that purpoſe; but *Moſcoſo* diſcover'd the Plot in good time, and letting the *Indians* know as much, they were afraid to give them any diſturbance.

When the time of Year was come for ſailing, they went aboard their Veſſels, and ſail'd down the *Rio Grande* from *Minoya*, and were 17 days before they came to the Sea, the diſtance run being about 250 Leagues. Near the Sea that River is divided into two arms, each of them a League and half broad; it runs with a violent ſtream into the Sea, and the Coaſt is ſo ſhallow and gentle, that the freſh Water enters a great way into the ſalt. Providence favour'd them in their Voyage ſo, that after 52 days ſailing they came ſafely into the River *Panuco*, the number of them then living being 311, and the time that they were out, from *A. D.* 1539. to *A. D.* 1543.

Thus we have ſeen how unfortunate *Florida* has been to the *Spaniards*; but *Peru* and *Mexico* were ſo very kind and fortunate to them, that they might eaſily forgive this for being otherwiſe.

CHAP. XVII.

A brief Account of ſome of the firſt French *Voyages to the Northern Parts of* America.

Firſt Expedition.

IN *A. D.* 1524. one *John Verrazano* a *Florentine*, was ſent out by King *Francis* the Third, and the Queen Regent his Mother, who is ſaid to have made Diſcoveries from the 28th to the 50th degr. N. L. upon which ſcore ſome of the *French* Nation have pretended a Right to all that Coaſt, and made their *New France* almoſt as big as all *Europe* beſides. Wherein 'tis certain, that they are very greatly miſtaken, ſince all that Land, and much more, had long before been diſcover'd by Sir *Sebaſtian Cabot* for the King of *England*, and he was without doubt the firſt that ſet foot upon the *American* Continent on the behalf of any Chriſtian Prince; and this he did *A. D.* 1496. or, as others will have it, in 1497.

Cabot the firſt Diſcoverer.

Second Expedition.

In *A. D.* 1562. that famous Admiral of *France* Monſieur *de Chaſtillon*, ſent Monſieur *Ribalt* to diſcover the Coaſt of *Florida*, and the adjoining Parts. He arriv'd at *Cape Francis* in *Florida*, which lies in 30 degrees; to which *Cape* he gave that Name, as alſo to the River there the Name of *May*, and to ſeveral other Rivers the Names of ſome known in *France*. He built a Fort and furniſh'd it with Proviſions, and ſo leaving a Colony there he came home again; but thoſe left behind, tho' the *Indians* were kind to them, cou'd not be kind to one another, but mutiny'd and fought, and at laſt all came away, being like to be famiſh'd ere they reach'd *England*, where they went aſhore.

French fall out.

Third Expedition.

The ſame Admiral procur'd the King to ſend three Ships more to the ſame Coaſt, in *A. D.* 1564. under the command of Monſieur *Laudonniere*, who went aſhore about 10 Leagues from *Cape Francis*, and the *Indians* received him with a great deal of kindneſs.

Silver.

Some Parts or other of this Country affords Silver, for *Laudonniere* had a wedge of Silver preſented him, which was ſaid to come from the Province of *Thimogoa*; tho' we hear of no particular diſcovery made of that Province. Only this is ſaid too, that ſome of the *French* Soldiers aſſiſting one of the Savage Kings in his Wars, brought away with them ſome quantities both of Gold and Silver, but how much, or from whence, they don't tell us.

Strange Lightning.

A great Lightning happened here, which burnt up 500 Acres of Land, and kill'd all the Fowl thereabouts; and after it follow'd ſo violent a heat, that the Fiſh in the River of *May* died with it by whole Cart loads, and from the putrefaction of them proceeded ſeveral grievous diſeaſes. The Savages believed the *French* had done all this miſchief with their great Guns, and that that was the Lightning that killed the Fowl in the Air, and made the Fiſh die in the Rivers.

Old Man.

They ſaw here a Wonder of Old Age that deſerves to be remember'd, a Man with ſix Generations deſcended from his own Loins, he himſelf being almoſt 300 Years old, and his immediate Son near 250. The *French* ruin'd their Deſigns here again by Mutinies, Diviſions and Quarrels amongſt themſelves; ſome run away to the *Spaniards* at *Cuba*, and others ſtaid where they were, living in great diſtreſs for want of Proviſion, even to the next degree to downright ſtarving. But Sir *John Hawkins* happening to come thither with 4 *Engliſh* Ships, was ſo charitable as to afford *Laudonniere* and his company one for their Tranſportation home. But as they were preparing for their Voyage, in comes Monſieur *Ribalt* with 7 Sail from *France*, which the Admiral had ſent for the recruit and maintaining of the Colony there. This put a ſtop to the Voyage, and the *French* were now in hopes of getting the Gold Mines of *Apalatci* into their hands, (ſome proofs of which they had ſeen) when a Fleet of 7 *Spaniſh* Ships, guided by one of the runaway *Frenchmen*, came to drive them all away. As for *Laudonniere*, he made his eſcape, and came home ſafe to *France*; but *Ribalt* was firſt wrack'd, and afterwards Maſſacred, with all his company, by the *Spaniards*. The *Spaniards* ſtrengthned themſelves here with three Forts, one begun by the *French*, and two others built by themſelves; but they horribly exaſperated the Natives here, as they do every where, and prepar'd them for revenge. But this kindneſs of the *Spaniards* was well requited by the *French* in *A.D.* 1567. under the Command of Monſieur *Gourges*, who coming with three Ships, made a League with ſeveral of the Savage Kings, took all the Forts, and kill'd all the *Spaniards*. And to obſerve the *Lex talionis* in all points, he hang'd abundance of the *Spaniards* upon the very ſame Tree on which the *French* had hung a Year or two ago: And the *Spaniſh* Admiral had written over the *French* in great Letters, *I do not this*

French quarrels.

Fourth Expedition.

Spaniards drive them out.

Fifth Expedition.

French drive out the *Spaniards*.

Lex talionis.

as to Frenchmen *but as to* Lutherans; ſo *Gourges* likewiſe writ over the *Spaniards* Heads, *I do not this as to* Spaniards, *but as to Robbers and Murderers.* He raz'd all the Forts, not having Men to keep them, and ſo came home to *France*, where he was ill rewarded by his Prince, tho' the Voyage was undertaken at his own, not the publick Coſt; he was forc'd to hide himſelf, (the King of *Spain* had ſo poſſeſs'd the *French* King in his prejudice) but in *England* he met with good Entertainment from Queen *Elizabeth*.

Cartier's Voyages.

One *Jaques Cartier*, in *A. D.* 1534. ſet out from St. *Malo* with two Ships, and came to *Newfoundland* and *Bird-Iſland*, which receives its Name from the incredible multitude of Birds of ſeveral ſorts found there. *Cartier* ſeems to have done no more this time than the finding out theſe two Iſlands; however, the next Year, he went out again with three Ships, and came to *St. Lawrence's Bay*, to *Canada* and *Hochelaga*. After this the King of *France* ſent him again, in *A. D.* 1540. as alſo *Francis de la Roche*, Lord of *Robewall*, to be his Lieutenant in *Canada*. This latter went in *A. D.* 1542. but only built a Fort and Winter'd there, and then came back; ſo that the *French*, as yet, had little or no footing in theſe Parts of the World.

CHAP XVIII.

An Account of a Voyage to Canada, *by* Samuel Champlain: *Dedicated to* Charles de Montmorencie *Lord High Admiral of* France.

A.D. 1603

THE Voyage thither contains no remarkable Occurrence, except that only of the vaſt Banks of Ice they met with. They were indeed rather ſo many floating Iſlands, being big enough for the Habitations of many thouſands of Animals, and many Iſlands in the World are well inhabited that are leſs than they. There were two of them particularly that were above 8 Leagues long; one of which they ſaw when they were between 44 and 45 degr. N. L.

Tadouſac Port.

The Port they firſt anchor'd in the Country was that of *Tadouſac*, which is form'd like a Creek in the entrance of the River of *Saguenay*. It is but a ſmall Port, and lies open to the S. and S. S. E. Winds; but there is Water enough to the Eaſtward, towards the opening of the River of *Saguenay*, along by a Hill, which is almoſt cut off from the Main by the Sea. At the entrance of it there are two Points, the one on the Weſt-ſide, which runs a League into the Sea, called *St. Matthews Point*, the other on the S. E. ſide, containing a quarter of a League, which they call the *Point of all the Devils*. Theſe two Points are very near a League aſunder, and are dry at Low water. They brought along with them a couple of Savages, which had formerly been carried from this Country into *France*, and very well uſed there; for this end particularly, that they might commend the bounty and kindneſs of the *French* Nation to their Countrymen at home, and ſo make way for their Settlement in the Country.

Great Feaſt.

The great *Sagamo*, or Savage King, was at their arrival engaged in a great Feaſt at the *Point of St. Matthews*, and there 'twas that the *French* had their firſt Conference with him. The Savage that was to tell the ſtory of their good uſage in *France*, and of that Prince's deſires to plant his Subjects amongſt them, did it ſo effectually, that *Anadabijou*, the Grand *Sagamo*, was dighly pleas'd, and eaſily granted all; and all the reſt of the *Sagamos* expreſs'd their good will and liking of it too. They were at this time celebrating a Feaſt for an advantage lately obtain'd over the *Iroqueze* their Enemies, about one hundred of whoſe Heads they had brought along with them, the better to grace the Ceremony. In the great Cabbin where they were met together, they had 8 or 10 ſeveral Fires about 6 paces diſtant from one another, over every one of which were hung a Kettel full of ſome ſort of fleſh, either Wild Fowl, Bever, Bear, Seal, or Orignac, which is like an Ox. While Dinner was dreſſing, one took a Dog and danc'd with it about the Kettels, which ſtood in the middle of the Cabbin; and when he came by the great *Sagamo*, he threw the Dog down upon the ground, at which all, with one conſent, cried ho! ho! ho! Which done, that Man went and ſat down in his place again, and another riſe up and did the like; and thus they ſpent the time till their Victuals was ready. When they went to eating, every Man had his Diſh before him made of the Bark of a Tree, and a certain Perſon that Carv'd gave to every one his Portion. When their hands were greaſie, they wip'd them either upon the hair of their own heads, or that of their Dogs backs. After Dinner they went out to dancing, and to expreſs the greater joy, did it with the Heads of their Enemies in their hands. In theſe dances they uſe no great motion, but do more by odd geſtures and turnings of their Bodies than any thing elſe. When the Men began to ſing, all the Women and Maids, which ſat down in ranks by one another, ſtarted up of a ſudden, and threw off their Mantles of Skins, ſtripping themſelves as naked as ever they were born; and when the Song was ended, and the Men with one voice cried ho! ho! ho! the Women and Maids ſat down again in their places, and cover'd themſelves with their Mantles; and theſe odd actions they repeated ſeveral times. Theſe People are of an Olive colour, more by reaſon of the paint they uſe than by Nature; they are generally of very good ſhape and well-proportion'd. Their Habit is Skins and Furrs, with which they are entirely cover'd in the Winter, but in Summer only a part of their Bodies. At that time alſo they make a ſort of Rackets, which they faſten to their feet, that they may go over the Snow without ſinking. In the ſevere Winter-Seaſons they are bitterly pinch'd for Proviſions, becauſe abundance of the Animals they live upon retire themſelves into warmer Climates. They have much more Senſe and Ingenuity than many of the *Americans* have, but are revengeful, falſe and treacherous. In their Conſults and Debates, only the Ancients are preſent; and 'tis a cuſtom with them to ſtop in their Speeches, and think a while, and then go on again. As for Religion, they believe one God, one Mother, one Son, and one Sun in the Firmament, but that God is above all the reſt. There's little ſign of any external Worſhip or Devotion amongſt them; and the great *Sagamo* gave this account of the matter, That every one pray'd in his Heart what he thought good. And concerning the Original of Mankind, their Faith is, That when God had made all things elſe, he took a bundle of Arrows and ſtuck them into the ground, from whence grew Men and Women.

Diverſion before Dinner.

Habit.

Manners and Religion.

Devotion.

Marriage.

Marriage amongſt them is a Woman's making choice of that Man for her conſtant Companion and Bedfellow that ſhe has made trial of before, for 4, 5, or 6 Years, more or leſs as ſhe pleaſes. And as ſhe has the liberty of trying a great many, ſo 'tis paſt all doubt that ſhe takes him whom ſhe finds the moſt agreeable Companion during the time of his Probation.

Funerals.

In their Funerals they do no more than put the dead Body into a great hole in the ground, together with all the Goods and Houſhold-ſtuff belonging to them; ſo that this is not only a burial of Bodies, but of Pots, Pans, Kettles, and the like Lumber. When their Friends are dead, they ſay they are gone into far diſtant Countries, to rejoice with their Relations and Acquaintance. Monſieur *Champlain* preach'd the main Points of the Chriſtian Religion to them, and tho' they were patient hearers, and approvers of that Law, yet he does not tell as that any of them proceeded ſo far as to be doers of it, and to renounce their own barbarous Rites and Cuſtoms.

Houſes.

The Cabbins or Houſes theſe People dwell in are low, made like Tents, and cover'd with the Bark of a Tree, only they leave an open place in the Roof, about a foot wide, to let the light in upon them; they make ſeveral fires in the middle of them, and there are many times eight or ten Houſholds together in one Cabbin. They lie upon Skins promiſcuouſly by one another, and the Dogs lie by their Maſters ſides upon the ſame Couches.

Their Canoes are made of the Bark of the Birch-tree, and are ſtrengthened within with ſeveral little circles of Wood; we ſuppoſe they mean Hoops, or ſomething of that nature. They are ſo very light, that a Man may carry one of them eaſily, and the Natives very frequently do ſo, when they have occaſion to paſs any Land from one River to another. They are 8, 9 or 10 paces long, and half broad in the middle, but they grow narrower towards the ends; there are but two that row in them, and thoſe are the Man and his Wife.

River of *Saguenay*.

As for the actions of the *French* in the Country this time, they made ſome diſcoveries both of the River of *Saguenay*, in the mouth of which the Town of *Tadouſac* ſtands, and alſo of the great River of *Canada*. As for the former, they went no farther than 10 or 12 Leagues up it, and ſo came not near the great fall, which by report is between 40 and 50 Leagues from *Tadouſac*. 'Tis ſaid alſo, that beyond the great fall there are various others, and then ſeveral Lakes communicating with one another by intermediate Rivers; the fartheſt of all which Lakes are properly the head of this River *Saguenay*. As far as they went they found the Country mountainous and rocky on both ſides the River, the Soil unpleaſant, and all the Iſlands in the River meer deſart ground, and inhabited by nothing but a few ſmall Birds. But their Voyage in queſt of the fall of the great River of *Canada* was more conſiderable, in order to which they ſet out of *Tadouſac* and paſs'd by *Hare-Iſland*, the *Iſland of Filberds*, and the *Iſland of Orleans*; the former of theſe is about 7 Leagues from *Tadouſac*, and contains nothing remarkable. The ſecond is pleaſant and wooddy, has ſtore of Slate, and a good gravel Soil; it's within two Leagues of *Hare-Iſland*. The *Iſland of Orleans* is a ſmooth level, and delightful ſpot, and about 8 Leagues long; 'tis dangerous paſſing by the North-ſide of it, becauſe of the Banks of Sand and Rocks that lie between it and the main Land, where 'tis almoſt dry at low Water.

Iſland Orlean.

Quebec.

After this they came to an Anchor at *Quebec*, which is a Streight of the ſaid River of *Canada*, which is ſome 300 paces broad. Excepting one very high Mountain on the North-ſide of the Streight, the Country is plain and level, full of fine grounds beſet with Oaks, Birches, Firrs, Cypreſſes, Wild Vines, and ſeveral ſorts of Fruit-bearing Trees.

Diamonds.

The *French* ſay alſo, that along the Coaſt of *Quebec* there are Diamonds in the Rocks of Slate, which are better than thoſe of *Alonſon*; from *Quebec* to the Iſland of *Filberds* are 29 Leagues. Beyond *Quebec* the River grows wider and wider, in ſome places a League broad, in others a League and half, in others two Leagues, which is the moſt. The proſpect of the Country grows alſo pleaſanter ſtill, and you ſee all low Champion grounds, which promiſe ſomething of Fruitfulneſs conſiderable.

The North Coaſt is full of Rocks and Banks of Sand, and therefore ſailing that way you muſt take the South-ſide, and go about half a League from the ſhore. From *Quebec* they ſail'd to St. *Croix*, which is 15 Leagues farther, and the Country continues ſtill the ſame pleaſing proſpect, the ground level, and abundance of good Fruit-trees, beſides plenty of Woods which ſtand well to the eye; the Soil is black and ſoft, and only wants Art and Induſtry to improve it to very good purpoſe.

River of the *Iroqueze*.

They kept ſtill Coaſting on by the North ſhore, and came to the mouth of the River of *Iroqueze*, in which courſe they had a view of various little Iſlands, Lakes and Rivers, too many to claim a particular deſcription; but this is obſervable, that the Land for the moſt part yielded much the ſame pleaſant proſpect as before, and the Vines and Wallnut-trees, which were in abundance, made it manifeſt 'twas not a barren Soil.

The River of the *Iroqueze* runs with a very rapid Current, inſomuch that their attempts to go up it were fruſtrated; it is at leaſt 3 or 400 paces broad, and has ſeveral Iſlands in it. Proceeding on towards the fall of the great River of *Canada*, they diſcover'd abundance of Iſlands, many of which were extremely pleaſant and fruitful, eſpecially them towards the South Coaſt, where they found in ſome of them moſt ſorts of the ſmaller Fruits, as Strawberries, Rasberries, Gooſeberries, with many others they did not know: As alſo for Animals, Does, Conies, Bears, Bevers, Otters, with a great many other kinds they had not ſeen before. When they came to the entrance of the fall, they found an Iſland almoſt in the very middle of that entrance on the South-ſide of which they paſs'd, and tho' they quickly began to find the ſwift current of the Water, yet they found it withal extremely low and ſhallow, ſometimes not exceeding 5, 4, or 3 foot: Abundance of Rocks and little Iſlands alſo lie ſcatter'd about in the River, many of which are juſt even with the water. Upon all theſe accounts they ſaw there was no going farther in the Pinnace, and ſo the Skiff was made ready, in which the Author, with one or two more, and a few of the Savages for their Guides, attempted to purſue the diſcovery of the fall: And they went ſo far as to be able to give this account of it, That the water runs with a force and ſwiftneſs that is very ſurprizing, yet the fall is as it were ſtep by ſtep, and the depth ſometimes not above one or two fathom, and never above three fathom. The breadth is about a League, and there are abundance of Rocks and Iſlands up and down in it, particularly in the middle there are ſeveral long narrow Iſlands, that make the fall divide it ſelf into two others, one to the North, and the other to the South-ſide, both which are very dangerous for any Skiff or Boat, tho' ever ſo ſmall, to paſs, and nothing but the light Canoes of the Savages can poſſibly do it. The *French* went aſhore and travell'd a while by the River, to ſee if they could find the end of the fall, and having gone about a League, they found no more Rocks, nor any thing of ſuch a fall as before, but the water continued running with a ſtrange ſwiftneſs, and that current (as the *Indians* ſaid) held on for 3 or 4 Leagues.

Great fall of the River of *Canada*.

Account given by the Natives.

The Savages alſo inform'd them, that after this firſt great fall, there are ſeveral others to be paſs'd, and ſo through a continuation of Falls and Lakes, (many of which communicates with one another by Rivers, and are vaſtly large and wide) ſome of them had paſs'd a great way in their Canoes, but they had not ſeen the end of it, nor how far they cou'd have gone that way. The firſt fall to which the *French* came lies in 45 degrees N. L. and according to all that they cou'd gather from the deſcriptions of the Savages, they found it muſt be near 400 Leagues from thence to the South Sea.

Other Voyages of the *French*.

After this they return'd to *Tadouſac*, from thence they ſet out again ſailing to *Gachepay*, the *Bay of Cods*, the *Iſland of Percee*, and the *Bay of Heat*, but in this Courſe they made no remarkable Obſervations nor Diſcoveries. *Gachepay* is ſcituated about 100 Leagues from *Tadouſac*, in a fair Bay about 7 or 8 Leagues long, and 4 broad in the mouth. Theſe Bays are not very far diſtant from one another, and all of them (as alſo the *Iſland Percee*) are places for green and dry Fiſh.

They ſaw nothing of Gold or Silver in all their progreſſes, at leaſt they would not tell of it if they did, only there were ſome ſuſpicions of a Silver-Mine near a certain Bay in about 44 degrees S.L. within 5 or 6 Leagues of the South Coaſt. Copper-Mines there certainly were in the Country, as particularly near the River of *Souricoua*, where their Countryman Monſieur *Prevert* had been to make trial of them, as he himſelf inform'd them at the *Iſland of Percee*, from which place 'tis not difficult to find the way to the River of *Souricoua*. With this Perſon they return'd back again into *France*, where whatſoever Diſcoveries they made to their own Prince, they do not think to tell the World any more.

Copper-Mines.

CHAP.

Chap. XIX.

Monſieur Monts's *Voyage into* New France; *Written by* Mark Leſcarbot.

The French *King's Patent granted to Monſieur* de Monts, *for the Planting of* Canada, *&c.*

‘Henry, by the Grace of God, King of *France* and *Navarre*. To our dear and well-beloved the Lord of *Monts*, one of the ordinary Gentlemen of our Chamber, greeting. As our greateſt care and labour is, and hath always been, ſince our coming to this Crown, to maintain and conſerve it in the ancient dignity, greatneſs and ſplendour thereof, to extend and amplify, as much as lawfully may be done, the bounds and limits of the ſame. We being, of a long time, informed of the ſituation and condition of the Lands and Territories of *La Cadia*, moved above all things, with a ſingular zeal, and devout and conſtant reſolution, which we have taken, with the help and aſſiſtance of God, Author, Diſtributer, and Protector of all Kingdoms and Eſtates, to cauſe the People, which do inhabit the Country, Men (at this preſent time) Barbarous, Atheiſts, without Faith or Religion, to be converted to Chriſtianity, and to the Belief and Profeſſion of our Faith and Religion; and to draw them from the ignorance and unbelief wherein they are. Having alſo of a long time known by the Relation of the Sea Captains, Pilots, Merchants and others, who of long time have haunted, frequented and trafficked with the People that are found in the ſaid places, how fruitful, commodious and profitable may be unto us, to our Eſtates and Subjects, the Dwelling, Poſſeſſion, and Habitation of thoſe Countries, for the great and apparent profit which may be drawn by the greater frequentation and habitude which may be had with the People that are found there, and the Traffick and Commerce which may be by that means ſafely treated and negotiated. We then for theſe cauſes fully truſting on your great Wiſdom, and in the Knowledge and Experience that you have of the quality, condition and ſituation of the ſaid Country of *La Cadia*, for divers and ſundry Navigations, Voyages and Frequentations that you have made into thoſe Parts, and others near and bordering upon it, aſſuring our ſelves that this our reſolution and intention, being committed unto you, you will attentively, diligently, and no leſs couragiouſly and valorouſly, execute, and bring to ſuch perfection as we deſire, have expreſly appointed and eſtabliſhed you, and by theſe Preſents, ſigned with our own hands, do commit, ordain, make, conſtitute and eſtabliſh you, our Lieutenant-General, for to repreſent our Perſon, in the Countries, Territories, Coaſts and Confines of *La Cadia*, to begin from the 40th degree unto the 46th, and in the ſame diſtance, or part of it, as far as may be done, to eſtabliſh, extend, and make to be known our Name, Might and Authority. And under the ſame to ſubject, ſubmit and bring to obedience, all the People of the ſaid Land and the Borderers thereof: And by the means thereof, and all lawful ways, to call, make, inſtruct, provoke and incite them to the knowledge of God, and to the light of the Faith and Chriſtian Religion, to eſtabliſh it there: And in the exerciſe and profeſſion of the ſame, keep and conſerve the ſaid People, and all other Inhabitants in the ſaid places, and there to command in peace, reſt and tranquillity, as well by Sea as by Land: to ordain, decide, and cauſe to be executed all that which you ſhall judge fit and neceſſary to be done, for to maintain, keep and conſerve the ſaid places under our Power and Authority, by the forms, ways and means preſcribed by our Laws. And for to have there a care of the ſame with you, to appoint, eſtabliſh, and conſtitute all Officers, as well in the Affairs of War, as for Juſtice and Policy, for the firſt time, and from thence forward to name and preſent them unto us, for to be diſpoſed by us, and to give Letters, Titles, and ſuch Proviſoes as ſhall be neceſſary, *&c.*

Given at Fountain-bleau *the eighth day of* November, *in the Year of Our Lord* 1603. *and of our Reign the fifteenth. Signed* Henry, *and underneath by the King,* Potier. *And ſealed upon a ſingle Label with yellow Wax.*

Monſieur *de* Monts *not alone in the Voyage.*

THO' Monſieur *de Monts* Name be only mentioned in this Title and Patent, yet we muſt know that ſeveral others were concern'd in the Voyage as well as him, and as they were all Men of ſome note, ſo the courſe of the Story will make it appear that what he did, as to the point of Diſcovery, was but little in compariſon with what they did.

March, A. D. 1604.

There went along with him Monſieur *Poutrincourt* and Monſieur *Champlain*, he whoſe Voyage was deliver'd juſt before. They had no more than two Ships, and tho' they ſet out at a time of Year when contrary Winds were hardly to be expected by thoſe that ſail to thoſe Parts, yet they were diſtreſs'd with them ſo far, as to render their Voyage much more long and tedious than otherwiſe it wou'd have been.

Cape de Sable.

Being come as far as *Sand-Iſland*, they ſail'd to the South of it, and came to *Cape de Sable*, and from thence to the *Bay of St. Mary*, which they commend for a very commodious place to dwell in, and ſay alſo that there are both Iron and Silver Mines there.

Port-Royal a fine place.

From hence they proceeded to a great Bay which is 40 Leagues long, and 14 at leaſt broad, and which they call'd *La Bay Francoiſe*, or the *French Bay*. Here they found a moſt delectable Port, to which they gave the Name of *Port-Royal*; 'tis 8 Leagues in Circuit, defended with Mountains on the North-ſide, and on the South with ſmall Hills which pour out a thouſand fine ſtreams, that renders the place extremely pleaſant. On the Eaſt, between the Mountains and the Hills, is a River in which the Ships may ſail 15 Leagues and more, and on the Banks on both ſides is nothing but fair Meadows all the way; this they call'd the River *Le Equille*.

Copper-Mine.

From *Port-Royal* they ſail'd to the Copper-Mines, mentioned in Monſieur *Champlain*'s Voyage. This was a high Rock between two Bays; the Copper appear'd very fair and pure, and the *French* Goldſmiths fancied a Golden Mine might be at the bottom. There was ſome ſtore of Diamonds too about theſe Rocks, tho' not warranted for fine; and a certain ſort of blue Stones, which they reckon'd not leſs valuable than Turqueſes.

River of *St. John*, and the conveniency of it.

From the Copper-Mines they came to the River of *St. John*, the Country along by which is very fruitful and pleaſant, full of Vines, and other good Plants and Trees. This River affords a good conveniency for a Correſpondence between *Port-Royal* and the great River of *Canada*, for People may hear of one another this way in 16 or 17 days, which they can't do by the way of the Sea in a Month, nor then neither without danger; for in 6 days time they go to *Gachepay* by the Bay or Gulph of *Chaleur*, and in 8 days they may go to *Tadouſac* by a branch of this River coming from the N. W.

St. Croix.

Leaving the River of *St. John* they ſail'd to *St. Croix*, which is 20 Leagues diſtant, and here they reſolv'd to make their abode for ſome time. This Iſland is half a League in compaſs, and the mark to diſcover it is three or four Mountains topping one another upon the ſides, but at the North end only one ſharp pointed one, from whence the River runs down. Right over againſt the Iſland are ſtore of moſt pleaſant freſh water Brooks, and the Soil there is very rich and fat, and needs little Tillage to make it yield fair crops of Corn; for Monſieur *Monts* ſow'd ſome Rye, which he was forc'd to leave there ungather'd, but two Years after ſome of the company found a glorious crop there, which had ſprung up from the grains that had fallen into the ground.

Monſieur *Poutrincourt* ſail'd away from hence into *France*, leaving Monſieur *Monts* and his company here; but terrible illneſſes forc'd him and them to remove from hence alſo into other Quarters, which they ſet out to ſeek as ſoon as the rough Seaſon was over. They wanting a more warm and temperate Dwelling, went to the Southern Parts to find it out. The Voyage they made in order to it was 120 Leagues, from *St. Croix* to the River *Kinnibeki* 60 Leagues, the Coaſt lying Eaſt and Weſt; and from *Kinnibeki* to *Malebarre* 60 Leagues more, the Coaſt lying North and South. The People that lie from *St. Johns* River as far as *Kinnibeki* are called *Etechemins*, and thoſe from *Kinnibeki* to *Malebarre* go by the Name of *Armouchiquois*, an odd ſort of People, as we ſhall ſee afterwards.

Voyage to *Malebarre.*

Tho' the Country hereabouts was more agreeable and temperate than that from which they remov'd, yet they ſtaid here but a ſmall time; for Monſieur *du Pont*, who had been with Monſieur *Champlain* in theſe Parts before, arriving from *France* with Recruits of freſh Men for Monſieur *de Monts*, they agreed all to return back to *Port-Royal*, and make that their Reſidence, till they had carried on the Diſcovery of the Country farther, and found ſome more profitable or inviting place. This deſign they put in execution; and being come thither, Monſieur *de Monts*, and ſome of the company, return'd in the Ships to *France*, leaving Monſieur *du Pont* and the reſt, amongſt whom the chief were Monſieur *Champlain* and Monſieur *Champdore*, Men acquainted with the Country, and very uſeful in the conduct of the Affairs of the Colony. At parting Monſieur *de Monts* made Monſieur *du Pont* a promiſe, that he would ſend him the following Year new Supplies from *France* to *Port-Royal*, where he was to ſtay the limited time in expectation of them. And here it may be ſaid that they had a pretty good Correſpondence and Traffick with the Savages for Otters, Bevers, Stags, and ſuch like things. But he cou'd hardly fadge here any more than Monſieur *Monts* had done at *St. Croix*, for ſome of his Men died, and what with one diſaſter or another, having ſpent the moſt part of the appointed time here, he built him a Bark, and one or two Shallops, with which he reſolv'd to go to ſome of the places where the *French* uſe to dry their Codfiſh, to get a paſſage by thoſe Ships into *France*, if his Recruits did not come in due time.

Come to *Port-Royal* again.

Monſieur *Poutrincourt*'s Voyage to *Canada* a ſecond time.

Now Monſieur *de Monts* had taken care the mean while to furniſh out a Ship for this Voyage, into which Monſieur *Poutrincourt* alſo put himſelf, reſolving to try this Country once more; the Writer of this ſtory too (Monſieur *Leſcarbot*) came over at the ſame time. Their Voyage contain'd nothing remarkable in it, but only the account of the mighty Banks of Ice which are brought down from the North to the Seas of *Newfoundland* and *Labradore*. That which they call the great Bank is (as the Author affirms, but more from common eſtimation than his own particular knowledge) 200 Leagues long, and 18, 20, or 24 Leagues broad; and here 'tis that the great fiſhing for Cods goes on. The mark by which the Seamen know they are near it is a multitude of Birds, the chief of which are thoſe call'd by the *French* Hapfoyes, or Liver-catchers, becauſe they ſo greedily devour the Livers of the Codfiſh that are thrown into the Sea; and 'tis certain that they are ſo fond of that ſort of Meat, that they will venture into any danger for it; nay, tho' a Poll were lifted up over their Heads to knock them down, yet they wou'd have a pull at their beloved Liver.

Monſieur *du Pont* was gone from *Port-Royal* before they came thither, having left two *Frenchmen* only for the preſervation of the Stores of Meat and Merchandize repos'd there; neither did they ſcruple to venture themſelves there, amongſt a Nation of Savages, to do this Service to their Country. Before they had been here long, Monſieur *du Pont* (who was gone to find out ſome *French* Ships, and had had tidings of their being at *Port-Royal*) came hither to them; and after ſome time ſpent together, the two companies parted again, Monſieur *du Pont*, and ſome with him, for *France*, and Monſieur *Poutrincourt* in queſt of ſome Southern Region beyond *Malebarre*, where they might meet with all conveniences for a Plantation.

Du Pont goes to *France*.

The Author, and ſome others, were left at *Port-Royal* in the mean time, where they liv'd in very great plenty, having Bread-Corn, Peaſe and Beans, Rice, Raiſins, Oil and Butter, of their own; and the Country afforded Wild-geeſe and Ducks, Larks, and other good Fowl, Deer, Sturgeon, Salmon; and, in a word, any Fiſh or Fleſh that the Savages cou'd procure, for whatever Game came into their hands they wou'd commonly bring the *French* half of it.

Monſieur *Poutrincourt* ſailed to the Iſland of *St. Croix*, and from thence to *Kinnibeki*, and ſo on to the Bay of *Marchin*. Here many kindneſſes paſs'd reciprocally between the *French* and the Savages, and Monſieur *Poutrincourt* made a League with the Prince of them.

Leagues with the Savages.

From hence they ſail'd to the Bay of *Chouakoet*, at the entrance to which is an Iſland full of Vines, the Trunks of which they found to be three or four foot high, and as big as ones fiſt in the lower part; the Grapes were ſome of them as big as Plumbs, but the juice ſo thick that it left a ſtain behind it upon whatſoever it came. They proceeded to a certain Port of *Chouakoet*, where the Savages entertain'd them kindly, and brought Merchandize to truck with them.

From hence they came to another Port which was farther than Monſieur *de Monts* had ever been, tho' he had (as was ſaid before) been as far as *Malebarre*, which is beyond the Bay of *Chouakoet*. This Port was a very delightful one, and now they were in the Country of the *Armouchiquois*, a thieviſh, ſly ſort of People, and who muſt be narrowly watch'd by all that have any Dealings with them. They are much fear'd by many of the neighbouring Nations, and with reſpect to their treachery and reſolution, as well as their thieviſh qualities, they ought to be fear'd by all People, for there's nothing that hinders them from the accompliſhment of any deſign they have a mind to but only meer Impoſſibility, or accidental Fruſtration; yet they carried it civilly enough to the *French*, and were ready to contend with one another who ſhou'd bring them in moſt Proviſions.

Armouchiquois.

The *Armouchiquois* wou'd not let any of their People, that were wounded, be touch'd by a *French* Chirurgeon, till they had firſt ſung and baul'd over them a while, and then they willingly reſign'd them up to be cured. Monſieur *Poutrincourt* continued not long amongſt them, yet neither did he proſecute that Southern Diſcovery, but returning to *Malebarre*, proceeded from thence back again to *Port-Royal*. 'Tis to be noted, that the entrance to *Malebarre* is exceeding difficult, by reaſon of the great ſtreams and ſhoals that are there. The adjacent Country is well Peopled, and affords great ſtore of Grapes. Being come to *Port-Royal*, they paſs'd the Winter there pleaſantly enough, having plenty of all ſorts of Proviſions, and Sports and Recreations in the Woods and Fields, that help'd to take off the burden of the time that lay upon their hands; but that Seaſon over, and no Recruits coming from *France*, but on the other hand a Meſſenger, ſignifying, That all the Projects about Planting the Country were broke to pieces, and nothing farther (now at leaſt) was to be expected, upon this ſcore Monſieur *Poutrincourt* was now oblig'd to think of a ſpeedy return, which was not a ſmall grief to moſt of them, the Country being ſo fine and charming, and the People ſo good humour'd about *Port-Royal* where they reſided. The Savages expreſs'd no leſs concern (than they) at their departure; yea, they wept heartily, having been always in hopes that ſome Settlement wou'd have been made amongſt them, ſince the aſſiſtance of the *French* was ſo uſeful to them in their many and frequent Wars with their enemies. However Monſieur *Poutrincourt*, tho' he came away, yet did it with a firm reſolution to return thither again as ſoon as matters cou'd be brought to bear; yet he ſtaid long enough, before he ſet ſail, to ſee a noble crop of Corn come up, ſome Samplers of which (of ſeveral ſorts) he brought along with him, to let the *French* Nation ſee that Country was not to be neglected upon ſlight and trivial Occaſions. Theſe few tokens of the fruitfulneſs of the Country, obtain'd the end they were deſign'd for ſo far, that the King was very much pleas'd with what he had ſeen, and confirm'd Monſieur *de Monts* Privileges to him afreſh. Upon this, he quickly made Proviſion for the laſt Improvement of the King's favour, in ſending ſeveral Families thither to begin the Plantation, and lay the firſt Foundations of a *French* Government. This was *A. D.* 1608. and 'twas but two Years after that (the *Canada* Affairs going on now more proſperouſly) Monſieur *de Poutrincourt* went over again, as well to diſcharge himſelf of his promiſe made to the Savages, as to ſatisfy his own inclinations which were ſtrongly bent to that Country. He carried over a conſiderable number of People with him, particularly Artificers of ſeveral ſorts, who were very uſeful Members of a new Plantation.

Bad entrance to *Malebarre*.

Poutrincourt returns to *France*.

Privileges confirmed.

New Colony.

Poutrincourt comes over again.

The place he fix'd on for his Settlement was *Port-Royal*, as being that he had always admired, and was alſo granted him by Monſieur *de Monts* by the King's Order. Monſieur *Poutrincourt*, preſently upon his arrival, ſet himſelf to the Improvement of the Land, by Plowing and Sowing, and Dreſſing, for the following Year. After which neceſſary care for the Bodies of his own

People,

Savages baptiz'd.

People, he began to take care of the Souls of the Savages, and after Inſtructing of them in ſome Principles of the Chriſtian Religion, he proceeded to Baptiſm, which Sacred Rite was Adminiſtred to ſeveral of the chief of them. Particularly there was baptized the great *Sagamo* or Prince of the Savages, that inhabited about *Port-Royal*, his Wife and his two Sons, he himſelf being honour'd with the King of *France*'s Name, ſhe with the Queens; and the two Sons, one with the Pope's, and the other with the Dauphin's. The Spirit of Popery was gotten into this Savage King by that time he was baptiz'd; he was no ſooner out of the Font almoſt, but he began to breathe defiance againſt all the World about him that wou'd not be of his Opinion. He threaten'd his Savage Neighbours with Fire and Sword, and was reſolv'd to carry all the Plagues and Terrours of War into the Bowels of their ſeveral Countries, if they did not follow his Example, and become Chriſtians as well as he. But his Spiritual Fathers, had they been themſelves in the right Spirit, wou'd have told him he was in the wrong, and let him know 'twas the way to make the other Savages afraid of Chriſtianity, to ſee him come all of a flame out of the Water of Baptiſm. What Monſieur *Poutrincourt* did after his Settlement here we cannot inform the Reader, but we can ſay ſomething of Monſieur *Champlain*, that moſt Induſtrious and Indefatigable Diſcoverer of Countries.

Champlain's Diſcoveries

This Perſon made two Expeditions with the Savages of *Quebec*, one againſt their old Enemies the *Iroqueze*, and the other to diſcover the People beyond the Falls of the great River of *Canada*. The former had no more conſiderable in it than this, That the *Quebeckers*, by the help of the *Frenchmen* arm'd with Guns, routed the *Iroqueze*, and came back with a great deal of Triumph.

In the latter Expedition, Monſieur *Champlain* did ſomething remarkable, for he paſs'd above 80 Leagues beyond the Falls of the great River, as far as a certain great Lake which is 100 Leagues long. The Country hereabouts was extremely fine and fruitful, abounding in all the beſt of thoſe things that have hitherto been mentioned as the Products of any of theſe Parts. The People were valiant, and bold fighters too, and put *Champlain* and his company hard to it to defend themſelves. Their Villages were fortified with ſtrong Barricadoes of Pales, and their Houſes two or three Stories high. Their Houſes were themſelves like ſo many Forts; in the lower parts were planted huge great Bows that diſcharged Arrows big enough to knock a Man down; in the higheſt they had Murdering holes and Battelments, from out of which they flung and caſt great Stones, that annoy'd their enemies at a diſtance. In the middle Story they lay up their Corn, and other Proviſions; and hither their Women retire themſelves in the time of action, where they are not idle neither, but do all the Service their Sex will allow them to do.

There is a vaſt ſtore of Bevers along this great Lake, but 'tis in vain to come hither to drive a Trade for the Skins of them, for the People burn their Bevers as we do our Hogs, and ſo effectually prevent all Trade that way. Monſieur *Champlain* was ſo ſet upon the buſineſs of diſcovering this Country, that he reſolv'd not to leave off till he had pierc'd as far as the Weſtern Ocean, or that of the North, and ſo to open the way to *China*. But as many a one in this caſe has fail'd of being as good as his word, ſo we believe Monſieur *Champlain* did the like, for without all doubt had that paſſage been open'd, the performance had been taken notice of in the World.

CHAP. XX.

An Account of the firſt Engliſh *Plantations in* Virginia.

1ſt Voyage

THE famous Sir *Walter Raleigh* had firſt of all a Patent for theſe Diſcoveries, granted by Queen *Elizabeth*. *A. D.* 1584. he ſet out two Barks for that purpoſe, which arriving on that part of *America* ſince call'd *Virginia*, took poſſeſſion of the Country in Her Majeſties Name, and return'd after taking a ſhort view of it.

2d Voyage.

A. D. 1585. Sir *Richard Greenvile* was ſent by Sir *Walter Raleigh* with 7 Ships, and came to *Virginia*, where he left a Colony. Theſe Men diſcover'd from *Roanoak* to the Country of the *Cheſepians*, above 130 Miles; and to *Chawanock* N. W. as far. The Savages form'd a Conſpiracy againſt them, and made them uneaſie; ſo that Sir *Francis Drake*, who had been plundering *Spaniſh* Towns, coming thither with his victorious Fleet, they all went back with him to *England*. This unexpected return of the Colony, was the reaſon why a good large Ship, ſet out by Sir *Walter Raleigh* the ſame Year, coming thither, and finding all the *Engliſh* gone, preſently return'd again. Sir *Richard Greenvile* alſo, who was abroad with three Ships, arriving at the ſame place, and ſeeing no Colony ſtaid not long there, but leaving 15 Men well furniſh'd for two Years, to keep poſſeſſion in the Iſland of *Roanoak*, came back to *England*.

3d Voyage.

A. D. 1587. Sir *Walter Raleigh* ſent another Colony of 150 Perſons, with a Governor, and 12 Aſſiſtants, to whom he gave a Charter, and Incorporated them by the Name of Governor and Aſſiſtants of the City of *Raleigh* in *Virginia*. Their directions were to plant at the Bay of *Cheſepiak*, and erect their Fort there. Enquiring after the 15 *Engliſh* left lately in the Country, they were informed by *Manteo* (a Chriſten'd *Virginian*, and who had been in *England*) that ſome were kill'd by the Savages, and the reſt fled for Refuge into the other Parts of the Country. This Colony cou'd not tell how to ſettle neither, but growing uneaſie under their wants, perſwaded their Governor to return home.

4th Voyage.

A. D. 1590. Mr. *John White*, the late Governor, put to Sea with three or four Ships and Pinnaces, and came to *Hatorask* in *Virginia*, but the bad Weather wou'd not permit any farther ſearch into the Country, ſo they ſail'd for *England* without doing any more.

Chap. XXI.

A Relation of a Voyage to the Northern Part of Virginia; *perform'd by Captain* Goſnoll. *Written by Mr.* Gabriel Archer, *who went the ſame Voyage.*

A. D 1602.

A Savage in *European* Dreſs.

Copper Ornaments.

Elizabeth Iſland.

A Fort begun.

CAptain *Goſnoll* arrived firſt at the Northern Parts of this Country, where finding a proſpect of things to his liking, he did not trouble himſelf to undertake the diſcovery of the Southern. They went along the Coaſt a conſiderable way, ſeeing many pleaſant Iſlands, but for the moſt part uninhabited, and yet by their fruitfulneſs capable of maintaining a great number of People. The firſt Savages they met with, after ſigns of Peace made on both ſides, and a long Speech made by their Commander, (which the *Engliſh* to be ſure underſtood a great deal of) came boldly on board their Ship. The Commander himſelf was dreſs'd with Waſtcoat, Breeches, Shoes, Stockins, Hat, and all the Accoutrements of an *European*, but all the reſt had only Deer-skins about their ſhoulders, and Seal-skins tied about their middles. They were painted, tho' their natural ſwarthy colour was eaſily diſcern'd; their hair very long, and tied up with a knot behind. They had certainly convers'd with ſome *Europeans*, as appear'd by ſeveral of their words, and wou'd fain have had the company of the *Engliſh* longer. The next they met were more finely deck'd than the former, having all of them Copper Pendants in their Ears; but one had a Breaſtplate of the ſame Metal a foot long, and half broad; and another had his Head all ſtuck with Feathers, that rendred him a very frightful Figure. They brought little trifles to Barter, but they were a ſhy, ſly, thieviſh ſort of People. 'Twas in the Latitude of little more than 42 degr. North, that they firſt came upon the *Virginian* ſhore; and 'twas in the Lat. of 41 degr. 10 min. that the Captain fix'd his Reſidence. It was in an Iſland which he call'd *Elizabeth Iſland*, that lies 4 Leagues from the Main, a ſmall unpeopled Spot, and over-run with Trees, but fertile and pleaſant enough to engage Inhabitants. On the N. W. ſide is a Lake of freſh Water almoſt a League in Circuit, and very near the Sea; in the midſt of which is another little Iſland about an Acre in compaſs, and this they thought the moſt convenient place for the building of a Fort, and therefore began it here. About this Lake there was an infinite number of Tortoiſes, ſeveral ſorts of Fowl and Fiſh too, ſo that thoſe that liv'd here might have a fair proſpect of Proviſions enough.

Strange Cherry-trees.

Minerals.

Fine Earth.

Elizabeth Iſland it ſelf, as it abounded with Trees of many kinds, which we ſee here in theſe Parts of the World, ſo the moſt remarkable of all were the Saſſafras and the Cherry-trees, as they call them. The former are well known for their uſe in Phyſick, and are no rarities in this Iſland; the latter have this extraordinary in them, that together with the Leaf, Bark, and bigneſs, not different from ours in *England*, the Fruit grows at the end of the Stalk 40 or 50 in a cluſter. The Vines were very numerous here too, and the more common Garden and wild Fruits in great abundance. The Animals, both Terreſtrial and of the Water, are ſuch as are common every where in theſe Parts, and great plenty of them all. The Minerals were Copper, Emery-ſtones, Alabaſter, together with ſome others of a blue Metaline colour, which our Author knew not what to make of; ſome there were that ſaid 'twas Steel Ore, but they ought to have conſider'd that tho' Gold Mines are very ſcarce, yet Steel Mines are certainly much ſcarcer, and they are never found but where a Braſs Mine lies either at the top or the bottom. There is alſo Stone for all ſorts of Building, and an Earth which they ſuſpect may prove of the ſame nature with the *Terra Sigillata*.

Tobacco.

The Iſland affords alſo Materials for Dying, and for Smoking; and no place yields finer Tobacco than this. The main Land adjoining, which they viſited alſo, was in all reſpects as charming, as curious Meadows, Groves, Brooks and Rivers cou'd make it. They had ſome communication with the *Indians* of the main Land, who came and Barter'd with them for ſome of their *European* rarities; and there was nothing hardly but what was ſo to thoſe People. The Commodities they gave in exchange for Knives, and other Toys, were Bevers, Lucerns, Marterns, Otters, Foxes, Conies, Seals and Deer-skins. They were all deck'd with Chains, Collars, Ear-rings and Bracelets of Copper; their complexion Olive-colour'd, their ſtature much higher than the *Engliſh*, their hair very black and long, tied up behind in knots, in which they ſtick feathers, and ſo make them look like Coronets. Thoſe to whom Nature has denied good Beards, borrow the hair of other Animals to make falſe Beards, and ſo ſupply that defect.

Good humour of a Savage.

One of the *Engliſh* Sailors having a Carrot-colour'd Beard, a certain Savage thought it was not natural, becauſe not of the colour of the hair of his Head, and having a great mind to one of that colour, he offer'd the Sailor to change Beards with him, pretending to give a very good one of his own making for that bunch of Carrots which grew upon the others Face; but the *Engliſhman* did not care to have the hair of a Bear, or a wild Cat perhaps, planted upon his Cheeks, and therefore told the *Indian* he would make no ſuch bargain with him. Theſe People (the Women eſpecially, to whom the Men are wonderfully obſervant) are commended by them as ſome of the handſomeſt of *America*, and very gentle and courteous too, not much fearful of harms from others, becauſe not ſeeming to deſign any themſelves; but we doubt this good character will not agree to all the *Virginians*. They ſtrike fire with a flat piece of Emery-ſtone and ſort of Mineral, which they can't tell us the name of, but they have a piece of dry Touchwood ready, which receives the ſpark they knock out between the other two. The Affairs of the Plantation might have gone on very well, had all the Planters been unanimous and eaſie in their Settlement here, but they were intent upon their private Intereſts, and contriv'd only to make a profitable Voyage. The Captain labour'd againſt it, but to no purpoſe; ſo having gotten good ſtore of Saſſafras, Cedar-wood, Furrs, and other good Commodities, they ſet ſail for *England*, leaving their little Fort, which 10 Men, in about 19 days, had made fit to harbour a conſiderable number, together with their Proviſions.

Capt. *Pring's* Voyage.

The ſucceeding Year, *A. D.* 1603. there was a *Virginian* Voyage, with a ſmall Ship and a Bark, ſet out at the charges of ſome Merchants of the City of *Briſtol*, and perform'd by Captain *Pring*. They fell in with the ſame Parts of the Country that Captain *Goſnoll* had been at before, but they tell us nothing new of the Country or People, but what we have heard already from the others, Neither did they make any new Diſcoveries, or meet with any remarkable Occurrences of any ſort; upon which account, we ſhall not trouble the Reader with any particular account of their Voyage.

Capt *Gilbert's* unfortunate Voyage.

The ſame Year, *A. D.* 1603. a Voyage was made to *Virginia* in the *Elizabeth* of *London*, under the Command of Captain *Gilbert*, in which nothing conſiderable, or valuable, occurs neither. They traded with the Savages at *Santa Lucia*, *Dominica*, *Mevis*, *St. Chriſtopher*, and from thence proceeded to the *Virginian* Coaſt, coming to the Bay of *Cheſepiak*; from whence going farther Eaſtward, they went aſhore, where in the Woods the *Indians* ſet on them, and Captain *Gilbert* himſelf was one amongſt 4 or 5 that had the misfortune to fall by their Arrows. The Voyage thus broken, the reſt return'd to *England*.

Chap.

Chap. XXII.

An Account of a Voyage to Virginia, *ſet forth by the Right Honourable* Henry *Earl of* Southampton, *and the Lord* Thomas Arundel; *performed by Captain* Waymouth *in the* Archangel. *Written by Mr.* James Roſier.

March, A. D. 1605.

False Charts.

THE way to *Virginia* was pretty well known, and the Commerce with thoſe Parts in ſome meaſure advanc'd, when this Ship the *Archangel* was ſent thither. She ſail'd on proſperouſly till ſhe came towards the deſired Coaſts, and found her ſelf in the Latitude of 41 degrees and half, where the company aboard her began to wiſh extremely for a ſight of the Land to recruit their waſting ſtock of Wood and Water. And whereas their Charts gave them reaſon enough to expect it, and they bare in directly with it according to their preſcriptions, yet they found none in almoſt 50 Leagues running. But after much expectation they got a ſight of Land, which prov'd an Iſland of no great compaſs, and very wooddy along the ſhore, but by the Fruits that appear'd, no barren nor deſpicable ſpot; there were ſtreams of freſh water running down the Cliffs in great plenty, and vaſt numbers of Fowl about them too, and Fiſh enough all along the ſhore. From hence they cou'd diſcern a great many other Iſlands, and the main Land it ſelf, from the W. S. W. to the E. N. E. Several of theſe Iſlands adjoining to the main Land they viſited, and found them all very full of Trees, both Timber and Fruit, and thoſe of ſeveral ſorts. Some of them afforded at a little depth, Clay red, blue, white, proper for making Brick or Tiles. And what the Soil of another was, may be gather'd from this experiment of it, that Peaſe and Barley, a ſmall quantity of which they ſet in a little Plat, grew 8 Inches in 16 days time, and ſo continued growing every day more than half an Inch, and yet this was no more than the very cruſt of the ground that was thus rich and good.

Pentecoſt-Harbour.

Amongſt theſe Iſlands they found a Harbour in which Ships of any burden might lie defended from all manner of Winds, in 6, 7, 8, 9 and 10 fathom, upon a tough Clay Oze; and this they call'd *Pentecoſt Harbour*, becauſe 'twas at that time that they found it.

Turpentine.

The Firr-trees were the moſt numerous about theſe Iſlands, and the Turpentine they yielded was the beſt and ſweeteſt our Sailors pretend ever to have ſeen.

Pearl.

The Muſcles found about the Rocks afforded ſmall Pearl in abundance, nay, they found ſome that were large and orient; the ſhells of theſe Muſcles look'd like Mother of Pearl in the inſide.

Manners of the Savages.

Several Canoes of the Savages came off from the Main to traffick with them, as they lay at this excellent Harbour, and the chief Commodities that paſs'd were Knives, and other like trifles, on one hand, and Skins and Furrs on the other. Theſe Skins were the Apparel of the Savages, they hung down to their Knees, and were made faſt upon the ſhoulder with a leather Strap. Some of them wore Sleeves, others Buskins and no Sleeves; ſome the hair of their Skins outward, others turn'd it inwards; and beſides all this, they had a piece of Skin tied about their Waſte, and coming between their Legs to cover thoſe Parts which Nature bids conceal. Theſe People wore no Beards, but the hair of their Heads very long, and tied up behind, tho' many of them were curlpated, and needed no ſtring for their hair. Their Faces were all painted with ſome colour or other, and Nature had form'd them with good Features, tho' miſerably diſguiſed by that baſe practiſe of painting. What Women they ſaw (which were but few, for either they were modeſt, or their Husbands jealous) were handſom, fat, and well made, only ſomething too ſhort. They ſtood behind their Husbands, and wou'd hardly be ſeen. Their Children were very comely, but all naked except their Legs, which were cover'd with thin Leather-buskins faſten'd with Straps to a Girdle about their Waſte; this Girdle is hung all round with ſmall pieces of Copper. Their Bows, Arrows, and Canoes, had nothing but what is common enough amongſt the Savages: Their Tobacco-pipes were ſometimes made of Earth, ſometimes the Claw of a Lobſter, but 'twas always ſomething that wou'd hold as much as 10 or 12 of ours.

Barbarous Cuſtom.

The Savages and our Men growing pretty well acquainted, ſome of them lay aboard the Ship while one or two of the *Engliſh* went and lay aſhore to ſee the Manners of them; but they ſaw nothing that Night or two they lay aſhore, but an impertinent Cuſtom, in which, while one of the company riſing up of a ſudden, and crying bough, wough, all the Women fall flat upon the ground, and the Men repeat the ſame words, ſtamping with both feet till they make the ground ſhake again; which noiſe is not half ſo bad as that they make with their Mouths at the ſame time. They hold on ſtamping and ſtaring about till ſome of the younger ſort fetch ſome Stones from the ſhore, which they take every one one, and fall a beating (firſt of all) the Fire-ſticks, and next the ground, with all their might, in which frantick geſtures they continue for two hours; after which they all retire with their Wives to their ſeveral ſeparate Manſions in the Woods.

Treacherous Diſpoſition.

A noble River, and the ſeveral conveniences of it.

The Savages, tho' they ſeem'd to be very honeſt-minded, and to have a great Friendſhip for our Men, yet in reality they had nothing leſs, but rather form'd Deſigns to betray them. They wou'd have drawn them into an Ambuſcade, under a pretence of Traffick, at a certain place, but they happily diſcover'd the Plot, and avoided the ill conſequences of it. As for the qualities of the Main Land, they were (as far as they diſcover'd it) ſuperiour in goodneſs to thoſe of the fruitful Iſlands before-mentioned, and therefore to be ſure very fine; but the diſcovery of which they ſeem to be proudeſt was that of a River, which they do upon many accounts prefer to any known *American* River. They went up it with their Ship ſeveral Leagues, and give this account of it: That for a matter of 40 Miles it keeps a good breadth, as it runs up into the Main; in moſt places it is a Mile, ſometimes three quarters, but never leſs than half a Mile broad. It flows 16 or 18 foot at high Water, and at low Water you have from 6 to 10 fathom depth. There are abundance of Harbours for Ships of all Burdens, and which will ſecure them better from any Wind or Weather than any known in *Europe*. On both ſides there are at a ſmall diſtance from each other ſeveral gallant Coves, ſome able to contain 100 Sail, where the ground is ſoft Oaze, with a tough Clay underneath for Anchor-hold: Nature alſo has made ſeveral excellent Places, as Docks to Grave and Careen Ships of all Burdens, and ſecure from all Winds. The neighbouring Land trends along on both ſides in a ſmooth Plain, and inſtead of Rocks and Cliffs, one ſees borders of green Graſs and tall Trees, Firr, Oak, and the like. The ground in a word is ſuch, that with a little labour it might be converted into good Paſture; in many places 'tis all clear Meadow already. The River yields vaſt plenty of Fiſh, and is every way as delightful, as perhaps the beſt Rivers of Old, deſcribed by the Poets, have been. On both ſides there are various branches of it that run into the Main Land, which afford a very eaſie and convenient tranſportation of Goods from one place to another. Thoſe that come to *Pentecoſt-Harbour* before-mention'd, will find this River without any difficulty; but this company ſeem to be the firſt *Europeans* that were ever here, for they cou'd not diſcover in all their paſſage up the River, by any ſigns whatſoever, that any had been here before them. And whereas 'tis uſual amongſt all Chriſtian People to erect Croſſes in thoſe Newfound-places, they found none hereabouts, but yet left one or two to ſignifie they had been here.

They leave the Country.

The Company cou'd all have ſat down chearfully upon the Banks of this River, and planted there; but their Commiſſion now ran otherwiſe, and they were obliged to leave the farther diſcovery of this, and the reſt of the Country, till another time. The Captain having finiſh'd all his Traffick with the Savages ſet Sail for *England*, carrying 4 or 5 Savages along with him, together with all their whole Eſtates of Bows, Arrows and Canoes.

The Reader may pleaſe to expect larger and more particular Accounts of the Country and People, in a full Diſcourſe to that purpoſe.

CHAP. XXIII.

An Account of the Plantation of the Southern Colony in Virginia, A. D. 1606. *Written by Mr.* George Percy. *To which is prefix'd the firſt Patent for the Plantation of* Virginia, *granted by K.* James *that ſame Year.*

King James's *Patent*, &c.

‘JAMES by the grace of God, *&c.* Whereas our loving and well-diſpoſed Subjects, Sir *Thomas Gates*, Sir *George Summers*, Knights; *Richard Hakluyt*, Clerk, Prebendary of *Weſtminſter*, *Edward Maria Wingfield*, *Thomas Hannam*, *Rawleigh Gilbert*, Eſquires; *William Parker*, *George Popham*, and divers others of our loving Subjects, have been humble Suitors unto us, that we would vouchſafe unto them our Licenſe to make Habitation, Plantation, and to deduce a Colony of ſundry of our People into that part of *America* commonly call'd *Virginia*, and other Parts and Territories in *America*, either appertaining unto us, or which now are not actually poſſeſſed by any Chriſtian Prince or People, ſituate, lying, and being all along the Sea-Coaſt between 34 degrees of Northerly latitude from the Equinoctial Line, and 45 degrees of the ſame latitude, and in the main Land between the ſame 34 and 45 degrees, and the Iſlands thereunto adjacent within one hundred Miles of the Coaſt thereof. And to that end, and for the more ſpeedy accompliſhment of the ſaid intended Plantation and Habitation there, are deſirous to divide themſelves into two ſeveral Colonies and Companies, the one conſiſting of certain Knights, Gentlemen, Merchants, and other Adventurers of our City of *London* and elſewhere, which are, and from time to time ſhall be joined unto them, which do deſire to begin their Plantations and Habitations, in ſome fit and convenient place between 34 and 41 degrees of the ſaid latitude, all alongſt the Sea-Coaſt of *Virginia*, and Coaſt of *America* aforeſaid. And the other conſiſting of ſundry Knights, Gentlemen, Merchants, and other Adventurers of our Cities of *Briſtol* and *Exeter*, and of our Town of *Plimouth*, and other places which do join themſelves unto that Colony, which deſire to begin their Plantations and Habitations in ſome fit and convenient place between 38 and 45 degrees of the ſaid latitude, all alongſt the ſaid Coaſt of *Virginia* and *America*, as that Coaſt lieth. We greatly commending, and graciouſly accepting of their deſires, to the furtherance of ſo Noble a Work, which may by the Providence of Almighty God hereafter tend to the glory of his Divine Majeſty, in propagating of Chriſtian Religion, to ſuch People as yet live in Darkneſs, miſerable Ignorance of the true knowledge and worſhip of God, and may in time bring the *Infidels* and *Savages* (living in thoſe Parts) to humane civility, and to a ſetled and quiet Government, do by theſe our Letters Patents graciouſly accept of, and agree to their humble and well-intended deſires: And do therefore for us, our Heirs and Succeſſors, grant and agree that the ſaid Sir *Thomas Gates*, Sir *George Summers*, *Richard Hakluyt*, and *Edward Maria Wingfield*, Adventurers of our City of *London*, and all ſuch others as are or ſhall be joined unto them of that Colony, ſhall be called the firſt Colony, and they ſhall and may begin their ſaid firſt Plantation and Seat, of their firſt Abode and Habitation, at any place upon the ſaid Coaſt of *Virginia* or *America*, where they ſhall think fit and convenient, between the ſaid 34 and 41 degrees of the ſaid latitude. And that they ſhall have all the Lands, Woods, Soil, Grounds, Havens, Ports, Rivers, Mines, Minerals, Marſhes, Waters, Fiſhings, Commodities, and Hereditaments whatſoever, from the ſaid firſt Seat of their Plantation and Habitation, by the ſpace of 50 Miles of *Engliſh* Statute-meaſure all alongſt the ſaid Coaſt of *Virginia* and *America*, towards the Weſt and South-weſt, as the Coaſt lieth, with all the Iſlands within 100 Miles directly over-againſt the ſame Sea Coaſt: And alſo all the Lands, Soil, Grounds, Havens, Ports, Rivers, Mines, Minerals, Woods, Marſhes, Waters, Fiſhings, Commodities and Hereditaments whatſoever, from the ſaid place of their firſt Plantation and Habitation, for the ſpace of 50 like *Engliſh* Miles, all alongſt the ſaid Coaſt of *Virginia* and *America*, towards the Eaſt and North-eaſt as the Coaſt lieth, together with all the Iſlands within 100 Miles directly over-againſt the ſame Sea-coaſt. And alſo all the Lands, Woods, Soil, Grounds, Havens, Ports, Rivers, Mines, Minerals, Marſhes, Waters, Fiſhings, Commodities and Hereditaments whatſoever, from the ſame 50 Miles every way on the Sea-coaſt, directly into the main Land, by the ſpace of 100 like *Engliſh* Miles. And ſhall and may inhabit and remain there, and ſhall and may alſo build and fortify within any the ſame for their better Safeguard and Defence, according to their beſt diſcretions, and the direction of the Councel of that Colony. And that no other of our Subjects ſhall be permitted or ſuffered to plant, or inhabit behind or on the backſide of them towards the main Land, without the expreſs licenſe or conſent of the Councel of that Colony, thereunto in writing firſt had or obtained. And we do likewiſe for us, our Heirs and Succeſſors, by theſe preſents, grant and agree that the ſaid *Thomas Hanham*, *Rawleigh Gilbert*, *William Parker*, and *George Popham*, and all others of the Town of *Plimouth*, in the County of *Devon*, or elſewhere, which are or ſhall be joined unto them of that Colony, ſhall be called the ſecond Colony, and that they ſhall and may begin their ſaid firſt Plantation and Seat, of their firſt Abode and Habitation, at any place upon the ſaid Coaſt of *Virginia* and *America*, where they ſhall think fit and convenient, between 38 and 45 degrees of the ſame latitude, and that they ſhall have all the Lands, Soil, Grounds, Havens, Ports, Rivers, Mines, Minerals, Woods, Marſhes, Waters, Fiſhings, Commodities and Hereditaments whatſoever, from the firſt Seat of their Plantation and Habitation, by the ſpace of 50 like *Engliſh* Miles, as is aforeſaid, all alongſt the ſaid Coaſt of *Virginia* and *America* towards the Weſt and South-weſt, and towards the South as the Coaſt lieth: And all the Iſlands within 100 Miles directly over-againſt the ſame Sea-coaſt. And alſo all the Lands, Soil, Grounds, Havens, Ports, Rivers, Mines, Minerals, Woods, Marſhes, Waters, Fiſhings, Commodities and Hereditaments whatſoever, from the ſaid place of their firſt Plantation and Habitation, for the ſpace of 50 like *Engliſh* Miles, all alongſt the ſaid Coaſt of *Virginia* and *America*, towards the Eaſt and North-eaſt, and towards the North as the Coaſt lieth, and all the Iſlands within 100 Miles directly over againſt the ſame Coaſt, and alſo all the Lands, Soil, Grounds, Havens, Ports, Rivers, Woods, Mines, Minerals, Marſhes, Waters, Fiſhings, Commodities and Hereditaments whatſoever, from the ſame 50 Miles every way on the Sea-coaſt, directly into the main Land, by the ſpace of 100 like *Engliſh* Miles; and ſhall and may inhabit there, and ſhall and may alſo build and fortify within any the ſame, for their better Safeguard, according to their beſt Diſcretions, and the direction of the Councel of that Colony, and that none of our Subjects ſhall be

The firſt Colony to be planted betwixt 34 & 41 degrees of N. latitude. They to have all the Lands, &c. for the ſpace of 50 miles W.S.W. from the place of their firſt plantings, and all Mines, *&c.* The like E. N. E. with all Iſlands for 100 miles in the Sea over-againſt them, 100 within the Land, *&c.* None to inhabit on the backſide without their ſpecial Licenſe in writing, *&c.*

permitted

ſet Sail for *England*, carrying 4 or 5 Savages along with him, together with all their whole Eſtates of Bows, Arrows and Canoes.

The Reader may pleaſe to expect larger and more particular Accounts of the Country and People, in a full Diſcourſe to that purpoſe.

Chap. XXIII.

An Account of the Plantation of the Southern Colony in Virginia, A. D. 1606. *Written by Mr.* George Percy. *To which is prefix'd the firſt Patent for the Plantation of* Virginia, *granted by* K. James *that ſame Year.*

King James's *Patent*, &c.

‘JAMES by the grace of God, *&c.* Whereas our loving and well-diſpoſed Subjects, Sir *Thomas Gates*, Sir *George Summers*, Knights; *Richard Hakluyt*, Clerk, Prebendary of *Weſtminſter*, *Edward Maria Wingfield*, *Thomas Hannam*, *Rawleigh Gilbert*, Eſquires; *William Parker*, *George Popham*, and divers others of our loving Subjects, have been humble Suitors unto us, that we would vouchſafe unto them our Licenſe to make Habitation, Plantation, and to deduce a Colony of ſundry of our People into that part of *America* commonly call'd *Virginia*, and other Parts and Territories in *America*, either appertaining unto us, or which now are not actually poſſeſſed by any Chriſtian Prince or People, ſituate, lying, and being all along the Sea-Coaſt between 34 degrees of Northerly latitude from the Equinoctial Line, and 45 degrees of the ſame latitude, and in the main Land between the ſame 34 and 45 degrees, and the Iſlands thereunto adjacent within one hundred Miles of the Coaſt thereof. And to that end, and for the more ſpeedy accompliſhment of the ſaid intended Plantation and Habitation there, are deſirous to divide themſelves into two ſeveral Colonies and Companies, the one conſiſting of certain Knights, Gentlemen, Merchants, and other Adventurers of our City of *London* and elſewhere, which are, and from time to time ſhall be joined unto them, which do deſire to begin their Plantations and Habitations, in ſome fit and convenient place between 34 and 41 degrees of the ſaid latitude, all alongſt the Sea-Coaſt of *Virginia*, and Coaſt of *America* aforeſaid. their Pagod or Idol.

‘ permitted or ſuffered to plant or inhabit behind, or on ‘ the back of them towards the main Land, without the ‘ expreſs licenſe or conſent of the Councel of that Colo‘ny, in writing thereunto firſt had and obtained. Pro‘vided always, *&c.*

It followeth that neither Colony ſhall plant within one hundred Miles of each other; alſo that each Colony ſhall have a Councel of thirteen Perſons to Rule and be Ruled, according to Articles ſet down and confirmed under the Privy-Seal, (which I have, but for brevity omit, as alſo the reſt of this Patent) the Seals of each Colony appointed, the digging of Mines granted in the ſame, and on the backſide of their Colonies within the main Land, paying the fifth of Gold and Silver, and the fifteenth of Copper, to the King; liberty to carry all Subjects (not reſtrained) which will go with them. Of Coining for the Colonies uſe there, of repelling Enemies, of ſtaying Ships which trade there without leave, were too long to rehearſe, ſeeing this Patent hath been often altered and renewed.

THis Account appears to the World with the Name of the Honourable Mr. *Percy*, who was Brother to the Earl of *Northumberland*; yet to do Juſtice to all, we are oblig'd to tell the Reader, that he will find here the Remarks and Obſervations of ſeveral Perſons of the Plantation put together, but particularly thoſe of the worthy Captain *John Smith*, who was a principal Agent and Manager in theſe Parts. There being ſo many of them, it's not irregular to prefix the moſt Honourable Name to ſuch a Medley of Accounts, having only inform'd the World that it is a Medley, and not the Compoſure of one ſingle Man.

A. D. 1606.

Council of *Virginia.*

The number of Planters that went over at this time was conſiderable, being better than 100; the moſt noted of whom were the Honourable Mr. *Percy*, Capt. *Goſnoll*, Capt. *Smith*, Capt. *Ratcliffe*, Capt. *Martin*, Capt. *Kendall*, Mr. *Wingfield*; theſe were of the Councel all except Mr. *Percy*. But beſides theſe, and a whole Train of Gentlemen, there were Men of all neceſſary Trades and Occupations; Bricklayers, Blackſmiths, Carpenters, Taylors, Barbers, Surgeons to take care of their Bodies, and a Reverend Divine to provide for the health of their Souls. The Fleet conſiſted of two Ships and a Pinnace, commanded and conducted by Capt. *Newport*. Our Planters fell in with ſome of the *Weſt-Indian* Iſlands by the way, and went aſhore upon moſt of them they came to, either to make ſome Obſervations, or to procure ſome Refreſhment.

Iſland *Dominica.*

Dominica (which was the firſt) they commend for a fine and pleaſant Iſland. They praiſe the lovely Woods, the ſweet ſmelling Trees, and the wholſome Fruits that grow there; but the People they repreſent as ſome of the moſt brutiſh and degenerate of Mankind, ſlovenly to a Prodigy, and, in a word, of much ſuch a nice and ſqueamiſh compoſition as the *Hottentots* are.

Sordid People.

They will let a Man ſpit in their Mouths as long as he pleaſes; one may ſerve them as we do Dogs, and they'll ſwallow thoſe favours with as much pleaſure as the Curs do, licking their Lips as if they wanted more. Now one may reaſonably ſuppoſe, that thoſe that are ſo much pleas'd with a Man's ſpitting in their Mouths, wou'd not be much diſpleas'd if he ſhou'd do ſomething elſe there; and it muſt be own'd, that this wou'd be a very great convenience for Travellers, ſuppoſing Cloſe-ſtools to be wanting in the Iſland.

Their Habit.

They wear their hair a matter of a yard long, and of an equal length every where, only 'tis plaited or parted before, ſo that it does not hang down to that length over their Faces; for if it did, a Man wou'd find himſelf pretty much puzzel'd to gueſs what ſort of Animals they were, whoſe upper and more noble part was ſo abſolutely loſt in a Wood of hair. They paint and work their Skins, which is all the Apparel they have, and all the Ornament too, except a few Beads, or pieces of Copper hung at their Noſtrils, Ears and Lips. They are as barbarous as the moſt barbarous of the Cannibals, not knowing either how to live quietly by one another, or to treat Strangers with any thing of Courteſie and Humanity.

Hot Bath.

At the Iſland *Guadalupa*, our Men found a Spring ſo ſo hot, that it boil'd a piece of Pork perfectly well in the ſpace of half an hour.

Moderate Bath.

They paſs'd the Iſland of *Monſerrat*, and St. *Chriſtopher*, (both then uninhabited) and anchor'd at *Mevn*. Here they found a Bath in a Valley betwixt two Hills, of the ſame Nature and Uſe with thoſe in *England*. The Conies, Fowl and Fiſh, this Iſland abounded with, enabled them to keep a good Table as long as they ſtaid here, but they were obliged to be always upon the watch for fear of the treacheries of the *Indians*, who yet never came near them; and to ſpeak the truth, were more careful about hiding themſelves in places of ſecure ſhelter, than contriving how to give the others any diſturbance.

The freſh water of *Mevis* has the ill character of growing putrid and ſtinking in a very little while, ſo that 'tis of little uſe to Seamen.

Virgin-Iſland affords no Water.

From hence they paſs'd to the *Virgin-Iſlands*, famous for an excellent Bay capable of harbouring 100 Ships; but here the Seamen are at a loſs again about water, for that of *Mevis* is not good, but at this place there is none neither good nor bad. Beſides Fiſh and Fowl in abundance, they met with a ſort of Trees at this Iſland whoſe Bark taſted like Cinnamon, and was hot in the mouth like that.

They proceeded to the Iſland *Mona* and *Monetta*, at the latter of which there is a terrible rocky landing, but the Iſland at the top is all ſmooth fertile ground, and ſo full of Fowls, that our People found it a hard matter to ſtir without treading upon Birds or Eggs.

Engliſh aſſaulted by the *Indians.*

Having had ſight of the main Land of *Virginia*, (the firſt of which that appear'd they call'd *Cape Henry*) they enter'd *Cheſepiak*, where ſome of them landing for a little diverſion, were aſſaulted by the Savages, which ſtole ſuddenly and cunningly upon them; they track'd them indeed, but cou'd never find them.

The adjacent Country was very charming and inviting; thoſe that love to ſee fine rows of Cypreſs and Cedar-trees, might here have had their fill of ſuch proſpects; and thoſe that love to pick Strawberries, might here have loaded themſelves with thoſe that were four times bigger, and as much better taſted, than ours in *England*. However, there were no good depths of water here for their Ships, upon which account they quitted this lovely place, and paſs'd over to a certain point of Land which they call'd *Cape-Comfort*, becauſe thereabouts they had the conſolation of a good depth of water.

Cape Comfort.

Savages entertain them.

And this was *Cape-Comfort* to them in another reſpect too, for here they found People that wou'd converſe with them; the Savages, tho' ſhy at firſt, yet invited them afterwards to their Town *Kecoughtan*, where they entertain'd them with the beſt of their Proviſions, and afterwards with their Dances. Theſe People had their hair an Ell long on the left ſide of their Heads, and ſhaved on the right; but on that ſide where it is permitted to grow, they tie it up in a knot and ſtick feathers in it. Their Bodies were painted, ſome with one colour, and others with another; their Privy-parts cover'd with Skins beſet with the teeth and little bones of Beaſts. Inſteud of other Ornaments, they had thruſt whole legs of Fowl through their Ears; which was very proper, for Nature had furniſh'd a Drum in that part, and 'twas natural enough for them to add a pair of Drum-ſticks.

King of *Paſpiha* treats them.

King of *Rapahanna.*

Our Planters were now roving about to find out a good place for a Settlement, in which enquiry they came to the Town of *Paſpiha*, and the King of that place treated them kindly. While they were here, the King of *Rapahanna* came himſelf in a Canoa, on purpoſe to invite them to his Town. He went before, and when they came (which they did in their Shallop well guarded with Muſqueteers) he receiv'd them with an extraordinary deal of ceremony. He came down to the Waterſide with all his Train, at the head of which he walk'd playing upon a Pipe made of a Reed. His Head was adorn'd with a ſort of a Coronet in the form of a Roſe, but of no finer Materials than Deers hair colour'd red; this ſtood on one ſide his Head, faſten'd upon the knot of his hair, whereas on the other was a large Plate of Copper, and in the middle of all ſtood up ſtaring a couple of great feathers, which made his Majeſty look as if his Wife had introduc'd him into the moſt Noble Order of Knights of the Horn. His Body was painted crimſon, and his Face blue; he had plenty of Pearl in Chains and Bracelets about him; and which was very particular, through each Ear was thruſt a Birds claw. In ſhort, this Savage King, tho' dreſs'd like a Jackanapes, yet behav'd and carry'd himſelf like a Man, and a Man of much civiller Education than any his own Country could afford him.

Town of *Rapahanna*

After they had all reſted awhile, he led them away to his Town, and they ſay the Walk thither was it ſelf one of the fineſt Entertainments that cou'd be deſired. Sometimes they paſs'd through goodly Corn-fields, at other times through Woods, ſo delicately water'd with Springs and Brooks, that if the King had had no Town nor Palace to go to, he might well have been allow'd a great ſhare of happineſs only by living in thoſe ſweet rural Manſions. His Palace was ſeated upon the top of a very ſteep Hill, and the *Engliſh* being come thither, he

entertain'd

Colony ſettled.

entertain'd them with all the beſt Proviſions it afforded. When this Viſit was finiſh'd they went on, purſuing their deſign of finding out a proper place for the Colony to ſettle in, and after ſeveral places view'd, they fix'd upon a ſpot in the King of *Paſpiha*'s Country, about 8 Miles from *Cape-Comfort*, where the Ships had been brought.

Archer's-Hope.

Nature of the Government of the Colony.

Capt. *Smith's* ill Uſage.

Fort built.

There was another point of Land which they call'd *Archer's-Hope*, where the advantages of a rich and fruitful Soil, an eaſie ſatisfaction, and plenty of Proviſions, wou'd have invited them to ſettle, but their Ships cou'd not ride there near the ſhore as they cou'd at *Cape-Comfort*, where they were Moor'd to the Trees in ſix fathom water. And now the little Government began to model it ſelf into the Figure which the Sovereign Authority of *England* had appointed. The Boxes being open'd, and the Orders read, the Preſident was ſworn, and the Council likewiſe. This Preſident was to be but an Annual Archon, and to concert all his Meaſures of Government with the Council, without whoſe Approbation and Conſent nothing was to be done. All Matters of moment were to be examin'd by a Jury, but determin'd by the major part of the Council, in which the Preſident had two Voices. 'Tis to be noted that Captain *Smith*, tho' nominated in their Orders for one of the Council, was yet at the firſt opening of the Government here excluded from being ſo; neither was that all, but they had laid him under confinement too, and 'tis to be ſuppos'd intended to make him the firſt example of Juſtice in the new Commonwealth. This wou'd have been done, cou'd his Enemies (which envied his fair Reputation and Character) have made good their Forgeries againſt him; but they were ſo happy as to diſcover themſelves, and the Captains Innocency too, by thoſe very Perjuries which they intended to ſtain and render it ſuſpected by. When the Villains had done him this kindneſs as to clear him, he was, according to his Merit, and the Orders of his Country, receiv'd a Member of the Council. The next buſineſs to be done after the Settlement of the Colony, was to raiſe ſome Fortifications for its Defence; ſo they began a Fort, and follow'd it with ſo much diligence, that in the ſpace of a Month they had finiſh'd it. The form of it was Triangular, having three Semilunar Bulworks at every Angle, with 4 or 5 pieces of Cannon mounted on every one of them. They ſet themſelves alſo to cultivate the Land, and ſowed a great deal of Corn, which in a ſmall time ran up to a very conſiderable heighth; ſo rich and good was the Soil where they had planted themſelves.

Savages of *Paſpiha* treacherous.

The Savages of *Paſpiha* in the mean time were oftentimes hankering about the Fort, and plainly ſhew'd that they wanted only an opportunity to put ſome very ill deſigns, which they had formed againſt them, in execution. The King himſelf came once to ſee it, with 100 Men arm'd well after their faſhion, and wou'd fain have perſwaded the *Engliſh* to have laid aſide their Arms, and entertain'd him in a friendly manner, without thoſe frightful tokens of War in their hands; but they were wiſer than to be impos'd upon by his ſmooth words, and were more than ſufficiently convinc'd that they ought to expect all degrees of enmity from him, where he cou'd have the advantage of expreſſing it in a way of treachery and ſurprize.

River *Powhatan* diſcover'd.

The Preſident (which for this firſt Year was Mr. *Wingfield*) employ'd ſome of his Men to diſcover up the River of *Powhatan*. This River they repreſent under a very advantageous character; it ebbs and flows 160 miles, and Ships of great burthen may ride in it with ſafety. In ſix days ſailing the Diſcoverers came up as high as a Town call'd *Powhatan*, which is ſeated pleaſantly upon a Hill, having fine Corn-fields about it, and good Defences granted by Nature. The Prince of the circumjacent Country was call'd *Powhatan* alſo, of whom we ſhall have occaſion to ſpeak more afterwards.

King *James* proclaim'd.

As far as this Town the River is Navigable, but higher within a mile, by reaſon of the Rocks and Iſlands, there is not paſſage even for a ſmall Boat; and this is what they call the Falls of the River. The Diſcoverers ſay, that wherever they landed upon it, they ſaw the ſweeteſt Woods in the World; Cypreſs, Cedar, Wallnut Trees, and Vines in abundance, under which a Man might find a delightful ſhelter at any time. The ground alſo in moſt places was cover'd with fragrant Flowers of ſeveral ſorts; and the Strawberries, Raſberries, and Mulberries, were as numerous as the Flowers. The River divides it ſelf into ſeveral branches that ſcatter through the Woods, and yield good ſtore of excellent Fiſh. They went up to the Head of the River and erected a Croſs, proclaiming *James*, King of *England*, Lord of that Country and River; as a memorial of which they nam'd it *Kings River*. And now they return'd back again to the reſt of the Company at the Fort, which was alſo dignify'd with the Name of their Sovereign, and call'd *James Fort*.

Ill State of the Colony.

K. of *Rapahanna* their friend.

Paſpihas their enemies.

Unworthy Preſident.

Captain *Newport* having ſeen theſe beginnings of the Colony (which hitherto were not over promiſing) ſail'd back for *England* with the Ships that tranſported them. But it was not long after he was gone, that their Affairs began to be in a very ill condition; and whereas before there were not many happy ſigns that promis'd much good, now there appear'd a great many unlucky ones that ſeem'd to threaten no leſs than the ruine of the whole Plantation. One thing was, the Savages began to grow troubleſome, and continually plagu'd them either with Alarms, Aſſaults, or one ſort of treachery or another. The King of *Rapahanna* indeed continued their Friend, yea, he bound himſelf to be ſo for ever, by a ſolemn lifting up of his hands to the Sun, which is the ſublimeſt act of Devotion known or practis'd in the Country. But the King of *Paſpiha*, who lay nearer to them, was a thorn in their ſides, and tho' he dar'd not pretend to wage open War with them in the Field, yet, as he cou'd not be their Friend, ſo he did not fail to make them ſenſible of the effects of his enmity whenever he had a fair opportunity. Theſe diſtreſſes however were not the greateſt that came upon them; they had Wants, Sickneſſes, Diſcontents, and treacherous Practiſes amongſt themſelves. The Preſident was a Man of Self-intereſt and Deſign, fond of his own Eaſe and Pleaſure; both which he preferr'd before the good of the Community, and did not care how it went with them, ſo he had his own private Contents and Satisfactions. All the beſt Proviſions both for eating and drinking he engroſs'd to himſelf; he had Sack, Oil, Aquavitæ, Beef, Butter and Eggs, while the reſt of the company had the Kettle, with a little Wheat or Barley Meal in it, to Dine and Sup upon. If their own Pains and Induſtry ſupplied them with any thing from abroad; if they cou'd catch Fiſh or Fowl they might, and waſh it down with cold water when they had done, otherwiſe they were oblig'd to take up with his ſcanty Allowances, which was much beneath what the pooreſt *Indians* in the Country were reduc'd to.

Preſident depos'd.

Capt *Smith* manages Affairs.

In ſhort, what by their continual hard Labours, and this pinching of their Bellies, a great many fell ſick and died, the Preſident himſelf living all the while in Eaſe, Health and Plenty, and not ſeeming to be any ways mov'd or affected with thoſe Calamities. But the Company, who had ſuffer'd after this manner for the ſpace of three or four Months, pluck'd up their Spirits, and took pity upon themſelves; and did themſelves that act of Juſtice and Kindneſs, as to depoſe this infamous Preſident, and put him out of a Capacity of tyrannizing for the time to come. The Perſon ſubſtituted in his room was Captain *Ratcliffe*, who, if he had more Honeſty and Goodneſs than his Predeceſſor, yet had not Spirit nor Judgment enough for ſuch a Charge; ſo that the main ſtreſs of all buſineſs lay upon Captain *Smith*'s ſhoulders, who cou'd have made the Plantation happy (at leaſt prevented many of their misfortunes) had he ſooner been entruſted with the Management of their Affairs. The Savages about this time (when 'twas leaſt expected from them, and no body can tell what motives induc'd them to be ſo kind and charitable) came and brought in a good Supply of Proviſions; a Supply not only to Plenty, but Superfluity, they pour'd in more than the *Engliſh* wanted for that preſent, tho' they knew there was no harm in having a ſtock by them.

James's Town begun.

Capt. *Smith* goes to the Savages.

They abuſe him.

He drives them away.

Captain *Smith* began his Superintendency with laying the foundation of a little Town about the Fort; he employ'd ſome in one Office, and ſome in another, but ever did the largeſt ſhare of Work himſelf. And this buſineſs he puſh'd on ſo vigorouſly, that in a ſhort time he had rear'd Houſes for the moſt part of the Plantation to beſtow themſelves in; and this was the beginning of *James's Town*. The next thing was to ſearch the Country for Trade, and to fix a ſure and laſting Correſpondence with ſome of the Natives that might turn to ſome account. In order to this he went down the River to the Town of *Kecoughtan*, where the Savages looking upon him and his Company as Men half ſtarv'd, derided him; and to expreſs their ſcorn, offer'd him to exchange a handful of Corn for the Swords and Muskets they had brought with them, and propos'd to buy their Clothes off their backs alſo upon the ſame terms. But the Captain, to requite this Inſult of theirs, ſince he cou'd not by fair means bring them to more civil carriage, us'd his Muſkets in another ſort of exchange; that is, he gave them 10 or 12 good thumping Bullets out of them, which put an end to their jeſting, and made them run away into the Woods in good earneſt to ſave their lives.

The *Engliſh* preſently upon this fell to rummaging their Houſes, and ſearching over their Stores of Proviſion, for as that was all they wanted at this time, ſo they did not expect to find any hoards of Gold and Silver here. While they were thus engag'd, in came the Savages again, making moſt horrible outcries as they march'd along, and carrying their *Okee* before them, whoſe preſence was to give them courage in the aſſault they were going to make: This *Okee* was an Idol made with Skins, and ſtuff'd out with Moſs, and hung all over with Chains and pieces of Copper. They were well arm'd with Targets, Clubs, Bows and Arrows, and charg'd the *Engliſh* with a great deal of fury; but they on the other ſide having once fired their Muskets upon them (which fetch'd down the Idol, and laid ſeveral of his Worſhippers ſprawling upon the ground) ſo effectually routed them, that they thought of nothing ſo much as making every Man the beſt of his way into the Woods.

They aſſault the *Engliſh*.

They ask for Peace.

And the next thing was (as ſoon as they were recover'd from the horrible fright) to ſend an Ambaſſador to beg Peace, and redeem their Gun-ſhot Idol, which Captain *Smith* was free enough to grant, upon condition of a Boats lading of Corn. The Savages did not boggle at thoſe terms, but comply'd with them, and brought Corn, Veniſon, Wild Fowl, which they deliver'd with Muſick and Dancing into the bargain.

Capt. *Smith* prevents their going away.

The Captain return'd juſt in time to prevent the execution of a baſe and ſcandalous Project, which was that of abandoning the Country, and running away from all their pretenſions there. The Plotters were juſt ready to be gone, and had gotten into the Pinnace for that end, but Captain *Smith* fired ſo briskly at them with his Muſkets and Faulcons, that he brought them to this Dilemma, either to ſink in the River, or to ſtay; the latter of which they choſe, tho' the action coſt ſome blood, and Captain *Kendall* loſt his life by it.

Not long after, the mean ſpirited Preſident, and Captain *Archer*, had form'd ſuch another deſign, and were in like manner baffled by the ſame courageous Perſon. But the reſtraints he laid them under were quickly taken off, by an unhappy accident that happened to himſelf; and beſides the Winter now coming on, the Rivers were ſo cover'd with Swans, Geeſe, Ducks and Cranes, and ſo many ſorts of Game were to be had in the Woods, that the Mutineers, who feaſted their Carkaſſes to ſatisfaction here, began to lay aſide all thoughts of their own Country.

Capt. *Smith* taken by the Savages.

As for Captain *Smith*'s misfortune, it was thus: He went out upon the Diſcovery of the *Chickahamine* River, and having gone as far as he cou'd go in his Barge, he quitted that, and went on in a Canoe, having only two or three *Engliſhmen*, and as many Savages, with him. His Men that ſtaid with the Barge went (ſome of them) aſhore, contrary to his expreſs Orders, and one of them being ſnapt by a Party of Savages, they forc'd him to tell where his Maſter Captain *Smith* was gone, and immediately they march'd after him, to the number of three hundred Men, under the command of *Opechankanough* the King of *Pamanuke*. And tho' 'twas his ill fortune to be found out by them, and conſequently aſſaulted, yet he reſolv'd to ſell his Life as dear as was poſſible, and in purſuance of that reſolution dealt his Bullets ſo freely amongſt them, that he kill'd three in a little time, and made all the reſt keep their diſtance. They follow'd him in the mean while with their Arrows, and the Captain wanting a Target to defend himſelf, tied one of the Savages, that came in the Canoe with him, on to his Arm, and ſo made uſe of him to guard his own Body from their Arrows. In this manner he endeavour'd to make his retreat to the Canoe, but keeping his Eye more upon his Enemies than upon his Way, he happened to ſlip into a ſort of a Quagg, and as the Savage and he were now very cloſe together, he pull'd him in along with him, and there they both ſtood up to the Waſte in Mud and Water. The others did not dare to come near him till he had thrown away his Arms, which he did, when he had ſtaid ſo long that he was almoſt dead with cold. So at laſt, when they had compounded the matter, the Savages pull'd him out, and carried him to a fire, where they rubb'd and chaf'd his benumm'd Limbs, and recover'd his vital Warmth that the cold Quagmire had conſiderably abated. His Men were all kill'd, and he himſelf was going the ſame way, being bound to a Tree, and the Arrows of the Savages ready mounted upon the String to let fly at his Breaſt: But in the very interim the King forbad it by a ſign to the contrary, which ſign was the lifting up a little Compaſs-Dial which the Captain had given him juſt before. The Savages wondred extremely at the playing about of the Needle in the Box; and the more, becauſe they cou'd ſee it move through the Glaſs that cover'd it, but cou'd not come to touch it with their fingers. But 'tis not eaſie to expreſs their admiration, when the Captain explain'd ſomething of the Uſes of it to them, and launch'd out into a ſort of Coſmographical Lecture; this Diſcourſe knock'd them all in the head, and they gap'd and ſtar'd like Men that had Convulſions in their faces. After this they led him away with all the Savage Triumph imaginable to *Oropaxe*; the King march'd in the middle, having the Muskets and Swords, taken in this action, carried before him as ſo many honourable Trophees of his Victory. The Captain came next him, being led along by three great Lubbers, and a guard of 6 Bowmen on each hand of him. When they had brought him to *Oropaxe*, the Women and Children came ſtaring about him with as much earneſtneſs as if he had been ſome Monſter, which when they had their fill off, preparations were made for a ſolemn Dance.

Savage ſimplicity.

He is led to *Oropaxe*.

This was a ſort of Thankſgiving for the great Victory obtain'd by 300 Men over 3, and owing more to fortune too than their own Courage; for if Captain *Smith* had not ſlipt into the Bog, and ſo loſt the uſe both of his Arms and Legs, they might e'en have gone home again as ſimply as they came. The Men of War threw themſelves into a Ring, in the centre of which ſtood the King and Captain *Smith* with a Guard; the others danc'd about them, making all the odd poſtures and horrid noiſes imaginable, their Clubs and Quivers of Arrows hanging at their backs, and their Bows in their hands all the while. But their Dreſs was as remarkable too as their Poſtures, for over their Arms they had thrown Foxes and Otters Skins, upon their Heads the Wings of of a Fowl extended to the full length, with pieces of Copper, Shells, and the Rattles of Snakes; their Faces and Shoulders were painted red, to make all look the more agreeable. When they had finiſhed three Dances they led him into a Houſe, and feaſted him with no worſe Meat than good Veniſon, of which they gave him as much as he car'd for every Day; and not only then, but in the Night time alſo did they follow him with this ſort of Victuals. This made the Captain believe they had a deſign upon his Carkaſs, and fatted him up only to eat him at laſt: But he was comfortably miſtaken, as the ſequel prov'd; for when he had ſtaid awhile here, they carried him to ſeveral of the neighbouring Nations of the Savages to ſhew him, and ſo at length to the King's Habitation at *Pamanuke*. At this place he had very civil Entertainment, eſpecially from the King's Brother: but he obſerv'd both here, and at other places, that his Hoſts would never eat a bit with him, nor none of the company whatſoever, but he always eat alone by himſelf; the reaſon of it he cou'd not know, and conſidering what a parcel of Slovens they are, he had no great reaſon to care for their company.

Capt. *Smith* feaſted.

While he ſtaid at *Pamanuke*, he was witneſs to ſome of their Ceremonies, which for their oddneſs one may call Conjurations but for what reaſon they were perform'd ſhall be ſaid by and by.

Savage Cuſtom.

Early in the Morning a great fire was made in a long Room, and a Mat ſpread on each ſide, on one of which the Captain was plac'd. The Guard being gone out of the Room, in comes a huge grim Fellow, leaping and skipping, that a Man might well enough have miſtaken for the Devil, he made ſo deviliſh a figure. That of his Face that could be ſeen, was as black as Coal cou'd make it, but the greateſt part was hidden, by a parcel of Snake and Weazel-skins that hung down all about his Head, Shoulders, Back and Face, and were tied together Tail to Tail upon the crown of his Head; but beſides all this, the pretty Image had a Coronet of Feathers too, and a Rattle in his Hand. The voice and geſtures, the paſſions, were all ſutable to the Dreſs and outward Figure, that is helliſh, frightful and abominable. Shaking his Rattle he began his Invocation, and encompaſs'd the fire with a Circle of Meal. Upon this there ruſh'd into the Room three more ſuch Figures, and a little while after three more, which all danc'd, and ſhew'd the ſame Tricks and Poſtures that the firſt had done. At laſt they all ſat down right againſt the Captain, three of one ſide, and three of the other, and the Arch-Devil in the middle. Then beginning with their Rattles they ſtruck up a Song, which ended, the chief of them laid down five Wheat-corns, and ſtraining himſelf with ſuch violence that he ſwell'd again, he made a Speech, at the concluſion of which they all gave a groan, and then laid down three grains more. To this impertinent action ſucceeded another Song, and to the Song an Oration, laying down between whiles as many grains as before, till they had encircled the fire twice with them. All this done they took a bundle of Sticks, and began their Songs and Orations again, at the end of every one laying down a Stick between the Diviſions of the Corn; when the whole bundle was exhauſted, the Ceremony was concluded. For three Days together did they eat after this ridiculous manner, and faſted every one of them till Night, and forced the Captain to do ſo too, but at Night they eat and drank ſoundly for't.

Now if the Reader's curioſity will not be ſatisfied without knowing the deſign and ſcope of all this, and he asks what was all this buſtle for? We anſwer, It was to find out whether Captain *Smith* was really their Friend or no, and whether he did not deſign them ſome miſchief. For (as they expounded the Myſtery) the Circle of Meal ſignified their Country, the Circle of Sticks Captain *Smith*'s Country, and the two Circles of Corn the Sea-bounds betwixt them; and ſo from thence, by a very natural Method, they found out whether any evil was like to come from the Country of Sticks into that of Meal. The reaſon is very clear, and is eaſily made out by *Prop.* 5. *Cap.* 2. of *Hiccius Doccius*, about cutting the *Heco-Poco* Curves at right Angles.

Savage Geography.

A good thought about Gun-powder.

Theſe People believe the Earth to be round and flat like a Trencher, and their Country to be the very middle ſpot of all. Having alſo ſeen the great Uſes, and many ſtrange Effects of Gun-powder, they got a little quantity of it together, which they kept very carefully, intending to ſow it the next Spring, in expectation of a Crop of the ſame. They had a mighty deſire to have ſome of that rare ſtuff growing amongſt them; particularly they had a curioſity to ſee the Seeds on't, which they fancied were mighty pretty things. 'Twas pity but they had had a Plantation of Gun-powder: they ſhou'd have ſow'd one Field with that, and another with Muskets and Piſtols, and ſeen which wou'd have been ripe firſt; ſuch a Harveſt as that once in two Years, would have made them a horrid plague to all the Country round about them.

Capt. *Smith* brought to *Powhatan*.

But Captain *Smith* had not yet run through the worſt of his dangers, for they carried him away at laſt to *Werowocomoco*, to appear before *Powhatan* the great Prince of the Country. When he came to make his Entrance he was ſtaid, till *Powhatan* and his Attendants had put themſelves into their beſt Dreſſes and Poſtures; all which time he was the Object of the very great Wonder of the gazing Croud without doors.

Powhatan's State.

Powhatan himſelf was ſet by a Fire-ſide on a Seat like a Bedſtead, and cover'd with a Robe of Skins, the tails of which hung down in ſight very pleaſantly. On each hand of him ſat a young Girl of 16 or 18 Years old, as on each ſide the Room was a row of Men, and behind them another of Women; and all, both Men and Women, painted red, with feathers (or ſome Spoils or other of Birds) about their Heads, and Chains of Beads about their Necks. This was the pomp the Savage Aſſembly appear'd in at this time, and this was the Splendour that they had made ſo much preparation to equip themſelves into.

The Captain's reception.

His danger and reſcue by the King's Daughter.

The King of all Trades.

At the Captain's Entrance they all gave a great ſhout, and without any other Ceremony water was preſently brought him to waſh his hands, and a bunch of feathers to wipe them; and then the beſt Meats King *Powhatan*'s Pantry cou'd afford were ſerv'd in, and the Captain eat heartily. After this they conſulted together awhile, the iſſue of which was, that two great Stones were brought in and laid at the King's feet, and as many of the Savages as could lay hold of the Captain dragg'd him thither, and forcing him to lay down his Head upon the Stones, ſtood ready with their Clubs to beat out his Brains. But the King's beloved Daughter *Pocahunta* having conceiv'd a reſpect for the Captain, diverted the Execution for a moment, and humbly entreated her Father to ſpare his Life: Which requeſt, when ſhe found him no ways at all inclinable to grant, but ſeemingly fix'd in his reſolution to ſacrifice him, ſhe ſtept of a ſudden towards the Captain, and got his Head into her Arms, declaring by that action, that either his Life ſhou'd be ſav'd, or hers loſt together with his. In ſhort, the arms of this Lady was ſo good a Protection to the Captain that he got his life by it; and *Powhatan* ſeeing his Daughter as much bent the one way as he was the other, was at laſt contented he ſhou'd live, and live to make little Toys and Baubles for his Daughter, who had now a Title to him, and had purchas'd his Service for ever. But the buſineſs is, how did the King come to know, or what made him think, that Captain *Smith* had been us'd to any Handycraft Trade, and was capable of doing any of that ſort of Work? Why he judged of the Captain by himſelf, and believ'd him to be ſuch another *Jack of all Trades* as he was.

Powhatan made his own Robes, Shoes, Pots, Bows and Arrows, and did all Offices like the meaneſt of his Subjects; and he reaſonably preſum'd, that ſince he did thus, Captain *Smith*, who had no Majeſty to pretend to, might have been brought up to the ſame.

A ſtrange Ceremony.

A few days after this Deliverance, *Powhatan* made the Captain be brought to a great Houſe in the Woods, and there ſet upon a Mat by the fire, and left alone; which could be no great matter of terror to him that had ſeen all thoſe deviliſh Rites perform'd at *Pamunk*. When he had ſtaid there ſome time in expectation, he heard a moſt frightful noiſe, and preſently in comes *Powhatan* moſt horribly diſguis'd, and 20 more with him. He came up to the Captain, and told him that now they were made perfect Friends together, and all grudges were remov'd; that to teſtify the truth of the Friendſhip on his part, he wou'd give him his liberty immediately, and ſend him back to *James-Town*, deſiring only in requital a Grind-ſtone, and a couple of Guns. So the Captain return'd with a Savage Guard, whom he entertain'd at *James-Town*, and inſtead of a Grind-ſtone ſhew'd them a Mill-ſtone, which they were ſenſible they could not carry to their Maſter; and ſo inſtead of a couple of ordinary Guns, he ſhew'd them two Demi-culverins, which the Savages found likewiſe too heavy for their ſhoulders. But beſides, they did not care to meddle with them, for the Captain loading them with Stones, diſcharg'd them againſt a great Tree; the boughs of which they brought down with ſuch a horrible noiſe and fury, that the Men were half dead with fear, and were very well pleas'd to be charg'd only with a few Toys for their Maſter, in the room of the other things that he demanded. The Captain's conduct in this was not any way blame-worthy, for 'twas not politick to put Fire-arms into the hands of the Savages; and if he had never a Grind-ſtone to ſpare, the beſt way was to ſhew them a Mill-ſtone inſtead on't.

Capt: Smith's return.

He ſends Preſents to the King.

We can't ſay whether the Company was glad to ſee Captain *Smith* return from his Captivity amongſt the Savages or no; but this is certain, that he was glad to come juſt at time that he did, for he broke the Neck of another Project of deſerting the Fort and Town, and running away to *England*.

A 3d Plot diſcovered and prevented.

Quickly after his return came Captain *Newport*, with freſh Supplies from *England*, which put them all in good heart again: The Savages alſo, who had been wonderfully pleas'd with Captain *Smith*'s Converſation amongſt them, brought in ſtore of Proviſions; part of which were Preſents from *Powhatan* to him, and part to be ſold at the rates he ſhould determine.

Trade with the Savages ſpoil'd by the Company

Thus there began a very good Commerce with theſe People, but the ill-natur'd Preſident and Council ſpoil'd it; for they envying Captain *Smith*'s great Intereſt and Reputation amongſt the Savages, and to poſſeſs them with a notion of their own Authority and Greatneſs, wou'd give four times as much for Commodities as he had agreed with them for, and ſo ſacrific'd the Common Good of the Plantation to their own ambition and baſe humour.

The Seamen alſo, that came with Captain *Newport*, being allow'd to trade at Pleaſure with the Savages, wou'd, according to their extravagant ways, (whenever they come aſhore) part with their Commodities upon ſo eaſie terms, and give ſo much for ſo little, that by degrees, a thing which might have been had at firſt for an Ounce of Copper, cou'd not be purchas'd under a Pound; and ſo proportionably of other things that went in Barter. But this liberality (or fooliſh extravagancy rather) of Captain *Newport*'s Men, wrought in *Powhatan* ſuch an Opinion of the Maſters greatneſs that he deſired to ſee him; ſo he and Captain *Smith*, with a good Guard, went to *Werowocomoco*, where the Savage King entertain'd them with all the pleaſures and the good things his Court and Town were capable of yielding. As much a Savage as he was, he had Pride and Majeſty in him; and tho' he was his own Taylor and Shoemaker, yet he cou'd put on the King when he pleas'd, and when 'twas fit for him to appear ſo to others. Our *Engliſh* found it ſo at this time, not only in his putting his wild Court into the beſt poſture for their reception, but alſo his ſcorning to trade and barter with them for ſuch little trifling matters as the common People did. ‘ Captain *Newport*, (ſays he addreſſing himſelf to him) it is not ſutable to my Greatneſs to drive a Trade for trifles in this Pedling manner, I eſteem you as a great Prince, therefore lay me down all your Commodities together, what I like I will take, and in recompence I'll give you what I think fitting their value. In ſhort, *Powhatan* ſet ſuch extravagant prices upon his Commodities, that they cou'd come to no terms with him at all, till a parcel of blue Beads charm'd him, and he

Capt. *Smith* and Captain *Newport* go to *Powhatan*.

Powhatan's State and Pride.

he agreed to give two or three hundred Buſhels of Corn for a pound or two of them.

Their trade with him.

The King of *Pamanuk* alſo was bewitch'd with a paſſion for the ſame trifles, and allow'd the ſame good rates for them that *Powhatan* had done.

Quickly after their return there happen'd a grievous Fire at *James-Town*, which did a great deal of damage in burning their Palliſadoes, Store-houſes, the Church, beſides private Houſes.

More Supplies.

Captain *Newport* being gone back with his Ship for *England*, there came in another Recruit of Men and Proviſions for the Plantations; a Ship that ſet out from *England* with Captain *Newport*, but had been forc'd by contrary Winds to take up for ſome time in others Parts of the *Weſt-Indies*.

Town repair'd.

By the care and diligence alſo of Captain *Smith*, and Mr. *Scrivener*, (an honeſt and underſtanding Gentleman that came along with Captain *Newport*, and was admitted one of the Council here) the Buildings both publick and private were repair'd, the Town put into a good poſture again, the Fields dreſs'd, and the Corn ſow'd; all which buſineſs lay neglected by the lazy Preſident, and his as ſloathful Managers. But now there happen'd an unlucky difference between the Savages and them, which was an introduction to the after-diſorders and calamities of the Plantation.

Quarrel with *Powhatan.*

Powhatan had preſented Captain *Newport* with a parcel of Turkeys; to requite which kindneſs, the Captain very indiſcreetly made him a Preſent of Swords, number for number with the Turkeys. The Savage expecting to have always the ſame advantageous returns for his Fowl, ſent Captain *Smith* ſuch another Token, (after *Newport* was gone back to *England*) which he receiv'd, but ſent back no Swords, to the very great diſappointment of *Powhatan*, and raiſing of his choler and indignation. He ſaw the Swords did not come, but he was reſolv'd to fetch them; and therefore firſt of all, tried to bring them by tricks and policies, afterwards he proceeded to open force and inſolence, coming up to the very Walls, laying Ambuſcadoes for the Workmen, and ſurprizing them in their buſineſs, with many more affronts of the like nature. The Preſident and Council ſaw all this, but wou'd not meddle to right themſelves, and curb theſe inſolent People, but let them run on in a trade of doing miſchief, pretending the Orders from *England* were very ſtrict in this Matter, and ſeverely prohibited the doing any thing to affront and provoke the Natives. But Captain *Smith* underſtood the Orders after another manner, and therefore one Day, when the Savages came up and abus'd ſome of his Men, he fell upon them to rights, and thraſh'd them handſomly; and taking ſome of them Priſoners, he drove the reſt home well cudgell'd, to tell their King how they had been entertain'd. This brought no leſs than an Army of them up to *James-Town*, where they threaten'd terrible things, if their Priſoners were not preſently deliver'd to them. But the Captain, to try their Mettle, with a ſmall force went out and attack'd them, and reduc'd them in a very little while to a condition of begging Peace, and receiving it upon his own terms. Examining his Priſoners too, they confeſs'd that *Powhatan* had ſet them at work to get their Weapons from them, and then cut their Throats; with all the particulars and circumſtances of the Plot.

Inſolence of the Savages.

Capt *Smith* corrects them

Powhatan's ſubmiſſion.

As for *Powhatan* himſelf, his courage was ſo far cool'd, that he ſent his dear *Pocahunta* (as the fitteſt Perſon he cou'd pitch upon to mediate with Captain *Smith*) to excuſe the injuries that had been done, to deſire his Mens liberty, and to aſſure the *Engliſh* of his friendſhip. The Captain, who ow'd his Life to this Savage Lady, was ſo grateful and complaiſant as to diſcharge the Priſoners at her requeſt; but it was not before he had both given them ſuch a correction as might make them take care how they fell into his hands again upon the like Occaſion, and afterwards us'd them ſo well, that they might know they had to do with a Perſon that cou'd be very kind and civil.

The Council wou'd fain have pick'd a hole in the Captain's Coat, upon the ſcore of this breach with the Savages, but there was no room for't; for he had ſhed no Blood, but done the Plantation very good Service in unpluming the Savages a little, who elſe wou'd have been very troubleſome. And 'tis certain this made them ſtand ſo much in awe, that the very Name of Captain *Smith* was almoſt enough to fright them.

Capt. *Smith* goes out to diſcover.

When this Squabble was over, Captain *Smith* was ſent out by the Preſident and Council to diſcover the Country of *Monacan* beyond the Falls, which Deſign he went upon in a little Barge, and with no more than ten or twelve Men: The Diſcoveries made were very inconſiderable, the Savages in many places treated them as Enemies, and wearied them with Ambuſcades and other Treacheries; again, in other places they were kind and friendly, and did their beſt to obtain the good-will of the *Engliſh*. But they were effectually convinc'd, by an accident that happen'd, that *Powhatan* was their Mortal enemy, whatever fair ſhews of the contrary he made; for a certain Ambuſcade of Savages being put to the rout, when they came to parley, made a Confeſſion that *Powhatan* had order'd them to lie there, and he was encourag'd by the Malecontents at *James-Town*. A fine Project, for *Engliſhmen* to ſet Savages at work to cut the throats of *Engliſhmen!* The Captain narrowly eſcap'd with his Life this Expedition, he was given over for a dead Man, and his Burying-place provided. 'Twas not the Savages that brought him into this extremity, but a certain Fiſh which had a Sting of two or three inches long: They ſay it was like a Thornback, but had a longer tail, and a weapon in the end of it as long as was ſaid, which went into the Captain's fleſh very near an inch and half. The effect was a violent ſwelling, and a tormenting pain, which ſymptoms were notwithſtanding carry'd off by good applications of the Chirurgeon, and all made well again. This Fiſh was good to eat, for the ſick Man that was ſo like to die in the Morning, was able to make a Supper of it in the Evening.

Treachery of *Powhatan* and the Company at *James-Town.*

Venemous Fiſh.

Preſident Depos'd.

At their return they found the company at *James-Town* in an uproar againſt the Preſident, and ready to Depoſe him; his unfitneſs for buſineſs, and eſpecially his riotous manner of living, (when their Stores were low, and all the reſt muſt pinch that his extravagant appetite might be glutted) provok'd them to take thoſe violent courſes after a great deal of tame forbearance. The deſire likewiſe of the Company was, that Captain *Smith* wou'd take the Preſidency (at leaſt the Adminiſtration of it) upon himſelf, which he did, and making honeſt Mr. *Scrivener* his Subſtitute in that Affair, he went out a ſecond time to purſue his Diſcovery. But the reſult of both theſe attempts put together, amounts to no more than the diſcovery of a few Nations of Savages, and ſome Rivers, the Names of either of which wou'd be of no great Service to the Reader, ſince there's nothing of importance relating to either of them; and eſpecially too, ſince what is material upon either of thoſe heads, ſhall be brought into our General Account of *Virginia*, which will be added in its due place. Only this may be ſaid, that they had the ſame fortune amongſt the Savages now as in the former Expedition, ſome of them being very friendly and hoſpitable, others as full of treachery, and ready to aſſault them upon all opportunities of doing it with advantage.

Capt. *Smith's* 2d attempt.

A. D. 1608. Capt. *Smith* made Preſident.

Captain *Smith* at his return upon the Election of the Council, and the unanimous requeſt of the whole Society, receiv'd the Letters Patents, and actually enter'd upon the Preſidentſhip. Quickly after this, Captain *Newport* arriv'd from *England* with freſh Supplies, and with Preſents for *Powhatan*, which Prince they thought to oblige the more by ſending for him to *James-Town*, where they intended to entertain him with ſome pomp, and were willing too to let him ſee ſomething of the *Engliſh* Grandeur and Magnificence. The new Preſident was thought the fitteſt Perſon to undertake the delivery of this Meſſage to *Powhatan*, and he very willingly accepted of the Office, and went with four Perſons only in his company. When they came to *Werowocomoco*, *Powhatan* was not there, but about ſome thirty Miles off, and in the mean while the Captain had this comical Entertainment from ſome of his Women. He and his company were without the Town in a fair Field, juſt by the ſide of a Wood, where they were ſitting upon Mats by a fire, and a great many of the Inhabitants, both Men, Women and Children, were about them, as they always gather about Strangers. While they were in this poſture, they heard a moſt diſmal ſhrieking and howling in the Wood, ſuch a noiſe, that the Captain believ'd no leſs than *Powhatan*, with his whole Army, was come to ſurprize them, and therefore he and his Men accordingly ſtood to their Arms. The People however aſſur'd him there was no danger, and deſired him not to diſturb himſelf, and by that time they had done this, the enemies ruſh'd out of the Wood and ſhew'd themſelves. They were a Troop of young Women, about 30 in number, as naked as ever they were born (only a few green leaves before, and their Skins painted, ſome red, ſome black, ſome green, ſome blue;) in a word, there were Girls of all colours. One had a Quiver of Arrows at her back, another a Bow and Arrows in her hand, a third a Club, a fourth a Sword; and, in ſhort, every one ſome weapon, or ſome device or other. But their Head-attire was the moſt charmingly fine and pretty, for each of them had a large pair of Stags-horns planted

He goes to *Powhatan.*

A comical Adventure.

upon her Forehead, ſo that here was *Acteon* and *Diana* in one Perſon. They made moſt fearful cries as they came out from among the Trees, and inſtead of running to puſh the Captain and his Men with thoſe horns they had got, they all joyn'd hands and caſt themſelves into a Ring, and fell a dancing about them, being themſelves their own Muſicians all the while.

This wild Scene continued for near an hour, and then they all ſcuttl'd away again into the Wood, where having put themſelves into a handſomer poſture, they came and made Captain *Smith* a ſolemn Invitation to go and ſee their Lodging: He accepted of the civility, and followed them into the Houſe, but he was no ſooner got within Doors, but they all came crouding and preſſing about him in ſuch a manner, that a Man of leſs courage than the Captain wou'd have been afraid of a Rape. One hung about his Neck, and another caught hold of his Arms, and all cried out, *Don't you love me? Don't you love me?* So that no body cou'd be anſwer'd firſt, becauſe every body ſpoke at the ſame time, and 'twas a wonder if they were all worth loving. Here was a Man hardly beſtead, this was a very unequal Match; two to one we commonly ſay is great odds, but thirty to one was a very hard caſe indeed.

Fine Courtſhip.

How the combat ended we can't ſay, but we ſuppoſe the Captain came off very well, and diſengag'd himſelf handſomly. This Salutation ended, they gave him a Treat of Fiſh, Fleſh and Fruits, ſome of them waiting, others ſinging and dancing all the while. At the concluſion of the Treat, they conducted him to his Lodging, and it being dark night, and the Country affording no Torches, they lighted him along with Fire-brands.

His Conference with *Powhatan.*

Powhatan coming the next day, the Captain told him of the Preſents that were prepar'd for him at *James-Town*, and the general deſire there was of ſeeing him there, in order to the concluding of the common League againſt the *Monacans.* But the ſubtle Savage made him this Reply: ' If your King (ſays he) has ſent me Preſents, ' I am alſo a King, and this is my Land. I will ſtay here ' eight days to receive thoſe Preſents; and I expect that ' your Father (that is Captain *Newport*, whom *Smith* cal' led Father amongſt the Savages) ſhou'd come to me, ' and not I to him; neither will I go to your Fort, nor ' bite at any ſuch bait. As for the *Monacans*, I can re' venge my own Injuries; and if my People have told ' you of any Salt water beyond the Mountains, their ' relations are falſe.

Powhatan's Pride and Craft.

This was all the Anſwer the Captain cou'd get, and was forc'd to return with this to *James-Town*. Too much good uſage had made *Powhatan* proud and inſolent; and 'tis plain, that he valued himſelf and his Commodities vaſtly more, upon the account of that regard that he ſaw the *Engliſh* had to both. There was nothing of Trade now to be had with him, and the more he ſaw the others preſs for it, the more backward he ſhewed himſelf. One wou'd have thought that the Plantation ſhou'd have been too ſenſible of this baſe humour of the Savage, to do any thing afterwards to gratify it; and that it ſhou'd have been their care rather to mortify it, and take ſuch courſes that he might ſee they were not really fond of his Friendſhip, tho' they ſeem'd to court it. But on the contrary, they were ſo weak as to blow up his Pride and Vanity yet more, and under the pretence of obliging and winning him, to make themſelves and their favours ſo cheap, that the conſequence of it was the rendring of both deſpicable.

The folly of the Plantation.

Powhatan crown'd.

Amongſt other extravagancies of this nature, *Powhatan*, forſooth, muſt be crown'd, and proviſion muſt be made to do it with ſome ceremony too. And becauſe he wou'd not come to *James-Town*, to receive his Crown there, it muſt be ſent him to *Werowocomoco*; and Captain *Newport* was the Man that went upon this goodly Errand. The Preſident, 'tis true, oppos'd this fooliſh Deſign, or at leaſt never approv'd it, but there were others that thought 'twou'd help (together with the Preſents that were to be carried at the ſame time) to joyn him faſter to them in the Band of Friendſhip. In a word, that to receive a Crown from the *Engliſh*, wou'd diſpoſe him to proſtitute his Kingdom to them. But the Jeſt of all was, that *Powhatan* himſelf was not at all fond of this fine thing call'd a Crown; he had no ambition to have ſuch a ſplendid Bauble ſet upon his Head, and wou'd eaſily have excuſed them from the trouble of coming thither to do it. He knew well enough the meaning of the Preſents they brought him, but when they came to the Ceremony of the Coronation, the Man was ſurpriz'd; he did not underſtand what they pretended to do with his Head, and was afraid of ſome deſign againſt his life. And whereas, when the Crown was going to be put on, Captain *Newport* told him he muſt kneel; he was ſo obſtinately reſolv'd not to kneel, that all the company was tired with perſwading him to it, neither wou'd he take his own Peoples word for't that there was no danger in ſo doing. At laſt, with much ado, by leaning hard upon his ſhoulders, and ſo forcing him to ſtoop a little, they got him into ſomething of a decent poſture, and the Crown was ſet upon his Head, and he receiv'd the Complements of the *Engliſh*. Juſt at this time, when the buſineſs was done, according to appointment, all the Guns were diſcharg'd from the Ships, the noiſe of which frighten'd his Majeſty ſo effectually, that he ſtarted away out of their hands, and look'd about him to ſee if the Enemies were coming to knock him o'th' Head. But he recover'd, after ſome time, and to expreſs his Royal Bounty, he gave Captain *Newport* his old Shoes and Mantle; for we muſt know, they had brought him an entire Coronation Suit, even a Scarlet Cloak, which ſerv'd at that time for a Robe. But his gratitude to the Plantation for theſe favours, was no more than a Preſent of ſeven or eight Buſhels of Wheat, not a conſiderable quantity to ſerve for a Supply of their Wants, nor ſo much as the Offer of Promiſe of Trade for that purpoſe; as to any thing of this he ſaid not a word, neither would he (at Captain *Newport*'s requeſt) lend him either Men or Guides to make the diſcovery of *Monacan*.

His comical frights.

Powhatan's Ingratitude.

This was the Generoſity of the Savage King, and if the Plantation found him afterwards Inſolent and Domineering, or deſpiſing the *Engliſh* Commodities, and over-valuing his own, they may e'en thank themſelves for't: For what need was there of ſetting a Crown upon this barbarous Head? And what need of ſuch coſtly Preſents, as Scarlet Cloaks, Bed and Furniture, Baſon and Ewer, and the like, where a few Glaſs-Beads, or pieces of Copper, wou'd have done as well? To Court and Complement Savages at that extravagant rate, is only to teach them to deſpiſe thoſe that do it; and our Men never found it better Dealing with that ſort of People, than when at the ſame time, together with Civilities, they ſhew'd them good Reaſons why they ſhould fear and ſtand in awe of them.

Captain *Newport*, preſently after his return to the Town, ſet out for the Diſcovery of *Monacan*; all the Council, with at leaſt 120 Men, went upon this Deſign, the Preſident, with about 80 more, ſtaying behind at the Fort. The Preſident had foretold the ill ſucceſs of their Enterprize, which they were as ſadly ſenſible of at laſt, as they were far from believing at firſt: for, in a word, they ſaw only two Villages of the *Monacans*; that was their Diſcovery, and they had their labour for their pains, and that was their reward.

Capt. *Smith* goes to *Powhatan.*

Powhatan's treacherous pretences.

Capt. *Smith's* ſharp Diſcourſe to him.

The Savages now pretty plainly diſcover'd their Deſigns of ſtarving the *Engliſh*, for they made it their buſineſs to keep their Corn and Proviſions from them: and the Preſident was forc'd to go out and lay ſome of their Country under Contribution to get neceſſary Supplies; the People he ſerv'd thus were the *Chickahamines*, the *Nauſamunds*, with ſome others. But this ſort of way wou'd never hold long, and therefore the Preſident reſolv'd to endeavour to force ſomething out of *Powhatan*, who had not the gratitude to ſerve his Benefactors of his own accord. And that which the rather induc'd him to it was, that *Powhatan* had about this time ſent him word, that if he wou'd come to him and bring a Grindſtone, a parcel of Swords, Guns, Beads, and other trifles, he wou'd give him a Ship's lading of Corn. The Captain ſubſtituted Mr. *Scrivener* in his place, and ſet out for *Werowocomoco*, with the Pinnace and two Barges, having in all no more than 46 Men, tho' he order'd more to be ready at home in caſe of need. An honeſt Savage by the way perſwaded him not to ſee *Powhatan*, or at leaſt to give him no manner of opportunity of ſeizing their Arms, becauſe his deſign was only to cut their Throats. When they came thither, he entertain'd them with the ſame freedom that he us'd to do, but pretended he had no Corn to diſpoſe of, and that he did not ſend for Captain *Smith* to come upon that ſcore; yet he added, that for 40 Swords he would procure them 40 Buſhels. But the Captain confronting him with the very Meſſengers that brought him that word, the Savage, when he ſaw he cou'd not deny it any longer, turn'd it off with a laugh. Then he ask'd to ſee what Commodities they had brought; none of all which wou'd pleaſe him without Guns and Swords, valuing ſtill a Basket of Corn above a Basket of Copper, ſaying he cou'd eat the one, but not the other. Upon this, Captain *Smith* was oblig'd to tell him in pretty ſmart terms, That he was not inſenſible of his Artifices in delaying and whiling off the time at that rate; that he had always aſſur'd him he had no Guns nor Swords to ſpare, and ſhou'd be ſorry to be compell'd to employ what he had againſt him, as ill Uſage and Affronts might ſome time or other make him do, otherwiſe he wou'd preſerve entire the good Correſpondence that had been hitherto cultivated betwixt them, with all the zeal in the World. Many other Diſcourſes paſs'd between Captain *Smith* and *Powhatan* at this time, in which the Savage mightily inſiſted upon his laying aſide his Arms, and for his Men to come aſhore like Friends, without thoſe formidable Weapons, Guns and Swords, which did ſo vehemently fright his People, that (as he pretended) they were unwilling to come near the *Engliſh* upon that ſcore. The Captain perfectly well underſtood the meaning of all this, and ſince he manifeſtly ſaw that *Powhatan* intended nothing elſe than the murdering or making a Priſoner of him, he reſolv'd not only to ſtand the more nicely upon his guard, but alſo, if a favourable opportunity offer'd, to put a trick upon the Plotter, and ſnap him firſt. They both now had the ſame deſigns upon one another: *Powhatan* waited but till more Men (which he had ſent for) came to the Houſe; and Captain *Smith* but ſtaid till his Men landed under pretence of Trade. But *Powhatan*'s being come firſt, he himſelf ſlipt cunningly away, leaving two or three of his Women to hold the Captain in talk; in the mean while the Houſe was beſet with arm'd Savages, and the Captain had but eight of his own Men with him in this diſtreſs. As ſoon as he was ſenſible of the treachery, he preſently open'd the Doors and ruſh'd out amongſt them, and with his Sword and Piſtol open'd himſelf ſuch a paſſage amongſt thoſe naked Raſcals, that he was quickly got out of their reach. They fled from him like ſo many Hares before a Hound, and ſeeing the Plot had miſcarried, quickly began to excuſe the matter, and pretend there was no harm deſign'd. *Powhatan* alſo ſent a Preſent of Pearl, and Meſſengers to excuſe his own abrupt going away, and the coming of that multitude without his knowledge. In ſhort, they were now ſo officious, that the Captain eaſily got all his Corn into his Barges, and ſo went away to *Pamanuk*, intending to call upon *Powhatan* at his return. But here he fell into the hands of as treacherous a Wretch as *Powhatan*, namely *Opechancanough* King of *Pamanuk*, one ſet at work by *Powhatan* to do what he could not yet do himſelf. This Savage, to colour his Deſigns the better, ſtruck preſently into a Trade with him, and proviſion was made for a much greater Traffick to be carry'd on one day at the King's Houſe. The Captain, with about fifteen or ſixteen very well arm'd went thither, *Opechancanough* entertaining them with a great deal of ſeeming friendſhip and heartineſs; but they had not been there long, before they diſcover'd that the Houſe and adjoyning Fields were beſet with Savages, well furniſh'd with Weapons too. One may imagine they were ſhock'd at this News, but the brave Captain heartned them up with an Oration, and they all vow'd to follow him wherever he led them. Being ſure of the Courage and Fidelity of his Men, he was now not afraid of the Savage Army, tho' they had been a greater number, and they were at leaſt 700. But turning to *Opechancanough*, he told him he was ſenſible of his deſign to murder him, but before the Men of both ſides begin to ſhed one anothers Blood, let you and I (ſays he) have a trial by our ſelves. Take your Arms, and I'll take the ſame, and ſtrip off my Cloaths and be as naked as you, and the Conqueror of us two ſhall be Lord and Maſter of both Troops. If you don't like this, draw your Men into the Field, and if they ben't enough, go fetch more, but let every one bring a Basket of Corn, and I'll take the value in Copper, and ſo let the conquering ſide take all. The Savage was daſh'd at this bold Challenge, and inſtead of accepting on't, endeavour'd by good words to abate the Captain's choler, and bring him into better temper. In order to this, he told him that there was a conſiderable Preſent for him at the door, which he intreated him to ſtep forth and receive: The meaning of which was, that by that bait he ſhou'd be drawn out to the door, where there was an Ambuſcade of above two hundred Men, ready to ſalute him with their Arrows, as ſoon as he came. But being aware of the deſign, and having ſet a Guard upon the door, he comes up to *Opechancanough*, (whoſe horrid treachery had now tranſported him beyond all bounds of patience) and in the very midſt of his Guard ſeizes him by his Fore-lock, and clapping a Piſtol to his Breaſt, made him inſtantly reſign his Bow and Arrows. Holding him ſtill in this poſture, he dragg'd him out before all his Men, who were aſtoniſh'd to ſee that any Man dar'd uſe their King in ſuch a manner: however, the Captain called to them, and commanded them all to fling away their Bows and Arrows, and come and hear what he had to ſay to them. The Savages very readily obey'd him; down went the Weapons, and about him they throng'd to hear his Speech, rejoycing to ſee their King alive, to whom the Captain now had given a little liberty again. As for his Diſcourſe to theſe People, he only charg'd them, in ſhort, with their Villainous Deſigns and Treacheries, and threaten'd them ſeverely in caſe they made him loſe his labour, and did not bring him Corn as they had promis'd. 'You promis'd (ſays he) to fraught my Ship 'ere I departed, and ſo you ſhall, or I'll load her with 'your dead Carkaſſes: But ſtill, if you'll come and 'trade as Friends, you ſhall never be moleſted or griev'd 'by us. And they did preſently go and fetch in ſuch heaps of Commodities, that the Preſident was quite weary'd with looking them over; ſo that he was forc'd to retire himſelf into the Houſe to take a Nap, leaving his Men to manage that Affair. But ſome of them were weary too, and fell aſleep, and part of the Guard that ſhou'd have attended the Captain were careleſly diſpers'd up and down; all which advantages being perceiv'd by the quick-ey'd Savages, forty or fifty of the ſtouteſt of them, arm'd with *Engliſh* Swords, preſs'd into the Houſe, and there were two or three hundred more marching after to ſecond them. But the Raſcals made ſuch a noiſe a crouding in, that the Captain was wak'd with it, and preſently taking up his Sword and Target he flew in amongſt them, and ſome few of his Men (that were by him) charging at the ſame time, they quickly rid the Houſe of them, and made them ſqueeze out a little faſter than they did in. The Plot being thus fruſtrated, according to their way they came to beg Pardon; but the Captain diſſembled his reſentments, and ſo having ſpent ſome time in Mirth and Feaſting with the King, came aboard ſafely again with all his Company that ſame Night. The next Morning they wou'd have trepann'd them into an Ambuſcade on ſhore, under pretence of trading, but theſe old Birds were not now to be taken in ſuch Snares. The following Night the Savages thought that the *Engliſh* had ſecretly ſent away one of their Barges, which they concluded muſt be to fetch more Men and Arms, and that muſt be in order to the executing of that Vengeance which Captain *Smith* had threaten'd, for their trifling thus with him in the Matters of Trade: Very early therefore the next Morning the King ſends the Captain a good Chain of Pearl, begs him not to ſend for any more Men, upon which condition he wou'd load him with Corn; and to take away all ground of ſuſpicion, bring it a Ship-board too. And he was as good as his word; fear made him honeſt, and the Corn was punctually deliver'd. It's plain all this was the effect of no good-will, for the Captain, with ſome others, (particularly Mr. *Weſt* the Lord *De la Ware*'s Brother) was like to be poyſon'd by them before they went away; that is, they actually took the Doſe, but it was not ſtrong enough to kill, and only made them ſick. *Powhatan* was the cauſe of all theſe attempts againſt the Life of Captain *Smith*; and all the reſt of the Petty-Kings hereabouts being his Vaſſals, he cou'd command them to go upon what Deſigns he pleas'd. As for *Opechancanough*, he was his Brother, and conſequently every way his Tool.

Savage diſſimulation.

Plot againſt Plot.

Capt. *Smith* drives the Savages.

A Plot againſt Capt. *Smith*.

Bold attempt.

He Harangues the Savages.

They bring in their Commodities.

Capt. *Smith* in danger.

Another Plot.

They bring Corn.

The Captain returning homeward, call'd (as he had reſolv'd) at *Werowocomoco* again, intending, if he had opportunity, to ſeize *Powhatan*, with his Stores of Corn; but he was fled, and had remov'd all before they came, and thoſe that went aſhore were like to be kill'd for their pains too. The cauſe of this (and a great deal of miſchief more) were ſome *Dutchmen* which the Captain in kindneſs had lent to *Powhatan* to build him a Houſe. Theſe horrid Villains betray'd all the Secrets of the Plantation to him, and ſome of the Ammunition of it too, in the Preſident's abſence. In ſhort, they put him upon moſt of his curſed projects, and did what they cou'd to ruin the *Engliſh* Intereſt in *Virginia*.

The *Dutchmens* Villany.

Captain *Smith* return'd to *James-Town* with 270 Buſhels of Corn; but there had been this further misfortune in his abſence, that Mr. *Scrivener* and Captain *Walde* (both Perſons of Courage and great Uſefulneſs) going out upon a ſmall Expedition, were with all their little Company over-turn'd in their Skiff and drown'd. The Plantation however was now in poſſeſſion of a pretty Stock of Proviſion, and might have enjoy'd ſome proſperous days had it not been for thoſe deviliſh *Dutchmen*, and their Accomplices; for a Party of Raſcals they had at *St. James-Town* that ſided with them, and help'd to convey Ammunition out of the Fort to them. The place of their Rendezvous was at the Glaſs-Houſe, which is about a Mile from *James-Town*, in the Woods; and near this place they had planted an Ambuſcade of Savages to take Captain *Smith*, who was gone out one day to ſearch this

Mr. *Scrivener* loſt.

Rendezvous of the Traytors.

Neſt

An Adventure of Captain *Smith* with a Savage King.

Neſt of Rogues. The Bird he wou'd have taken (one of the Traytors) was fled, and having ſent all the Muſketeers he brought out with him after this fellow, he walk'd home alone. Upon the way he meets the King of *Paſpaheigh*, one of *Powhatan*'s Tributaries, (or Allies at leaſt in the War againſt Captain *Smith*) and a wonderful ſtrong ſtout Man. The Savage wou'd fain have drawn him into his Snares, but the Captain wou'd not go; ſo that ſeeing no other way, he endeavour'd to ſhoot him, but *Smith* prevented him there, for he preſently clos'd in with him, and endeavour'd to diſpatch him with his Faulchion. But here again the Savage prevented him, for finding his deſign to ſtab him, he catches *Smith* up in his arms, and runs away with him to the River (juſt by) into which he plunges both himſelf and him. Here they tried to drown one another as faſt as they cou'd, for Swords and Guns ſignified nothing in the water. Whilſt they were ſtruggling in this Element, there came two of the Captain's Men upon the ſhore, which ſight loſt the King of *Paſpaheigh* all his courage: However the Captain had him faſt by the Throat, and held him ſo, till the Men came in and took him off; and then his Majeſty begg'd his Life very heartily, but notwithſtanding was carried Priſoner to *James-Town*, from whence afterwards, by the negligence of his Guards, he made a ſhift to eſcape.

Capt. *Smith*'s reputation amongſt the Savages.

The Factions of the Company.

Captain *Smith*, after this, by his prudent and politick managements, reconcil'd the *Paſpaheigh*'s to the *Engliſh* Intereſt, and bound them by a ſolemn Treaty to bring in Proviſion. By a lucky hit alſo of bringing a Savage to himſelf, that was almoſt ſtifled with the fumes of Charcoal, he got the name of a Man of extraordinary Power, and one that cou'd raiſe the Dead to Life. This over-aw'd *Powhatan*, and all his Allies, ſo that they deſired Peace, and brought Preſents; yea, many of them that had ſtolen things from the *Engliſh*, came and made Reſtitution of their own accord, believing that Captain *Smith*, who cou'd reſtore the Dead to Life, cou'd alſo diſcover their Villanies. When the ſtock of Proviſions grew low, and the Rats (which came in for the beſt ſhare of it) had, together with other accidents, done their worſt towards the deſtroying it, the Captain ſet the Company at work to trace the Country, and find their own Proviſion, and Billetted them about upon the Savages in the neighbouring Parts; theſe courſes ſtirr'd the Gall of the lazy droniſh People, and ſet them a murmuring. In ſhort, tho' the Captain did all that cou'd be expected from a brave Governour, and a Man of an Heroick temper and courage, yet he could not pleaſe theſe Malecontents, but was ever obnoxious to their ill-natur'd Cenſures and Reflections. But a ſudden turn of Affairs now came on, which promis'd quickly to remove this Preſident from them, that was by his Honeſty and Bravery become ſuch a burden to Knaves and Cowards: For the Council in *England* hearing of the diſturbance in the Plantation, fix'd upon the Lord *De la Ware* to go and govern there, who ſent, as his Deputy, Sir *Thomas Gates*, with Sir *George Summers*, together with 9 Ships, and at leaſt 500 Perſons. What was the ſucceſs of this Voyage, we ſhall ſee by and by: thus much only is to be ſaid now, that the Admiral Ship of this Fleet, wherein were the two Knights, and the new Commiſſion, was ſeparated from the reſt, and forc'd away by bad Weather to the *Bermuda* Iſlands, and one or two more were driven another way; the reſt came ſafe to *Virginia.*

Mutinous People return'd to *Virginia.*

Their Deſigns againſt Capt. *Smith.*

New Plantations.

The ſucceſs of that at *Nauſamund.*

Along with theſe Ships return'd ſome of the troublers of the Peace of the Plantation, who had gone back to *England*, and now came again to be a freſh plague to Captain *Smith*. 'Tis not eaſie to deſcribe the Diſorders they were the occaſion of, and the extravagancies they committed; as likewiſe the Plots and Snares they laid for his Life, and the many Dangers he went through. However, being Preſident ſtill, (tho' his Year was well nigh expired) he exerted his Authority, reſtraining ſome, and puniſhing others, and diſpoſing of others into places where they might be capable of doing the leaſt miſchief. The chief Heads of the factious People were Captain *Ratcliffe*, Captain *Martin*, and Captain *Archer*; and their main quarrel againſt the Preſident ſeem'd to be this, That he was a Man of far more Merit than they, and that his Vertues attracted the love of all People that had Eyes to ſee them, even the Savages themſelves. In theſe confuſions the Honourable Mr. *Weſt* went, by the Preſident's leave, to Plant at the Falls of the River of *Powhatan*, with 120 Men; and Captain *Martin*, with near as many, to *Nauſamund*. But this latter Plantation was preſently blown up, for *Martin* muſt needs ſeize the King of *Nauſamund*, and rifle his Houſes and Country: all which Villanies he did with ſo much fear and conſternation too, that he encourag'd the Savages to fall upon him, which they did with ſo good ſucceſs, that they redeem'd their own King, kill'd ſeveral of the *Engliſh*, and carry'd off above 1000 Buſhels of their Corn; tho' the weak-ſpirited Captain had a Reinforcement of Muſketeers ſent him by the Preſident, yet he dar'd not attempt any thing with them, but left his Company to ſhift for themſelves, and ran away to *James-Town*, loaden with all the honour of theſe noble Actions.

How they at the River *Powhatan* manag'd Matters.

Capt. *Smith*'s care to ſettle them better.

They refuſe to go.

They riſe againſt him.

Their Oppreſſions of the Savages.

The Savages riſe.

They plant at *Powhatan.*

They leave it again.

Capt. *Smith*'s misfortune.

As for the Company at the Falls of the River *Powhatan*, Mr. *Weſt* left them as ſoon as he had ſeated them; but whether he had fix'd them in that place, or they had remov'd themſelves as ſoon as he was gone, this is certain, that the Preſident (who went preſently after to overlook them in their new Seat) found them in a place of moſt intolerable inconveniences. Upon that he preſently ſent away to the Savage King *Powhatan*, to buy of him the Town ſtanding upon this River, both which bore his Name *Powhatan*, which was not only yielded to, but alſo very good terms were made for the *Engliſh* with the Savages; they were to bring in conſtant Supplies of Corn, in lieu of which the *Engliſh* were to give them a trifling Matter of Copper, and to be their Protectors againſt the *Monacans* their Enemies. But theſe Furies wou'd not hear neither of the place he had provided, nor the good terms he had made for them; they began to run into downright Tumults, and to make uſe of their Arms. Captain *Smith* had but five Men with him, and 'twas an imprudently bold action of him to truſt himſelf with ſo ſlender a Guard amongſt 120 of ſuch outrageous Mutineers. However, they forc'd him to retire from the ſhore into a Boat, by which means he got to their Ship that had all their Proviſion aboard her, and the Mariners proving Honeſt and Loyal, he made himſelf Maſter of it, and now had them at his Mercy. The diſorderly Company fell now to plundering the Savages, breaking open their Houſes, and ſtealing their Corn; nay, that was not enough, but they beat and abus'd thoſe poor wretches moſt unmercifully, and rais'd their fury and revenge to the higheſt degree. They came in their Canoes to Captain *Smith*, and complain'd that the *Engliſh* he had brought them for Protectors, us'd them more barbarouſly than their Enemies the *Monacans*, and therefore, as for his ſake they had patiently endur'd it a great while, ſo now, if they did not mend their Manners, they ſhou'd take up Arms in their own Defence, and revenge the Injuries that had been done them. The Preſident ſpent eight or nine Days in vigorous endeavours to reclaim this licentious multitude, but all being in vain, he reſolv'd to leave them and ſail away to *James-Town*. The Ship was no ſooner under Sail, but the Savages immediately fell upon them aſhore, gave a brisk aſſault to the Fort, and cut off as many as they found ſtraggling about in the Woods. This put them all into the dreadfulleſt fright imaginable, and the Captain being yet within hearing of all came back again, and found them ſo ſear'd with this accident, that they were ready to ſubmit to his Mercy upon any terms whatſoever. He made ſome of the Heads of them examples for their crimes, and then remov'd the whole Company to *Powhatan-Town*, where they were moſt gallantly Seated, had good Houſes, a pretty Fortification, and able to ſecure them from all the Savages in *Virginia*, and 300 Acres of very good Land ready to plant; beſides, a moſt pleaſant and healthful place, and well deſerving the Name they gave it, *Noneſuch*. The Savages alſo were appeas'd and ſatisfy'd, and new Officers appointed; thus all being Friends, and every thing ſetled in good order, Captain *Smith* was going a ſecond time for *James-Town*, but juſt at that inſtant arriv'd Mr. *Weſt*, who had indiſcreetly planted them at the Falls of *Powhatan*, and tho' that Honourable Perſon was no way concern'd in, or any encourager of their Diſorders, yet his arrival undid all again, the Factions grew as high, and the inſolent Mutineers talk'd as loud as ever, and nothing wou'd ſerve their turn, but they muſt quit this fine Town where the Captain had planted them, and return to their old Seat at the Falls of the River. And ſo they did, and Mr. *Weſt*'s good humour was govern'd by them: as for the Preſident, he determin'd to ſtrive no longer with them, but e'en let them take their own courſe, and brew as they bak'd; ſo he left them, and ſail'd away for *James-Town*. But in the way a terrible misfortune befel him, for ſleeping in his Boat, his Powder-Bag accidentally took fire and blew him up, ſcorching and tearing his fleſh after a moſt fearful manner; and the Captain frying as it were in his own Cloaths, to quench the fire that tormented him immediately leap'd over-board, and plung'd himſelf into the River, where he was very like to be drown'd before they cou'd recover him again. In this miſerable caſe (having no Chirurgeon to dreſs him) he was forc'd to travel to *James-Town*, where, notwithſtanding his illneſs, he wou'd not be excus'd from publick buſineſs.

They conſpire againſt his Life.

The Soldiers ſtand up for him.

Capt. *Smith*'s departure.

The mutinous Captains, *Ratcliffe*, *Martin* and *Archer*, were quickly to be brought to their Trials, according to the Laws of the Plantation; to prevent which, they endeavour'd to diſpatch the Preſident as he lay upon his his Bed ſo extremely ſick, that cou'd they have had patience enough, they might reaſonably have hop'd his malady wou'd have done it for them in a little time. However, the Villain that ſhou'd have Piſtol'd him had not courage enough to do it; ſo that this Plot being baulk'd, they thought the beſt way was to Uſurp the Government, and ſo make their Power ſerve to vindicate their own Innocency, and ſtain his that had made them guilty. Captain *Smith*'s old ſtaunch Soldiers wou'd fain have taken off the Heads of theſe Plotters againſt his Life, and Diſturbers of the Publick Peace, but he wou'd not yield to any ſuch Deſign, but got himſelf convey'd a Shipboard, and took Orders for his preſent return to *England*. This (next to his Death) was the thing that pleas'd the malignant Party the beſt, and now all their care was to get the Commiſſion from him; but the Captain wou'd never ſurrender it to them, tho' he conniv'd at their ſtealing it away. Then taking his farewel of them, with many ſevere reflections and reproaches for their baſe Practices, and calling all to bear witneſs that 'twas not long of him that the Plantation was left thus expos'd without a Governour, he came away from a Country of which he cou'd ſay thus much, That he had been more barbarouſly us'd there by his own Countrymen than by the wildeſt of the Savages.

CHAP. XXIV.

The Continuation of the Virginian *Affairs, from* A. D. 1610. *to* A. D. 1620.

State of the Colony when Capt. *Smith* went away.

They accuſe him when he is gone.

His enemies ſpeak well of him in *England*.

Capt. *Ratcliffe* and the *Dutchmen* kill'd.

WE concluded the laſt Chapter with Captain *Smith*'s departure, who left the Colony in a miſerable confus'd ſtate, tormented with a parcel of factious Uſurping Spirits, that ſtudied nothing leſs than the Publick Good, nor more than their own Private Advantage. At his going away the whole number was very near 500, their Store-Houſes full, their Arms, and all Military Furniture, in good caſe, and as much Powder and Shot as they needed. They had all ſorts of uſeful Animals about them too, from Horſes even to Hens and Chickens; yet neither all the Captain's former Benefits, nor theſe his laſt Cares for them, to leave them in ſo good a condition, cou'd ever perſwade them into any ſoft and kind thoughts of him, or to afford him the leaſt degree of generous treatment. He was no ſooner gone, but all thoſe turbulent People, with one conſent, began to rail at him; eſpecially thoſe whom he had any way chaſtis'd for their Inſolencies, and who now had full liberty to invent whatever Scandals they wou'd, and ſwear to all they invented. There were as many ſeveral Stories told of him, as there were Perſons that envied and maligned him, and the degrees of their Malignity were very well diſcover'd by the magnitude of their Lyes. One ſaid this, and another that, and a third another thing; and ſo they had their Says all round. As for thoſe whoſe Inventions were dull, and they had not Sence enough to patch up a plauſible Story themſelves, the good Council help'd them out at a dead lift, and advis'd them what they ſhould Swear. The Ships waited upon them all this time, while they were laying their Accuſations together, for they were ready to ſail back to *England* before, but they were compell'd to ſtay till the Witneſſes were all furniſh'd, that they might go and teſtify Captain *Smith*'s crimes to his face. But the Jeſt of it was, that the beſt of all his Friends cou'd not give him a better Character, than ſeveral of thoſe very Men did who had made ſuch a confounded noiſe in *Virginia*, and were ſent over on purpoſe to do the ſame in *England*. As to the reſt of them that ſtuck to their Principles, their Accuſations had ſo evidently all the Characters of Malice and Forgery ſtamp'd upon them, that all People, who were not blinded by prejudices, clearly ſaw that it was ſo, and the Captain's Vertues did ſhine but the lighter, for all their violent endeavours to eclipſe them. There were ſeveral of his moſt virulent Adverſaries, that by unexpected events came to receive a juſt recompence for their unreaſonable enmities and treacheries againſt him: The *Dutchmen* were knock'd in the head by *Powhatan*; for when the talk was firſt of my Lord *De la Ware*'s coming over, thoſe fellows highly commended that Lord to him, and promis'd to do mighty things for him, if he wou'd give them leave to go to him when he came. 'No, (ſays the Savage) you have betray'd Captain *Smith* to me already, 'and you'll betray me alſo to this Lord: for being 'falſe to your own Maſter, you cannot be true to me; and ſo commanded his Men to beat out their Brains.

Savages at War with them.

Captain *Smith*'s enemies repent the loſs of him.

Captain *Ratcliffe* alſo, with a Company of Men, attempting to trade, were ſurpriz'd and ſlain by *Powhatan*; and ſo were ſeveral more of the *Engliſh*, that went out under the command of Mr. *Weſt* and Captain *Martin*. For as ſoon as ever the Savages heard that Capt. *Smith* had quitted the Country, they revolted every where, and took all the opportunities that cou'd be, both to ſtarve them and cut their throats. *Powhatan* abſolutely denied them Trade, and the Savages in all places refus'd to repleniſh their decaying Stores with freſh Supplies of Proviſions. And now they began to find the want of Captain *Smith*; yea, his greateſt enemies were then ready to curſe the loſs of him. In a word, the 500 that Captain *Smith* left, were within ſix Months reduc'd to 60, and thoſe forc'd to live upon the wild Products of the Fields, or ſometimes a little Fiſh; yea, the Living ſometimes liv'd upon the Dead. The cauſe of theſe Diſtreſſes was not to be attributed to the barrenneſs of the Country, but their own Riot and Luxury, their want of good Government, and prudent Care in laying up Proviſions; and laſtly, their ill Conduct in making the Savages their enemies. 'Twas in theſe ſtraits that Sir *Thomas Gates*, and Sir *George Summers*, found the miſerable remainders of the Plantation when they arriv'd at *James-Town*.

Sir *Thomas Gates* and Sir *George Summers* Voyage.

Caſt up on the *Bermudas* Iſlands.

The Reader was inform'd in the laſt Chapter, that the beſt part of this Fleet came to *James-Town* without the two Knights: The buſineſs was, that they were ſeparated from one another by one of the moſt violent ſtorms that was ever known. For a matter of four days continually, they did nothing but pump and toil themſelves, to keep the Ship from ſinking; they threw out 100 Tun of water every four hours, and yet for the moſt part of the time, when the Ship had leaſt in her, ſhe bore ten foot deep. They had no leiſure to eat, drink or reſt; ſo that now they were upon the point of committing themſelves to the Mercies of God, when Sir *George Summers* happily diſcover'd Land. This prov'd to be the *Bermuda-Iſlands*, which from this excellent Perſon had afterwards the Name of the *Summer-Iſlands*. Here they came all ſafe aſhore, and tho' theſe Iſlands had formerly had a very ill name, and were ſaid to be fit for nothing but Devils to dwell in, yet they found them a very commodious Habitation for Men, and bleſs'd the Providence that caſt them here.

Mutinies.

The deſcription of theſe Iſlands ſhall not be given here, but remitted to its proper place, where we treat of them profeſſedly. As for the Colony, they did not want Proviſions, but there were no Inhabitants for them to converſe with. The Governour had the plague of ſeveral Mutinies too, ſome of which were ſtopt by ſeverities, and others by gentle treatment of the Offenders. They exercis'd all Religious Duties during their ſtay, and had

opportunities

Chriſtian Service perform'd there.

Come to *Virginia.*

opportunities of performing all the Rites of the Chriſtian Religion, in a place where perhaps never any Religion was practis'd before. Beſides Preaching and Praying, they had Marriages, Births, Baptiſms and Burials here. They ſet up a Croſs as a Memorial of their wonderful preſervation and ſafe arrival at this place; a ſhort account of which was engraven in a Copper Plate, in Engliſh and Latin, and plac'd upon the ſame Croſs, together with his Majeſties Picture in Silver. They alſo built a good Pinnace to help them on in their Voyage to *Virginia*, which was at leaſt 140 leagues from the *Summer-Iſlands*; and, in a word, having every way fitted up themſelves for ſuch a Voyage, they ſet ſail, and had a proſperous Voyage on't thither. They came firſt to the famous Bay of *Cheſepiack*, and then to *Cape Comfort*, where they had the comfort of hearing that all the reſt of the Fleet were come in ſafely the Year before; but the affliction of hearing at the ſame time, that the Colony at *James-Town* was in a moſt lamentable condition. The Preſident then in being was the Honourable Mr. *Percy*, at that time over-looking the Affairs of the Fort, which they had built at *Cape Comfort* the Year before. This Fort was very advantageouſly ſituated, and by reaſon of the Shoals which lie of the Sea-ſide, it eaſily commanded the mouth of the River, tho' it be as broad as the *Thames* between *Greenwich* and the *Iſle of Dogs*.

The ſad ſtate of the Colony in want of Proviſions.

They reſolve to go away.

The Lord *De la Ware's* arrival *A. D.* 1610.

They ſettle at *James-Town* again.

An unfortunate Voyage to the *Bermudas.*

Sir *George Summers's* death.

The Savages continue their violences.

When they came up to *James-Town*, they were ſad Eye-witneſſes of the deplorable ſtate of the Colony there; all things were out of order, their Stores exhauſted, and themſelves upon the point of ſtarving. And that which made the diſtreſs yet far more terrible was, that here were no Supplies brought to their relief; all that was in theſe Ships being no more than ſufficient for 150 Men for a little while. Neither was there any hopes of getting any in the Country; for beſides that, the Savages were all at Daggers draw with them, it was now their Seed-time, and their Corn was but juſt, or ſcarce put into the ground. That little matter however which Sir *Thomas Gates* brought with him from the *Bermudas*, he generouſly reſolv'd ſhou'd be divided amongſt them all; which when it came to be calculated, was found not poſſible to laſt longer than 16 days, tho' husbanded to the beſt advantage, and each Man's ſhare no more than wou'd ſuffice juſt to keep him from being famiſh'd. All theſe things put together, were reaſons ſtrong enough to introduce a general reſolution of quitting the Country, and there was a neceſſity of doing it preſently, for after they were all ſtarv'd there was no running away. Accordingly they beſtow'd themſelves as well as might be in the Pinnaces then in the Road, and thoſe they brought from the *Bermudas*, and ſo the whole Plantation went off together, having buried all their Ordnance before the Fort-gate, and by the particular care of Sir *Thomas Gates* the Town was left ſtanding, tho' ſome diſcontented People had a great mind to have ſet it afire. But they had proceeded but a little way down the River, when they met the Right Honourable the Lord *De la Ware*, who was then unexpectedly arriv'd to enter upon his Government of *Virginia*. So that now they all repair'd to *James-Town* again, with no little Joy at ſo pleaſant a diſappointment, and the care of the Deputy in preſerving the Town from the flames, appear'd to have been to ſome purpoſe. His Lordſhip brought three Ships with him exceedingly well furniſh'd with all neceſſaries, and enough to enable the Plantation to hold out for ſome time. All things were now regulated, his Lordſhip's Commiſſion read publickly, the Council nominated, and all the Officers appointed to their ſeveral Truſts and Charges. The Lord *De la Ware* had the Title of Lord Governour and Captain General: Sir *Thomas Gates* Lieutenant-General: Sir *George Summers* Admiral: The Honourable *George Percy* Commander of the Fort: Sir *Ferdinando Weinman* Maſter of the Ordnance: Captain *Newport* Vice-Admiral: *William Strachey* Eſq; (the Author of this account) Secretary and Recorder. The other Inferiour Officers were alſo nominated, and the uſual Oaths adminiſtred to all. Tho' his Lordſhip had brought a Stock of Proviſions, yet ſince that wou'd quickly require to be ek'd out with further Supplies, Sir *George Summers* therefore propos'd a Voyage to the *Bermuda-Iſlands*, from whence he wou'd fetch 6 Months Proviſion of Fiſh and Fleſh, and accordingly he and Captain *Argoll* were diſpatch'd thither for that purpoſe. But the effects of this Voyage prov'd very unhappy, for theſe two worthy Perſons loſt one another at Sea, and Captain *Argoll*, inſtead of the *Bermudas*, fell in with the Coaſt of *Sagadahoc*, where refreſhing awhile, he return'd with a ſmall quantity of Codfiſh to *James-Town*. As for Sir *George Summers*, he alſo fell in with the ſame Coaſt, miſſing the *Bermudas*, but having refreſh'd there awhile, he continued his ſearch of thoſe Iſlands, and at laſt found them, and his Death there, the effect of his over-toiling himſelf upon a Surfeit. His Heart and Bowels were buried upon the ſpot, and his Body brought back to *England* in his own Ship, which, without any Iron about her, one Bolt only in her Keel excepted, endur'd the Voyage through that mighty Ocean. In the mean time, the Affairs of the Plantation went but badly on; the Savages did nothing but inſult them, coming up to the very Works, and aſſaulting the Men there, and knocking all o'th' head that they found at any time unarm'd or ſtraggling in the Woods. The *Engliſh* had from ſeveral conſiderations hitherto forborn to chaſtize them any thing rigorouſly for theſe Inſolencies, but now they ſaw there was no end on't, and they grew but the bolder and ſawcier for being thus let alone, and therefore they began to treat them after another manner, and teach them good Manners by a little uſe of the Sword.

The *Engliſh* correct them.

Powhatan's proud anſwer.

And demands.

Sir *Thomas Gates* went and plundered the Town of *Kecoughton*, more to frighten the Savages than to get any great Spoil. The Lord Governour alſo ſent a ſort of an Embaſſie to *Powhatan*, to demand the reſtitution of all *Engliſh* Priſoners, and ſatisfaction for all Injuries done, promiſing all Friendſhip and Kindneſs in caſe of his compliance, and on the other hand threatning to take a ſevere revenge, and pay all the old Scores, if he refus'd to do Juſtice. But he (who had now loſt all fear of the *Engliſh* together with Captain *Smith*) let them know he ſhou'd yield to none of their Propoſals, but bid them all depart his Country, at leaſt confine themſelves to *James-Town*, and not rove about ſearching his Towns and Rivers, and making his Property their own; and if they did not, he wou'd make his People do them all the miſchief they fear'd. As for the Meſſengers, he commanded them never to preſume to appear before him any more, unleſs they brought him a Coach and Horſes, for he had heard that the great Lords in *England* us'd to ride in ſuch ſtate to ſee one another.

Engliſh reſolution.

Lord's ſickneſs.

Lord *De la Ware's* care of the Colony.

Some of his *Indians* had been in *England*, and having ſeen Coaches, had told him what things they were, otherwiſe a handſome Wheelbarrow might have ſerv'd well enough; and what a pretty figure wou'd his *Virginian* Majeſty have made, with his Copper Crown and Scarlet Cloak on, (the *Engliſh* gave him) in this one wheel'd wooden Coach? After this, *Powhatan* ſtill kept on his old way of intriguing and watching the Colony; his Spies went prouling about in every Quarter, and his Ambuſcades lay up almoſt to the very Paliſadoes. The *Engliſh*, when they catch'd any of them, gave them Martial Law, and reſolv'd, if *Powhatan* did not alter his courſe in a very little while, to carry Fire and Sword into the Bowels of his Country. But this accident happen'd in favour of him, that the Lord Governour (who otherwiſe wou'd have been as good as his word) quickly after his arrival loſt his health, and by degrees came to ſo ill a habit of Body, that in 8 Months time he was conſtrain'd to return to *England*, having no proſpect of any compleat cure but his own Native air. His Lordſhip ſubſtituted the Honourable Mr. *Percy* Deputy-Governour in his room, who was to remain in that Poſt till farther Orders from *England*. He left the Colony upwards of two hundred, in good ſtate as to health, and furniſh'd with ten Months Proviſion at leaſt. Before his Lordſhip's departure, Sir *Thomas Gates* was ſent for to *England* by the Council for the *Virginian* Affairs there, to give a true account of the Country, and to let them know in plain terms, whether it were ſuch as was ever likely to anſwer all the coſt the Society had been at, in their Contributions towards the Support of the Plantation there. The anſwer of which worthy Gentleman was ſuch, as gave them every way ample Satisfaction, and Encouragement to go on with their Deſign; the Reaſons of which being drawn moſtly from the nature of the Country it ſelf, the Reader will eaſily ſee in the Deſcription of *Virginia*, which we ſhall preſent him with afterwards.

His account to the Council.

When the Lord *De la Ware* came to *England*, he did himſelf in Perſon give the Council a large account of the Affairs of the Colony, which was publiſh'd by Order of the ſaid Council. For the better ſecuring of the *Engliſh* Plantation there, he had order'd three Forts to be built; two of which were ſeated near *Cape-Comfort*, and the third near the Falls.

Sir *Tho. Dale* ſent.

A. D. 1611.

The Company being encourag'd by what they had heard from the Lord Governour, and Sir *Thomas Gates*, ſent over a freſh Supply by Sir *Thomas Dale*, who bore the Title of Marſhal in the Country, and was to command there in chief till Sir *Thomas Gates's* arrival from *England*. This Gentleman found the Plantation labouring under their old Diſtempers of Idleneſs and Lazineſs,

having

Henry Town.

Patowomeek.

Capt. *Argoll's* Diſcoveries.

Sorts of Earth.

having thrown no Corn into the ground, but truſting to the Stores the Lord *De la Ware* had left, and what the Bounty of the Fields would afford them. He preſently ſet to repairing the Town, and having made a Diſcovery of *Naſamund*-River up to the very Head, and after that of the River of the Colony, he fix'd upon a place, (towards the Falls of this latter, near an *Indian* Town call'd *Arſabattocke*) a high Land, encompaſs'd with the main River, and about 18 Miles from the Falls, where he intended to plant a new Town. He had done no more than preparing his Materials for this new Building, when Sir *Tho. Gates* arriv'd from *England*, who came in the Quality of Governour, and brought ſix Ships well-furniſh'd with Men, Cattle and Proviſion. Sir *Tho. Gates* approv'd of the deſign of erecting a Town at the Falls of the forementioned River, ſo that Sir *Tho. Dale* preſently went about it, and in four Months ſpace had form'd ſomething that might (in *Virginia* at leaſt) be called a Town, to which (in honour of the noble Prince *Henry*) he gave the Name of *Henry-Town*. After the arrival of theſe two Knights, the worthy and brave Captain (afterwards Sir *Samuel*) *Argoll*, open'd a trade with the *Indians* of *Patowomeek*, and meeting with a very friendly reception amongſt them, he deliver'd in at *James-Town*, as the Fruits of this Expedition, 1100 Buſhels of Corn. He diſcover'd this time up the River which they call'd *Pembroke*-River, that runs up into the Land about 65 Leagues, being Navigable for any Ship. They ſaw great ſtore of a ſort of Cattle as big as Kine, that prov'd very good and wholſome Meat; they were a very heavy, ſlow ſort of Creatures, and tho' Inhabitants of the Woods, had nothing of that wildneſs in them that other Beaſts have. The Captain likewiſe diſcover'd a Mine, a trial of which he ſent into *England*, and ſeveral ſtrange kinds of Earth, one that the *Indians* of that Country always us'd to eat for Phyſick, and ſaid that it cured all diſorders in the Belly; another like a Gum, white and clear; another red, like *Terra ſigillata*; another very white, and ſo light, that it wou'd ſwim like Corn at top of the water.

Capt. *Argoll's* contrivance to force *Powhatan* to make reſtitution.

Pocahunta ſeiz'd.

Powhatan complies.

Sir *Tho. Dale* goes to *Powhatan*.

Pocahunta's [illegible] upon her Father.

Captain *Argoll*, in this Expedition, perform'd alſo another very good piece of Service, which was the redemption of the *Engliſh* Priſoners that liv'd an uneaſie life with *Powhatan*, partly upon the account of their Slavery, and the continual apprehenſions of ſome cruel death they ſhould be put to at laſt. And he brought it about by this pretty Stratagem: *Pocahunta*, the Beloved Daughter of *Powhatan*, reſided about this time with the great King of *Patowomeek*, which Captain *Argoll* having notice of, he apply'd himſelf to the King of *Paſtancie* Brother to the former, and propos'd to him to get this young Princeſs deliver'd into his hands. Now tho' the King of *Paſtancie* was the Captain's very good friend, yet he was afraid of having his hand in ſuch a buſineſs as that, for fear of drawing *Powhatan*'s anger and revenge upon himſelf, as there was juſt reaſon enough to expect it. However, the Captain telling him (that if he did not do it) it wou'd be a breach of the Friendſhip and good Correſpondence that was between them, and promiſing at the ſame time to ſtand by him with a good force in caſe *Powhatan* ſhould ever aſſault him, he conſented, and went away to his Brother the King of *Patowomeek*, to perſwade him to reſign her. And he having deliberated upon the Matter a little while, choſe rather to oblige the *Engliſh*, and loſe *Powhatan*'s Friendſhip, than the contrary, and ſo deliver'd up *Pocahunta* into the Captain's Cuſtody. Upon this, word was preſently ſent to *Powhatan*, that if he ever intended to have his Daughter again, he muſt diſmiſs the *Engliſh* Priſoners, with all the Arms and Tools that his People had ſtolen from the Colony at *James-Town*, and give a good quantity of Corn into the bargain. The Savage was bitterly perplex'd at this News, but not knowing how to help himſelf, he ſent word back, That if the Captain wou'd bring his Ship into his River, he wou'd ſatisfie his Demands, and there make Friends with him and the *Engliſh*. With which anſwer, Captain *Argoll* return'd to the Plantation, and deliver'd *Pocahunta* to Sir *Tho. Gates* the Governour, by whom ſhe was treated with all the civility and reſpect in the World. As for her, ſhe was ever a lover of the *Engliſh* Nation, and was ſo far from eſteeming this as a Captivity, that ſhe reckon'd it a Freedom. She was young, being not above twelve or thirteen Years old when ſhe preſerv'd Captain *Smith*'s life; and in all points the Pride and Flower of her Country. In order to the managing this Affair with *Powhatan*, it was reſolv'd that Sir *Tho. Dale* ſhould go inſtead of Capt. *Argoll*; ſo he ſet out in his Frigot, with 150 Men, taking *Pocahunta* along with him, and came into the *Pamankie*-River, where *Powhatan* then reſided It was ſome time (notwithſtanding all the former pretences) before the buſineſs cou'd be accompliſh'd. The Savages pretended not to know what Sir *Tho. Dale* came about, and wou'd have referr'd him for diſpatch to *Opechancanough* inſtead of *Powhatan*, who was, they ſaid, three days Journey off. In ſhort, they made ſo many delays, that the *Engliſh* were forced to quicken them by ſome Hoſtilities, and threatnings of more; ſo that at laſt *Powhatan* ſent his Men, but he ſent them in ſuch numbers, that it look'd as if he deſign'd ſomething elſe beſides the redemption of his Daughter. *Pocahunta*, for her part, wou'd hardly vouchſafe to talk to any of them, at leaſt ſhe did it only to a few of the chief; and them ſhe told, That ſince her Father lov'd her no better, as appear'd by his preferring a parcel of old ruſty Tools before her, ſhe wou'd e'en dwell with the *Engliſh* ſtill, who ſhew'd her all manner of kindneſs.

Powhatan's Propoſals.

Powhatan, preſently after this, ſent a Meſſenger to aſſure Sir *Tho. Dale*, that all the Guns, Swords and Tools, together with ſome Corn, ſhou'd be ſent to *James-Town* in 15 days time, and the Priſoners alſo ſhou'd come along with them. He promis'd alſo, that all Deſerters from the Colony ſhou'd be ſent back; and any of his Subjects that did miſchief, ſhou'd be reſign'd to them to be puniſh'd as they thought fit. Laſtly, he nam'd ſeveral of his Neighbour Kings, whom he deſired ſhould be included in the Peace; and as for his Daughter, he freely conſented ſhe ſhould live among the *Engliſh*, deſiring Sir *Tho. Dale* to treat her as his own Child.

Pocahunta baptiz'd and marri'd.

With theſe conditions they return'd to *James-Town*, and *Powhatan* was as good as his word, and perform'd them all by the time limited. *Pocahunta* was very well pleas'd with her life amongſt the *Engliſh*, and by the care of Sir *Tho. Dale* was throughly Inſtructed in the Chriſtian Religion, which after ſome time ſhe made an open and ſolemn profeſſion of, and was thought fit to be enter'd into the Viſible Church by Baptiſm, which accordingly was adminiſter'd to her. After this (with her Father's and Friend's approbation) ſhe was married to an *Engliſh* Gentleman of the Plantation, and her Uncle gave her in the Church.

The *Chickahomanies* ſubmit to King *James*.

Capt. *Argoll* routs away the *French*.

But to go on with Captain *Argoll*'s happy Managements in this Country: The Nation of the *Checkahomanies* having ſignified their deſire of a Friendſhip with the *Engliſh*, Captain *Argoll* went to them to conclude it. They had no King amongſt them, but were govern'd by eight great Men: They were a very ſtout and warlike People, and wou'd never upon any terms acknowledge the Sovereignty of *Powhatan*. Yet now they were very willing to own King *James* of *England* for their King, and ſaid they wou'd be call'd the *Chikahominy* Engliſhmen. The Captain promis'd them aſſiſtance againſt their Enemies, and made each of their Governours a Preſent of Copper, which pleas'd them highly. The Conditions were, That every Harveſt they ſhould bring Corn to *James-Town*, two Buſhels and a half for every Man that carried a Bow: in requital of which, they ſhould receive every one a portion of Copper, and each of their Governours a Suit of red Cloth; and with theſe the Savages were very well ſatisfied. Their Country is a delicate ſpot, and yields them Corn enough to pay their Tribute, without pinching or ſtraitning themſelves. Captain *Argoll*'s Induſtry and Zeal for the good of the Plantation, did not reſt in theſe performances neither, but put him on upon making ſome uſeful Diſcoveries Northward towards *Sagadahoc*, and beyond; to *Port-Royal* and *Santa-Crux*. In which latter Adventures, if he had brought no other advantage to the Colony than the diſplanting and driving out the *French*, (who had begun to fortify within our Limits) taking their Ships, and bringing them away to *James-Town*, this had been ſufficient to have Intitled him to a large ſhare of praiſe; but this benefit did not come alone, but together with it ſuch quantities of Victuals, Apparel, and other Neceſſaries, as prov'd a very ſubſtantial help to the Colony in the circumſtances it was in. And now we muſt go on with the Series of thoſe Publick Affairs.

A. D. 1614.

Sir *Tho. Gates*, the Governour, had return'd to *England* before all theſe laſt Events happen'd, and gave the Company ſuch an account of the Affairs in *Virginia*, as encourag'd them to go on with their honourable Deſigns of cultivating that Country.

Sir *Tho. Dale* preſides.

A. D. 1616.

Powhatan's Daughter comes into *England*.

Sir *Tho. Dale* preſided upon his going away, and under his good Government matters were brought to that good paſs that we have heard; and then he alſo came away for *England*, leaving Captain *Tardly* Deputy-Governour in his room. Along with him came *Pocahunta* the Daughter of *Powhatan*, (by her Chriſtian Name *Rebecca*) together with her Husband, into *England*. *Tomocomo* alſo, one of *Powhatan*'s Counſellors, came over at the ſame time. Thoſe that ſaw theſe Perſons at *London*, give this Character of *Pocahunta*, That ſhe behav'd her ſelf in all reſpects like the Daughter of a King, and was treated as ſuch, not only by the *Virginia* Company, but all the Nobility that converſ'd with her. She intended to have return'd to her Native Country again with the next Ships, but being come as far as *Graveſend*, in order to it, 'twas her fate to die there, giving very good proofs of her ſincerity in embracing the Chriſtian Religion, and a ſound progreſs therein.

As for *Tomocomo*, he ſtubbornly perſiſted in his Paganiſm, notwithſtanding all endeavours to bring him off; he preferr'd the God his *Virginians* worſhipp'd, far before him the *Engliſh* ador'd, and told ſeveral ſtories of the manner of his Deity's appearance amongſt them. This Savage was ſent over by his Maſter *Powhatan*, chiefly to ſee whether *England* was ſo fine a Country, ſo well ſtock'd with Men, and ſo fruitful of Corn, as was reported in *Virginia*; for they were inclin'd to believe, that the poverty and barrenneſs of their own Country had brought the *Engliſh* over thither. As ſoon as he came firſt aſhore at *Plimouth*, he got a Stick and made a notch in it for every Man he met, thinking that way to keep an exact account: but his method of computation fail'd him, and he found a whole Tree might quickly be notch'd out in that manner, yea, tho' he ſhou'd carry home a Cart load of that Arithmetick to his Maſter, he ſhou'd not make him much the wiſer; ſo he laid it down, and contented himſelf only to ſee and wonder, for reckon he cou'd not.

Good way of Caſting Account.

Capt. *Yardly* governs. *A. D.* 1617.

Captain *Yardly* applied himſelf in his Government to the advancement of Tobacco in the Plantation, but was oblig'd to force the *Chekahomanies* to pay the Tribute of Corn they had agreed for with Captain *Argoll*; yet many other Nations of the Savages ſupplied them with Proviſions, and all liv'd peaceably with the Colony during his ſtay. He returning for *England*, Capt. *Argoll* was ſent to ſupply his place. The Lord *De la Ware* alſo went away quickly after, intending to fill up the ſame place that he had formerly done, but he had the misfortune to die at Sea, and never reach'd *Virginia*. *Powhatan* died not long after this, and was ſucceeded by *Itopatan* his ſecond Brother, who, together with *Opechancanough*, confirm'd the League with the Colony.

A. D. 1617.

Lord *De la Ware's* death. *A. D.* 1619.

Captain *Argoll* being call'd over into *England*, Captain *Yardly* (then Sir *George Yardly*) return'd to take the Government upon him, which was highly to the ſatisfaction of all the Plantation. Many Supplies and Recruits came over at ſeveral times, to encourage and carry on the buſineſs here. The Tobacco-planting went on briskly, and one induſtrious Man cou'd very well manage four Acres of Land with a thouſand Tobacco-plants upon it, tho' many out of greedineſs wou'd have more, and ſuffering too many leaves to grow upon one Stalk, had, together with their much greater quantities, much worſe Tobacco. The Tobacco of the growth of this Country was ſo acceptable in *England*, that the beſt of it was ſold by the Tobacconiſts for the product of another Country, and the very worſt and coarſeſt traſh of all went under the Name of *Virginian*. This was a double Robbery; and if *England* ſuffer'd in the Commodity, buying that for other Tobacco which indeed was *Virginia*, *Virginia* ſuffer'd in its Reputation, and was little oblig'd to thoſe Knaves, that repreſented it as a Country producing Tobacco fit only for Porters and Carr-men to take. But there are ill Practiſes and Deceits in all Profeſſions, and the Cheat runs along from the Matters of Souls, to Bodies and Eſtates, and even down as low as Pipes and Tobacco.

Tobacco planted.

Cheat of the Tobacconiſts.

CHAP. XXV.

An Account of the State of the Virginian *Affairs, from the latter part of* A. D. 1619. *till* A. D. 1624.

ONE wou'd think by the large Accounts of Ships, Men and Goods now ſent over into *Virginia*, that all things there ſhou'd be in a very proſperous State, and the Plantation out of all Danger of being ever Inſulted by its Enemies, for before the Year 1619. was expir'd, there were no leſs than eight Ships diſpatched by the Company, beſides four more by private Adventurers, carrying at leaſt 1260 Perſons, who found in *Virginia* near 1000 remaining of them that had gone before. And there were great quantities of the moſt uſeful Commodities of all ſorts tranſported in theſe Ships; Iron, Cordage, Pot and Soap-aſhes, Timber, Salt, Silk, Vines, all ſorts of Tools, Armour, Powder, *&c.* The Colony now began to put on the face of an orderly Government, and to appear like ſomething able to Defend and Maintain it ſelf. It was diſtinguiſh'd into Boroughs, the Lands were ſhar'd and laid out, the Publick ones, and thoſe belonging to private Societies. There was a Colledge erected, and Publick Houſes for the Entertainment of new *Virginian* Gueſts. The Laws were reduc'd into form according to the *Engliſh* Model, and Juſtice ſat Enthron'd with an awful Majeſty here, in ſome proportion to what it did at home. The ſame Year alſo there were eleven or twelve private Patents granted for particular Plantations, the Undertakers in all which were to bring over ſufficient numbers of People for the management of their reſpective Lands. Several well-diſpoſed Perſons alſo gave rich Gifts, towards the promoting ſo good a Deſign as the cultivating of this Country, eſpecially towards the building of Churches, and the Endowment of them; and Publick Schools for the Education of the Children of the Infidels in the Chriſtian Religion, and good Learning. *A. D.* 1621. theſe Encouragements ſtill went on, for what by the Earl of *Southampton*, the Company, and by private Adventurers, there went over 21 Ships, in which were 1300 Perſons; and the private Patents granted this Year were twenty ſix, upon the Fund of each of which a conſiderable number of People were to be Tranſported. This Year was alſo a Year of great hopes, as to the Improvement of the Commodities brought thither: Their Iron-workers aſſur'd them, no Country in the World was fitter for that buſineſs than *Virginia*, both for Wood, Water, Wine and Stone. The *Frenchmen* alſo that belong'd to the Plantation were as poſitive, that none was properer for Vines, Olives, Rice and Silk; and 'tis certain there was good Wine made, which was the product of the Country. The Salt-works went on together with the reſt, and there was a proſpect that enough would be made to furniſh them for all the great and profitable Fiſhings upon that Coaſt. The Cotton-plants that came out of other Parts of the *Weſt-Indies* proſper'd exceeding well; yea, the *Eaſt-Indian* Vegetables thriv'd here too, the famous Plant *Nill*, from whence the Indigo is made, wanted only Skilful hands to manage it. In ſhort, it was not only theſe, but Sugar, Hemp, Flax, Woad, Mulberries, Oranges and Lemons, Corn, and various other uſeful Vegetables, that the Plantation ſet themſelves to the Improvement of, and eaſily ſaw that their Labour was not in vain. But the two principal Commodities that they reſolv'd particularly to attend the encreaſe and improvement of, were Silk and Wine, which alſo they were eſpecially directed to by an Order from his Majeſty to the Earl of *Southampton*, Treaſurer, and to the Council and Company of *Virginia*, and from them to the Governour and Colony reſiding in that Country.

Large Supplies ſent to *Virginia*, *A. D.* 1619. & 1620.

The Colony ſettled like a State.

Private Patents.

New Supplies in *A. D.* 1621.

Orders for improving Silk and Wine.

The Governour in this Year 1621. was Sir *Francis Wyatt*, who, by his Letters to *England*, certify'd the Company of the happy and flouriſhing State of the Colony: All things were in a profound Tranquility, the Savages were quiet in every Quarter of the Country about them, and there was no noiſe or clamour of War to be heard; every Man ſat ſecure under the ſhadow of his own Tree, and eat the Fruits of his Land without diſturbance. There ſeem'd to be an entire Confidence, a friendly Truſt (without any tincture of jealouſie and ſuſpicion) repoſ'd in one another mutually, by our

Sir *Fr. Wyatt* Governour in 1621.

People and the Natives. Their Houſes ſtood open to each other of both ſides, and the *Engliſh* (who of the two were capable of giving the better Entertainment) very commonly fed the Savages at their Tables, and lodg'd them in their Bed-chambers. The Planters were ſcattered up and down the Country in ſeveral little Companies, and follow'd their rural Labours with alacrity, being under the ſure guard of a Peace. The great Prince of all the Country at this time was *Opechancanough*, the Brother of *Powhatan*, and now his Succeſſor, and the ſame Perſon too whom the brave Captain *Smith* dragg'd along by his Forelock in ſight of all his Army, none of whom durſt ſtir to relieve him. All manner of injuries, and rough dealings of both ſides, ſeem'd to be perfectly forgotten; and this Prince was enter'd into the ſtricteſt League with the Plantation, not only for reciprocal Defence, but as one concern'd with them in the profits of Mines, or any other Diſcoveries made in his Country. And whereas his Majeſty (*Opechancanough*) us'd to dwell in a ſort of a Manſion, that might without injury be compar'd rather to a Hogſty than a Houſe, to oblige him the more, they built him a Houſe after the *Engliſh* faſhion, and put ſome Furniture in the inſide, ſo that he was now ſeated after another manner than ever any of his Predeceſſors had been. Of this Houſe he was ſo exceſſively proud, that he did nothing but walk in and out, ſhewing it to all the ſtrangers that came, who admir'd the ſtrange pomp he liv'd in as much as he did himſelf. But that which moſt particularly pleas'd his Savage fancy, was the Lock and the Key of the Door; he was ſurpriz'd to ſee that the turning of a little piece of Iron one way ſhou'd make the Door open, and the contrary motion ſhou'd ſhut it as faſt. This Engine was ſo wonderful to him, that he was never weary of making Experiments upon it, and 'twas a thing that he ſpent a good part of the day in to lock and unlock his Doors. He was no ſooner up in the Morning, but to work he went with his Keys; and if neither the Locks nor they were broke and ſpoil'd, it was none of his fault. The place of a Turn-key in ſome Jail wou'd have fitted him to the life, and if the Colony had any ſuch to beſtow, they wou'd have done well to have preferr'd him to it.

This wiſe King admiring Gun-powder as much as he did Locks and Keys, laid out a good piece of ground for a Gun-powder Plantation; and having Manur'd it in ſuch a manner as he thought moſt agreeable to the nature of that Seed, he threw it liberally into the well-prepar'd Soil, not doubting but he ſhould reap the Fruit of his Labours in a rich and plentiful Crop. But the *Virginian* Soil not being apt for Gun-powder, he cou'd never bring it to any thing, nor have the pleaſure of ſeeing it ſhoot up into the Blade, tho' he very much deſired it.

But we muſt turn our Eyes now to a more melancholy Scene, and ſee the Plantation (after theſe happy days) involv'd in the greateſt miſeries and confuſions; all this Peace and Quietneſs was but the Savages preparation for Murder and Bloodſhed. They wound themſelves thus into the greateſt familiarities and freedoms with the *Engliſh*, to accompliſh their ruin with the more ſecurity, and to be the leſs ſuſpected while they were contriving of it. Nay, ſo perfect was their diſſimulation, that but two days before the Maſſacre, they guided a Company of the *Engliſh* ſafe through the Woods, and return'd thoſe that had been amongſt them upon buſineſs in a very friendly manner, and all this to encreaſe their confidence in them, and take them off from their guard; that ſo, when the ſurprize came, it might be the more effectual, and the ſtroke given do a compleat and full execution. They had aſſembled themſelves in great numbers together, and being divided into ſeveral Bodies, reſolv'd to fall upon all the Plantations at one and the ſame time.

Friday Morning, *March* 22. *A. D.* 1621. was the fatal time, and the Cut-throats, in purſuance of their deſign, came about the *Engliſh* Houſes, having no manner of Weapons with them, but inſtead of them bringing Furrs and Proviſions to truck for Glaſs-Beads, as they uſe to do at other times. And the *Engliſh* entertain'd them with their accuſtom'd freedom, and in many places ſet them down at their Tables to Breakfaſt with them, little imagining what a ſort of Breakfaſt the others intended to give them. When they ſaw their opportunity they ran to all the Weapons they ſaw lying about the Houſes, all the Tools and Inſtruments by which miſchief might be done, and fell a killing as faſt as they could drive: And what ſome did in the Houſes, others did abroad in the Fields, and other places, amongſt the Workmen and Labourers that were at their ſeveral Employments. They ſpar'd neither Age nor Sex: they treated their greateſt Benefactors with the ſame cruelty and rigour that they did others whom they might have a pique againſt; nay, if there were any difference, they us'd them the moſt barbarouſly, and ſpurn'd their mangled Carkaſſes with the greateſt malice and contempt. The number that fell by their hands was near 400, taking Women and Children into the account; and amongſt the Men were ſeveral Perſons of conſiderable Figure in the Colony, and of the Council too. The Slaughter had certainly been Univerſal, and the *Engliſh* entirely Extirpated this time, had not the merciful Providence of Heaven open'd the Mouth of a Savage, to tell of the Plot before 'twas put in execution. By this means, timely notice was given to *James-Town*, and they ſtood upon their guard; and ſo they did in ſeveral other places that were within the reach of this Intelligence, and where 'twas poſſible to give warning of the danger. And wherever the Savages found them in that poſture, they march'd off as faſt as they cou'd, never venturing to ſtand the trial, tho' in ſome of the Plantations there were but a few Men together, and but ſlender arm'd and fortify'd neither.

The next Year the *Engliſh* reveng'd this Outrage in *A. D.* 1622. ſome meaſure, marching into the Country, and burning the Villages and Corn-fields of the Savages: They turn'd the Town of *Pamanuke* alſo (which was *Opechancanough*'s chief Seat) topſy-turvy, and left him a lively Image in his Country, of that Ruin and Deſolation he had ſpread through the Plantation. What mov'd the perfidious Savage to treat the *Engliſh* thus is uncertain, neither cou'd they ever know any other cauſe for it, than the killing of a Savage who had baſely murder'd an *Engliſh* Gentleman in the Woods: But he was a politick ſly Raſcal, fit to manage an Intrigue, and *Opechancanough* was ſaid to be highly Incens'd for the loſs of ſo uſeful a Tool, and to Vow this Revenge upon that ſcore. He prov'd ever afterwards a moſt inveterate Enemy to the *Engliſh*, and practis'd with a King upon the Eaſtern ſhore, to furniſh him with ſome quantities of a Vegetable poyſon, to deſtroy all them that ſurvived the Maſſacre; but that honeſt Savage refus'd it, and came and diſcover'd the whole Matter to the *Engliſh*, offering to juſtify the truth of it, with five or ſix of his great Men, at any time. *Opechancanough* had the fate of a miſerable death, and 'tis believ'd ſome of the *Engliſh* gave him that for his Reward.

The Colony, after this dreadful ſhock, came into a ſetled State again, and his Majeſty of *England* not a little concern'd at it, order'd them a ſtock of Arms and Ammunition out of the *Tower*, that they might be able to defend themſelves from the like Inſults for the future; and alſo appointed a Commiſſion to examine the Affairs of *Virginia*, and find out the letts that had hitherto hindred her from anſwering the Coſt that had been beſtow'd upon her.

Chap. XXVI.

The Hiſtory of Virginia, *drawn from the Writings of Captain* John Smith.

Boundaries.

WHat the Boundaries of this Country are, will be more eaſily ſeen by ſurveying a Map, than deſcrib'd by our writing down the Names of the Countries: That part of it which the firſt Plantations took up, was from 37 degrees to 39 degrees North Lat.

Entrance.

Great Bay of *Cheſepiack.*

The entrance to it by Sea is at the mouth of a very fine Bay call'd *Cheſepiack*-Bay, which is eighteen or twenty Miles wide. The Cape on the South-ſide was call'd *Cape-Henry*, in honour of the Prince; and that on the North-ſide *Cape-Charles*, in honour of the Duke of *York*. The adjoyning Country is as ſweet and pleaſant as moſt that the World can ſhow; and there are all the Beauties that Mountains, Valleys, Plains, Brooks, and large Navigable Rivers can add to a Country. Theſe Navigable Rivers are five in number; they lie on the Weſt-ſide of the Bay, and have their Falls within 15 or 20 Miles of one another.

Navigable Rivers

Powhatan River.

The firſt of theſe, and which is next to the Mouth of the Bay, is called *Powhatan*-River, from a very conſiderable Country that lies upon it: It has its Courſe from the W. & by N. its Riſe from certain Rocks in the Country of *Monacan*, its Mouth near three Miles broad, and is Navigable 150 Miles, but not to be paſs'd any farther by reaſon of Falls, Rocks and Shoals. There are abundance of other Rivers of leſſer note, that loſe themſelves in this great one; and upon all, or moſt of them, dwell ſome little Nations (or large Families of the *Virginians*) under their reſpective Werowances or Petty Kings.

Pamanuke.

About 14 Miles Northward from the *Powhatan* is the River *Pamanuke*, which is Navigable ſixty Miles, and with ſmall Barges thirty Miles farther.

Toppahanock.

The third is the River *Toppahanock*, Navigable 140 Miles. The fourth *Petawomeck*, which is ſix or ſeven Miles broad, and navigable as many Miles as the former.

Pawtuxunt.

The fifth *Pawtuxunt*, inferiour in magnitude to the reſt, but the Channel 16 or 18 fathom deep in many places.

Bolus.

To which may be added another large and navigable River, 30 Leagues to the Northward, which the *Engliſh* call'd *Bolus* upon the account of the Soil reſembling *Bole-Armenick* thereabouts. All theſe (the laſt only excepted) have varieties of People inhabiting about them, many other leſſer Rivers alſo falling into them; the Names of either of which wou'd be of little conſequence for the Reader to know, unleſs ſo far as the Colony was concern'd with them, and in that caſe, as there is occaſion, they may be mention'd. The temper of the Country is ſuch, as very well agrees with the Conſtitutions of *Engliſh* Bodies, being once a little us'd and ſeaſon'd to it.

Seaſons.

The Summer is as hot as in *Spain*, and the Winter at leaſt as cold as in *France* or *England*. The heats of the former Seaſon are very comfortably mitigated by cool Breezes, and the extreme cold of the other continues not long. There are uncertain viciſſitudes of Droughts and rainy wet Weather;

Thunder.

and the Thunder and Lightning is more terrible here than in any parts of *Europe*, at leaſt 'tis ſo for the moſt part.

Winds.

The Winds are no more reducible to certain Rules here than in other parts, only frequent Obſervations have confirm'd and recommended theſe. That the S. W. Wind blows the ſtrongeſt guſts, and brings Thunder and Heat. The N. W. is very cold, and is attended with fair Weather. The N. exceedingly ſharp; and the E. and S. E. foggy and rainy.

Length of Summer and Winter.

The main of the Summer is in *June*, *July* and *Auguſt*; and the Winter half *December*, *January*, *February*, and half *March*.

The Soil.

The Soil (take it all together) is ſuch as may well enough bear a part in compoſing the Character of a happy Country.

Sorts of Earths.

In ſome places you meet with a black Mould, in others a fat ſlimy Clay, in others a Gravel; but 'tis not uncommon to light upon Marble, Fullers-earth, Bole, or at leaſt a thing ſo very like it, that the *Engliſh* gave it the Name of *Bole-Armenick*, and believed it might be as good as the *Lemnian* (tho' here 'twas to be called *Virginian*) Earth. What Mines there are is uncertain, only there were ſome indications of Copper and Antimony: The diſſolving Snows waſh off alſo from the Mountains (about *Cheſepiack* Bay) a certain glittering Matter which they cou'd not well tell what to make of, but in a Country that had had a reputation for Gold, would perhaps have been taken for ſomething of that nature.

No Graſs.

In all the Country there is little or no Graſs but what grows in low marſhy Grounds, for 'tis all over-run with Trees, that by their continual droppings, and the ſtrength of the Soil together, turn all into high rank Weeds; which, notwithſtanding, is a diſtemper that might be cured by good Husbandry.

Trees.

The principal Wood of this Country is Oak and Wall-nut, tho' there is plenty alſo of moſt other ſorts of Trees. Of the former ſort you ſhall meet with abundance, ſo tall and ſtrait, that they will bear two and a half foot ſquare of good Timber for twenty Yards together. There are two or three kinds of them; and one of thoſe kinds, whoſe Bark is much whiter than the reſt, yields an Acron which is ſweet, and being boil'd half a day in ſeveral Waters, affords a very ſweet Oil, which the Natives keep by them to anoint their Heads and Limbs. The Aſh and Elm are very good for making Soap-aſhes, but the large Trees always make the beſt. The Cypreſs-trees (for ſo our *Engliſh* call'd them, becauſe the Wood, the Fruit and the Leaf, did moſt reſemble it) are many of them three fathom in compaſs about the Root, very ſtrait and tall, and running up fifty, ſixty or eighty foot, without a branch ſhooting out of either ſide. Neither are Firr, Cedar and Saſſafras-trees, ſtrangers to this Country, but on the other hand very plentiful, as the many Ships lading of the two latter, which the *Engliſh* have carried from hence, will ſufficiently prove. And beſides the Gums which theſe Trees yield plentifully, there is another like a white Poplar, from whence comes a clear odoriferous Gum reſembling Turpentine, and for its excellency call'd by ſome a Balſam.

Fruits.

In many parts of the Country there are Cheſnuts, equal to the beſt that any *European* Country produces. The Plums are of three ſorts; the red and white are like our Hedge-plums, but the others, which they call *Putchamins*, grow on a Tree as high as the *Palmeto*: the Fruit is like a Medlar, 'tis firſt green, then yellow, and when ripe 'tis red; if it be not fully ripe, it will draw a Man's Mouth awry, and put him to pain in the eating of it, but when 'tis in its perfect ſtate, 'tis as delicious as an Apricock. The Cherries are ſhap'd like Damzens, however, for the ſake of the Cherry, colour and taſte, the *Engliſh* gave them that name. The Vine is a ſort of a wild Plant here, but with care and dreſſing might be made to turn to good account: In many parts you ſee them climbing up to the tops of the higheſt Trees, yet theſe bear but few Grapes. But by the Rivers-ſides, and about the Dwellings of the Savages, where they are not robb'd of the Sun's heat, they are laden with Fruit, tho' it be not the effect of any Art or Care in pruning and manuring, but purely the bounty of Nature. Theſe they call Hedge-grapes, but there is another ſort near as big as a Cherry, which they call *Meſſamines*, which yield a thick heavy juice, and not of ſo pleaſing a taſte when made into Wine.

Chechinquamins.

The *Chechinquamins* are a Fruit in much eſteem amongſt the Natives, it is husked like a Cheſnut, but reſembles an Acron other ways; it is but ſmall, as alſo is the Tree it grows upon.

Rawcomins.

The *Rawcomins* are like our Gooſeberries in moſt reſpects, and they eat them either raw or boil'd.

Putchamins.

The *Putchamins* do as much reſemble Medlars, and theſe, together with Wall-nuts, Cheſnuts, Acrons, and *Chechinquamins*, the Natives dry and keep; and at any time when they pleaſe to have that Liquor, they beat them very ſmall, and mixing Water with them, after they have let it ſettle, and pour'd off the clear Liquor, they have a Drink which they value not a little. Of the Cheſnuts alſo and *Chechinquamins*, boil'd about three or four hours, they make both Bread and Broth too; either of which is an Entertainment for their greateſt Men. In the watery Valleys grows a Berry which they call *Ocoughtanamins*, which are very like Capers. Theſe they dry in Summer, and when they have a mind to eat them they boil them near half a Day, which it ſeems they require, being otherwiſe very unwholſome. The *Matteumes* are a Fruit that grow as our Bents do in Meadows; the Seed of which is not much unlike Rye, tho' ſmaller. This they uſe for making a dainty ſort of Bread, upon which they ſpread Deers Suet as we do Butter. Strawberries, Raſberries, Currans, Hurtleberries, are as common here as in *England*.

Roots. *Tockawhoghe.*

Their chief Root for Food is that which they call *Tockawhoge*, which grows like a Flag in low muddy places, the Root it ſelf being of the bigneſs, and having the taſte of a Potato. They are forc'd to give them a ſubſtantial waſhing over the Coals, or at leaſt to ſlice and dry them well in the Sun, and to eat them with Sorrel and Meal, or ſomething elſe, to qualify the extream heat and acrimony of them, or elſe they wou'd be very prejudicial, for eaten raw they are as bad as poyſon.

Wighſacan.

Their other main Root, which they call *Wighſacan*, ſerves for Phyſick, as the former did for Food; they bruiſe it, and apply it to the part affected.

Pocone.

Pocone is a Root, which being dried and pulveriz'd becomes red; this they uſe for painting their Bodies, as well as curing them of pains and ſwellings.

Roots for colouring.

Of the like uſe is the *Muſqualpene*, which is as red as Blood, and with which they paint their Mats, Targets, and the like. Abundance of the *European* Plants are found here, as Saxifrage, Pellitory of *Spain*, Angelica, with ſeveral others. The increaſe of their Corn is very conſiderable, every Stalk commonly bears two Ears, many three, and ſome four; and every Ear has ordinarily from 200 to 500 grains. The Stalk, while it is green, has a ſweet juice in it, which they ſuck very greedily when they gather their Corn; for 'tis to be noted, that as we gather our Peaſe green, ſo do the *Virginians* their Corn when it is green, and then they roaſt (that is ripen) it afterwards by a good Fire, chuſing rather to do it that way themſelves, than to let the Sun, by a kindly heat, do it for them.

Planted Fruits.

Peaſe and Beans they have alſo amongſt them, but theſe are in the number of their dainties, and they plant them amongſt their Corn. The only planted Fruits they have are Pumpions, Macokes, which are like Musk-melons, but leſs, and not ſo well taſted, ripening in the beginning of *July*, and continuing till *September*: and Maracokes, a Fruit like a Lemon, which begin to ripen in *September*, and continue till the end of *October*; both theſe increaſe infinitely.

Animals.

As for the Animals, the principal are their Deer, which differ not at all from ours. The Bears are very ſmall in compariſon with them in *Muſcovia* and *Tartary*. The Beavers are as big as an ordinary Dog, but their legs exceeding ſhort, and the two fore-feet as much like a Dogs, as the hinder are a Swans; the tail is quite void of hair, and 'tis one of the choiceſt bits the Savages deſire to eat. The Otters are very numerous, and much ſuch as ours are, and the Savages eat them as heartily as they do Fiſh. The Foxes are very ſmall, and like our Silver-hair'd Conies, but wholly without that rank ſmell that they have in theſe Parts. Their Dogs ought rather to be call'd Wolves, ſince they never bark but howl; yet are they really diſtinct from the Wolves, which are in this Country no bigger than our *Engliſh* Foxes. Martins, Polecats, Weazels, and other Animals of that Tribe, they have, but they are ſeldom ſeen; and 'tis obſervable of them, that they are not near ſo ravenous as they are with us, and the Hen-rooſts lie very quiet as for any thing they do to diſturb them.

Other ſtrange Beaſts.

The *Aroughcan* is a Beaſt much like a Badger, but lives much up in Trees as Squirrels do. Squirrels here are almoſt as big as our ſmaller ſort of Rabbits. The *Aſſapanick* the *Engliſh* call a Flying-Squirrel, becauſe by ſpreading their legs, and extending their bodies to the full ſtretch, they will as it were fly along for 30 or 40 Yards together. The *Opaſſam* has exactly the Head of a Swine, and a Tail as much reſembling that of a Rat; the Female has a Bag under the Belly, wherein ſhe lodges, carries and ſuckles her young. The *Muſſaſcus* is a ſmall Creature like our Water-Rats, but ſmell extremely ſtrong of Musk, which ours are far enough from doing. The *Virginian* Hares are none of them bigger than our Conies, and very few of them to be found.

Fowl.

For Fowl, *Virginia* affords plenty of the Nobler and more Princely ſort, as well of the Vulgar. There are Eagles, and all ſorts of Hawks, but (which is odd) they prey moſtly upon Fiſh. Partridges are little bigger than our Quails, but the wild Turkeys are every way as large as our tame ones. Black-birds, Thruſhes, with a great many ſorts of ſmall Birds of various colours, are in great plenty too. In the Winter there come vaſt numbers of Swans, Cranes, Herons, Geeſe, Ducks, Widgeons, Dotterels, Ox-eyes, Pigeons and Parrots, with many other kinds which the *Engliſh* were ſtrangers to.

Fiſh.

For Fiſh, you have there Sturgeon, Grampus, Porpus, Seals, Stingrays, (whoſe tails are ſo dangerous, as Captain *Smith* found to his coſt) Salmon, Trouts, Soals, Plaiſe, Herrings, Cony-fiſh, Rock-fiſh, Eeles, Lampreys, Cat-fiſh, Shads, Perch, Crabs, Shrimps, Craw-fiſh, Oyſters, Cockles, Muſcles. They tell us alſo of a very ſtrange Fiſh, which for the reſemblance may be call'd the Dragon-fiſh, of which we have no other deſcription than only this, that 'tis a very odd ſpectacle.

Inhabitants.

But let us now come to the Inhabitants: This large and happy Country is not ſtock'd with People at all in proportion to the goodneſs and greatneſs of it.

Virginia not full of People.

The greateſt numbers are of Women and Children; the Men but few, eſpecially the Warriours, for within ſixty Miles of *James-Town* there were about 7000 People, and of Men fit for War no more than 2000. And in one reſpect 'tis well enough that there are no more People, for not taking care to make any conſiderable profit of their Lands, (tho' the fruitfulneſs of the Soil does ſtrongly ſolicit their diligence in that caſe) did they ſwarm ſo here as they do in ſome Countries they muſt be half ſtarved, at leaſt they muſt be forc'd to take another courſe to maintain themſelves.

Their different ſizes.

But tho' the People lie ſo thin, yet they differ as much both in language and ſtature, as can well be ſuppos'd in ſo little a compaſs of ground; for ſome are very ſhort and little, as the *Wighcocomocoes*, others again are extremely large and tall, and but one remove from Giants, as the *Seſqueſahanecks*, to whom our *Engliſhmen* appear'd but as little puny Fellows, and as ſo many mouthfuls for them.

The People.

They are generally tall and ſtrait, and well-proportion'd, of comely features enough, and of a brown complexion; tho' 'tis certain that they are born white. They are black-hair'd, and Nature has ſcarce given the Men any Beards at all; thoſe that have any thing conſiderable are very few. A Barber therefore wou'd hardly live amongſt the People of *Virginia* by ſhaving faces, ſince he may go half a ſcore Mile before he meets with a Beard; yet by frequent practiſing with the Soil, a Crop of that kind might be made to ſpring up, and Beards come to thrive in *Virginia* as well as Tobacco.

Their Cuſtom in managing their hair.

Theſe Savages have alſo that ungainly Cuſtom of ſhaving the hair off their Heads cloſe of one ſide, and letting it grow long of the other; but the Women are their Barbers, and cut it into varieties of ſhapes for them according to their fancies. As for themſelves, they clip and ſnip their own as beſt pleaſes them; however, they always obſerve this Rule, to leave ſome part of it long as the Men do.

Their Apparel.

The Apparel of both Sexes is no other than the Pluſh and Velvet that comes off from the backs of wild Beaſts. Theſe Skins are dreſs'd in Winter-time with all the rough hair upon them, and in Summer without it. The better ſort wear Mantles of Deers-skins, not much different in faſhion from the *Iriſh* ones, ſome embroider'd with white Beads, others with Copper, others painted after their manner. There are ſome alſo that have Mantles made of feathers, ſo well wrought and woven with threads, that nothing but the feathers cou'd be diſcern'd. The Ornaments belonging to them are Beads, and pieces of Copper in their Ears, Bracelets about their Arms, and Chains of the like nature about their Legs.

Womens finery.

The Women are not contented with theſe, but have the forms of Birds, Beaſts and Serpents, wrought upon their Skins; and to theſe they ſometimes add various paintings.

Ear Jewels of the Men.

But the Men have ſome of them the moſt extravagant fancies imaginable in the choice of their Ear-ornaments. How wou'd it make any Man laugh to ſee a *Virginian* with a dead Rat hanging by the tail in his Ear? To ſee another with a living Snake thruſt through the hole made in that part, and twiſting it ſelf about his Neck, or flapping him ſometimes in the Face? Neither wou'd it be leſs pleaſant to behold them with the ridiculous attire of their Heads: The Wing of a Bird, with the Tail of a Rattle-Snake faſtned to it; the Skin of a Hawk (or ſome ſtrange Fowl) ſtuffed out, and the Wings extended to their full length: The Hand of ſome dead Man (ſome Enemy ſlain in the Wars) dried and ſet bolt upright. What gay folks theſe are now? And how much neater any of theſe Dreſſes are than our Hats and long Perriwigs?

Painting their Skins.

Their faces and ſhoulders are often painted red with the pouder of the Root *Pocone* mix'd with Oil; this they do to preſerve their Skins from the parching heat in Summer, and the pinching cold in Winter. The figures they paint upon their Bodies are various; but this is a general Rule, that he is the greateſt Gallant that has the uggliest forms, and looks moſt like a Devil. That the Women, inſtead of Topknots, have appear'd in *Virginia* with Stags-horns upon their Heads, Captain *Smith* was an Eye-witneſs in one of his Journeys to *Weramocomoco*; but that being only a Luſory Scene, and the deſign of thoſe young Women being manifeſtly to ſurprize him, one can't from thence eſtabliſh the certainty of the Cuſtom of Womens wearing horns in that Country.

They were then in Maſquerade, and being naturally as wild as Bucks, thought fit to appear in Diſguiſe like Stags. Yet this is to be ſaid of the *Virginian* Women, that they are modeſt and can bluſh; and there is this particular effect of their modeſty very viſible beſides, that they always take a nice care to hide the obſcene Parts.

Habit of *Saſqueſahanocks*.

Strange voices.

The *Saſqueſahanocks*, who differ very much from all the reſt of the *Virginians* in their bulk and ſtature, are alſo much more formidably dreſs'd; they look like ſo many *Hercules*'s arm'd with mighty Clubs, and cover'd with the Skins of Bears and great Wolves, the compleat Heads of which were on to the Hides, and ſhew'd their horrible Teeth, ſeeming yet to threaten deſtruction. The Paws alſo were on as well as the Teeth, and made the Monſters that wore them appear as fierce as thoſe to which they belong'd. Their way of ſpeaking was ſuch as might naturally be expected from ſuch huge Bodies. The voice in the wide cavities of their Throats, ſounded like a noiſe coming out of ſome hollow Cave or Vault; and were thoſe Men to talk in ſolitary places through Speaking-trumpets, a credulous Mob might eaſily be impos'd upon, and made believe they heard the voice of ſomething more than Humane. 'Tis a wonder this Generation of Men were not all Prieſts, ſince Nature has form'd them ſo well for Impoſture, and ſince thoſe Men, in all theſe Countries, cheat the People with far leſs advantages for doing it. Our *Engliſh* were viſited by ſome of this Nation, and therefore are the more bold in giving us this particular account of them. They had much ado to defend themſelves from being ador'd and worſhipp'd by them, ſo many excellencies did the *Saſqueſahanocks* find in their ſmall proportions, which they cou'd not ſee in their own Gigantick ones.

Saſqueſahanocks good condition'd.

Character of the *Virginians* in general.

As for their Women, they don't tell us they ſaw any of them, but 'tis more than probable they are of the ſame ſize with their Husbands, and ſo are their Matches in a double reſpect. Now the worſt part of theſe People is that which is viſible to the Eye; their outſides are rough and coarſe, but their tempers are more honeſt and innocent than the reſt of their Neighbours, for the *Virginians* are generally ſly, crafty, treacherous, ſeldom conſtant and true to their Word, but where fear or compulſion makes them ſo. They don't want ſence and quick apprehenſion, but they want honeſty and ſincerity, which is the worſe want of the two, and renders them that lie under it the worſt Neighbours to them that are about them. If they don't ſteal and thieve from one another, 'tis not becauſe their fingers don't itch at it, but becauſe they are afraid their Conjurers ſhou'd diſcover them: For they have a ſort of Men amongſt them that pretend to be Revealers of Secrets, and whether they are ſo or no, the common People believe them to be ſo, and conſequently are honeſt, becauſe they are afraid to play the Rogue.

Their Houſes.

The *Virginian* Women we ſaid before were modeſt; but ſome of our Authors ſay, That *they are careful not to be ſuſpected of Diſhoneſty without the Leave of their Husbands.* From whence a Man might infer, that when their Husbands gave their conſent they cou'd let that care drop, and be ſuſpected of Diſhoneſty; or (which amounts to the ſame) do ſomething to give cauſe to that ſuſpicion. For when the Man gives leave, if the Woman ſhould go no farther than bare ſuſpicion, 'twou'd be a very ſtrange thing. As for the Habitations of theſe People, they build their Houſes for the moſt part by the Rivers, or at leaſt not far from ſome freſh Spring. Theſe Houſes are built like our Arbours, of ſmall young ſprigs bow'd down and tied together, and cover'd very cloſe with Mats, or the Barks of Trees, which, as they order the Matter, defend them ſo well, that in ſpite of Rain, Wind or Snow, they are as warm as Stoves. At the top, right againſt the Fire-place, there's a hole to let the ſmoke out, but yet ſo much ſtays in (for all the hole) that 'twill make a Man that is not us'd to it cry to ſtay there.

Their Beds and way of ſleeping.

Their Beds are little Hurdles made of Reeds, and cover'd with Mats, and ſupported about the Floor by ſtrong Hurdles of Wood. Here they lie Heads and Tails by one another, round about the Fire, ſome cover'd with Mats, others with Skins, and others ſtark naked. And 'tis no little number that thus huddles together while they take their natural reſt, for if in one Houſe you ſee eight or ten, in the next perhaps you ſhall find twenty or thirty in this poſture. Adjoyning to their Houſe are their Gardens, or Fields, for the Service of their Families, nay, for the moſt part they ſtand in the middle of them; and not far off is ſome little Wood or other that ſupplies them with firing.

Their Labours.

Planting the Fields and ſowing their Corn.

The Men beſtow their time in Hunting, Fiſhing, and other ſuch Exerciſes, while the Women are employ'd in making Mats, Baskets, Pots, providing Victuals, planting and gathering the Corn, and lugging it home upon their ſhoulders: For the *Virginians*, we muſt know, ſcorn all thoſe kinds of Labours, and look upon them as too ſordid and effeminate for their Sex, and therefore throw them upon their Women. But yet the Men don't think it beneath them to make their own Cloaths, and certainly the work of a Taylor is much more Womaniſh than that of a Husbandman; and a Man looks more ſilly with a Needle between his fingers, in the Chimney-corner, than with a Spade or a Pickax in his hand abroad in the Fields. The hardeſt of all their Work is indeed the planting and dreſſing of their Fields, for which reaſon one wou'd think the Men ſhou'd have taken it upon themſelves. In order to the preparing of the ground, they do thus: As the Country is naturally over-run with Woods, ſo they come and bruiſe, and beat the Barks of the Trees, to make them burn the eaſier; then they make Fires all about the Roots, and ſcorch them ſo effectually, that they grow no more. The next Year they do, with a very little labour, pull theſe ſcorched Trees up by the Roots, and in that Mould where they ſtood they plant their Corn. The way is, making a hole in the ground with a Stick, to put 4 grains of Wheat, and 2 Beans, into the ſame hole: Theſe holes are made about 4 foot diſtance from one another. 'Tis the buſineſs of the Women and Children to keep all clean and clear of Weeds; and when the Corn is grown middle high, they hill it about like a Hop-yard.

Seaſons for planting.

Odd piece of Husbandry.

Way of managing their Food.

The beginning of their Plantation is in *April*, but the chief is in *May*; and ſo they continue till the midſt of *June*. What they ſow in *April* they reap in *Auguſt*; in *May* in *September*, in *June* in *October*. 'Tis one piece of Husbandry practis'd here, which is not common in other Countries, to ſow or ſet other things amongſt their Corn. 'Twas ſaid juſt now that they bury Wheat and Beans together in the ſame hole; but this is not the only inſtance of it, for you ſhall ſee them plant Pumpions, and other Fruits, amongſt their Corn, neither do they believe that either of theſe will do the other an injury by its neighbourhood. 'Twas hinted before that they don't let their Corn ſtand upon the ground till 'tis ripe, but gather it green, and roaſt it by the Fire. Many times they bruiſe it in a Mortar, and lapping it up in the leaves of the ſame, boil and eat it as a great dainty. They make a ſort of Meal or Flower of their roaſted Corn, of which they make Cakes; and theſe they ſometimes Bake and ſometimes Boil, eating the Broth together with the Bread. And they do in general eat the Broth of all things they boil, whether Fiſh or Fleſh, and this indeed one wou'd not ſo much wonder at, when one hears they eat that made of Meal alone; yet Porridge made of Shell-fiſh, a Man wou'd think ſhou'd be but poor ſtuff.

How they live at ſeveral times of the Year.

According to the various Seaſons of the Year, ſo does their Diet alter and change. In *March* and *April* they feed much upon Fiſh, Turkies and Squirrels. In *May* and *June* they live upon Acrons, Wall-nuts, Strawberries, Mulberries, Oyſters, Crabs and Tortoiſes. In *July* and *Auguſt* they eat Roots, Fiſh and green Wheat; and at other Seaſons live upon their roaſted Corn, and what they get by Hunting. This diverſity of feeding makes a ſtrange alteration in the ſtate of their Bodies; ſometimes they are round and plump, at other times as lean as Rakes. They change juſt as the wild Beaſts themſelves do, that at certain Seaſons have their Ribs well lin'd and cover'd, and quickly after appear ready to ſtart out of their Skins.

Their Fiſhing.

Their Hunting.

The whole Buſineſs and Sport of the *Virginians* (the Men I mean) is to Fiſh and Hunt; and theſe they may be allow'd to underſtand very well, ſince they are brought up to them from their Cradles, and concern themſelves about nothing elſe. Their Fiſhing is for the moſt part in their Canoes; their Lines are made of the ſinews of Deer, or a ſort of Graſs they call *Pemmenaw*, or elſe of the Barks of Trees, either of which the Women very dextrouſly Spin into a thread. Their Hooks are ſome ſharp crooked Fiſh-bone, tied on to the end of the Line. But ſometimes they uſe certain long Arrows, with which they ſhoot the Fiſh in the River. And there is one Nation of the *Virginians* that always uſe long Javelins, headed with bone, which they dart into the Water, and ſtrike their Prey ſwimming. But Hunting is an Exerciſe of much more toil, as well as profit to them, and 'tis this that they mainly value themſelves upon. 'Tis a matter of Glory with them to be well accompliſh'd in this Sport; the Young Men raiſe their Reputation, and recommend themſelves to Wives, by their dexterity and good management here. Their Bows and Arrows do a double Execution, and kill the Women as well as the Deer. At theſe times they leave their Habitations for a conſiderable while together, and march out ſometimes 200 or 300 in a company. They know all the Haunts and lurking Places of the Game they ſeek, and diſcover no little Art in traverſing their ground, and bringing their Deer up into the Pounds where they are ſure to have them. Up by the Heads of the Rivers they find plenty of Sport, and there's hardly any thing comes in thoſe narrow Paſſes that eſcapes them.

How they ſurround and catch the Deer.

When they have ſight of a parcel of Deer, they compaſs them round about with Fires, and betwixt thoſe Fires (which are at no great diſtance from one another) they take their own ſtandings. When this is done, they begin to ſet up a moſt fearful cry, which ſcares the Deer, and makes them run for their lives; but finding themſelves ſurrounded with Fire, they are forc'd to run about in that Circle, from one quarter to another, till the Hunters Arrows have pierc'd them. The Hunters ſometimes drive them into ſome narrow point of Land, and from thence they force them into a River, where their Ambuſcade-Boats preſently deſtroy them.

Their policy in Hunting alone.

But they have another ſort of Hunting, wherein one Man alone attempts a Deer, and this is done by a peculiar policy. 'Tis true, there's no great matter of Craft in ſhooting or catching a Deer, but as the *Virginians* manage it, there is a trick in it which ſcarce any but themſelves practiſe. When a Savage goes out a Hunting alone, he dreſſes himſelf up in the Skin of a Deer: His arms come through holes that are fitted for them, as likewiſe his legs; and the Head, which is preſerv'd entire upon the Skin, comes upon his Head. Thus the Man appears like a Deer; and to appear the more ſo, he crawls upon all four, and places himſelf behind ſome Tree, till he ſees ſome of his fellow Bucks come in view. When he has his Sport in ſight, he ſtalks along towards it, and takes care as he marches to keep his Horns right upon his Forehead, that the Deer may be ſure to ſee them ſtand in the ſame place that his own do. If the Deer ſtarts, and ſeems to diſcover any thing that does not belong to his own kind, the Man compoſes himſelf into a decent poſture, and looks as Deeriſh as poſſible; he ſets his Head in order, and ſtretches out his Cloven foot, and goes to work upon the Graſs as thoſe Creatures do. In ſhort, what by one imitation and another, he trepans the Animal into a Security, and ſo ſhoots him; for this Buck (we muſt know) carries a Bow and Arrows with him, which the others do not.

How they ſtrike fire.

Thus much for their ways of getting Proviſion; in order to the dreſſing of it they muſt have Fire, and that they procure after this manner. They don't uſe Flint and Steel as we do, which are Heterogeneous Subſtances, but go a more compendious way to work by Homogeneous ones. They rub Wood upon Wood, in order to the getting of Fire; for having made a hole in a thick ſquare piece of Wood, they take another pointed Stick which fits that hole, and by a continued ſwift motion heat it ſo far, that at laſt it takes fire. And having gotten a ſpark, they quickly make a blaze, for they have always their Tinder ready at hand, which is Moſs, Stubble, or any ſort of dry Rubbiſh.

Their Cuſtoms.

Having now taken a ſhort view of the State of Nature, and their way of living, we ſhall in the next place come to Moral Conſiderations, and ſee how they manage themſelves as Societies, and what ſort of Laws and Cuſtoms they are under the power of.

Their Conſultations for War.

In Matters of War and Peace they always conſult their Sages, and moſt commonly their Friends and Allies. 'Tis very ſeldom that they determine to fight another Nation, without having the conſent of the Prieſts for't, thoſe Men conducting them by their Opinions in all caſes of importance. And when they are come to the concluſion of fighting, they go regularly to work, appointing ſuch Men to command and lead their Troops as they know to be of a well-tried Valour.

Why they make War.

Their Reaſons for making War, are very different from thoſe which make moſt People in theſe Parts of the World fall together by the Ears: They don't fight for Lands or Goods, for meer Dominion, or for fighting's ſake, but chiefly to purchaſe Women and Children; which, if they get a good ſtock of, they have all the Succeſs that they deſire their Arms to be bleſs'd withal. If ever they begin a War upon another Nation, 'tis upon this account, or that of ſome Wrong and Injuſtice done: For as there are few of them that are not ſome way or other Enemies to one another, ſo any little Injury or Affront whatſoever is a ſufficient ground for fighting. If a Savage of one Nation ſhould beat, or ſcuffle with one of another, this is enough to engage the whole *Poſſe* of both ſides.

The *Virginians* Enemies to one another.

'Twou'd be endleſs to reckon up all the Nations in *Virginia* that are declar'd Enemies to one another: The moſt conſiderable are the *Powhatans* and the *Monacans*; the *Maſſowomeeks*, and their implacable Adverſaries the *Saſqueſahanocks*. Theſe are moſt of them populous Nations, and are continually plaguing and tormenting one another. The *Engliſh* were many times ſolicited, with great importunity, by the *Powhatans* and *Saſqueſahanocks*, to eſpouſe their Cauſe, and undertake the Protection of them againſt their reſpective Enemies; 'twas ſo in Capt. *Smith*'s time, and it might have been done with a few Men, a little trouble, and to very great advantage, but the perverſe Council (at that time ruling the Roaſt, and envying the Glory of that brave Man) wou'd not give way to it.

Their Treacheries.

As the *Virginians* are naturally treacherous and full of deceit, ſo they abound in ſtratagems and tricks to ruin one another in their Wars. There's no People under the Sun that underſtand Trap better than they; that can lay a Snare more artificially, and bring an Adverſary into it more cleverly. They do more by Surprize (by far) than by fair and open fighting, and pleaſe themſelves more with a Victory, when they pop out of a Wood upon an Enemy, than when they meet him handſomly in the Field, and fight upon equal terms.

Manner of their pitch'd Battels.

The manner of their Engagements our *Engliſh* learnt, by an Entertainment which the Savages themſelves gave them; in which Scene they repreſented their way of fighting. The Spectators being plac'd in their reſpective Stations, the Combatants appear'd, painted and diſguiſed in the fearfulleſt manner they cou'd invent. They were about 100 of a ſide, one part repreſenting *Powhatan*'s, and the other *Monacan*'s, the two moſt contending Nations upon the Continent. Being led on by their Captains, they took their Stands at the diſtance of a Musket-ſhot from one another, and rank'd themſelves fifteen a breaſt; the Ranks being 4 or 5 Yards diſtant, and ſtanding ſo upon the ſlope, that the Rear cou'd ſhoot as conveniently as the Front. While they ſtood thus, Meſſengers paſt betwixt them, carrying theſe Conditions, (to be mutually obſerv'd) That which Party ſoever had the Victory, thoſe of the vanquiſhed that eſcaped ſhou'd have their Lives, upon a ſubmiſſion to Mercy within two days, but their Wives and Children ſhou'd be a Prize for the Conquerors. With all theſe formalities was the ludicrous Scene carry'd on; and now the Meſſengers being return'd to their reſpective Parties, both ſides addreſs'd themſelves to action. They march'd towards one another in good order, with their Sergeants in Flank, and Lieutenants bringing up the Rear, but they came on leaping and ſinging their War-Tune; for all which mirth and merry poſtures, they did not at all break their Ranks, nor put themſelves out of their due places. Upon the firſt diſcharge of Arrows they gave ſuch horrible ſhouts, and made ſuch ſcreechings, that (our People ſay) a Troop of Infernal Hounds cou'd ſcarce have made more terrible ones. When they had ſpent their Arrows, they clos'd together prettily enough, charging and retiring, every Rank ſeconding the other. As they got advantage, they catch'd their Enemies by the hair of the Head, and pulling out their wooden Swords, made a ſhew of beating out their Brains. The *Monacan* Party decreaſing, (for abundance lay for dead, that were alive enough to run away) the *Powhatans*, to get a compleat Victory, charg'd their Enemies in form of a Half-moon, which they finding to be a deſign to incloſe them, fled towards their Ambuſcades, upon which they drew the others very cunningly, and here the Battel was renewed with vigour. In ſhort, the *Powhatans* now did their beſt to get out of this Snare, and retir'd towards their old Quarters; and here was an end of the Battel, which coſt much leſs Blood than thoſe between theſe two Parties uſe to do.

Martial-muſick.

Their Martial-muſick is ſomething Analogous to Trumpets and Drums: Inſtead of the former, they have Pipes made of Canes or Reeds; and for the latter, a great deep Platter of Wood, the hollow of which is cover'd with a Skin. But their main Inſtrument is the Rattle, which is made of Gourd or Pumpion-ſhells; and of which they have Baſe, Tenor, Counter-tenor and Treble. The Pipes, the Wooden-platters, the Rattles, and the Voices, all put together, do make ſuch a charm, that a Man that had once heard it, wou'd never deſire to hear it more.

Weapons.

What their Weapons are will eaſily be gueſs'd; they have no Notion of any others than Bows and Arrows, Targets and Swords, or at leaſt a Weapon that ſtands them in the ſtead, and does the Work of a Sword.

Their Arrows how made.

Their Arrows are made of ſtrong Wood, headed with Bone, and thoſe heads are ſome of them two or three

Inches long. But they have another ſort of Arrows made of Reeds, piec'd with Wood, and headed with Splinters of Cryſtal, or ſome ſharp Stone; or perhaps with the Claw or Bill of ſome Bird. To make the Notches of their Arrows, they uſe the Tooth of a Beaver ſet in a Stick, with which he grates it by degrees. Their Targets are round, and made of the Barks of Trees; their Swords of Wood: Tho' many times, inſtead of Swords, they uſe other contrivances, as the ſharp Horn of a Deer put through a piece of Wood, or a great Flint ſet after the ſame manner. But after their Acquaintance with the *Engliſh*, they grew leſs fond of their own contrivances of this nature, becauſe they found better amongſt them; and 'twas hinted before, that ſome of our People were ſo ſilly as to make them very familiar with Swords and Hatchets, and not only them but Fire-arms too.

Their Knives.

What they commonly us'd to help themſelves with inſtead of a Knife, was only a Splinter of a Reed, with which a Man wou'd wonder to ſee how very cleverly they'll cut their Feathers, and their Leather for making Shoes and Buskins; alſo how they will open a Deer, and joint him, and divide him into his ſeveral Parts.

A Glew.

With the Sinews of Deer, and the tops of the Horns of the ſame Creatures, they make a very tenacious Glew that will not diſſolve in cold Water. Theſe People, as barbarous and unpoliſh'd as we reckon them, have yet not a ſmall number of Ceremonies in their Viſits and Entertainments of one another. If any great Man comes to ſee another that pretends to any degree of State and Power, in the firſt place the Mats are ſpread upon the ground for them to ſit on; for the *Virginians* make juſt the ſame uſe of theſe, that the *Turks* do of their Carpets.

Ceremonies of Entertainment amongſt the *Virginians.*

The Viſitant, and the Perſon viſited, being ſeated upon their Mats oppoſite to one another, the latter, with all his Company, do in a ſort of a Muſical way (or betwixt ſinging and ſhouting) bid him welcome. After this, two or three of the chiefeſt of the Hoſt's Company make Orations to him, the ſence and ſcope of which, is to let the Gueſt know how acceptable his preſence there is, and how much he is belov'd. But this they do with ſuch vehement paſſion, and ſuch an intenſe ſtraining of their Bodies, that the drops of ſweat run down their faces apace; and they run themſelves quite out of breath, and pant as if they were ready to die. A Man that ſhou'd ſee this Scene, and was ignorant of the Cuſtom, wou'd think them to be raving all the while, and either downright mad, or expreſſing a violent indignation againſt their Gueſts. When the pathetick Speeches are done, the Victuals comes in, which is by far the better part of the Entertainment. Whatever they have in the Houſe they bring out, and are pleas'd to ſee thoſe they entertain eat freely. Towards Night they provide his Lodging; and to make the whole kindneſs compleat, bring him a Woman very well dreſs'd (according to their faſhion) to be his Bedfellow. This is a ſort of Civility not ſo commonly practis'd in other Parts of the *Weſt-Indies*; but the *Virginians*, it ſeems, wou'd hardly think themſelves made truly welcome at their Friends Houſes, if the Joys of the Woman were not added to thoſe of eating and drinking. Their trading is too inconſiderable for a deſcription, for as they aim at no higher things than Beads and pieces of Copper, ſo they have nothing.

Their Phyſicians.

There are ſome People in *Virginia* that profeſs themſelves Doctors, and by certain odd unaccountable Methods pretend to cure diſtempers. They gabble out a deal of ſtrange ſtuff, and accompany their words with actions ſo horrible, that ſome People who are fearful of Witchcraft, wou'd conclude, inſtead of being cured, they ſhou'd be bewitch'd. What they wou'd make the World believe is, that they cure the diſtemper by ſucking away the cauſe of it, for they apply their Mouths to the part affected for that purpoſe. The *Braſilians* (we have heard in its place) take the like courſe, and are for drawing away the diſtempers of their ſick People into their Mouths; and we believe the *Braſilian* and *Virginian* Doctors have both the ſame degree of Skill and Succeſs in this Affair. They go a much more direct and natural way to work, when they make thoſe fearful noiſes, and put themſelves into ſo many Deviliſh poſtures, for perhaps this may frighten away the diſtemper, or at leaſt the Patient out of his Wits, and that's as good as curing of him. Yet theſe Diſeaſe-ſuckers had ſo high an Opinion of our *Engliſh* Surgeons, that they believ'd any Plaiſter of theirs wou'd cure any hurt; and that what was intended for a broken Bone, or an Ulcer, wou'd ſerve as well for a Fever or a Dropſy, if it were but a Medicine of theirs, and adminiſtred by them. The common People notwithſtanding, are for the moſt part their own Phyſicians.

Their way of curing diſtempers.

For a Dropſy, they go into a little Hut built like our Dove-houſes, and made as cloſe as a Stove, and making a little Fire here they ſit and ſweat it out; the ſame they do for any pain or ache. Swellings they cure by Inciſion with a ſharp Flint, or ſometimes burning the Part, and ſucking out the Corruption (a parcel of naſty Whelps) with their Mouths. But if the ſwelling happens to be in a place out of their reach, (as ſuppoſe it to be juſt behind) then their own Mouths are excus'd, and ſome bodies elſe performs the cleanly work for them. Every Spring they conſtantly Purge themſelves with the Juice of the Root *Wighſacan*; they pour down a vaſt quantity of it mix'd with Water, and continue loading their Guts in that manner till it works moſt furiouſly with them, and makes them a little weak and maukiſh for three or four days after. Horſes perhaps, ſhou'd they be ſerv'd ſo, wou'd be purg'd to death, or at leaſt quite off their legs; but the *Virginians*, who are not of ſo infirm and puny a Conſtitution as thoſe Animals, are only a little out of order upon't, and after 100 or 200 Stools can't be briſk again, till Nature has reſted her ſelf upon the hurry for three or four days.

Strong Purge.

Conjurations and Laying of Storms.

They have a ſort of Men alſo amongſt them, that pretend no leſs to cure diſtempers in the Elements than theſe others in Humane Bodies. They have Methods for quieting the Sea, and ſilencing the Winds, when they rage in a Storm. When the Waters begin to run high, they haſte away to the Sea-ſide, or the Banks of the Rivers, and after ſeveral Invocations and Outcries made, they throw Tobacco, Copper, and other traſh, into the Water; this is in order to appeaſe that Power which they believe to be very angry upon ſuch occaſions, and muſt have ſome ſuch Offerings made him before he will be quiet again.

Funerals.

When they have any dead People to diſpoſe of out of the way, they take, inſtead of Shovels and Pickaxes, great Stakes made ſharp at one end, and ſo dig a hole of conſiderable depth in the ground, in which they lay a parcel of Sticks acroſs, and lapping up the Corps in Skins and Mats, they lay them upon thoſe Sticks, and ſo cover them up with Earth. But all their Jewels (that is their Beads, pieces of Copper, and the like) go under ground along with them; neither is there any Man buried without his Treaſure.

Funerals of their Kings.

The Burials of their Kings differ from thoſe of the common People in many reſpects: The Bodies are firſt Embowell'd, and then dried upon Hurdles, till they are very dry. About their Necks, and every Joynt, are hung Chains of Beads and Copper, (the Toys they us'd to wear) nay, their very inſides are ſtuff'd with ſome traſh or other. Being wrapt very carefully in curious white Skins, and then roul'd in Mats, they are laid in their Sepulchres (which are Arches made of Mats) in very great order. In all Burials, the Body being laid in the ground, the Women preſently appear with their faces in deep Mourning; that is, they black them over with a mixture of Cole and Oil, and then they go to their noiſy Lamentations in the Houſes, which commonly laſt for 24 hours, and is much ſuch a ſort of Muſick as a Man may hear at a Catterwauling. But when Kings die, the Mourning is much deeper, all the Paſſions more intenſe, and the noiſe conſequently more intolerable.

Women Mourners.

Their Religion.

The Religion of the *Virginians* conſiſts principally in this, That whatſoever is above them in Power, and able to do them any hurt, is an Object of their Worſhip. Any thing that may do them miſchief, in ſpite of all the care they can take to prevent it, is a ſort of a Deity to them, and they expreſs a reverence for it accordingly. Therefore Fire, Water, Thunder and Lightning; nay, even the Horſes, the great Guns and Muſkets of the *Engliſh*, were at firſt worſhipp'd by them. But that which they ſtand moſt in awe of, is a Being they call *Okee*, and which the *Engliſh* Interpret the Devil. They confeſs themſelves they don't ſerve him out of Love, but fear of his Power and Malice, and that they have oftentimes Conferences with him. In their Temples they have his Image ſtanding up, a loathſome and deformed Object to look upon, but dreſs'd up with all the fineries of Chains and Bracelets that their Invention can add to him. Cloſe by this Image are the Sepulchres of their Kings, who, it ſeems, reckons it a felicity to lie by his ſide.

Okee their Deity.

Their Temples.

The *Virginians* have peculiar Edifices conſecrated to their Deities, and devoted to the Exerciſes and Ceremonies of their Religion. In the Territory of every Werowance there is one Temple at leaſt, and one Prieſt (perhaps two, three or four) for the Service of that

The great ones at *Pamanuke.*

Priests.

Temple. The Principal and moſt Sacred place of all for their Devotion is at *Uttamuſſack* at *Pamanuke*; here, upon the tops of certain Hills in the Woods, are three great Temples, or Houſes, fill'd with the Images of Kings and Demons, and with the Tombs of the deceaſed Werowances. They imagine ſo much Sanctity in theſe places, that none but the Prieſts and Kings themſelves dare to come into them. The Savages, as they go up the River in Boats, at a little diſtance from it, throw pieces of Copper, Beads and Roots, into the Water, when they come over againſt it, as a ſort of Sacrifice or Offering to the Divinity of the place; neither do they dare to paſs along without paying this Acknowledgment. In this place are always Reſident 7 Prieſts, the chief of whom differs from the Inferiours in this chiefly, that he is more filthily dreſs'd than they, and what that Dreſs is, may be known from the Relation made by Captain *Smith*, concerning their Conjurations done in his preſence at *Pamanuke*. That Story gives a full account of their Dreſs and their Proceedings too, both of which the Reader will find to be as well ridiculous as deviliſh.

Notions of a future State.

The common People have no Notion at all of any Immortality with reference to themſelves; but their Kings and their Prieſts they believe ſhall be Immortal. They ſay they go, when they die, beyond the Mountains towards the ſetting of the Sun, and remain there for ever, not in the form they appear in here in this World, but in the ſhape of *Okee*; that is, like ſo many Devils. For they pay the Object of their Worſhip this Complement, to believe the form he appears in to be handſomeſt, and to think they are never ſo beautiful as when they are likeſt him. All their Notions of the felicity of theſe Kings and Prieſts, in the pleaſant places beyond the Mountains, are ſutable to the groſs delights they enjoy and converſe with here. Thus they ſay that their Heads ſhall be painted there with fine Oil and Pocones; that they ſhall be delicately trimm'd with feathers, and have plenty of Beads, Copper, Axes and Hatchets; that they ſhall be continually ſmoking Tobacco, and Dance and Sing with their Anceſtors in the Flowry Fields of that Region. As for themſelves, (as was ſaid before) they don't expect to live any where, when once they die in this World, and conſequently ſmoke, and dance and ſing, like Perſons that are to take their leaves of them for ever. There does not ſeem to be any diſtinction of Time into common and ſacred amongſt them, their conduct ſpeaking for them, that all Time is alike to them, as far as it cou'd be obſerv'd. Yet this Cuſtom is taken notice of, that in times of very great Want and Scarcity, or when they have triumph'd over their Enemies, or gather'd in the Fruits of their Fields, that they all meet together, Men, Women and Children, in order to a certain Solemnity. What they do at this time, is to make a rouzing Fire, for the moſt part in the Fields, and all to ſing and dance about it for four or five hours together; and what with their ſhouting, and noiſe of their Rattles, 'tis a moſt fearful clatter they make upon this Occaſion. Sometimes, inſtead of dancing round a Fire, they ſet a Man in the middle and dance round him, he all the while clapping his hands, and making as if he kept time to their Songs. All this ended, they go away to the far better Sport of Feaſting.

Strange Cuſtom.

But once every ſeven or ten Year, they have a ſort of a Solemnity much more ſtrange than this; 'tis practiſed amongſt all the Nations of *Virginia*, and the *Engliſh* ſaw it amongſt thoſe that were their Neighbours at *James-Town*. They take 15 of the moſt likely Boys they can find, between 10 and 15 Years old, and paint them all white: And when they have put them into this trim, they bring them out to the People, who ſpend all the Forenoon in ſinging and dancing about them with their Rattles. In the Afternoon they lead them under a great Tree, and ſet them cloſe about the Roots of it, where all the Men ſtand by them like a Guard, every one having in his hand a great Rod made of Reeds, tied up in a bundle together. Now all the Men with theſe Rods in their hands, being in exact order, and making a Lane by their Ranks, in come five young Fellows to fetch away theſe Boys, which they did one after another in their reſpective turns, ſo that each of theſe five had five Boys apiece to lug out. But that which was the oddeſt part of the Scene was, that theſe Fellows all the while run the Gaunlet, and were whipp'd by the Guard after a moſt ſevere manner, while they were going for, and carrying out the Boys. And ſince they did not fetch their Boys all together, but went in order one after another, each for his five, it's certain that this cou'd be no little puniſhment; for here were a multitude of hands, and every hand had a Rod, and every Rod was heartily applied to the naked Backs of thoſe poor Fellows, and they had not the advantage of miſſing a laſh from one and another, as they wou'd have had if they had run all together. And yet they endured all very patiently, and carefully skreen'd the Boys with their naked Bodies, that none of the laſhes fell upon them. After the Boys were paſs'd, the Guard fell upon the Tree, rent the very Body, and tore off all the branches of it, adorning their Heads with the leaves. But what became of the Boys afterwards the *Engliſh* cou'd not poſitively affirm; only this they ſay, that they were all laid of a heap in a Valley as if they were dead, and there was a great Feaſt made for the Company there upon the ſpot. It ſhou'd have been obſerv'd before, that all the while the Guard were a laſhing the young Men, the Women wept, and cried out moſt paſſionately, and employ'd themſelves in providing Mats, Skins and Moſs, as things fitting for the Funerals of their Children. Yet the King of *Quiyoughcohanock*, in whoſe Territories this Solemnity was perform'd, told the *Engliſh* that the Children were not dead when they lay there in the Valley; but that the next day after they were to drink the Liquor of the Root *Wighſacan*, which wou'd make them all mad, and that *Okee* wou'd come and ſuck the Blood of ſome of them that fell to his ſhare.

Severe Diſcipline.

He gave alſo this account farther of the matter: That theſe Boys were to be kept in the Woods for the ſpace of nine Months, by another Sett that had gone through this Diſcipline the laſt Solemnity; and that here they endure the greateſt hardſhips, and are ſo abſolutely under the Government of theſe Keepers, that they do the moſt unnatural things in the World at the leaſt word of Command from them. If they bid them lie down naked in the Snow, they'll lie there till they have leave to riſe again; or if they Command them to go and take Proviſions from their Parents, they are ſo afraid of the Malediction they threaten them with in caſe of refuſal, that they'll tear their Mothers throats out, but they will have what they were order'd to bring. In ſhort, they are documented at ſuch a rate by theſe deviliſh Tutors, and made ſo fierce and wild, that they very often do miſchief to People they find ſtraggling in the Woods. When the nine Months are expired, thoſe that ſurvive all theſe difficulties come to their laſt Probation, which is, amongſt ſeveral Diſhes of Broth that are ſet before them, and ſome of which are poyſon'd, to diſtinguiſh and find out them that are not poyſon'd. What becomes of thoſe that do not hit upon the right we can't ſay, 'tis probable the poyſon ends their days; and conſidering the life they had liv'd, a Meſs of ſuch Broth wou'd have done them a kindneſs nine Months before. As for thoſe that happen upon the wholſome Meſſes, they have done enough to eſtabliſh their Reputation in this Country for ever. They are now conſummated Prieſts and Conjurers in the Opinion of the common People; and this any body elſe wou'd readily allow them to be, if 'twant by hap-hazzard that they did what they did. We muſt ſuppoſe the poyſon to be ſuch, as not any way ſenſibly to have alter'd the qualities of the Broth; for if it did, where wou'd be the trial of Skill in diſcerning one Diſh from t'other? And certainly, he that can tell when his Meat is poyſon'd, without being firſt told ſo by his Meat, does very honeſtly deſerve the Name of a Conjurer. The *Virginians* look upon this Solemnity as ſo important a piece of their Devotion, that if they ſhou'd omit it, they ſhou'd expect to incur the higheſt diſpleaſure of *Okee*, and he wou'd revenge it upon them, not only by with-holding the Neceſſaries of Life from them, but alſo by making a horrible Slaughter amongſt them, and deſtroying far more than they deſtroy themſelves by theſe Methods. In ſuch Bondage do theſe poor Wretches live, under that Cloud of Ignorance of the true God, that over-ſpreads their Country; yet we can't but do our Countrymen the Juſtice, to own that they us'd their hearty endeavours to diſpel this Cloud, and give them the true Light.

An odd trial of Skill.

The *Virginians* Notion of the God of the *Engliſh*.

The King of *Quiyoughcohaneck* (before-mention'd) was one they made many trials upon, and tho' not with the great and moſt deſired ſucceſs, yet not without any at all; for he made no ſcruple to own, that the God of the *Engliſh* exceeded his, as far (to uſe his own homely compariſon) as their Guns and Piſtols did his Bows and Arrows. When he wanted Rain, he wou'd ſend to *James-Town* to deſire the *Engliſh* to pray to their God for it, alledging that his own were unkind, and wou'd not ſend him any.

This Prince, as he was a Man of the fineſt Sence, and beſt Diſpoſition the *Engliſh* ever convers'd with in all that Country, ſo 'tis probable he had gone farther had he been free from reſtraints: But where People are ſo infinitely ſuperſtitious in their Way, and ſo tenacious of their Notions, as all the *Americans* are, and where the Prieſts ride and govern at that rate as they do amongſt them, 'tis hard for a Prince to make any Innovation upon the Religion of his Country.

Their Government.

The Succeſſion.

Laws.

The *Virginian* Government and Policy is next to be conſider'd: The Succeſſion is Hereditary, tho' not in the firſt place to Sons and Daughters, but to Brothers and Siſters. All the Brothers being dead, the Siſters mount the Throne, in order according to their Age; and when they are gone, the Children of the eldeſt Siſter ſucceed, and ſo thoſe of the ſecond, and ſo on. But it never comes to the Heirs of the Males, unleſs in caſe of defect of the others; and never to the Children of the Body, but in caſe of defect of all the others beſides. There are no written Laws in the Country, becauſe no Writing nor Letters; but Cuſtom is the main Rule they go by, next to the abſolute and uncontroulable Will of the Prince. This is indeed the great Law by which all theſe People are govern'd; but this is to be underſtood of a Sovereign Prince, ſuch a one as *Powhatan*, for as for all the Tributaries, they are tied entirely to the Meaſures of Cuſtom. There are none more Arbitrary in their Government than theſe Princes are, and all their Vaſſals pay them as much reſpect. They lay their Tributes and Preſents at their feet, with the humbleſt Adorations imaginable, and look upon the leaſt frown that ſits on their brow, with as much awe as Death it ſelf. And there is not a little reaſon for't, for they puniſh Offenders with a moſt cruel rigour, and hardly ſpare any that they ever ſuſpect.

Memorials.

Inſtead of Records, and other Memorials, they ſet up certain Stones (which they call *Pawcorances*) in the places where, and at the times when they have had any extraordinary accident or encounter. And they are very careful to teach their Children the meaning of them very exactly, and ſo ſee that they underſtand thoſe accounts of the Hiſtory of their Country. 'Tis not uncommon for them alſo to Offer Blood, Tobacco and Deer-Suet, upon theſe *Pawcorances*, at their return from Wars and Hunting, when things have ſucceeded well with them.

An account of *Powhatan* and his manner of living.

Before we finiſh this account, it may not be amiſs to add a few things more particularly relating to that Prince of ſo great a Name and Power in theſe Countries, and ſo often brought upon the Stage in the foregoing Scenes; *Powhatan* we mean. His natural Name was *Wahunſcnacock*, but he took the Name of *Powhatan* from the Country and Town ſo call'd, and ſometimes his principal Reſidence. Several of his Countries came to him by Inheritance, but the greateſt part were Conqueſts. He was a tall well-proportion'd Man, with a ſowre thoughtful look, gray-headed, and little or no Beard at all, (as is uſual in thoſe Parts) and about Sixty when the *Engliſh* firſt knew him. Any one wou'd have thought him as ſubtle as he has been repreſented to be, by the ſight of ſo politick a face; but beſides, he had the aſpect of a Soldier, and was hardy and able to endure any Labour or Travel. A Guard of 40 or 50 of the talleſt Men in his Country conſtantly attended him by Day; and every Night, at the four Quarters of his Houſe, four Sentinels were plac'd, who anſwer'd in their reſpective Stations to one that hollow'd from the *Corps du Guard* every half hour. And if any of the Sentinels fail'd in this point of Duty, an Officer came forth preſently that beat him ſoundly. His Houſe at *Oropacks* (at the head of the River *Chickahamine*, to which place he retired from *Werewocomoco*, for fear of the *Engliſh*) ſtood in a Thicket, and at the four corners of it were the Effigies of a Dragon, a Bear, a Leopard, and a Giant. 'Twas here that moſt of his Treaſure was laid up, and here none but the Prieſts came near him. He always kept a multitude of Women; one generally lay on the Bed by him, another ſat at his Head, and a third at his Feet; but when he ſat upright, he always ſat between two, one of each Hand of him. Before and after his Meals, ſome of his Women bring him Water in a Wooden Diſh to waſh his Hands, and others wait with a bunch of Feathers (inſtead of a Towel) to wipe them. When he is weary of any of his Women, he beſtows them as ſo many ſpecial favours upon thoſe of his great Men that have moſt Merit. Herein he falls in with the practiſe of other Princes in the World; for crown'd Heads will ever have that variety, to think that other Men will be proud of their Leavings. Here we ſhall take our Leave of *Virginia*, and paſs to the *Bermuda* Iſlands.

CHAP. XXVII.

An Account of the firſt Plantation of the Bermudas *or* Summer-Iſlands, *with the Natural Hiſtory of the Country; Extracted from the Memoires of Captain* Smith, *Mr.* Richard Norwood, William Strachie, *Eſq; with ſome others.*

WE have heard before, that an *Engliſh* Fleet under the conduct of Sir *Tho. Gates*, and Sir *Geo. Summers*, put into theſe Iſlands; but this was not the firſt time an *Engliſhman* had ſet footing here, for the Diſcovery of theſe Iſlands, by thoſe two Worthy Knights, was made *A. D.* 1609. but one of our Countrymen had been here in *A. D.* 1593. The Name of this Perſon was *Henry May*, one of Captain *Lancaſter*'s Company, who had been in the *Eaſt-Indies*, and in his return put over to *Trinidado*, and ſo to *Porto-Rico* and *Hiſpaniola*, for refreſhment. Here Captain *Lancaſter* deſiring a certain *Frenchman* (Monſieur *de Barbotiere*) to give this *Henry May* a Paſſage home in his Ship, by the way they were wrack'd upon the *Bermuda-Iſlands*. This Man came home to *England* in *A. D.* 1594. and to be ſure told of his Adventure; yet we don't find that there was any motion made towards the ſending a Colony to thoſe Iſlands till ſome Years after. But Sir *George Summers* (as was related before) dying at the *Bermudas*, and his Men going not from thence directly to *Virginia* according to his laſt Command, but to *England*, whither they brought his Body, theſe Perſons at their return gave ſuch an account of the Country to the *Virginia* Company, that they thought it worth their while to eſtabliſh a Correſpondence between *England* and it. Accordingly they ſold theſe Iſlands to 120 Perſons of the ſame Company, who obtain'd a Charter from his Majeſty, and became the Proprietors of it.

A. D. 1612. a Ship call'd the *Plough* was ſent thither with 60 Perſons, and one Mr. *Richard Moor* for Governour, an honeſt and induſtrious Perſon. He ſpent the moſt part of his time in fortifying the Iſlands, and training the People ſent over to Martial Exerciſes; he built nine or ten Forts, and furniſh'd them all well with Ammunition. During his Government, there began that grievous and moſt tormenting plague of Rats, which continued for near five Years. The Original of it was a ſmall Troop of thoſe Vermin that came out of a Ship, that multiplied ſo prodigiouſly aſhore, that ſuch numbers were hardly ever ſeen in the World. They had their Neſts about in every Tree, and all the ground was cover'd with them; neither cou'd a ſpot hardly be found where they had not Hous'd themſelves. They devour'd Fruits, and the Trees too that bore them; when the Corn was ſown, they wou'd come in the Night-time and dig it up, or to be ſure as ſoon as it began to grow it ſhou'd not 'ſcape them. When 'twas gather'd and laid up within Doors, they made a moſt fearful deſtruction of it. They tried all ways and means imaginable to rid the Country of theſe peſtilent Creatures, as by breeding up abundance of Cats, teaching their Dogs to kill them, ſetting up Traps, and laying Poyſon up and down in all places for them; and yet, in ſpite of all theſe Methods, (which notwithſtanding ſwept away multitudes of them) they encreas'd to that degree, that the Country was reduc'd to the laſt diſtreſſes by them. For two Years together they were ſo deſtitute of Bread, that afterwards, when they came to have it again, they had forgot the Uſe of it ſo far, as not to mind to eat it with their Meat. Neither was it the main Iſland alone that was thus plagued by them, for they ſwam the Salt Water, and ſpread into all the neighbouring ones thereabouts, inſomuch that there was not one of them, for many Miles round, but what had a ſhare in the Calamity. Cou'd the *Engliſh* have planted the Iſland as faſt as the Rats did, they wou'd quickly have made a very ſurprizing Figure in that part of the World: But this diſtreſs wore off by degrees, tho' 'twas ſome Years firſt, and the Rats went away as ſtrangely as they came; by what Cauſes they can't tell, but at laſt it came to this paſs, that the Wild Cats and the Dogs, that us'd to live upon them, were abundance of them famiſh'd for want of their accuſtomed Food, and others left the Woods, and came down to the Houſes, to get a Maintenance there. There's no reaſon to imagine a greater encreaſe of the Cats and Dogs at one part of that time than another; and ſince the Rats encreas'd as well as they, and were too many for them all along, 'tis not probable that the entire deſtruction of them was owing to thoſe Creatures. But this Obſervation they made, which was odd enough: That about the time when this Plague of Rats began, there was a conſiderable number of Ravens came to the Iſland, which ſtaid there all the time the Rats ſtaid, and departed again upon their going away; and as there had been none of thoſe Birds ſeen there before that time, ſo neither have there been any obſerv'd ſince. Now what connection there is between Ravens and Rats, the Philoſophers muſt enquire: but there is a Maxim amongſt them, that will prove the former to have been, ſome way or other, the cauſe of the latter, for they both came and went together; now that's the Cauſe of an Effect, (ſay they) *quâ poſitâ ponitur effectus & quâ ſublatâ tollitur.* Mr. *Moor* having fill'd up the 3 Years of his Government, was ſucceeded therein by Capt. *Tucker*, who alſo was very induſtrious in improving the Country, and doing all things for the benefit of the Plantation. Before he left it, he ſaw it reduc'd into a very flouriſhing condition again; there were good Houſes built, Fruits planted, Grounds clear'd of Woods and Rubbiſh, and an Orderly form of Government eſtabliſhed. He reſign'd his Charge in *A. D.* 1618, and was ſucceeded in it by Capt. *Butler*, who came over *A. D.* 1619, bringing four good Ships, with at leaſt 500 People along with him, and there being 500 more there before, the Body was now pretty conſiderable. Capt. *Butler*'s 3 Years being expired, one Mr. *Bernard* was ſent by the Company to ſupply his place, which within 6 Weeks after was vacant again, Death bringing that Gentleman a *Quietus eſt*. And now, till farther Orders came from *England*, one Mr. *Harriſon* took the Charge upon him. And thus we have brought the *Bermuda* Affairs to *A. D.* 1623, in all which time there being no memorable Occurrents in the Colony, and our Authors going no farther than this term of Time, we ſhall now come to the Deſcription of the Country.

Deſcription of the *Bermudas.*

The *Bermudas* are a cluſter of ſmall Iſlands, which may be reckon'd at leaſt 500. There are none of them of any conſiderable compaſs, yet ſome much larger than others, as Time and the Sea, continually waſhing upon them, has worn them away in different proportions. They lie as it were in the Figure of a Croiſſant, and within the Circuit of 6 or 7 Leagues at moſt; ſo that being ſo many in number, and lying in ſo ſmall a compaſs, 'tis plain they can't be very large. The main, or great Iſland of all, is 16 Miles in length from E. N. E. to W. S. W. and lies in 32 deg. 20 min. N. L. It is beholding to Nature for a very conſiderable Fortification of Rocks, which do every way round extend a great way, only leſs to the E. than to any other point of the Compaſs. There are no more than two places where Shipping may come ſafely in, and it is not eaſie for a Man to find thoſe places out; but then thoſe places are ſo well fortify'd, that if an Enemy ſhou'd light of them, he wou'd be eaſily kept out. Theſe Rocks in moſt places appear at low Water, for it ebbs and flows there not above 5 foot. The very ſhore it ſelf is for the moſt part a Rock, inſomuch that 'tis not eaſie to find out an Iſland ſo entirely ſurrounded, and ſo well guarded by them as this is.

The Soil.

The Mould is of divers colours and tempers; the red, which reſembles Clay, is the worſt of all; the whitiſh, (which is like Sand) and the blackiſh, is good, but the brown between them both is beſt of all. Under the Mould, ſome two or three foot deep, lies a ſolid white body, which they call the Rock, but with very little reaſon, for 'tis not harder than Chalk, and 'tis as full of Pores as a Pumice-ſtone, and thoſe Pores contain abundance of Water. Nay, as much Rock as 'tis, the Trees uſually faſten their Roots in it, and draw their nouriſhment from it. In many places there is a Clay found under it. The denſeſt and hardeſt kind of this Rock, is commonly that which they find under the red Mould; this has but very little Water in it, and lies in the ground in Quarries, as it were thick Slates one upon another. All the Water finds a paſſage out by the chinks and creviſes that are between the ſeveral Lares, ſo that 'tis very ſeldom that any freſh Water is found in thoſe places;

The freſh Water.

for 'tis to be noted, that all (or at leaſt the far greateſt part of) the freſh Water they have in this Iſland, comes either out of the Sea, being ſtrain'd in its paſſage through the Sand, or elſe from the rocky Body juſt now mention'd, in which the ſaline Corpuſcles are left, as they are in the march of the Water through the Sand. The *Engliſh* digg'd ſeveral Wells within four or five paces of the Sea, and theſe held ſuch a correſpondence with the Sea, that they ebb'd and flow'd as it did, and yet the Water was freſh and good.

Weather.

The Weather is for the moſt part fine and pleaſing here; and abating ſome extraordinary Storms and Tempeſts, the Air is generally calm, and of a moderate temper. But it muſt be confeſs'd, that the Thunders and Lightnings at theſe Iſlands are more terrible than any where, and the latter oftentimes ſplits the Rocks aſunder, tumbles mighty pieces down, and buries them in the Sea.

Strange Storms.

Once every New Moon theſe Storms have their round for the moſt part; and 'tis particularly obſerv'd, that if a Circle be ſeen about the Moon, a prodigious Tempeſt does not fail to follow.

Circles about the Moon.

And theſe Circles are taken notice of at the *Bermudas*, to be vaſtly larger than they ever appear any where elſe: Thus, when the *Engliſh* lay there, in order to their Voyage to *Virginia*, there was an extraordinary *Halo* ſeen, and the Thunder and Lightning that follow'd upon it, was ſuch as almoſt frighted them out of their Wits.

Winds.

The N. and N. W. Winds are the moſt predominant, and always turn Summer into Winter when they blow. The Rains that are, are more frequent in Summer than Winter, and tho' they don't laſt long, yet when they do fall, they fall with a ſtrange violence, and the Heavens are as black, as if 'twou'd never hold up and be clear any more.

Corn.

The Product of the Iſle for Corn is Maize, that common Grain, all the *Weſt-Indies* over; and of this they have two Harveſts in a Year, for what they ſow in *March* they gather in *July*, and ſo again in *December* they have the Fruits of their *Auguſt* Labours.

Trees.

When the *Engliſh* firſt came thither, they found the Country over-run with Woods and Plants of ſeveral kinds; Cedars, Palmetoes, Pepper-Trees, Lawrel and Olive-Trees, Mulberries, and many others they knew not the Names of, were the Natural growth of the Iſland.

Bermuda Palm-Trees.

But the Palms here are not the true *Indian* Palms, ſuch as at *St. John de Porto Rico* are full of a ſmall Fruit like Almonds, and of the bigneſs of the grains in a Pomgranate, nor of that kind of Palms neither which bear Dates, but a ſort of Simeron, or wild Palm, that yet does, as to all viſible reſemblances, (except that of the Fruit) come as near to the true Palm as can be. They were high, ſtrait, ſappy Trees, no branches but in the uppermoſt part, and at the very top or head of all grow leaves, which ſpread and fall down upon the Tree like a Coronet; theſe leaves are ſo broad, that one of them alone will ſerve for an Umbrella, and a Man may well enough defend himſelf with it from a good ſhower of Rain. The inmoſt part of the head a top they call the Palmeto, it is white and thin, and will peel into a great many Plates which are very ſmooth and fine, and a Man may uſe them inſtead of Paper. They dreſs the Palmeto after various manners, and the *Engliſh* commend them for very good Meat. Theſe Trees bear a Berry which is black and round, and as big as a Damſon, being ripe about *December*; they are then very luſcious, but ſcalded when green they eat much like our Bullaſes. The leaves don't continue on all the Year round, but fall off in the cold Winter Months, being quite blaſted by the rough North Winds.

Silk-worms in the Palm-leaves.

They obſerv'd abundance of Silk-worms Hous'd about theſe leaves, and it being a matter of frequent Obſervation with them, one may conclude they were not miſtaken, and that ſome profits of that nature alſo might redound from hence.

Cedar-Berries.

Of Cedar-Trees there is no ſmall ſtore, and the Berry that they yield is very pleaſant and good for eating. The Olives are not many, and the Pepper is much ſhort of the *Indian*.

Colour'd Woods.

There are abundance of odoriferous Woods, and Woods of divers colours, black, yellow, red;

Medicine for the Flux.

and ſome of theſe coloured Trees bear a round blue Berry, which has both the rough taſte, and the ſtyptick quality of a Sloe, and much us'd by the *Engliſh* for the Flux, which the greedy eating of the luſcious Palm-Berries wou'd bring them very

Prickle Pear.

ry frequently into it. Upon the Rocks there grows a ſort of Fruit in ſhape and bigneſs like a Catharine-Pear, full of prickles all round, and for that reaſon the *Engliſh* call'd it the prickle Pear. It is green in the outſide, but being opened is of a deep murry; 'tis full of Juice like a Mulberry, and juſt of the ſame taſte and ſubſtance. They are very good eaten either raw or bak'd.

Other Fruits.

In Parts near the Sea-ſide, there is found a kind of Wood-bind (as the *Engliſh* call'd it) that runs up upon Trees like a Vine; the Fruit of which is ſomething like a Bean, but only flatter. If it be eaten any way whatſoever, 'twill purge a Man vehemently, but without doing any farther harm. There is a Plant like a bramble, bearing a long yellow Fruit, with a hard ſhell within, which is a hard tough Berry; this ſtamp'd and taken inwardly, will purge gently.

Red Pepper.

Several Plants.

Poyſon-Weed, *&c.*

The red Pepper there is like our Barberies, and beaten or bruis'd with the Teeth, ſets all the Mouth and Tongue of a violent heat; but if ſwallowed whole, has the ſame effect with black Pepper. But now beſides theſe, which are the natural Products of the Country, there are moſt of the ſerviceable and ſubſtantial Fruits of other Parts of the *Indies*, and of *England* too, tranſplanted thither, and thrive exceedingly well. The moſt remarkable ſtrange Plants are theſe; theſe at leaſt are what our People obſerv'd. The Poyſon Weed, ſo call'd from its venemous Nature. It is in ſhape like the *Engliſh* Ivy, but the very touch of it cauſes a redneſs in the Part, itching and bliſters, which notwithſtanding go all away of their own accord in a little while, without any other ill effects. The red Reed is a tall Plant, whoſe Stalk is cover'd with a red rind; the Root of it ſteep'd in a ſmall quantity of the Juice of it drunk alone, is a forceable Vomit, and commonly us'd there for Indiſpoſitions of the Stomach, and that to very good purpoſe. The Sea-feather is a Plant that grows upon the Rocks at the bottom of the Sea, it's almoſt in the form of a Vine-leaf, but far more ſpread, with Veins of a paliſh red ſtrangely interwoven and mixt with one another; the Vertues of it are unknown. Excepting this Poyſon Weed, there is not any venemous thing known in the Country; no, not amongſt the Animals as well as the Vegetables. But 'tis obſerveable, that here is a ſort of a perpetual Spring, and tho' the Trees throw off their old leaves, yet they are always ſeen with freſh green budding out at the ſame time. There is the like continuity in the Animal-line too, as to the Seaſons of the Year; the Birds breed all the Year round, or at leaſt moſt Months in the Year, as a Man that walks the Fields will be abundantly ſatisfied by ſeeing their Young ones.

Animals at the *Bermudas.*

Wild Hogs.

Feeding of the Hogs.

Sorts of Fowl.

The Cohow.

Their way of breeding, and the manner of catching them.

In the ſurvey of the Animals of this Iſland, the account of the Quadrupeds will take up but little room. Theſe Authors tell us nothing of Lions, Tygers, and other the ravenous Inhabitants of the Woods; nor of Kine and Sheep, the more tame and gentle ones of the Fields. But wild Hogs they do affirm are Natives of the place, at leaſt the *Engliſh* found them there, when they came with Sir *George Summers* the firſt time. Theſe Creatures were a very comfortable Supply to them, and the numbers they took of them ſo conſiderable, as to leave it paſt all doubt that the Iſland was plentifully ſtock'd with them. The way by which they came to diſcover their being here, was the ſending ſome few of their own Swine out into the Woods to feed; for when they rambled home again, a huge wild Boar kept them company, and paid for this his Complement to the ſtrange Hogs with the loſs of his life. The ſame decoy that brought this wild Boar into their clutches, afterwards brought ſeveral more; and then when they ſaw that there was Sport abroad, they made a Trade of going a Hunting in the Woods, and always return'd with Boars and Hogs enough to make it well worth their while. Abundance of theſe they brought home alive, where they put them in Sties, and fatted them with the Palm and Cedar-Berries that dropt from the Trees in the Months of *Auguſt*, *September*, *October* and *November*. But when the time came about that thoſe Berries fail'd, and the Hogs conſequently grew poor and low, the main part of their ſubſiſtence then was Tortoiſes, of which they had multitudes not to be computed. Very few Iſlands can pretend to greater ſtore (and perhaps variety) of Fowls, than the *Bermudas* can; for here you have Hawks of all ſorts, Herns, Bitterns, Offpreys, Cormorants, Bald-coots, Moor-hens, Swans, Teal, Snipe, Duck and Widgeon. Bats and Owls are alſo very common here, with multitudes of ſmall Birds, Wood-peckers, Sparrows, Robins, (or at leaſt Birds very like them) tho' the beſt part of theſe have been deſtroy'd by the wild Cats. But for Birds not ſo common, here is the Tropick Bird, as 'tis uſually call'd; the Pemblico, a Bird ſeldom ſeen by day, and an unwelcome foreteller of ſtormy tempeſtuous Weather; the Cohow, another Bird of the Night, and whoſe Muſick is not much more pleaſant, tho' not ſo fatal as that of the former. It is of the bigneſs of a Sea-mew, and is hardly ever ſeen by day, but in the darkeſt Winter or Autumn-nights comes forth of its Neſt, and hovering about in the Air, makes a very odd and harſh noiſe. The colour of it is inclining to a Ruſſet, their Bellies all white, and the long feathers of their Wings ruſſet and white. They breed moſtly in thoſe Iſlands which are high, and ſo far alone in the Sea, that the wild Hogs can't ſwim over to them, for it ſeems they do either diſturb or devour them; and the Cohows are as much expos'd to them as can be, for their Neſts are not in Trees, or upon the high Clifts of the Rocks, but upon the plain ground, where they live and breed like ſo many Conies in their Burrows. The way the *Engliſh* took to catch them, was to ſtand upon the Rocks in the Night-time, and there hollow and ſcream, and make all the ugliеſt noiſes they could poſſible, which wou'd bring the Cohows flocking about them, and fixing themſelves upon their Heads and Arms, and all the while anſwering the note of the Men, and hollowing as faſt as they. At this rate they took with eaſe more than 20 dozen in two hours frequently; and when they wanted other Proviſion, 'twas but ſending out their Cock-boat to ſome of theſe Iſlands, which in a very little time wou'd return with enough to ſerve the whole Company. They are a very well reliſh'd ſort of Meat, as fat and plump as a Partridge; their Eggs are as large as a Hens-egg, and differ other ways very little from them; only that they are ſomething ſpeckled.

Fiſh.

The *Bermudas* have not leſs plenty of Fiſh than they have of Fowl; moſt of thoſe that are common here our Author tells us of, both the Scaly and the Shell ſort, but then vaſt numbers of others beſides, to which they cou'd give no Names, frequently occurr'd. The Whale, with his everlaſting Enemies the Sword-fiſh and the Threſher, are no uncommon ſights upon this Coaſt; but the Tortoiſes do abound ſtrangely there, and they are as good and great too as any where in the whole Univerſe beſides.

No venemous Creatures.

As for venemous and dangerous Creatures, this happy ſpot has none; at leaſt as far as the *Engliſh* had then diſcover'd. Here are no Toads nor Adders, Scorpions nor Crocodiles; Lizards there were, before the wild Cats deſtroy'd deſtroy'd them all, but neither the Character of venemous nor hurtful otherways agrees to them.

Spiders.

Neither do the Spiders ſeem to deſerve either of thoſe Names, ſince they cou'd not find by any Obſervations that they were at all pernicious; yet they are of a very large ſize, but withal beautifully colour'd, and look as if they were adorn'd with Pearl and Gold. Their Webs are in colour and ſubſtance a perfect raw Silk, and ſo ſtrongly woven, that running from Tree to Tree like ſo many Snares, ſmall Birds are ſometimes catch'd in them; this Captain *Smith* reports, upon whoſe Credit as great an improbability as this may be ventur'd to be related.

Flies, Ants and Worms, the hurt they do.

The moſt troubleſome Animals of all upon the Iſland are ſome Inſects: The Musketoes and Bugs creep into their Cheſts and Cupboards, and beſides what they devour, by their moſt ill-ſcented Excrements defile all about them. The little Ants are ſo troubleſome in Summer time, that they are forc'd to dry their Figs on high Frames, and beſmear all the feet of them with Tar, to ſtop the paſſage of thoſe Creatures, which elſe would ſpoil all. Neither are the Worms leſs pernicious to their Corn and Tobacco; and they are forc'd to take a deal of pains every Morning to deſtroy them, or elſe they had as good quit their Plantation.

Ambergreeſe found at the *Bermudas.*

It may not be amiſs here at the concluſion, to take notice (tho' out of its place) that this Iſland has afforded good ſtore of Ambergreeſe, which ſome of the Plantation made a good Market of. This is encouragement enough to hope, that what once came into the hands of theſe Men, may alſo ſometimes light into the hands of honeſter than they, who are there in the way to find it.

CHAP.

CHAP. XXVIII.

An Account of ſome of the firſt Attempts towards the Diſcovery and Plantation of New-England.

THE firſt Perſon that went out upon this Affair, was that Worthy Gentleman Mr. *Henry Challons*, in a Ship call'd the *Richard* of *Plimouth*, his Company not being in all above 30, and his Veſſel but ſmall, tho' the Deſign was great.

A D. 1606. Lord Chief Juſtice *Popham* promotes the Diſcovery.

This Voyage was undertaken at the Charges of the Right Honourable Sir *John Popham*, Lord Chief Juſtice of *England*, and Sir *Ferdinando Gorges*, Governour of *Plimouth* Fort, together with ſeveral other Gentlemen and Merchants of the Weſt Country.

Firſt diſappointment.

They ſet out in *Auguſt, A. D.* 1606, but the iſſue of this Attempt was unfortunate; for being gotten as far as the *Spaniſh Weſt-Indian* Iſlands, they fell in with a Fleet of *Spaniſh* Ships, by whom they were taken, and after a great deal of ill Uſage, carried into *Spain*, where their treatment alſo was very cruel and inhumane.

Another trial.

This Misfortune did conſiderably damp the Courage of the firſt Adventurers; however, the Lord Chief Juſtice *Popham* quickly after ſent out another Ship, under the Command of Captain *Hanam*, whoſe buſineſs was not ſo much to Plant, as to make Diſcoveries in order to it. And when they came back, they gave ſo good an account of the Country, that all People were as much encourag'd as they had been the contrary by the firſt Miſcarriage, and thoſe that fell off before, now came boldly on to be Adventurers again.

A 3d Attempt.

Hereupon Captain *Popham* and Captain *Gilbert*, were ſent away with 2 Ships and 100 Men, Ordnance, and all neceſſary Proviſions for their Uſe, till farther Supplies could be ſent.

Many diſcourag'd.

But before theſe Ships cou'd come back again, the Lord Chief Juſtice *Popham* died, the ſtopping of which ſo principal a Wheel in this buſineſs, made abundance of the reſt ſtand ſtill.

Freſh Ships ſent.

Yet Sir *Francis Popham*, his Son, encourag'd the Affair with his moſt zealous Endeavours, and contributed liberally towards the ſending forth a freſh Supply, which accordingly the next Year was performed.

The Plantation diſcourag'd.

Theſe Ships arriving there, brought the uncomfortable News of the Deaths of the Lord Ch. Juſtice, and Sir *John Gilbert*, (Brother to the Captain, and Preſident of the *New-England* Council) and had alſo, as ſoon as they came, the ſad News from the Planters that Captain *Popham* was dead, a Man in whom a very great Confidence was repos'd, and from whom no little Matters were expected. Captain *Gilbert* alſo (his Brother being dead) was obliged to return to *England* to take poſſeſſion of his Eſtate, ſo that there was no conſiderable Man left upon the ſpot to ſtand at the head of the Company. All theſe Misfortunes, together with the loſs of their Stores, which they had ſuffer'd that Winter by Fire, ſo diſpirited the whole Plantation, that they unanimouſly reſolv'd to go back to *England* with theſe Ships.

They come away.

This Reſolution they accordingly put in practiſe, and at their coming home ſo diſcourag'd all the firſt Undertakers, that here ſeem'd to be a full ſtop ſet to the *New-England* Affair, and there was now no longer ſo much as any diſcourſe about ſettling a Plantation there.

The *French* take their places.

The *Engliſh* thus as it were quitting their pretenſions to that Country, the *French* preſently came and made theirs, fixing themſelves within our Limits: But the *Virginian* Plantation taking notice of this, and not liking their Neighbourhood, (had there been no other reaſons for the removal of them) immediately diſpatch'd Sir *Samuel Argall* to diſplace them, which he perform'd with a great deal of courage and dexterity.

Sir *Sam. Argall* drives them out.

For having ſeiz'd the Forts they had built at *Mount Manſell, St. Croix*, and *Port Real*, he carried away all their Ordnance, Proviſions, and Ship it ſelf, to *Virginia*, and ſo effectually fruſtrated their whole Deſign of Seating themſelves there. The *French* being expell'd, ſome there were who (not willing to part with *New-England* upon ſo eaſie terms, at leaſt not till one trial more had been made) ſent out another Ship under Captain *Hobſon* and Captain *Herley*, to make ſome Diſcovery that ſhould revive the Deſign of Planting again.

A.D. 1611. More Ships ſent.

Along with them went a couple of Savages of the Country, who had been here in *England*, and were likely to do ſome good Service. But a little before this Ship came, there had been one *Hunt* an *Engliſhman* upon the Coaſt, a Manager for ſome private ſordid ſpirited People of our own Nation, that were for ſeeking their own Profit by any Methods, how prejudicial ſoever to the Common Intereſt of their Country.

Hunt's Villany.

This Fellow having enticed ſome of the Natives into his hands (and they came, confiding in the ſincerity of his promiſes) clapp'd them under Hatches, and carrying them away, ſold as many of them for Slaves as he cou'd, the reſt being taken from him by the contrivance of ſome honeſt Friars, who pitied the poor Savages, and deſired to Inſtruct them in the Chriſtian Religion. But this Villanous practiſe ſour'd the Natives, and enrag'd them againſt the *Engliſh* to a high degree; and theſe two Savages that came over in the Ship, as ſoon as they underſtood it from their Countrymen, reſented it as deeply as they, and bent all their thoughts upon revenge.

Engliſh aſſaulted.

In ſhort, they plotted to cut the Throats of the *Engliſh*, and taking a fit time for't, made a furious aſſault upon them; but our People, who had ſome notice of their indignation, and the cauſe of it, were ſo wiſe as to be always upon their guard, and ſo were not ſurpriz'd, yet the Action coſt them ſome wounds, but no lives at all, tho' many of the Savages were cut off. 'Twas to no purpoſe now to ſtay in the Country, the Natives being all in Arms againſt them; ſo Captain *Hobſon* e'en ſail'd home again to *England*, bringing the ſad News of a War with him. However, 'twas thought convenient to try if Peace and Trade cou'd be by no means obtain'd with this Country, which by the intervention of ſo many unlucky accidents had ſo often ſeem'd to refuſe them: And therefore two good Ships were ſet out at the Charge of Capt. *Reyden*, Capt. *Langham*, Mr. *Bully* and Mr. *Skelton*, and committed to the Conduct of Captain *Smith*.

A.D. 1614. Capt *Smith's* ſucceſsful Voyage.

The Captain being come to *New-England*, fiſh'd, traded with the Inhabitants, and with 8 Men alone ranged the Coaſt, and took a Plot of the Country. In a matter of 6 Months he made his Voyage out and home, and got near 1500 *l.* in his Pocket by the advantage he made of Otter and Beaver-Skins, Salt-fiſh, Train-Oil, and ſuch like groſs Commodities.

Another Voyage. A.D. 1615.

The next Diſpatch was of 4 good Ships, by the *Virginia* Company, which Captain *Smith* not undertaking, they entertain'd the Men that had been with him the former Voyage, and underſtood the buſineſs. Theſe return'd alſo within 6 Months, with Fiſh, Train-Oil and Furrs. The ſame Year Captain *Smith* ſet out a ſecond time for *New-England*, with two Ships, and ill Weather breaking his Maſts, he was forc'd to return to *Plimouth* again, where, rather than loſe all, he preſently put to Sea again only with a Bark.

Capt. *Smith's* unfortunate Voyage, and taking by the *French*.

But now this brave Man was to have his ſhare of Misfortunes as well as others; for ſailing in amongſt 8 or 9 *French* Men of War, his little Bark was taken, but made a ſhift to eſcape again out of the enemies hands, while the Captain himſelf was left aboard them, and entirely at their diſpoſe. By this means he was carried Priſoner into *France*, and beſides all the extremities that he ſuffer'd during his confinement there, when he came home again, he was little better than ruin'd by theſe ſad Misfortunes which fruſtrated the Voyage.

A.D. 1615.

But notwithſtanding the Captain's Perſonal Misfortune, a certain Ship (one of 4 that was intended for him) went that Voyage, and came home again very well laden; and this the very ſame Year that he was thus lamentably baulk'd.

A.D. 1616.

The next Year, from *London* and *Plimouth*, there went at leaſt 8 more, and got good quantities of Fiſh and Train-Oil, which they ſold at *Spain* and the *Canary-Iſlands* for conſiderable profit.

A.D. 1618.

The next Year to this, none went out upon any Publick account; but the ſucceeding Year, there was ſet out from *Plimouth* two luſty Ships, that made a proſperous and profitable Voyage of it (out and home) in 5 Months time.

A.D. 1619.

The next Year, tho' ſeveral Ships were ready to ſet Sail from the ſame place, yet one only went, but made ſo good work of it in 6 or 7 Months time, (from the time they went out to the time they return'd) that every Sailor that had but a ſingle ſhare, had beſides his Charges 17 *l.* clear Money in his Pocket. Along with this Ship, there

went

Capt. *Darmer's* Diſcoveries and Death.

went for *New-England* the Worthy Captain *Darmer*, who did very good Service in *Virginia* and *Newfoundland*, as well as *New-England*. He proſecuted a Northern Diſcovery with excellent ſucceſs, finding out many goodly Rivers, and very pleaſant fruitful Coaſts and Iſlands, for the ſpace of 80 Leagues from E. to W. for ſo that Coaſt ranges along from *Hudſon's* River to Cape *James*. But while he was proſecuting theſe Diſcoveries with more zeal for the Publick Intereſt than care for himſelf, he was betray'd by the Savages, and wounded in 14 or 15 places by them; of which wounds, upon his return to *Virginia*, he died. The three ſucceeding Years Matters went on ſtill better; more Ships went, (to the number at leaſt of 50) and more profit was made both by the Fiſhing-trade and Furrs. And now we have ſeen the Correſpondence between the two *Englands* thus open'd; we muſt come to Accounts ſomething more particular, and then to a Deſcription of the Country.

CHAP. XXIX.

A Relation of a Plantation ſettled at Plimouth *in* New-England, *with the Proceedings thereof.*

IT was in *September*, *A. D.* 1620, that this Voyage was undertaken; with what number of People and Ships, or with what quantities of Proviſion, we can't ſay, only ſince they call themſelves a Plantation, neither ſhou'd be very inconſiderable.

The excellent Bay at *Cape-Cod*

Good fiſhing for Whales.

'Twas the beginning of *November* before they arrived at *Cape Cod*, the moſt remarkable Point of the *New-Engliſh* Land. Coming to an Anchor in the Bay, they found it a very good and commodious one, capable of entertaining 1000 Sail, and giving ſufficient Recruits of Wood and Water. The entrance is about 4 Miles wide, and 'tis encompaſs'd all round, even to the very Sea, with Oaks, Pines, Juniper, Saſſafras, and other ſweet Woods. They declare they ſaw here the greateſt plenty of Fowl that ever they ſaw, and had they had Tackling for the Whale-Fiſhery, they might have made a very rich return from hence, for they ſaw thoſe monſtrous Fiſhes playing hard by them every day.

Attempt to diſcover the Land.

Indian Graves.

The contents of a great Grave.

Their buſineſs now was to make ſome Diſcovery of the Country, and find out a convenient place to ſeat themſelves in; and in order to this, they made ſeveral Attempts by Companies ſent out for that purpoſe. The firſt conſiſted of about 16 Men well arm'd, who quickly ſaw ſome of the Natives, but they run away from them, and hid themſelves in the Woods, while the *Engliſh* follow'd them from one Thicket to another, and endeavour'd to trace them through Valleys and over Hills, but cou'd neither overtake them, nor light of any of their Habitations. They found indeed in this Ramble a great deal of ground fit for the Plow, and ſeveral Fields where Corn had actually been ſown; alſo ſome of the *Indian* Sepulchres, which were certain heaps of Sand cover'd over with Mats, and had Bows and Arrows buried in them, but they did not deface them much, for fear of affronting the Natives. In another of theſe *Tumuli* they found a good quantity of *Indian* Corn, part of which they brought away for Seed, intending to pay the Natives when the Soil paid them. Strawberries and Wallnuts they met with great plenty of, and ſome Vines. There were ſome marks alſo of Chriſtians that had been there before, as a Ship-kettle in the remainders of an old Houſe, and the Ruins of a Fort, which to be ſure was not built by the Savages; their Fortifications (of Poſts and Stakes knock'd into the ground) are as eaſie to be known from the *European*, as their rude Houſes of Leaves and Mats from the others of Brick and Stone. The next time 24 were diſpatched in the Shallop, to make a farther Diſcovery of the Country and the Rivers. Thoſe that were landed ſearched about, but cou'd find no People; yet they light upon ſome quantities of Wheat, Beans and Oil, which the *Indians* had buried, and ſtood the Revivers in very good ſtead. Happening alſo upon ſome more of thoſe Graves but now mention'd, they reſolv'd to dig up one of them which appear'd much larger than the reſt: The outſide covering was Boards, under which was a Mat; next to that were Bowls, Trays, Diſhes, and then another Mat, under which was a Board about three quarters long, finely painted and carved. To this ſucceeded another Mat, under which were two Bundles that promis'd ſomething more curious. The greater of theſe Bundles being open'd, diſcover'd a large quantity of a very fine and perfectly red powder, (of a ſtrong, but no offenſive ſmell) and in this were the Bones and Skull of a Man, the latter of which had fine yellow hair ſtill upon it, and ſome of the fleſh unconſum'd. Together with theſe Relicks, was made up in the ſame Bundle a Knife, a Pack-needle, and 2 or 3 old Iron things, and all was pack'd up in a Sailors Canvaſs Caſſock, and a pair of Cloth Breeches. In the leſs Bundle there was the ſame ſort of powder, and the Head and Bones of a Child; about the Legs, and other Parts of which, were Strings and Chains of white Beads, and by it was laid a Bow about three quarters long, with ſome other odd Nicknacks. Our Men continuing their Search, found ſeveral Graves more, but no more Corn. But it was the luck of ſome of them to fall in with two or three of the *Indian* Houſes; the Neſts were there indeed, but the Birds were fled, ſo that the *Engliſh* were at liberty to take and look what and where they pleas'd. Theſe Houſes were made of young tender Trees bent down Arbour-wiſe, and cover'd from top to bottom with thick and well-wrought Mats. The Doors were about a Yard high, and made only of Mat; the Chimneys were wide holes left open at top, to be cover'd with Mats when they pleas'd. All was as warm and cloſe as cou'd be, for the Houſes were not only Matted in the outſide, but in the inſide alſo. In the midſt of them were four little Stakes knock'd into the ground, with Sticks laid acroſs them, upon which they hung their Pots. Their Beds were ſo many Mats ſpread round about the Fire-place; for as the Fire keeps them warm in the Day, ſo 'tis a Principle with them to keep that warm in the Night. Had the *Engliſh* wanted Baskets, Bowl-diſhes, Trays, Earthen-pots, or any Lumber of that kind, they might have had enough in theſe Houſes.

Indian Houſes

Houſhold-ſtuff.

The other things the Houſes afforded were Corn, ſome ſorts of Seed, Proviſions, and the like; ſome of the beſt of theſe they took away, intending (as before) to pay their Debts another time when they were able.

The third Attempt they made upon a Diſcovery was with their Shallop again. Now they happen'd to have a ſight of ſome *Indians*, who wou'd not come near them, nor ſtay till they came near, but run away and ſhelter'd themſelves in the Woods.

More Graves

Another large Burying-place was the moſt conſiderable thing that entertain'd them in this Ramble; the Graves here were more ſumptuous than thoſe they ſaw before, and the whole ground was encompaſs'd with a Palliſadoe, but they did not ſtand to enquire into the contents of them, but left the Bones to their repoſe.

Aſſaulted by the *Indians*.

One Night while they were out, the *Indians* came in a good Body and aſſaulted them, but keeping a ſtrict Watch, they received no damage by them. The proſpect they had of the Country this time, gave them very good ſatisfaction as to the ſucceſs of the Deſign of Planting here. They found an excellent Soil in moſt places, and both Timber, Fruit-trees, and good Herbs in abundance.

They go to view the place where they planted.

The Company now having ſo good an account of the Country from thoſe that had been ſent to view it, they went all together to make a Judgment of it, and to come to their laſt Reſolutions about a place to ſettle in; ſo they pitch'd on a Spot upon the Main Land, a high ground, where there was a great deal of Land clear'd that had been us'd to Corn, and was well water'd with Springs and Brooks. There was alſo near to it a good Harbour for Shipping, and other conveniences ſufficient to encourage a Settlement there. This Harbour was a Bay larger than *Cape-Cod*, and afforded ſtore of excellent Fowl and Fiſh; and two fine uninhabited Iſlands that lay within it, were as well repleniſh'd with all ſorts of Timber. This place was alſo ſo near to *Cape-Cod*, that from a certain Hill adjacent (on which they deſign'd to raiſe their Fort) *Cape-Cod* might eaſily be ſeen. Here then they went to building as faſt as they cou'd, and in 3 or 4 Months ſpace the firſt rudiments of a Town appear'd; for 'twas the whole buſineſs of the entire Company, (them excepted that watch'd) and every Family had their proportion of Work allotted them. By that time ſo many Houſes were built, that it might be call'd a little Town, the Savages began to make Viſits to them. And firſt of all came one Savage alone, marching boldly into the Street, and ſaluted the *Engliſh* in their own Language, bidding them welcome into the Country. He was one of the Sagamores or Lords of the *Moratiggon*, a Country about 5 days Journey by Land from their Town; he had convers'd amongſt the *Engliſh* that had come thither, and was a Perſon of a free eaſie Carriage. Notwithſtanding his (Savage) Dignity, he was as naked as the Child juſt born, excepting only his Waſte that was cover'd with a Leather; he was a tall ſtrait Man, with long black hair, (but no Beard) and came Soldier-like with his Bow and Arrows in his hand. The *Engliſh* treated him with good Victuals and ſtrong Liquors, which made him like their company ſo well, that he did not care to leave it. He inform'd them, that the place where they were ſeated was call'd *Patuxet* by the *Indians*, and that all the former Inhabitants were dead of a Plague; ſo that by this account, it ſeems the *Engliſh* diſpoſſeſs'd no body.

Houſes built.

A Savage comes to them.

Patuxet the *Indian* Name of the place.

More Savages come.

They diſmiſs'd him at laſt with ſome Preſents, which pleas'd him ſo far, that he came again quickly after, and brought 5 or 6 more along with him. Theſe had Deer-skins on, and the chief of them a wild Cats-skin upon his arm; moſt of them too had a ſort of long Hoſe that reach'd up to their very Groins, and pieces of Leather wrapt about their Waſtes. Their hair hung long behind, and was cut ſhort before much like his that came firſt; only this difference, that ſome of theſe had it truſs'd up with feathers, and after ſeveral other antick faſhions. They were of a dark complexion like the *Engliſh* Gipſies, and were very tall proper Men. Theſe eat and drunk very freely with the *Engliſh*, and to make them amends for their kindneſs, entertain'd them with ſome of their *Indian* Dances.

The great Sagamore of the *Indians* comes to ſee the Governour.

Quickly after News came by ſome of the Savages, that *Maſſaſoyt*, the great Sagamore of the Country thereabouts, was come to a place hard by, to have an interview with the Governour; but the Governour thought fit, firſt of all, to ſend ſome other Perſon to ſpeak with him, and know his mind, and accordingly diſpatch'd one Mr. *Winſlow* with a few Toys (Preſents) for the King and his Brother. *Maſſaſoyt* receiv'd the Meſſenger civilly, and liking the Propoſals he made of Peace and Friendſhip, and of his being taken into the number of King *James* of *England*'s Allies, he march'd on to go meet the Governour, leaving Mr. *Winſlow* in the Cuſtody of his Brother *Quadeqqina*, and giving a ſufficient number of Hoſtages for his Security. He came towards the Town with 20 Men only, and thoſe unarm'd, and was met by the Way by Captain *Standiſh* (the chief Manager of the Military Affairs) with a File of Muſqueteers. They conducted him into a Houſe, where a Seat of State was prepar'd for him, which was three or four Cuſhions pil'd up upon a green Rug.

The Ceremony of his Reception, and the Treaty of Peace.

The Governour came in with a Drum and Trumpet before him, and a Guard; and *Maſſaſoyt* having kiſs'd him, they ſate down together. Preſently an Entertainment was brought in, the chief of which was Strong-Waters (a thing the Savages love very well) and the King having once ſet the Pot to his Noſe, drunk ſuch a ſwinging draught, as made him ſweat all the time he ſtaid there.

The next thing was to enter upon a Treaty, which the Strong-Water was a very good preparative to: And what the Governour propos'd was to this effect. 'That 'Reſtitution or Satisfaction ſhou'd be made in caſe of 'any Injury or Damage on either ſide, and Offenders 'duly puniſh'd. That they ſhou'd mutually aſſiſt each 'other in their Juſt Wars. That all *Maſſaſoyt*'s Allies 'ſhou'd be comprehended in this Treaty, and notice given thereof by him accordingly. That whenever the 'Savages came amongſt the *Engliſh*, they ſhou'd leave 'their Weapons behind them, and the *Engliſh* ſhou'd 'likewiſe free them from all Jealouſie and Suſpicion in 'like manner. Theſe Propoſals were readily embrac'd, and ſo the League of Friendſhip ſolemnly concluded.

The deſcription of him and his Company.

Maſſaſoyt was a luſty tall Man of a middle Age, of a grave demure Countenance, and ſparing of Speech. His Dreſs was little different from that of his Men, (the ſame with that before-mention'd) only he had a Chain of Fiſh-bones about his Neck, in which Ornament all the Majeſty of his Guarb was compris'd; for without that, the others look'd as much like Kings as he, tho' with that, he look'd more like a Jackanapes than they. His Face was painted with a Murry-red, and both that, and his Head, were well lick'd over with Oil; ſo that it may eaſily be imagin'd what a greaſie figure he made. He had a long Knife hanging in a String at his Boſom, and behind at his Back a little Pouch of Tobacco; this was Furniture he never was without, but the Chain perhaps was only for high Days, and ſelect Company, or when ſomething of the King more than ordinary was intended to be ſhewn. His Men had alſo their Bags of Tobacco at their backs, and their faces painted with varieties of colours; ſome ſhew'd an outſide of Deer-skin, others of Badgers, and others of Aſſes-skins, theſe laſt being ſtark naked.

Maſſaſoyt's Return.

After this Interview, the King retir'd with all his People into the Woods, about half a Mile from the Town, where the Women and Children came to them, and they lodg'd that Night. This Entertainment *Maſſaſoyt* ſhortly after requited in the beſt manner he cou'd, to a couple of *Engliſh* Gentlemen that went to ſee him while he ſtaid in thoſe Woods; and it appear'd by all tokens, that he had a real deſire to maintain a Friendſhip with the *Engliſh* Nation.

Engliſh ſent to him.

But the Company having let him digeſt and pauſe upon the League for the ſpace of 3 or 4 Months, thought fit to try (by a ſort of Embaſſy ſent for that purpoſe) how it ſat upon his Stomach. And there was another, and a more politick Deſign in this too, which was to make ſome farther Diſcoveries of the Country, to ſee where their ſtrength lay; and ſince they were Allies, to know where to find them if occaſion required. Mr. *Winſlow*, who had already convers'd with *Maſſaſoyt*, was thought to be the fitteſt Perſon to undertake this Employ, wherein he was accompanied by one or two more, and particularly a Savage, that ſpoke good *Engliſh*, for an Interpreter. This Savage was one of thoſe that had formerly been betray'd, and carried away by *Hunt* the *Engliſhman*, and ſince he acts a conſiderable part upon this *New-England* Stage, we are obliged to name him; the *Indians* called him *Tiſquantum*, a ſly crafty Knave he was, and tho' the *Engliſh* did not know him now, yet afterwards they came to have a true notion of him, and plainly diſcover'd his treacherous practiſes.

A.D. 1621. Kindneſs of the *Indians* to them in their Journey.

Well, our *Engliſhmen*, in company with him, ſet forward for *Pakanokick*, the ordinary Reſidence of the Great Sagamore *Maſſaſoyt*. The *Indians*, all along by the Way, treated them with a great deal of courteſie, and plain honeſt freedom. They willingly gave them of their Proviſions to eat, wou'd carry any Baggage for them; yea, take them themſelves upon their backs, and wade with them through the Rivers.

Deſolate Country.

Reſolute Savages.

In ſome places they found the Country almoſt depopulated; there were fine Corn-fields and Paſture-grounds, without either Cattle or Inhabitants. 'Twas a great Plague it ſeems that had ſwept away theſe People, and left the Country in ſo mournful and deſolate a ſtate. About one River (where formerly abundance of People had dwelt) there were then but two Savages remaining, and thoſe both Old Men, unfit for the hazards of War, or to ſtand the Champions and Defenders of their Country. Yet as ſoon as they ſaw the *Engliſh* entring the River, they ran to the oppoſite Bank, and ſtood charged with Bow and Arrow in their hands; with a vaſt deal of courage, they demanded who and what they were, intending, if they had found them enemies, to have expos'd their old Carkaſſes to all manner of dangers, rather than ſuffer them to have paſs'd the River, but hearing them declare themſelves Friends, they freely permitted them to land, and welcom'd them with the beſt Food they had.

Maſſaſoyt continues a Friend.

Scarcity of Proviſions at the time they viſited him.

When they came to *Maſſaſoyt*, they found him the ſame Man, as to his Reſolutions of maintaining an inviolable Friendſhip with the *Engliſh*, that he was at *Plimouth* Town. Abundance of the Sachems, or Petty-Governours, came about them while they were there; but the jeſt of all was, that they cou'd get no Victuals at Court. *Maſſaſoyt* himſelf had none to entertain them with; it fell out ſo at that time, for they live from Hand to Mouth, and go with a full or an empty Belly, according as they have, or have not ſucceſs at their Sport. Our *Engliſhmen* had been very free of their own Proviſions by the Way, and had beſtow'd it all upon the *Indians* they met with, not doubting but at *Maſſaſoyt*'s Houſe they ſhould meet with a Belly full; but it ſeems they were ſadly diſappointed, and had not the Savages beſtirr'd themſelves, and got a few Fiſh, and a Partridge or two, they had come away without making one Meal there. *Maſſaſoyt* was heartily aſhamed of his being ſo ill provided, but could not help it; however, he made up thoſe defects with other kindneſſes and tokens of his good will, for he lodged the two *Engliſhmen* upon the ſame Bed with his Wife and himſelf, tho' for want of room, two more of his Grandees were forc'd to ſqueeze in upon the ſame Mat; ſo that all things conſider'd, our People were in as ill a caſe, as to the point of Lodging, as with reſpect to their Diet, and neither their Bellies, nor their Bones, cou'd reproach each other, with any luxurious Pleaſures or Satisfactions. Yet all this had been perhaps tolerable, had they had no other company upon theſe hard Beds but the King and the Queen, and the two Grandees, but there were abundance of other Intruders that came without asking leave from his Majeſty, and 'tis to be ſuppos'd were pretty much us'd to the Houſe; what the *Indian* Name of theſe may be we don't know, but in *Engliſh* we call them Fleas and Lice, ſome of thoſe Animals that formerly plagu'd *Egypt*, and were no ſmall plague now in *America*. Upon all theſe accounts, they hurried away as faſt as they cou'd, and tho' *Maſſaſoyt* earneſtly preſs'd them to ſtay longer, yet they remembred their Lodging, and thanking him for his kindneſs came away.

Fleas and Lice.

Jyanough King of *Cummaquid*.

'Twas no ſmall ſatisfaction to the Colony, to find that *Maſſaſoyt* ſtood ſo firm and tight to the Articles of the League, and that he diſcover'd ſo much Fidelity to the *Engliſh* Intereſt. Their Satisfaction was alſo encreas'd by a new Friendſhip with a neighbouring Prince, contracted much about this time: It was *Jyanough*, the Sachem of *Cummaquid*, a moſt affable, courteous, and well-accompliſh'd Perſon, and in nothing Savage but the rudeneſs of his Habit. He and his People ſtudied to do the *Engliſh* all the good Offices imaginable, and as they had occaſion to come into his Territories, ever treated them with the utmoſt Civility, and the beſt Proviſions he had.

The *Narraghanſets* enemies to the *Engliſh*.

Their bold Defie.

But there were another ſort of Neighbours call'd the *Narraghanſets*, that were much otherwiſe affected towards the Plantation, and in plain terms breath'd Defiance, threatning no leſs than the utter Deſtruction of it. The *Indians* of all ſides talk'd of this Expedition of the *Narraghanſets* againſt the *Engliſh*, and that which render'd it the more probable was, that they were a numerous People, and as bold and daring as they were great and ſtrong: And that all this was more than meer talk, appear'd convincingly ſhortly after, for there came a Meſſenger from *Conauacus*, the great Sagamore of the *Narraghanſets*, who brought a bundle of new Arrows wrapt up in a Rattle-Snakes Skin. As for the *Engliſh*, they knew not the meaning of this Preſent; the Arrows and the Snake-skin were equally a Myſtery to them, but *Tiſquantum*, their Interpreter, unfolded the Riddle to them. He knew the Cuſtoms and Manners of thoſe *Indians*, and aſſur'd the *Engliſh* that this was no leſs than a formal Challenge, and that the *Narraghanſets* did by theſe Symbols defie them to Mortal Battel, and proclaim themſelves their everlaſting Enemies.

The Inſolence of the *Narraghanſets*

The *Narraghanſets* appear'd the bolder in this Defie of theirs, in that it was given juſt upon the coming of a Ship with Recruits to the Colony. But they knew well enough what they did, and underſtood by their Spies that the *Engliſh* had only an addition made to their Numbers, but none to their Arms nor Proviſions, (which are equally the Support of a War) by the coming of this new Ship. However, they took this advantage to let the *Engliſh* ſee how little they fear'd them; and the truth of it is, 'twas an Inſult big enough, conſidering they had no means of being ſure that the *Engliſh* knew upon what grounds they made ſo light of them, and that the reſt of the World round about, who did not know the true State of the Caſe, wou'd judge it an effect of pure Reſolution and Bravery.

The Governour ſends Powder and Shot.

The *Indian* King wont receive it.

But the Governour having conſulted upon the point, took the Arrows out of the Skin, and having ſtuff'd it full of Powder and Shot, ſent it back again to the King of the *Narraghanſets*. This was to let him know that his Challenge was accepted, and that whenever his People came with their Bows and Arrows, the *Engliſh* wou'd be ready to receive them with Powder and Shot. When the Meſſenger deliver'd this Preſent to *Conauacus* he was extremely ſurpriz'd, and having found 'twas Powder and Shot, he wou'd not ſo much as touch it, nor ſuffer it to ſtay in his Houſe: ſo that 'twas e'en brought back again as it went. The Savage King, 'tis probable, thought the *Engliſh* had ſent that Powder and Shot to do him a miſchief beforehand; to murder him before the War began, and ſo prevent the ſhedding of more Blood, for he knew that Men were kill'd with ſuch things as thoſe were, (tho' he did not know how nor which way) and therefore he did very wiſely in not ſuffering the Powder and Shot to lie within doors, leſt it ſhou'd have gone off of its own accord, and ſo a blown him up to rights. This was a Judicious conſideration; and the *Engliſh* Plot was thus entirely defeated. However, the *Engliſh* took care to fortify their Town, and put themſelves into the beſt poſture of Defence, that in caſe the *Narraghanſet* King came (to revenge that horrid Deſign upon his Life) they might be in a condition to receive him. This done, they proceeded with ſome Deſigns of Trade.

A cunning Plot of *Tiſquantum*.

The Town alarm'd.

They had a long time promis'd the *Maſſachuſet Indians* to come and Traffick for their Furrs, and now notwithſtanding theſe rumours of Wars, they reſolved to be as good as their Word; ſo Captain *Standiſh*, accompany'd with 10 Men, together with *Tiſquantum*, and *Hobbamock* (which was one of *Maſſuſoyt*'s greateſt Captains, and liv'd now with the *Engliſh* at *New Plimouth*) ſet out upon this Deſign. But they had not gone far, before a certain *Indian* comes to the Governour, and tells him that the *Narraghanſets* were marching towards the Town, and that *Maſſaſoyt*, the great pretended Friend of the *Engliſh*, was joyn'd with them, and he muſt therefore prepare for an aſſault. And the Rogue told this Story with ſo much paſſion, and ſo many other appearances of truth, eſpecially a Bloody face, which he ſaid he got by ſpeaking for the *Engliſh*, that the Governour believ'd him, and therefore ſhot off 2 or 3 pieces of Ordnance for a warning to Captain *Standiſh* and his Company to return, if they were not out of hearing; which they not being, came back again, and put themſelves into a readineſs to fight. But in vain did they expect the Enemy, who never came, having no ſuch Deſign at that time. And *Hobbamock*, who was more nearly concern'd for his Maſter *Maſſoſoyt*, aſſur'd the Governour of his Fidelity, and that all this Report was a Scandal upon him. To be ſure of this, the Governour diſpatch'd a Meſſenger to *Puckanokick*, the place of *Maſſaſoyt*'s ordinary Reſidence, which found him at home quietly minding his own Affairs, and thinking of no Plots nor Wars; but he was highly concern'd, when he heard how he had been miſrepreſented to the *Engliſh*, and it work'd ſo far upon him, that he went away to the Plantation ſhortly after, on purpoſe to clear himſelf, and wipe away thoſe aſperſions that had been caſt on him. This was the firſt diſcovery of *Tiſquantum*; for the Savage that had acted that part before, and alarm'd all the Plantation, was one of his Creatures, and was ſet awork by his Maſter.

Maſſaſoyt abus'd.

Tiſquantum's Deſigns.

Now this Fellows deſign in all this under-hand dealing, was not ſo much to expoſe the *Engliſh*, as to purſue his own Reputation and Advantage, and make his Country-men think him a mighty great Man: For he us'd to tell them, that he cou'd manage the *Engliſhmen*, and perſwade them to Peace or War as he pleas'd; and by this means, they entertain'd a high Opinion of him, and us'd to make him large Preſents in the quality of a Mediator. He undertook to procure them Peace or Protection, Trade or Commerce, or any other favour from the *Engliſh* that they deſir'd. And on the other hand, when the Gifts did not come in faſt enough, he wou'd denounce War againſt them, and threaten to ſet the *Engliſh* upon their backs; ſo that he was much more look'd upon than many of their Sachems, yea, *Maſſaſoyt* himſelf was grown an inſignificant Perſon in compariſon with *Tiſquantum*. For whereas the Savages us'd to apply themſelves to the former, to mediate with the *Engliſh* on their behalf, now the latter was all in all; and who forſooth, but he, had Power at *Plimouth* Town? And the Tricks he had put upon the *Indians* round about were ſo many, and had proceeded ſo far, that the *Engliſh* having now found out the Raſcal, were obliged to expoſe him as ſuch to thoſe *Indians* he had deceiv'd, and to aſſure them of their Friendſhip and conſtant Reſolution to maintain Peace with them, upon other Terms than *Tiſquantum* us'd to repreſent.

A. D. 1622. A pleaſant Story.

But one of this Fellows deceits was ſo Comical, that we will divert the Reader with the account of it. 'Twas his buſineſs to ſtrike his Country-men with a very awful fear of the *Engliſh*, and by repreſenting them as a People ſomething more than ordinary, to make himſelf (who was very familiar with them) to be taken for ſomething extraordinary too. He told them therefore, that the *Engliſh* had the Command of the Plague, and cou'd diſpenſe it about in the Country as they pleas'd. He ſaid that they kept that Fury buried in a certain hole in the ground juſt by their Store-houſe, and cou'd let it out at any time upon their Enemies, and ſo kill them without the trouble of fighting. And as a conſequence of the former, that by keeping that hole faſt ſtopt, they cou'd keep the diſtemper a Priſoner under ground, and hinder the malignant Contagion from flying abroad to diſturb the Country. Now the *Indians* who had had the Plague raging amongſt them, and ſo had known the terrible effects of it, cou'd not poſſibly hear any thing more aſtoniſhing; and therefore (not knowing the Knave they had to do with) thought the *Engliſh* a very ſtrange ſort of People, believ'd it was their intereſt upon all accounts to keep the Peace with them, and for that end courted *Tiſquantum*, by whoſe means alone they hop'd to have the fatal hole kept cloſe ſtopt. But in the late alarm, it happen'd that certain Barrels of Gun-powder, that were buried under ground, were dug up, and *Hobbamock* ſeeing the great hole where the Barrels lay, chanced to ask *Tiſquantum* the meaning of it: Why (ſays he) this was the place where the Plague was buried; which ſo ſurpriz'd the other, that he went immediately to ask ſome of the *Engliſh* themſelves, who told him, They had not (but the God they ſerv'd had) the command of the Plague. Thus all *Tiſquantum*'s Roguery came out, and the *Indinns* were ſatisfied they were liable to no ſuch Perſecution from their Neigbours as that came to. 'Tis poſſible the Raſcal might mean the Gun-powder all the while, for that was a raging Plague amongſt the *Indians*, and a great many of them dy'd on't. The politick King of the *Narraghanſets* we know, wou'd not ſuffer the Infection to lodge under his Roof, but threw it out of doors with all imaginable haſte; and 'tis probable he had ſeen ſome Men drop down very ſuddenly of it, or elſe he wou'd not have been in ſuch a hurry. But whether *Tiſquantum* meant that or no, 'tis certain he impos'd upon the *Indians* to as great a degree, as if the Plague had been actually Impriſon'd in that Cavern he ſpake of; and like the Winds, cou'd have been let out and call'd in, at any time when the Keepers pleas'd.

Maſſaſoyt diſpleas'd.

'Twas hinted before, how *Maſſaſoyt* was repreſented to the *Engliſh* as a Confederate with their Mortal enemies the *Narraghanſets*, and this by the ſly inſinuations of *Tiſquantum*: Now this abuſe provok'd *Maſſaſoyt* ſo far, that he ſent to the Governour to have the ſcandalizing Slave reſign'd to him, and the rather, becauſe being one of his own Subjects, he had a Right to demand, as well as a Power to puniſh him; but the *Engliſh* found, or made ſome excuſes for not delivering him up, and tho' Peace was afterwards made for him, yet this refuſal in ſome meaſure ſour'd that Prince: and the truth on't is, it ſeems hardly worth their while to have loſt the leaſt degree of his Friendſhip for the ſake of a deſigning Villain, allowing him to have been an Interpreter.

Their Trade with ſeveral *Indian* Towns.

NewPlante s oppreſs the *Indians*.

Nauſet and *Mattachieſt*.

No Wars coming on, the Colony improv'd their time in trading with the *Indians*: They went that Voyage to the *Maſſachuſets*, from which they had been once hindred by the noiſe of the coming of the *Narraghanſets*, and their Trade with that People turn'd this time to very good account. A while after, the Governour in Perſon going out upon the diſcovery of a paſſage within the Shoals of *Cape Cod*, (which attempt prov'd ineffectual) and having ſome expectations of Corn from the *Maſſachuſets*, he went thither; but a Sickneſs had been amongſt that People, and hindred their Country Affairs. They complain'd alſo to the Governour of the *Engliſh* that were ſeated in the Bay hard by them; of their prouling about, and ſtealing their Corn. Theſe we muſt know were a little Plantation by themſelves, lately come over, upon one Mr. *Weſton*'s account, and who thought fit to Seat themſelves in this place. They ſpent and ſpung'd upon the Colony at *Plimouth*, and robb'd the Savages too; and which was worſt of all, they had enter'd into a ſort of a Partnerſhip, as to ſome points of Trade, with them of *Plimouth* Town, which ſeem'd to give them Partners ſhares alſo in the ſcandal of the abuſes and injuries offer'd to the *Indians*. The Governour found there was no good to be done here, thoſe new Planters having indeed quite ſpoil'd the Trade both for Corn and Furrs, giving as much for a Quart of Corn as the *Plimouthians* us'd to give for a good Beaver-skin; ſo that he return'd into the bottom of the Bay of *Cape-Cod*, to a place call'd *Nauſet*, where the Sachem us'd the Governour very kindly, and furniſh'd him with 8 or 10 Hoſheads of Corn and Beans. The ſame uſage they met with at *Mattachieſt*, together with a good quantity of Corn. And tis obſervable, that being under a neceſſity of leaving a conſiderable Stock of Corn, which they had bought here, behind them one Winter, at their return to fetch it they found it perfectly untouch'd, and not only ſo, but well guarded and preſerved by the *Indians*; ſuch an awe had they of the *Engliſh*, and ſo readily did the Sachem (who was commanded by the Governour to look after the Corn) obey the Orders laid upon him.

Namasket and *Manomet*.

After this they traded at *Namaſket* and *Manomet*, Inland Towns, and got good ſtore of Corn. That latter place ſtands upon a fine River that yields abundance of excellent freſh Fiſh, and runs into the *Narraghanſet* Bay. It lies S. W. from *Plimouth*-Town about 20 Miles. The Sachem of this Country us'd the Governour with very great civility, and was one of thoſe that had acknowledg'd the Sovereignty of King *James* of *England*.

Another Voyage.

The next Voyage about this Corn-trade was to *Mattachieſt*, and Captain *Standiſh* undertook it. Here the *Indians* diſcover'd much another ſort of temper than they had done before, for they pilfer'd and ſtole away ſeveral things from the Company, which tho' in themſelves but Trifles, yet the Captain was reſolv'd not to loſe, and therefore threaten'd the Sachem till he had made him take Orders for the reſtitution of them again.

Treachery of the *Indians*.

But this was not all, for the Captain plainly diſcover'd that they had a deſign to murder him and his Men, but he kept a good Watch all the while he was there, and ſo defeated them. Neither was this the firſt time the *Indians* had been fingering the *Engliſh* Commodities; for before this, when they were trading at *Nauſet*, they ſlily got away ſome things, and the Captain was forc'd at that time to give them ſome rough words before he cou'd have them reſtor'd.

Capt. *Standiſh* at *Manomet*.

The *Indians* falſe there.

The carriage of a bold *Indian*.

But to proceed: Some time after, when their decaying Stores requir'd a freſh Supply, Captain *Standiſh* went to *Manomet*, to fetch home a parcel of Corn that the Governour had contracted for. The Sachem of this place had given the Governour, when he was here, a very kind Entertainment, but he treated the Captain now not near ſo well. In ſhort, he very evidently ſaw that they had the ſame treacherous Minds with them of *Mattachieſt*, and this paſſage alone was enough to have perſwaded him of it, had there been no others grounds for ſuſpicion. While he was at the Sachem's Houſe, in comes a certain *Maſſachuſet Indian*, by Name *Wituwamat*, a proud inſulting Fellow, and one that had imbrued his hands in the Blood both of *Engliſhmen* and *Frenchmen* more than once. He was a luſty ſtrong Man, and had Courage enough, and knew it ſo well, that he leſſen'd it wonderfully by his extravagant braggs of it. This ſawcy Savage cou'd not forbear jeering the *Engliſh* and *French* before the Captain's face, and laughing at their weakneſs and puſillanimity: For (ſays he) they never die like Men, but like Children, crying, and making a parcel of ſoure faces, when they are Mortally wounded. But he did not content himſelf with this piece of Inſolence, but taking a Dagger from about his Neck, (which Weapon he had gotten from ſome of the *Engliſh* of *Weſton*'s Plantation) he preſented it to the Sachem, and afterwards made a long Speech, accompanied with a World of impudent geſtures and actions; and 'twas very evident, that he intended not only to affront Captain *Standiſh*, but alſo to let him know that he deſign'd to do ſo. The Captain indeed, tho' he underſtood the Language in ſome meaſure, yet not well enough to make ſenſe of a tedious Speech; however, he underſtood enough to make him ſenſible what the Man wou'd be at, yet being fearful of beginning to open a wide breach, he let them alone, and reſolv'd to ſee what they wou'd make of it themſelves.

The ſcope of his Meſſage to the Sachem.

Now (as they came afterwards to be inform'd) *Wituwamat*'s Speech to the Sachem was to this effect: That the *Maſſachuſets* had formerly deſign'd to deſtroy the *Engliſh* Colony planted by them in the Bay, but they conſider'd, that if they did that, they muſt cut off them at *Plimouth* too, or elſe they ſhou'd lie expos'd to a ſevere revenge. But then finding themſelves not ſtrong enough to carry on both thoſe deſigns, they endeavour'd to engage their Neighbours aſſiſtance, and came now to beſpeak him to joyn with the other Sachems round about, who were reſolv'd to do their utmoſt towards the Extirpation of the *Engliſh*. Farther he told him, That ſince Captain *Standiſh* was thus luckily fallen into their hands, they ought not to ſlip the opportunity, but make him and his Men the firſt Examples. After this Meſſage, *Wituwamat* was mightily careſs'd by the Sachem, and there was a manifeſt difference between his Entertainment and the Captains. This was a plain Declaration of his Mind, and 'twas as much as to ſay that he was reſolved to joyn in the Confederacy againſt the *Engliſh*. The Captain eaſily ſaw the difference made between *Wituwamat* and himſelf, but however digeſted that, as long as they did not come to other extremities. Now the number of Men he had with him was very inconſiderable, they were not above 6 in all, whereof one half was with the Shallop, and the other aſhore with him;

Captain *Standiſh's* dangers.

Maſſaſoyt ſick, and the Viſit made to him.

yet they did not dare to come to open violence tho' he had ſo few, and the Captain having got all his Corn ready, made the *Indians* carry it down to the Shallop, according to their promiſe, and ſo came off clear. At this time there was a notable Raſcal (an *Indian* of *Cape-Cod*) very officious about the Captain, and wou'd needs help him in getting his Corn aboard, and doing other pieces of Service, almoſt whether he wou'd or no. He had been acquainted ſome time with the *Engliſh*, and now being got into the Plot, appear'd more courteous and diligent to pleaſe than ever; but his true deſign was to kill Captain *Standiſh*, and being to lie amongſt the *Engliſh* that Night, promis'd the Sachem that he wou'd Stab him before they parted, and then his Men might fall upon the reſt of the company. But as it fell out, that Night the Captain cou'd not ſleep, and did nothing but turn to and fro (and ſometimes walk about by the Fire-ſide) all Night long; ſo that the Aſſaſſinate fail'd of his purpoſe. The next day the Wind ſerving, they ſail'd back for *Plimouth*, and this *Indian* with them, who wou'd fain have perſwaded the Captain to have gone to a certain place along with him, where he had (as he pretended) large Stores of Corn to furniſh him with; and Capt. *Standiſh*, who ſuſpected nothing of his treachery, wou'd have accompany'd him thither, but Providence prevented it, and the Wind turning ſuddenly about, oblig'd them to lay aſide thoſe thoughts, and ſail home. Thus the ſecond Plot was baffiled too, and the Life of a brave Man happily ſpar'd. In the interim that Capt. *Standiſh* was at *Manomet*, News came to *Plimouth* that *Maſſaſoyt*, their Old Friend and Allie, was very like to die, which was no ſmall trouble to the whole Plantation, for they had always found him punctual, juſt and ſincere in all his Treaties and Dealings with them. Now ſince 'twas the cuſtom amongſt the *Indians*, when any (eſpecially a great Man or a Sachem) are ſick, for all that profeſs a Friendſhip for them to ſend to viſit them, the Government determin'd to pay that Civility to *Maſſaſoyt*, and Mr. *Winſlow* (accompanied with the truſty *Indian Hobbamock*, and one *Engliſhman* more) was diſpatch'd upon that Errand. By the Way they had News that the good Prince *Maſſaſoyt* was dead, (which had almoſt ſpoil'd their Journey) but conſidering the uncertainty of Reports at a diſtance, they went on.

Hobbamock's ſorrow for his Prince.

Mr. *Winſlow* cures him.

Maſſaſoyt's gratitude to the *Engliſh*.

Coubatant receives them.

But *Hobbamock* burſt out into a bitter Lamentation, for the ſuppoſed death of his beloved Lord and Maſter: He went on crying, *Neen womaſu Sagamus*, *Neen womaſu Sagamus*, My Sachem, my Sachem, many have I known, but never any like thee. Then he wou'd turn to Mr. *Winſlow*, and run into a long harangue upon the Praiſes of his Maſter, and bid him depend upon it, that he ſhou'd never find any other *Indians* ſo Juſt and Honeſt, and Good as he. However, when they came to *Puckanokick*, they were ſurpriz'd with the joyful tidings of his being yet alive, tho' in a condition in which his life was not long to be expected. He had not quite loſt his Senſes, only his ſight was gone, when Mr. *Winſlow* came to his Bed-ſide, and *Hobbamock* telling him there was his good Friend *Winſlow*, he put out his Hand, and faintly repeated thoſe words, *Keen Winſnow*, that is, *Art thou* Winſlow? for they can't pronounce the Letter *l*, but always uſe *n* in the room of it. To which Mr. *Winſlow* replying, *Ahhe*, Yes, he return'd, *Matta neen wonckanet namen Winſnow*; that is, O! Winſlow, *I ſhall never ſee thee again.* And the truth on't is, the noiſe and buſtle that was about him was enough to have kill'd a Man almoſt without a diſtemper; for being mightily belov'd amongſt the *Indians* for his Vertues, there was a vaſt concourſe of Viſitants about his Houſe and Chamber. Several of theſe were at their Charms and Incantations for his recovery; that is, making loud noiſes and clamours, and diſturbing the Sick Man inſtead of doing him good. Beſides, there were 6 or 8 Women employ'd to chaſe his Arms and Legs, in order to the keeping of the natural heat in them; and what with the gibble-gabble of theſe, and the wild noiſes of the Charmers, our *Engliſh* Viſiters declare that their Heads were diſtemper'd. *Maſſaſoyt* yielded to all theſe Ceremonies and Cuſtoms of his Country, but in ſpight of all the Means, concluded himſelf a dead Man. But Mr. *Winſlow* comforted him in the beſt manner he cou'd, and began to act the part of a Phyſician towards him, adminiſtring ſome Cordials which he brought from *Plimouth*, and found that they were not without their ſucceſs. This encourag'd him to go on in his practice, and the ſucceſs ſtill attending the endeavour, the iſſue was, that in a few days time the Patient was ſo far recover'd, as to be out of danger of dying this bout. But 'tis hardly to be expreſs'd how kindly he took this Viſit from the *Engliſh*; to make ſome returns, he diſcover'd all the whole Plot of the *Maſſachuſets*, how many of the Sachems they had drawn in, and what applications they had made to him to joyn with them too. But withal, he earneſtly adviſ'd the *Engliſh* not to wait till the *Maſſachuſets* began with them, but to begin firſt themſelves, and cut them all off; otherwiſe, if they ſpar'd them upon thoſe Principles of tenderneſs that they had hitherto done, they wou'd have cauſe to repent it hereafter. With infinite thanks, and freſh aſſurances of true love to the *Engliſh*, they departed from *Maſſaſoyt's* Town, in company with *Coubatant* the Sachem of *Mattapuiſt*, who entertain'd them at his Houſe. This was a ſort of an unſettled (if not a hollow-hearted) Friend of the *Engliſh*; however, he entertain'd them civilly, and diſmiſs'd them without any wrong, tho' Mr. *Winſlow* and *Hobbamock* both had been employ'd in a Service againſt him.

Reſolution to puniſh the *Maſſachuſets*.

Miſerable Caſe of the other Colony.

At their return home, the Affair of the *Maſſachuſet*-Plot was taken into publick conſideration, and ſince the Evidences that prov'd that bloody and barbarous Deſign were ſo many and ſo clear, that there was no room for doubt of it, it was determin'd Capt. *Standiſh* ſhou'd go and prevent them. Matters were now come to that paſs with the *Engliſh* of *Weſton's* Plantation, that they cou'd hardly live there for the continual Violences and Inſults of the *Indians*; they wou'd come and take their Proviſions out of their very Fort, and eat it before their faces, and if any body ſpoke a Word to gainſay them, they wou'd draw their Knives and hold them to their Breaſts. In ſhort, they were in a very miſerable condition, and cou'd not poſſibly hold out (between want of Proviſions and of Strength) much longer. It muſt be own'd, that their own Unjuſt treatment of the *Indians* brought all theſe Miſeries upon them, and they were ſo far from being not acceſſary to their own Miſfortunes, that if the Savages had executed their Deſign upon them, it muſt have been allow'd they had receiv'd but a Juſt recompence.

Deſign upon the *Indians*.

Careleſneſs of the new Plantation.

The Inſolence of the *Indian* Hectors.

However, ſince they had plotted to carry their revenge ſo far, and to deſtroy the innocent with the guilty, to Maſſacre them at *Plimouth* as well as the others, 'twas but reaſonable for the *Engliſh* to attempt ſomething in their own Defence. And they concluded it the beſt way to go to Work in ſuch a manner, that the *Indians* might not have any frightful alarm given them, and ſo fly and hide themſelves from their Juſt indignation; but rather, ſeeing no ſigns of any impending Storm, might be left to their full liberty, and ſo diſcover themſelves with the more plainneſs. For this reaſon, Capt. *Standiſh* took no more than 8 Men (of which *Habbamock* was one) along with him; but whatſoever other action was forborn at this time, he had poſitive Orders to bring the Head of that daring Savage *Wituwamat* along with him at his return. Being come to the Plantation among the *Maſſachuſets*, he found the People careleſly diſpers'd up and down the Country, like Men that neither knew nor fear'd any danger; they had neither Swords nor Guns amongſt them, and they ſuffer'd the Cut-throat *Indians* to lodge and live together with them, as if they had been their Friends and Countrymen. But when the Captain told them their danger, and the horrid deſign of the *Indians* to murder them all, then they cou'd reflect upon former paſſages, and find out ſome grounds of ſuſpicion that all was not as it ſhou'd be, and that there was ſome wicked deſign in hand. 'Tis ſtrange to think what theſe Men had done with their Senſes all this while, that People muſt come from another Country to tell them that their next Neighbours were about to cut their Throats. And moſt certainly, the very reaſon why they were not all diſpatch'd (every Man of them) before that time, was becauſe the *Indians* were not in a capacity to prevent the revenge that was to be expected from *Plimouth* Town; that is, to murder them as well as the reſt. Captain *Stanaiſh* endeavour'd to conceal his reſentments and deſign from the *Indians* as much as was poſſible, but yet a cunning *Indian* Spy diſcover'd ſomething of Revenge in his face, and gave the hint to his Countrymen. Now beſides the hectoring Savage *Wituwamat* before mention'd, there was alſo another among the *Maſſachuſets* whoſe Name was *Peckſnot*, as bold and inſolent a Fellow as the other, and of as much courage and ſtrength; and theſe two were Champions that they repos'd a great deal of confidence in. This *Peckſnot* talking one day with *Hobbamock*, diſcover'd that the deſign of their coming was very well known amongſt the *Maſſachuſets*. *We know* (ſays he) *that Captain* Standiſh *is come to kill us all, and tell him that we know it, but fear him not, neither will we run away from him; let him begin as ſoon as he dares, he ſhall not come upon us unawares.* Notwithſtanding this ſawcy Challenge, the Captain let him alone; yea, tho' they came and whet their Knives before

fore his face, and us'd ſeveral threatning geſtures and actions, yet he would not begin till he had a favourable opportunity. But this came ſhortly after, for the two Hectors being one day amongſt the *Engliſh* playing their rude pranks, as they us'd to do, *Wituwamat* bragg'd of the goodneſs of the Knife he had in his hand, upon the Handle of which there was a Womans face carv'd: *But* (ſays he) *I have one at home that's better than this, which has a Man's face carv'd upon't; and theſe two Knives I intend ſhall be married together. That Knife at home* (he continued) *has done many an Execution both upon* Engliſh *and* French; *and as for this*, hinnaim namen, hinnaim michen, matta cuts, *by and by it ſhall ſee, and by and by it ſhall eat and devour, tho' without ſpeaking a word.*

A Jeſt upon the Captain.

Pecksnot alſo (who was a Man of a very large Stature) thought fit to put his Jeſt upon the Captain, who was but of a ſmall one: *You* (ſays he to Captain *Standiſh*) *tho' a great Captain, yet you are but a little Man; and I, tho' I am no Sachem, yet am a Man of great Strength and Courage.* This was a pretty intelligible way of calling a Man Coward; however, the Captain did not thank him for this Savage Complement till the next day. But then having theſe two Fellows, with two more of their Gang in company, one of which was a Brother of *Wituwamats*, and Villain-like, trod exactly in his Steps; and having juſt the ſame number of his own Men with him, he gave the Signal to have the Door ſhut faſt where they were, and ſo being in a Room by themſelves, and an equal Match for number on both ſides, there cou'd be no foul play. The Captain himſelf began with *Pecksnot*, and after a vaſt deal of ſtruggling got him down, and cut his Throat with his long Knife. The *Engliſhman* that fought with *Wituwamat* kill'd him too, and ſo did the third his Man; only *Wituwamat*'s Brother was taken alive, and preferr'd to a pair of Gallows afterwards. It's incredible how many wounds and ſtabs thoſe two valiant Savages receiv'd before they died; how they ſtruggl'd and catch'd at the Weapons to the very laſt breath, and died without any unmanly noiſes or ſigns of fear. The Captain having done this hardeſt piece of the Work, went preſently away to do the eaſier; that is, to rout the reſt of the *Indians* that were banded together in ſeveral places. Some he and his Men cut off, and another Company of the *Engliſh* of that Plantation fell upon more of them; and had not ſome that eſcap'd given warning to the reſt, the *Maſſachuſets* had that time been ſhrewdly diminiſh'd in their numbers. But there was at length a good body of *Indians* got together, and they had courage enough to come and meet the Captain and his Men in the open Field; but that heat was quickly cool'd, and they retir'd behind the Trees, where they ſtood, and ſometimes ſhot, and ſometimes ſcolded, and gave the *Engliſh* foul Language, never daring to leave thoſe wooddy ſhelters. The Captain call'd to the Sachem to come and decide the Controverſie by ſingle Combat between them two, but he cou'd get no anſwer to it, but Arrows and ill Words. Theſe being diſpers'd, they return'd back to *Plimouth* Town, where the Captain was receiv'd with a great deal of Joy and Triumph, and *Wituwamat*'s Head was ſet up upon the Fort. It is not eaſily conceiv'd what a terror this execution done upon the *Maſſachuſets* ſtruck in the reſt of the Plotters round about; they forſook their Houſes, and ran to and fro in the Woods like diſtracted People, being continually afraid that the Juſt revenge of the *Engliſh* purſued them in all places. Not long after alſo, ſeveral of thoſe malignant Sachems died, and left the *Engliſh* either none, or (at leaſt) leſs virulent enemies in their room. And now it may be ſaid, that the Plantation began to flouriſh ſomething conſiderably, having, beſides the Bleſſings of Heaven in good Corn and Fruit Seaſons, the Encouragements of *Old England* in freſh Supplies from thence.

The *Indians* ſlain by Capt. *Standiſh* and his Men.

They are routed in other places.

The terror of the *Indians*.

Our Authors go no farther with the Hiſtory of the Colony and their Affairs; ſo that we ſhall here break off the thread of this Diſcourſe, and come to that of the Country and People, where, and amongſt whom, they were ſeated.

CHAP. XXX.

An Account of New-England, *with the Manners and Cuſtoms of the Natives.*

New-England ſuppos'd an Iſland.

THis Country (whatever the *Engliſh* ſay of it) the Natives believe to be an Iſland, and go ſo far as to tell the very Name of that Inlet of the Sea that parts it from the Main Land of *Virginia*. This Inlet they call *Moheggon*, and conſtantly affirm that the *Engliſh* and *Dutch* paſs that way between the two Countries, and drove a great Trade there. For the confirmation of this Opinion of the Natives, it is alledged that they had no knowledge of the neighbouring Country of *Virginia*, tho' it be not above 150 Leagues from them; that they never heard of *Powhatan* the great Prince of thoſe Parts, nor knew nothing of the *Engliſh* Plantation there, till they were inform'd of it. And the reaſon of this was ſuppos'd to be, becauſe ſome Waters (ſuch as they cou'd not paſs in their Canoes) lay between them and that Country. But they muſt be credulous enough, that will receive theſe things as Arguments to prove *New-England* an Iſland. Perhaps any great Lake they can't find the end of, they call a Sea; at leaſt thoſe that did not underſtand their Language well might think ſo. However, if the *Engliſh* have ever travell'd by Land from *Virginia* to *New-England*, 'twill be as much as is needful to put an end to this diſpute.

The reaſon of it.

Temper of the Air.

For the temper of the Air and the Seaſons, *New-England* differs very little from Old, at leaſt that part where the Plantation was fix'd; altho' in the Latitude of 42 deg. one wou'd expect that from this nearer poſition to the Line, it ſhou'd be much hotter here than in *England*, yet Experience ſhews the contrary, or if there be any difference 'tis next to indiſcernible. On the other hand, the Winters are thought to be both longer and ſharper than in *Old-England*, and Cold more piercing, and the Froſts more ſevere. But this difference, which is contrary to what ſhou'd follow, if one conſider'd meerly the ſituation of places upon the Globe, is not a Phænomenon peculiar to *New-England*, but is obſervable in other Parts of the World.

Great Froſts.

Soil excellent Clay.

As for the nature of the Soil, here is Sand, Gravel, Clay as good as any in the World, excellent for Pots, and that will waſh as well as any Soap. There is alſo great ſtore of Stone, tho' not ſo denſe and hard as in many other Countries. The Products of the Country as to Plants, Fruits, Corn and Animals, are ſo much the ſame with thoſe of *Virginia*, and the neighbouring Parts, that they need not be allow'd a particular deſcription.

Trade.

The main Commodities for Trade are Fiſh and Furrs, of both which there is ſuch plenty, and ſo good, that if great profit upon that ſcore be to be expected from any Country, 'tis from hence.

Natives belief of a God.

The Natives are not ſo groſly ignorant of a Supreme Almighty being here, as they ſeem to be in many other Parts of the World: For as they have a Notion of ſeveral Divine Powers, ſo they conceive of one Superiour to all the reſt, and that created all things. This Power they call *Kichtan*; and they ſay farther, That he made at firſt one Man and one Woman, from whom deſcended all the Nations of the Earth, but how they came to be ſo ſcatter'd about, and diſpers'd into Countries ſo remote from one another, they can't tell. They believe this Power to be good, and pay a ſort of acknowledgment to him for Plenty, Victory, or other Benefits receiv'd. His Habitation they ſay lies Weſtward in the Heavens, and all good Men when they die go thither, where they meet all their Friends, and have their fill of all manner of Pleaſures. As for bad Men, when they die they go to *Kichtan*-Habitation too, and knock at the door, but they have no anſwer from him but *Quachet*, that is, walk away; and ſo they wander about in reſtleſs diſcontent and penury. This Supreme *Kichtan* they hold to be a

Their thoughts of a future State.

Their account of the evil Spirits appearing to them.

The deluſions of the Powahs.

Method of curing the Sick.

The Tricks of the Powahs.

What they tell the Sick of their diſeaſes.

Their Sacrifices.

Power altogether inviſible, and not any of the Prieſts themſelves ever pretend to have ſeen him at any time. But they ſtand in more awe of another Power, which they call *Hobbamocko*, and our *Engliſhmen* the Devil. 'Tis to him they make their application for the cure of diſtempers, and he ſcruples not (as they affirm) to make very frequent appearances to them; ſometimes in one form, and ſometimes in another, like a Man, a Deer, an Eagle, but moſt commonly in the form of a Snake. To ſee him is an Honour that they are vaſtly ambitious of; however, 'tis conferr'd only upon thoſe of the better ſort, and the meaner ſort of People, as much as they long for't, have ſcarce any of his Viſits. But the miſchief of it, theſe better ſort of People, to whom *Hobbamocko* is thus kind, are the Powahs or Prieſts, and the Panieſe or Counſellors of State to the Sachems; that is, Men of Intrigue and Deſign, that love to govern and keep the People in awe about them. And according to the accounts our *Engliſh* give of the Matter, the very Notion of this *Hobbamocko* was put into the Peoples Heads by the Powahs; and the buſineſs of making him, and not *Kichtan*, (whom they believe to be all good) their great Phyſician, ſeems to have been entirely the Device of thoſe (too ſucceſsful) Cheats. One may gueſs at the Original and whole Management of the Impoſture, by this particular part of it. When a Man lies ſick of ſome grievous diſtemper, the Powah (who is the black Power's Agent and Officer) comes to do the good Work of curing him. The adminiſtration is nothing elſe but an Incantation; the Prieſt howls, ſcreams, ſings, jabbers, mutters, makes horrid faces, and looks as ugly as *Hobbamocko* himſelf. He has a thouſand antick tricks and poſtures over the diſeaſed Man, who all the while the Invocation laſts, ſhews his conſent to it by ſome few words dropt ever now and then, and ſometimes breaks out into a ſtrain of Muſick along with the Powah. And if there be a wound in the caſe, after the noiſes and poſtures are ended, he goes to licking the ſame. But the miſery is, that 'tis not the Powah that does this, tho' he ſeems to do it, but 'tis the Snake or the Eagle that ſits upon his ſhoulder that does the buſineſs; that is, (as we are to ſuppoſe) *Hobbamocko* in the ſhape of thoſe Animals. This Spectrum is inviſible to all but the Powah himſelf, who can ſee it very plainly tho' none of the reſt can; and yet they are ſuch Fools as to believe 'tis there, giving the Lye to all their Senſes at once, rather than to the Knave that impoſes upon them. Now for a Man that has his eyes open, and good ones too, to be perſwaded that an Object ſtands before him when he can ſee nothing of it, is no higher a denial of ſenſe, than to believe that an Object which he ſees before him is really not there; and conſequently, ſhou'd an *Indian* catch one of the Powahs in Bed with his Wife, that wou'd be no proof at all of his being there, for the Man's eyes may cheat him one way as well as t'other, and ſee what is not to be ſeen, as well as not ſee what is to be ſeen. So that theſe Fellows may lie with all the Women of the Country, and be taken in the fact too, and yet never provoke the Jealouſie of the Husbands, nor be call'd guilty for't. But to go on with their honeſt practiſes a little farther: When they come to a ſick Man, they generally tell him a very pretty Story of the Cauſe and Original of his illneſs. If they find the diſtemper any way hopeful and likely to be cur'd, they tell him that *Hobbamocko* ſent it for ſome Offence or other, who if he calls upon him in his diſtreſs, will ſtill afford him relief: On the other hand, if the caſe be deſperate, then they ſay that *Kichtan* is angry, and laid that affliction upon the Patient; and all Maladies from this hand they affirm are incurable: Thus they give them a far worſe Notion of God Almighty than the Devil, while they make the former a cruel and inexorable Being, but repreſent the latter as one that by Sacrifices and Prayers may be appeas'd. And our *Engliſh* Planters poſitively tell us, from the Confeſſions of the *Indians* themſelves, that the Worſhip of *Kichtan* was almoſt worn out amongſt them; and that many had ſaid, within their memory, that Power was much more Invok'd than he was at that time. The moſt zealous of all the *Indians*, in their Religious Superſtitions, were the *Narraghanſets*, the inveterate enemies of the *Engliſh*. They have large ſpatious Houſes in the nature of Temples, which are ordinarily frequented only by the Powahs; but at their Solemnities, vaſt Crouds of People reſort thither, and offer the beſt of their Treaſures in Sacrifice, that is Skins, Hatchets, Kettles, and the like. All theſe are thrown by the Prieſts into the midſt of a great Fire, and burnt (as our Authors ſay) to aſhes; which we believe may be true of the Skins, but hardly of the Kettles and Hatchets. Thoſe that offer liberally towards this Sacrifice are eſteem'd (not Fools as they deſerve to be, but) wiſe and devout Men. And 'tis ſuch a matter of reputation to be open-handed in this caſe, that the *Indians* about *Plimouth*-Town told the *Engliſh*, they wiſh'd their Sachems wou'd appoint the like Sacrifices amongſt them too. This is juſt as if they wanted to be rid of their Houſhold-ſtuff, or were ſo overburthen'd that they cou'd not tell what to do with it; but thoſe that look into their Houſes will find it otherwiſe.

The Panieſe, and the Diſcipline thoſe go through that are of that Order.

The Panieſe, or Counſellors to the Sachems, are not only the wiſeſt and moſt courageous Men that can be found, but generally of the largeſt ſize too. The Sachems never make War, or undertake any weighty buſineſs, without their Advice; and when the Armies march, theſe Men are always the immediate Guard of their Perſons. To keep up ſo honourable an Order as the Panieſe are eſteem'd to be amongſt all the *Indians*, they chuſe out the likelieſt and moſt promiſing Boys, and train them up with abundance of care, and in the Obſervation of peculiar Rites and Cuſtoms. 'Tis not a little hardſhip theſe Boys go through while they are under this Diſciple; they abſtain from all curious Meats, drink the Juices of bitter Herbs till they are ready to ſpue themſelves to death; they are beat over the Legs and Shins with Sticks, and made to run through prickly Buſhes and Brambles, to render them hardy, to inure them to Pain and Labour, and (as they ſay) to make them the more acceptable to *Hobbamocko*. For 'twas hinted before, that theſe Panieſe are ſome of them to whom the *Indians* affirm he makes very frequent Viſits, tho' our *Engliſh*, in all their Converſations with them, never had the luck of coming to any of their Houſes when he was there. But this ſeems pretty certain of theſe Men, that they diſcover in all great and dangerous attempts a Boldneſs and Courage beyond that of the other Warriours, and the common People firmly believe them to be above the reach of Swords and Darts, and that no (ordinary Weapons at leaſt) will kill them.

Government of the *Indians*.

Tributes.

The Government of the *Indian* Sachems is altogether Hereditary; and if the Father dies before the Son or Daughter is of Age to ſucceed him, the Minor is committed to the Tuition of ſome able Counſellour, who Manages the Affairs of the Country till the other is fit to take that burden upon his or her own ſhoulders. Some of theſe Sachems are little Tributary Princes that pay Homage, and depend upon ſome greater ones for Protection, without whoſe Knowledge and Conſent they cannot make War nor Alliances. There's none of them all but receive a ſort of an Annual Tribute from their People, which is for the moſt part ſome Baskets of Corn. Theſe they bring and ſet down in order in ſome place near the Sachem's Dwelling, where the Panieſe ſtand ready to give them thanks on the Sachem's behalf; and then going away, and acquainting him with it, he comes out himſelf, and expreſſes his Gratitude to his People, by good Words and ſome Preſents, and ſo diſmiſſes them. Now conſidering the abſolute Dominion of every Sachem in his own Country, this is but a very reaſonable Acknowledgment, for their Territories are their own Inheritance and Property; and if any Man has occaſion for ſo much Land, he goes and takes it of the Sachem, who marks him out as much as he has need for, and ſets him his Bounds. So that the Sachems are ſo many Landlords to their People; and 'tis but Juſt, ſince there is no ſuch thing as Money amongſt them, that the Tenants ſhou'd bring of the Fruits of their ground to make compenſation for the uſe on't. Neither do they pay only in Corn, but if any Man within the compaſs of his own Land kills any Veniſon, the better part thereof goes to the Sachem, or ſometimes the Skin.

Sachems receive all Strangers.

The Sachems generally keep open Houſe for all Strangers and Travellers. Any ſuch People, when they paſs through their Territories, go thither of courſe, where they are entertain'd according to their quality; but the Cuſtom is always, as ſoon as they come, to tell whither they go, and how long they intend to ſtay.

Their Wives and Concubines.

No Sachem will take a Wife that is not of a Birth equal to his; Concubines indeed they chuſe according to appetite and fancy, and ſtick not at the want of Extraction, if other things pleaſe. And tho' they keep a great number of theſe Women of Pleaſure, yet all are ſubject to the Wife, who is the Supreme Governeſs of the Family. The Subjects take the ſame liberty too, and give their Wives the ſame preheminence; beſides which, they keep them during life, but turn away the Concubines at pleaſure. When a Woman leaves a ſingle Life and becomes a Wife, ſhe preſently cuts her hair, and then wears a ſort of a Veil upon her Head till her hair is grown again. The time of War is a time of General Goal-Delivery to all Women that are uncomfortably Yok'd: For if any

Woman has either a bad Husband; or one ſhe can't love, away ſhe runs to the Enemy, where ſhe is ſure to be made welcome; for the *Indians* never think they have Women enough, and fight to gain ſuch Prizes oftner than Sovereignty.

Puniſhments of Adultery.

In the Caſe of Adultery, the Husband puts away the guilty Wife, or ſometimes reſts ſatisfied with baſting her ſides: But what the Wife does with the guilty Husband, we can't inform the Reader; tho' 'tis but Juſt ſhe ſhou'd uſe her Ladle a little about him, in order to his Reformation. While the *Indian* Women have their Monthly Purgations, they retire from their Husbands, and live in a Houſe alone; afterwards they waſh themſelves, and all that they have either touch'd or us'd, and ſo come back to make a part of the Family again.

Of Injuſtice in common dealings.

The Sachem executes Juſtice.

In Matters of unjuſt and diſhoneſt Dealing, they proportion the puniſhment according to the number of times the Delinquent has offended. For the firſt Crime he is reproach'd with his Villany after a very diſgraceful manner; for the ſecond he is beaten with a Cudgel upon the naked back; and for the third, beſides a ſound beating, he has his Noſe ſlit, that all Men may know and avoid him. Now in all theſe Caſes, the Sachem is not only Examiner and Judge, but Executioner too; 'tis he that beats and whips the Malefactors, and (when the Matter requires it) ſlits their Noſes too. Murder is always puniſhed with Death, without the leaſt favour; and the Sachem does this bloody Work himſelf. Indeed, if the Criminal be a great way off, and can't conveniently be brought, the Sachem ſends his own Knife, with which the Execution muſt be done tho' it can't be done by his own Hand. But any other puniſhment that is not Capital, the *Indians* will not receive but from the hands of their Sachems; they won't be beat or whipp'd by an Officer, but their Prince may do it to all extremities, and they'll never offer to run away. Nay, for a Man to cry or flinch during the time of his Correction, is reckon'd a more infamous thing than either the Offence it ſelf, or the Puniſhment.

Mournings for the Dead.

The Burials in this Country have been Occaſionally deſcrib'd before; the moſt remarkable Circumſtances ſucceeding theſe are the Mournings, which continue for ſeveral days Night and Morning, in which all the Friends of the deceaſed bear a part, and make a very doleful wretched noiſe. If a ſick Perſon happens to recover of his illneſs, there is mighty joy; and becauſe Sickneſs is always chargeable, the Friends ſend him Gifts to help to make it up, and come and dance, and feaſt with him.

Reſpect to Old Age.

Labours of Men and Women.

The laudable Cuſtom of paying a reverence to Old Age is ſtrictly obſerv'd by all the *Indians* in theſe Parts; yea, the younger People will do all mean Offices to excuſe the old ones from it, tho' they be ſtrangers to them. And let a Man have as many Years over his Head as he will, yet he is not counted a Man, till he has done ſome action worthy the Place he fills, and the Poſt he ſtands in. The Men employ themſelves in Hunting, Fiſhing, and making Materials for the Wars; but the Women, beſides the burden of the ordinary Houſhold Affairs, (that lies upon them of courſe) manage the Husbandry too, and do all in the Field as well as the Kitchin. The beſt way for the Women to get out of this Slavery, wou'd be to make their Husbands believe they Cuckold them when they are abroad at Work; for the Men can't always watch them, and perhaps they wou'd chuſe rather to be at the trouble of the Tillage of their Land, than have Horns grow without any Tillage. For the Habits of theſe People: Beſides a ſort of Covering next the Pudenda, they wear a Deer-skin looſe about them like a Cloak, which they will turn to the Weather-ſide upon Occaſion; alſo Breeches, Stockings and Shoes, all in one piece, made of the ſame Materials. This is their travelling Habit, but when they are at home, they pull off their Breeches, with all the appendages of them. But for a Habit of extraordinary warmth and defence, they have the Skin of that Beaſt which they call a Moſs in their Tongue, and ſeems to be the only rarity of the Country, that is, in compariſon with other Animals, which are common with this, to other *American* Countries. This Beaſt is as big as an Ox, and has a Head and Neck like a Red Deer, but his hair is long like an Elk, and he has a ſhort Mane that runs down his back a conſiderable way. Under the Throat hangs down a great bunch, which is of a dark colour. The Legs are very long, and ſo is the Tail, which reaches down almoſt to his heels; and the Feet are as large every way as an Oxes. The fleſh is excellent good Meat, and the Natives Barrel it up, and keep it all the Year round. The Skin makes a very ſubſtantial Buff, and will ſerve a Man for all the ſame uſes and purpoſes. But to return to the People. The *Indians* are a ſenſible ingenious People; they keep Account of the Time by the Moon, and know divers of the Conſtellations by name. They have Proper Names for the Winds alſo, and by conſtant Obſervation have very good Skill in judging of the changes of the Weather. Their Language is very copious and difficult to be attain'd; but they have nothing of the Uſe of Letters, or any ſuch Symbolical ways of expreſſing things as ſome of the *Americans* have. To ſupply this defect, and keep up the memory of ancient things amongſt them, they dig deep holes in the ground, in the place where any memorable action was perform'd, which they take care to preſerve from being ſtopt up, from Generation to Generation. So that as a Man travels the Country, if he can but underſtand his Guide, he may read as it were the Hiſtory of their Affairs, and make his Journey pleaſant and eaſie to him. Theſe are ſtanding Monuments that never wear out; but the Names of Perſons (ſuch is their Cuſtom) are in continual flux and change. Males and Females, when they come to Years of Diſcretion, retain not the ſame Names they had when they were Young; and if they do any remarkable thing, they ſtill aſſume a new Name upon't. Now to augment an old Name by a new Title, upon the account of ſome extraordinary Performance, has been a practice amongſt ſome of the politeſt People in the World; but to quit an old Name entirely, and take up a new one, is what ſeems to be peculiar to theſe People. But the reaſon of no one part of Mankind (in Arbitrary Matters eſpecially) is to be a Standard to the reſt; and if the *Indians* of *New-England* think they have reaſon for ſo doing 'tis ſufficient.

CHAP. XXXI.

The Diſcovery of New-Scotland, *with His Majeſties Patent for the Plantation of the ſame.*

King *James*'s Patent to Sir *William Alexander*, for the Plantation of *New Scotland*.

Jacobus Dei Gratia Magnæ Britanniæ, Franciæ, & Hiberniæ fideiq; defenſor: Omnibus probis hominibus totius terræ ſuæ Clericis & laicis ſalutem. Sciatis nos ſemper ad quamlibet quæ ad decus & emolumentum regni noſtri Scotiæ ſpectaret occaſionem amplectendum fuiſſe intentos, nullamque aut faciliorem aut magis innoxiam acquiſitionem cenſere, quam quæ inexteris & incultis regnis ubi vitæ & victui ſuppetunt commode novis deducendis Coloniis factu ſit; præſertim ſi vel ipſa regna cultoribus prius vacua, vel ab infidelibus, quos ad Chriſtianam converti fidem & Dei gloriam intereſt plurimum, inſeſſa fuerint. Sed cum & alia nonnulla regna, & hæc non ita pridem noſtra Anglia laudabiliter ſua nomina novis terris acquiſitis ſed in ſe ſubactis indiderunt, quam numeroſa & frequens divino beneficio hæc gens, hac tempeſtate ſit nobiſcum reputantes, quamque honeſto aliquo & utili cultu eam ſtudioſe exerceri ne in deteriora ex ignavia & otio prolabatur expediat pleroſque in novam deducendos regionem quam Coloniis compleant, operæ pretium duximus qui & animi promptitudine & alacritate corporumque robore & viribus quibuſcunque difficultatibus, ſi qui alii mortalium uſpiam ſe audiant opponere, hunc conatum huic regno maxime idoneum inde arbitramur quod virorum tantummodo & mulierum jumentorum & frumenti, non etiam pecuniæ tranſuectionem poſtulat, neque incommodam ex ipſius regni mercibus retributionem hoc tempore cum negotiatio adeo imminuta ſit, poſſit reponere. Hiſce de cauſis ſicuti & propter bonum fidele & gratum dilecti noſtri conſiliarii Domini Willielmi Alexandri equaitis ſervitium nobis præſtitum & præſtandum, qui propriis impenſis ex noſtratibus primus externam hanc coloniam ducendam conatus ſit, diverſaſque terras infra deſignatis limitibus circumſcriptas incolendas expetiverit. Nos igitur ex regali noſtra ad Chriſtianam religionem propagandam & ad opulentiam, proſperitatem, pacemque naturalium noſtrorum ſubditorum dicti regni noſtri Scotiæ acquirendam cura, ſicuti alii Principes extranei in talibus caſibus hactenus fecerunt, cum aviſamento & conſenſu prædicti noſtri conſanguinei & conſiliarii Joannis *Comitis de Marr Domini Erskene & Garrioche ſummi noſtri Theſaurarii computorum rotulatoris collectoris ac Theſaurarii novarum noſtrarum augmentationum hujus Regni noſtri Scotiæ, ac reliquorum dominorum noſtrorum Commiſſionariorum ejuſdem Regni noſtri, dedimus conceſſimus & diſpoſuimus, tene-*

reque præſentis chartæ noſtræ damus concedimus & diſponimus præfacto Domino Willelmo Alexandro, hæredibus ſuis vel aſſignatis quibuſcunque hæreditariè omnes & ſingulas terras continentis ac inſulas ſituatas & jacentes in America, intra caput ſeu promontorium communiter Cap. de Sable appellatum jacens prope latitudinem quadraginta trium graduum aut ab eo circa, ab æquinoctiali linea verſus ſeptentrionem, à quo promontorio verſus littus maris tendentis ad occidentem ad ſtationem Sanctæ Mariæ navium (vulgo S. Maries Bay) & deinceps verſus ſeptentrionem per directam lineam introitum ſive oſtium magnæ illius ſtationis navium trajicientem quæ excurrit in terræ orientalem plagam inter Regionis Suriquorum & Etechemmorum (vulgo Suriquois & Etechemines) ad fluvium vulgo nomine Santæ Crucis appellatum. Et ad ſcaturiginem remotiſſimam ſive fontem ex occidentali parte ejuſdem qui ſe primum prædicto fluvio immiſcet, unde per imaginariam directam lineam quæ pergere per terram ſeu currere verſus ſeptentrionem concipietur ad proximam navium ſtationem, fluvium vel ſcaturiginem in magno fluvio de Cannada ſeſe exonerantem. Et ab eo pergendo verſus orientem per maris oras littorales ejuſdem fluvii de Cannada ad fluvium ſtationem navium portum aut littus communiter nomine de Gachepe vel Gaſpie notum & appellatum. Et deinceps verſus Euronotum ad inſulas Bacalaos vel Cap. Briton vocatas Relinquendo eaſdem Inſulas à dextra & voraginem dicti magni fluvii de Cannada ſive magno ſtationis navium & terras de Newfoundland, *cum inſulis ad eaſdem terras pertinentibus à ſiniſtra. Et deinceps ad Caput ſive promentorum de Cap. Briton prædictum jacens prope latitudinem quadraginta quinque graduum aut eo circa. Et à dicto promentorio de Cap. Briton verſus meridiem & Occidentem ad prædictum Cap. Sable ubi incipit perambulatio includenda & comprehenda intra dictas maris oras littorales ac earum circumferentias à mari ad omnes terras continentis cum fluminibus torrentibus, ſinubus, littoribus, inſulis aut maribus jacentibus prope infra ſex lucas ad aliquam earundem partem ex occidentali boreali vel orientali partibus orarum littoralium & præcinctuum earundem. Et ab Euronoto (uti jacet Cap. Britton) & ex auſtrali parte ejuſdem ubi eſt Cap. de Sable omnia maria ac inſulas verſus meridiem intra quadraginta leucas dictarum orarum littoralium earundem magnam inſulam vulgariter appellatum Iſle de Sable vel Sablon includen. jacen. verſus carban vulgo South-South-Eaſt, circa triginta leucas à dicto Cap. Britton in mari & exiſten. in latitudine quadraginta quatuor graduum aut eo circa. Quæ quidem terræ prædictæ omni tempore affuturo nomine Novæ Scotiæ in America gaudebunt, Quas etiam præfatus Dominus Willelmus in partes & portiones ſicut ei viſum fuerit dividet iiſdemq; nomina pro beneplacito imponet. Una cum omnibus fodinis tum regalibus auri & argenti quam aliis fodinis ferri, plumbi, cupri, ſtanni, æris, &c.*

In cujus rei teſtimonium huic præſenti Chartæ noſtræ magnum Sigillum noſtrum apponi præcipimus Teſtibus prædictis noſtris conſanguineis & Conſiliariis Jacobo Marchione de Hamilton Comite Arraniæ & Cambridge Domino Auen & Innerdail, Georgio Mariſcalli Comite Domino Keith & alt. regni noſtri Mariſcallo, Alexandro Comite de Dunfermling Domino Fyviæ & urqubant noſtro Cancellario, Thoma Comite de Melros Domino Byres & Bynning noſtro Secretario, Dilectis noſtris familiaribus Conſiliariis Domino Richardo Kockburne Juniore de Clerkington noſtri Secreti Sigilli cuſtode, Georgio Hay de Knifarunis noſtrorum Rotulorum Regiſtrorum ac Concilii Clerico, Joanne Cockburne de Ormeſtoun noſtræ Juſtitiariæ Clerico, & Joanne Scot de Scottiſtaruet noſtræ Cancellariæ Directore, Militibus. Apud Caſtellum noſtrum de Winſore decimo die menſis Septembris Anno Domini mileſimo ſexenteſimo vigeſimo primo Regnorumq; noſtrorum annis quinquageſimo quinto & decimo nono.

SIR *Ferdinando Gorges*, who preſided over the Affairs of *New-England*, conſidering the largeneſs of the Bounds laid out for Plantations in thoſe Parts, and the ſlow progreſs made in Planting, made a motion to Sir *William Alexander*, one of His Majeſties Privy-Council for the Kingdom of *Scotland*, to procure a particular Patent for the Planting ſuch a part as ſhou'd be call'd *New-Scotland*; and to be held of the Crown of *Scotland*, and govern'd by the Laws of that Kingdom. Which Patent was accordingly granted by His Majeſty, and the Limits of the Country were thus ſettled, To take in all that lies to the E. of *St. Croix*, compaſs'd with the great River of *Canada* on the N. and the main Ocean on the S. as may be ſeen more at large in the Patent above.

A.D. 1622.

The firſt Ship that went with a Company aboard her to Plant there, was ſent out in *A. D.* 1622. but ſetting out too late, they were forc'd to Winter at *Newfoundland*. The next Year they ſet Sail from thence, and having made *Cape-Breton*, they kept along the Coaſt till they came the length of *Port du Muton*, where they diſcover'd 3 pleaſant Harbours, and went aſhore in one of them, which they call'd *Luke's-Bay*. Here they trac'd for a great way up, a delicate River which was 3 Fathoms deep at low Water; on each ſide of which were flowry Meadows, and a proſpect of a charming Country; Roſes red and white they took notice of, and a ſort of wild Lilly, which, wild as it was, was a Flower of a moſt pleaſing fragrancy. They Coaſted along to the next Harbour, which was but 2 Leagues from the former, and here they found a River more pleaſant than the other, and that had 4 Fathom at low Water, and the Fields and Meadows that lay about it were dreſs'd with Roſes and Lillies like that they had ſeen before. Within this River they found a place very fit for a Plantation; 'twas a fat Soil, well ſtor'd with Fruits and Grain, and naturally apt to be Fortified. The Fruits they obſerv'd growing there were Gooſberries, Huttleberries, Wineberries, Raſberries, and Strawberries: And the Grain, Wheat, Barley, Rye, Peaſe, which latter grow every where in abundance, and are very large and good to eat, only they taſte ſomething of the Fitch. Sailing along to the next Harbour, which was about 12 Leagues diſtant, all the way the pleaſures of the Country continued; and tho' here were allurements enough, yet the place laſt mention'd was concluded on as the moſt commodious for a Settlement. In all theſe Rivers they found plenty of Fiſh, as Cod and others, both great and ſmall; and all along the Coaſt, (as alſo upon the Rivers themſelves) great ſtore of wild Fowl, as wild Geeſe, black Duck, Woodcock, Hern, Pigeon, and many other ſorts which they did not know. The ſorts of Wood the Country afforded were Oak, Firr, Spruce, Birch, and ſeveral other kind of Trees they had not ſeen before. They return'd back to *Newfoundland*, and from thence to *England*, very well ſatisfied with this Diſcovery; but for ſome reaſons did not ſtay there now, but intended to return the next Year early in the Spring, to lay the Foundation of a new Plantation there.

CHAP. XXXII.

The Diſcovery and Plantation of Newfoundland; *with an Account of the Country, and His Majeſties Patent for the Plantation of the ſame.*

THis Country was firſt diſcover'd *A. D.* 1497. by Sir *Sebaſtian Cabot*, who was ſet forth by King *Henry* VII. After this follow'd the Voyages of *M. Rut*, *Albert de Prato*, *M. Hore*, and others, to the ſame place. In *A. D.* 1583. Sir *Humphry Gilbert* went thither, carrying a large Patent granted by Q. *Elizabeth*, and took actual poſſeſſion of the Country in Her Majeſties Name at *St. John*'s Harbour. This Worthy Knight ſailing from thence to *Virginia*, loſt in that Courſe his beſt and largeſt Ship, and in his return towards *England*, himſelf with the other; and all that ſurviv'd the foregoing Shipwrack were overwhelm'd with a Storm. Notwithſtanding all theſe advances made towards a Plantation, yet the Affair was neglected till ſome Publick Spirits thought fit (in *A. D.* 1609.) to put their Country in mind of it. One Mr. *John Guy* of *Briſtol* wrote a Treatiſe on purpoſe to revive the buſineſs, and animate the *Engliſh* to Plant there. This motion took ſo well, that the following Year, *A. D.* 1610. a Patent was granted by K. *James*, and a Colony ſent over, of which the Worthy Mr. *Guy* went Governour.

His Majeſties Patent for Newfoundland.

JAMES, *by the Grace of God, of* Great Britain, France *and* Ireland, *King, Defender of the Faith,* &c. *To all People to whom theſe Preſents ſhall come greeting; Know ye, whereas divers Our loving and well-diſpoſed Subjects, are deſirous to make Plantation to inhabit and eſtabliſh a Colony or Colonies, in the Southern and Eaſtern Parts of the Country, and Iſle or Iſlands, commonly called* Newfoundland, *unto the Coaſt and Harbour, whereof the Subjects of this Our Realm of* England *have for the ſpace of 50 Years and upwards, Yearly uſed to reſort in no ſmall numbers to fiſh; intending by ſuch Plantation and Inhabiting, both to ſecure and make ſafe the ſaid Trade of Fiſhing to Our Subjects for ever; And alſo, to make ſome commendable Benefit for the Uſe of Mankind, by the Lands and Profits thereof, which hitherto from the beginning (as it ſeemeth manifeſt) hath remained unprofitable. And for better performance of ſuch their purpoſe and intentions, have humbly beſought Our Regal Authority and Aſſiſtance; We being well aſſured that the ſame Land or Country adjoyning to the foreſaid Coaſts, where Our Subjects uſe to fiſh, remaineth ſo deſtitute and deſolate of In-*

habitants, that ſcarce any one Savage Perſon hath in many Years been ſeen in the moſt parts thereof: And well knowing that the ſame lying, and being ſo vacant, is as well for the reaſons aforeſaid, as for many other reaſons very commodious for Us and Our Dominions. And that by the Law of Nature and Nations, We may of Our Royal Authority, poſſeſs our ſelves, and make grant thereof, without doing wrong to any other Prince or State, conſidering they cannot juſtly pretend any Soveraignty or Right thereunto, in reſpect that the ſame remaineth ſo vacant, and not actually poſſeſſed, and inhabited by any Chriſtian, or other whomſoever. And therefore, thinking it a matter and action well beſeeming a Chriſtian King, to make true uſe of that which God from the beginning created for Mankind; And therefore intending, not only to work and procure the benefit and good of many of Our Subjects, but principally to increaſe the knowledge of the Omnipotent God, and the propagation of Our Chriſtian Faith, have graciouſly accepted of their ſaid intention and ſuit. And therefore do of Our ſpecial grace, certain knowledge, and meer motion, for Us, Our Heirs and Succeſſors, give, grant, and confirm by theſe Preſents, unto Our right dear, and right well beloved Couſin and Counſellor, Henry Earl of Northampton, Keeper of Our Privy Seal, and to Our truſty and right well beloved Sir Laurence Tanfield Kt. chief Baron of Our Exchequer, Sir John Dodridge Kt. one of Our Sergeants at Law, Sir Francis Bacon Kt. Our Sollicitor General, Sir Daniel Dun, Sir Walter Cope, Sir Piercival Willoughby, and Sir John Conſtable, Kts. John Weld Eſq; William Freeman, Ralph Freeman, John Slany, Humfrey Slany, William Turner, Robert Kirkam, Gentlemen, John Weld Gentleman, Richard Fiſhburne, John Brown, Humfrey Spencer, Thomas Juxon, John Stokely, Ellis Criſpe, Thomas Alport, Francis Needeham, William Jones, Tho. Langton, Philip Gifford, John Whittingam, Edw. Allen, Ric. Bowdler, Tho Jones, Simon Stone, John Short, John Vigars, John Juxon, Ric. Hobby, Robert Alder, Anthony Haveland, Tho. Aldworth, Will. Lewis, John Guy, Ric. Hallworthy, John Langton, Humfrey Hooke, Philip Guy, Will. Meredith, Abram Jenings, and John Dowghtie, their Heirs and Aſſigns. And to ſuch, and ſo many as they do, or ſhall hereafter admit to be joyned with them in form hereafter in theſe Preſents expreſſed, whether they go in their Perſons to be planted in the ſaid Plantation, or whether they go not, but do adventure their Monies, Goods and Chattels, that they ſhall be one Body, or Commonalty perpetual, and ſhall have perpetual Succeſſion, and one Common Seal to ſerve for the ſaid Body and Commonalty: And that they, and their Succeſſors, ſhall be known, called, and incorporated by the name of the Treaſurer, and the Company of Adventurers, and Planters of the City of London and Briſtol, for the Colony or Plantation in Newfoundland, and that they, and their Succeſſors, ſhall be from henceforth for ever inabled, to take, require, and purchaſe by the name aforeſaid (Licence for the ſame from Us, Our Heirs and Succeſſors, firſt had and obtained) any manner of Lands, Tenements and Hereditaments, Goods and Chattels, within Our Realm of England, and Dominion of Wales, and that they, and their Succeſſors, ſhall be likewiſe inabled by the name aforeſaid, to plead and be impleaded, before any Our Judges, or Juſtices, in any of Our Courts, and in any Actions and Suits whatſoever. And We do alſo of Our ſaid ſpecial grace, certain knowledge, and meer motion, for Us, Our Heirs and Succeſſors, give, grant, and confirm unto the ſaid Treaſurer and Company, and their Succeſſors, under the reſervations, limitations, and declarations hereafter expreſſed, all that part and portion of the ſaid Country, commonly called Newfoundland, which is ſituate, lying and being to the Southward of the parallel Line to be conceived to paſs by the Cape or Headland, commonly called or known by the Name of Bonewiſt Incluſive, which Cape or Headland is to be Northward of the Bay, commonly called Trinity-Bay, and alſo which is ſituate, lying, and being to the Eaſtward of the Meridian Line, to be conceived to paſs by the Cape, or Headland, commonly called or known by the Name of Cape Sancta Maria, or Cape Saint Maries Incluſive, which Cape or Headland is to be Eaſtward of the Bay commonly called the Bay of Placentia, together with the Seas and Iſlands lying within 10 leagues of any part of the Sea-coaſt of the Country aforeſaid, and alſo all thoſe Countries, Lands and Iſlands, commonly called Newfoundland, which are ſituate between 46 degrees of Northerly latitude, and 52 degrees of the like latitude, and alſo all the Lands, Soil, Grounds, Havens, Ports, Rivers, Mines, as well Royal Mines of Gold and Silver, as other Mines, Minerals, Pearls, and precious Stones, Woods, Quarries, Marſhes, Waters, Fiſhings, Hunting, Hawking, Fowling, Commodities, and Hereditaments whatſoever, together with all Prerogatives, Juriſdictions, Royalties, Privileges, Franchiſes, and Preheminencies, within any the ſaid Territories, and the Precincts thereof whatſoever, and thereto or thereabouts, both by Sea and Land, being, or in any ſort belonging or appertaining; and which We by Our Letters Patents may or can grant, and in as ample manner and ſort, as We, or any of Our Noble Progenitors have heretofore granted to any Company, Body Politick, or Corporate, or to any Adventurer or Adventurers, Undertaker or Undertakers, of any Diſcovery, Plantation, or Traffick, of, in or into any Foreign Parts whatſoever, and in as large and ample manner, as if the ſame were herein particularly mentioned and expreſſed. Nevertheleſs Our Will and Pleaſure is, and We do by theſe Preſents expreſs and declare, that there be ſaved, and reſerved unto all manner of Perſons of what Nation ſoever, and alſo to all and every Our loving Subjects, which do at this preſent, or hereafter ſhall trade, or voyage to the Parts aforeſaid for fiſhing, &c. April 27. A. Reg. 8.

The Company under Mr. *Guy* ſucceeded very well in the Country, they got acquaintance with the Natives, and gradually won them to a familiarity with them, by doing of them little kindneſſes. Neither do we find that they ever had any diſturbances from them, but offering the Natives no violence, had none offer'd by them. And tho' there were none that liv'd near where they were ſeated at firſt, yet wou'd they come and traffick with them, that is, leave things in a certain place where the *Engliſh* ſhou'd find them, and ſo ſtand to their Courteſie to leave what they thought good in the room of them. This confidence they ſeem'd to repoſe in them, becauſe the *Engliſh* once lighting of ſome of their Houſes when they were all abſent, took away none of their Houſhold-ſtuff or Proviſions; only they put ſeveral things out of their places, and left ſome Trifles there, that the Savages, when they came home, might know ſome ſtrangers had been there. This made them firſt ſearch the *Engliſh* out, and afterwards expreſs ſuch a good Opinion of them. And there's no doubt to be made, but the moſt Savage People in the World might (before they be too much abus'd at leaſt) be brought to a friendly Correſpondence with ſtrangers by gentle Methods, and a juſt and fair Carriage towards them. And there's as little queſtion to be made, but that the contrary deportment has greatly contributed towards the making many People much more barbarous, than Nature and their own Diſpoſitions ever made them. Amongſt thoſe that made Voyages to this Iſland before there was any Settlement there, Capt. *Richard Whitbourn* was one of the chief, who was alſo there at the time that Sir *Humphry Gilbert* was. This Worthy Perſon made at leaſt 5 or 6 Voyages thither, ſome before, and others after the Plantation. And 'tis from his Remarks, and thoſe of Mr. *Guy*, and ſome of the Members of the Colony, that we extract the following Account of the Country.

The Iſland of *Newfoundland* lies between the 46th and 53d deg. of N. L. ſeparated from the neareſt part of the *American* Continent, about as far as *England* from the neareſt part of *France*. It is almoſt as large as *Ireland*, and the greateſt part of it lies above 3 deg. more Southward than any part of *England*. All along the Coaſt are many large and excellent Bays, ſome of them ſtretching into the Land towards one another more than 20 Leagues. On the Eaſt-ſide are the Bays of *Trinity* and *Conception*, which ſtretch themſelves towards the S. W. *Tor* and *Capalin* Bays lying alſo on the E. ſtretch towards the W. The Bays of *Trepaſſey*, *St. Mary*, *Borrell* and *Plaiſance*, which are all on the South-ſide, extend their arms towards the N. The great Bay of *St. Peter* on the S. W. ſide, runs towards the E. and lies E. by S. from the great River of *Canada*, which is about 20 Leagues diſtant. The bottoms of theſe Bays do all meet together within the compaſs of a ſmall Circuit; by which means, paſſing over Land from Bay to Bay, the diſcovery of the whole Country is much facilitated. There are, beſides theſe, many others of leſs Note, and in moſt of them ſmall Iſlands, (none of which are farther than a League from the ſhore) very pleaſant and fruitful. Hardly any Country in the World can ſhew a greater number of ſafe and commodious Harbours than this; but the two moſt remarkable are the Harbours of *Trinity* and *Trepaſſey*. The former lies in 49 deg. and is moſt advantageouſly ſeated for Shipping both to anchor in, and to ſail from thence towards the E. W. or S. It has 3 Arms or Rivers, long and large enough to receive many hundred Sail, which may Moar faſt at Anchor near a Mile from the Harbours Mouth. Adjoyning to the Rivers-ſide, and within the Harbour, is much open Land, that yields Graſs enough both Winter and Summer to maintain great ſtore of Cattle. The *Bay of Flowers* lies to the N. of this Harbour, (not above a League diſtant by Land in many places) but becauſe of ledges of Rocks even with the Water, and very dangerous, no Ships go thither to Fiſh; ſo that *Trinity* Harbour is the moſt Northerly Fiſhing-place frequented by our Nation upon the Iſland. *Trepaſſey* Harbour is alſo a very commodious one, and has the advantage of lying in a more temperate Latitude, as being in 46 deg. very near. It is a fair, pleaſant and wholſome Coaſt, and free from Rocks and Shelves. Of all the Harbours, this is the moſt Southerly, and moſt convenient to receive any Shipping that comes for, and from *Virginia*, the *Bermudas* Iſland, or the great River of *Canada*. The Seaſons here are very temperate, neither are there any extremities of Heat and Cold greater than thoſe in our own Climate; and the often repeated experiences of the *Engliſh* have put it out of all doubt, that 'tis a healthy place, and agrees very well with their Conſtitutions. The Soil is exceeding fruitful, and without any Art or Cultivation produces Plants, Fruits and Grain, profitable for Man and Beaſt. Bilberries, Barberries, Rasberries, Cherries, Gooſeberries, Strawberries white and red, Pears, Filberds, grow in ſuch plenty, that a Man may much ſooner tire himſelf with eating and gathering, than in looking about for Entertainment. And as theſe are of a wild growth, ſo are many good Herbs which one may ſee abroad in the Fields, as Parſly, Sorrel, Alexander, and a great many others beſides. Wheat, Barley, Rye, Peaſe and Fitches, were found in the Country; but the *Engliſh* brought in Oats and Beans, which thrive exceeding well. In a word, there is hardly any ſort of Fruit, Root, Pulſe, or Plant, that flouriſhes in *England*, but will flouriſh here. The proof of this they had in the proſperity of their Lettice, Cabbage, Coleworts, Turnips, Carrats, with the reſt of the common Furniture of Gardens. The high Lands are adorn'd with Woods that keep their charming green all the Winter long; and the Plains are watered with Ponds, Brooks and Rivers, which refreſh the Meadow-grounds, and make the Graſs high and rank. Vaſt numbers of Cattle might be bred up here, and depend entirely upon the Meadows for ſuſtenance; for as there is great plenty of Graſs, (and a Spring of it even in the Winter) ſo it has a good ſpirit and ſtrength with it from the rich Soil where it grows. There is abundance of admirable Timber in this Country; they commend the Firr and Spruce-Trees for Ship-Maſts, and all other Uſes, and don't ſcruple to compare them, in point of Serviceableneſs, to thoſe of *Norway*. And they ſay, that no Country can ſhew Pine and Birch-Trees, of dimenſions every way, ſo ſtately as *Newfoundland*. As for the Animals; the Beaſts are Deer, Hares, Foxes, Squirrels, Wolves, Bears, and the amphibious Beavers and Otters. And whether it were fancy or no we can't ſay, but our People believ'd the Beaſts of prey here to be more tame and gentle than in other places. To this purpoſe :they tell a Story, That being one time a fiſhing, and having a great Maſtiff-Dog with them, there came a parcel of Wolves out of the Woods, and ſeated themſelves pretty near the place where they were at their work, and there they ſate howling and making a moſt terrible noiſe. The courageous Dog went up to them, and inſtead of ſnarling and grinning at one another, (the ordinary Prologue to fighting) they began to wag tails and ſawn, and at laſt went to downright playing; and, in ſhort, lik'd one anothers company ſo well, that they all went away together into the Woods, there the Dog ſtaid amongſt them 9 or 10 days, and then came home ſafe and ſound to his Maſters. And this Comical Scene between the Dog and the Wolves was repeated three ſeveral times; ſo many times did he take his Ramble with them, and when the Frolick was out came home again. This made ſome of our Planters ſurmize, that the Wolves were better natur'd here than other where; and the truth on't is, the Dog's entertainment was odd enough, and we'll allow the Wolves to be Hoſpitable. But a Man wou'd have ſaid a great deal more to't, had one of the Maſters taken the Maſtiff's place, and gone along with the Wolves into the Woods; and after 9 or 10 days ſpent with them, come home again without a hole in his Coat. They ſay too, that tho' the Bears are ſo very numerous here, yet they never receiv'd any hurt by them; the reaſon of which (moſt probably) was, becauſe they never came in their way, for Bears don't uſe to be guilty of that piece of good breeding to any thing that comes within the reach of their paws. As for the Foxes, as cunning as they are, our People cheated abundance of them of their fine Coats; and ſo they did the Martens, Beavers, and the reſt of the Furry Tribe, which (according to the Genius of the *Newfoundland* Animals) were ſo good-natur'd as to be catch'd. The Fowl are (of the leſſer ſort) Sparrows, Larks, Blackbirds, Bullfinches, Thruſhes, Nightingales, Fillidays, and the like. And of the larger, Partridge, Geeſe, Ducks, Pigeons, Snipes, Teal, Curlews, *&c.* And of the Sea-Fowl, Penguins, Murres, Hounds, Sanderlings, Redſhanks, *&c.* Laſtly of Birds of Prey: All ſorts of Falcons, Oſpreys, Ravens, Gripes, Crows, Gulls, Pittereils, Tercells, *&c.* The plenty and variety of Fiſh are not leſs than thoſe of the Fowl: All the World knows the reputation of *Newfoundland* for Cod, and what a rich Trade it yields only with reſpect to that one Commodity. But there's no Harbour or River here but what's well ſtor'd with excellent Fiſh; amongſt which we may mention Salmon, Pearl, Eels, Trouts, Herrings, Mackaril, Flounders, Launce, Capelin, Pales, Dorrel. Then Whale, the Sovereign of Fiſhes, Porpoiſes, Seals, and others of a Royal Character; and to conclude, all ſorts of Shell-fiſh. But the great rarity of all the Animals is the Mermaid, (or call it what you pleaſe, ſo you do but mean a Creature that lives in the Water, and as far as it appears in view of a Humane ſhape) which is infallibly an Inhabitant of theſe Seas, if at leaſt we may believe Capt. *Whitbourn* (the principal Author of this Account of the Country) upon his word. He affirms that at *St. John*'s Harbour, *A. D.* 1610. as he was ſtanding by the Water-ſide one day early in the Morning, he ſpied a Creature making very ſwiftly towards him, which by the Eyes, Noſe, Chin, Ears, Neck, Forehead; and, in a word, by all thoſe upper Parts which were very well proportion'd, appear'd to be a Woman. The Hair indeed was to be excepted; for inſtead of that, there were all round about upon the Head as it were blue ſtreaks, which much reſembled hair, and hung down to the Neck. The Captain ſays he beheld it intenſely, (and ſo did another of his company, that ſtood not far from him) and ſtaid till it came to about the length of a long Pike from him, and then he thought it time to go backwards. When the Creature ſaw that he went from it, it turn'd about alſo and made away, which gave him the opportunity of viewing the ſhoulders and back Parts of it, down to the Waſte, which he declares were as ſquare, ſmooth and white, as the like Parts in Mankind. From the middle to the lower part (to uſe his own words) it went pointing, in proportion like a broad-hooked Arrow; but how it was in the fore part of the Body, from the Neck and Shoulders downwards, he could not diſcern, becauſe it did not advance towards him ſo much above the Water as it went away. This Syren had a mind to the Captain's company, in ſome Palace or other within the Dominions of *Neptune*; but he (tho' otherwiſe a Man of good breeding) refus'd the favour, and ſlighted her. What ſhe wou'd have done with him there the Lord knows; however, he knew there was no good Wine in that Country, but on the other hand, a moſt confounded guzling of Salt Water, ſuch as wou'd no way agree with his Conſtitution. So he retired from her, and thereby perhaps eſcap'd a drinking bout, which wou'd have coſt him his Life, and depriv'd him of Chriſtian Burial too. The Syren let him go, and did not attempt, by any farther diſcovery of her Charms, to reduce him. She had ſhewn him thoſe of her Face, but thought him unworthy of the Charms of her Voice; thoſe, which Poets through all Antiquity have ſo wonderfully extoll'd. However, the ſame Creature came ſhortly after to the ſide of a Boat, in which were ſome of the Captain's Men, and endeavour'd to come into them. Theſe Fellows were ſufficiently ſcar'd at the ſight of it, but ready to leap out of the Boat when they ſaw it attempting to get in; yet one of them recover'd ſo much Spirit, as to manage his Oar, with which he ſtruck the Syren a ſound blow croſs the Head, that made her let go her hold, and drop into the Water. But that it did not kill her was plain, by her coming afterwards to ſome Boats in the Harbour; at which time the Boats being near the ſhore, the Men got all out and run for their lives. This appear'd to be the very ſame with the former, and the ſame it was, unleſs ſhe died with that blow upon the Head and walk'd afterwards. Upon the whole, we can't ſee why this Relation ſhou'd not as effectually perſwade all People that there are ſuch Creatures, as the Voyage it ſelf ſhou'd that there is ſuch a place as *Newfoundland*; for a Man us'd to converſe with the Dangers and Monſters of the Sea, one may very eaſily believe not to be timerous. And a Man can have no Intereſt in forming a Story of a Mermaid, which is not at all adapted to ſerve any Deſign in Church or State. If the Reader won't be convinced by this, there's no way for him but to follow the Captain to *St. John*'s Harbour, and there wait for Ocular Demonſtration. Of the Natives of this Iſland, our Planters tell us but little: But in general, as far as they know of them, that in their Habits, Cuſtoms and Manners, they reſemble the *Indians* of the Continent, but far leſs polite in their Civil Government, as well as leſs Ceremonious in their Religion (if they have any at all) than many other Nations of the *Americans* are. They live altogether in the N. and W. Parts of the Country, which are leaſt frequented by the *Engliſh*; but the *French* and *Biſcainers*, who follow the Whale-fiſhing thereabouts, report them to be a tractable, ingenious People, patient of Labour, and not Mercenary, but ready to work for a ſmall Reward. Our *Engliſh* indeed ſaw ſome of them, and thoſe were all painted with Oker, cloath'd with Stags-skins, (made into ſort of Gowns) that reach'd to the middle Leg, and the Sleeves coming down at leaſt half way the Arm, and Beaver-skins about their Necks. They were bare legg'd, and moſt of them bare footed, only one had Shoes and Mittens on. There was nothing of a Cover for the Head amongſt them; they wore their hair pretty long, a great lock behind plaited with feathers, with a feather in it ſtanding upright by the crown of the Head, and a ſmall lock plaited before. Their hair is of very different colours, tho' they obſerve no proportion, but paint their Cloaths as well as their Bodies red. They are of no large ſize, but are broad breaſted, and of a bold ſtrong make, and ſtand very upright; tho' by the report of ſome, they don't walk ſo, being ſomething inclinable to the Vices of Cheating and Stealing. Their greateſt Art is ſeen in the conſtruction of their Kettles, Canoes and Oars; the former are made of the rinds of Trees very neatly ſow'd together, and the ſeams overlaid with Turpentine, but when they ſet them over the Fire to boil their Meat, how they do to keep the rinds from ſcorching, and the Turpentine from melting, is hard to conceive. Their Canoes are about 20 foot long, and 4 and half broad in the middle, made in the form of a Creſcent, Stem and Stem alike, and both equally diſtant from the greateſt breadth. From the Stem and Stem, there riſes a light Staff a Yard high, whipt about with the long ſtrings of certain Roots that ſerve inſtead of Cords, which they take hold by to bring the Canoe aſhore. They will carry 4 People very well, and yet don't weigh 100 weight; ſo that when they go a Land, they count it no burden to carry their Canoes with them. Inſtead of boards in the making of them, they uſe the outer Bark of the Birch-Tree, and ſow them with the ſame artifices that they do their Kettles. As for their Oars, they are of two ſorts; one is about 4 foot long, of one entire piece of Firr, the other 10 foot, and made of two ſeveral pieces, the firſt as long, big and round as a Half-pike, the ſecond is the Blade of the Oar, and is let into the end of the long one, ſlit and whipt very ſtrongly. The former of theſe they uſe as a Paddle, and the latter as an Oar. This is all that our Planters tell us of this Country, that is remarkable; with this Account therefore of the *Newfoundland*, we ſhall finiſh our Hiſtory of the New World.

FINIS.

AN INDEX OF THE Kingdoms, Countries, Rivers, Towns, Places, *viz.* in the Firſt Volume of *Navigantium atque Itinerantium Bibliotheca.*
